In apportioning the credit or the blame for the achievements and shortcomings of the Congress which came to an end on Monday, March 4, we should bear in mind that of the 90 Senators the Republicans had 58 and the Democrats 32, while of the 368 Representatives there were 248 Republicans and 120 Democrats, with two vacancies. The proportion should be heeded in view of the fact that in the Sixtieth Congress, up to the time when the five Representatives and two Senators of Oklahoma are admitted, the Republicans will master 222 and the Democrats 164 in the Lower House, whereas in the Senate there will be 61 Republicans against 29 Democrats, the former thus acquiring more than two-thirds of the votes. From the figures named an erroneous deduction might be drawn as to the effect produced upon the public mind by the record of the Fifty-ninth Congress. By no means do the Republicans get all the credit of it. The record is divided into two sharply contrasted parts corresponding to the two sessions. Almost all of the work which is likely to make the new delinquent Congress long remembered in our Federal history was accomplished in the first session, and it was brought about by a combination of President ROOSEVELT with both the Republican and Democratic members of the Lower House against the influences which previously had been dominant in the Senate, and which, in the Fifty-eighth Congress, had succeeded in postponing the railway legislation desired by the Chief Magistrate. The three memorable laws placed upon the statute-book during the first session, which began early in December, 1905, were the act enlarging the powers of the Interstate Commerce Commission (commonly known as the railway-rates act); the act making an appropriation for the Department of Agriculture to provide for meat inspection from hool to ran at government expense; and, thirdly, the act for preventing the manufacture, sale, or transportation of adulterated or misbranded or deleterious foods, drugs, medicines, and liquors—the act generally known as the pure-food act. It is tolerably certain that the railway-rate bill, and it is at least probable that the meat-inspection bill and the pure-food bill, would not have become laws in their present form had not the President been supported by almost all the Democratic Senators and Representatives, by almost all the Republicans in the Lower House, and also by a considerable minority of the Republican Senators. Under the circumstances, the credit for the remarkable legislation cannot be claimed exclusively by either political party, and cannot, therefore, figure as a campaign issue in the next Presidential contest. Outside these three epoch-making statutes, the most important legislative work performed during the first session of the late Congress was the act providing for the construction of a lock canal connecting the waters of the Atlantic and Pacific oceans; the act providing a uniform rule for the naturalization of aliens throughout the United States; the act enabling Oklahoma and Indian Territory to enter the Union as a single State, and providing also that New Mexico and Arizona might be admitted on the same terms, provided each Territory should separately vote for joint Statehood; an act for the withdrawal from land, tax free, of domestic alcohol, when rendered unfit for beverage or liquid medicinal uses by mixture with suitable denaturing materials; an act appropriating two million dollars annually for increasing the efficiency of the militia and promoting rifle practice; an act providing for the reorganization of the consular service of the United States; and, finally, an act appropriating \$25,000 annually for the travelling expenses of the President of the United States. As regards the three statutes of capital moment, the railway-rate act, the meat-inspection act, and the pure-food act, it was taken for granted that they might need amendments, which would be forthcoming, it was supposed, during the second session.

The expectation has not been fulfilled. The Fifty-ninth Congress, which, in its first session, was dominated by the President and the so-called radical reformers, fell back, in its second session, under the control of "special interests," owing partly to a certain reaction of public opinion against Federal interference with business heretofore transacted by private corporations or individuals. During the summer or autumn of 1906, an impression gained ground that, for the present, at all events, no further steps ought to be taken in that direction. This notwithstanding the fact that the President's personal popularity has not been so rapidly impaired, while his political activity has never been greater, more than forty messages having been sent by him to Congress since the second session began. The result of this slight change discernible in popular sentiment has been that a number of down reform measures have been killed during the second session. For example, Senator HARRIMAN has failed to secure the passage of the amendments which he tried to add to the meat-inspection law. One of these amendments aimed to make meat-packers pay the cost of inspection, which now rests on the Federal government, while the other required every label to bear the date at which the goods labelled were received. Congress also refused to sanction the bill permitting the Federal government to establish feed standards, in the absence of which the enforcement of the pure-food law is difficult. The Federal legislature even declined to

ratify the measures urged by the President for the protection of the public lands, and providing for the prosecution of fraudulent entries hitherto made on the public domain. Where Mr. ROOSEVELT was unable to carry his point, it was scarcely probable that Senator LA FOLLETTE would succeed, and we need not, therefore, be surprised that the latter's bill authorizing and directing the Interstate Commerce Commission to make valuations of railroad properties, for use as bases of taxation, did not find a place upon the statute-book. Miscellaneous also awaited another bill of his reducing by \$7,000,000 the amount paid to railroads for carrying mails. A similar fate befell a bill framed for the purpose of stopping express companies from engaging in the business of buying and selling merchandise. The distillers and brewers were strong enough to defeat Representative LUTHERHEAD's bill giving States complete jurisdiction over liquor brought within their borders. The influence of the Standard Oil Company is alleged to be traceable in the frustration of the bill allowing farmers to manufacture denatured alcohol. It is hard to realize that all these proposals were rejected by the very same Congress which, during its first session, passed the railway-rate bill, the meat-inspection bill, and the pure-food bill.

It must not be inferred that the President considers the session of Congress just ended as entirely unsatisfactory from his point of view. He is reported to have been elated at the passage of the amendment to the immigration act authorizing him to exclude from the American mainland Japanese or other laborers whose passports do not show that they were authorized to proceed directly from their native country to the continental territory of the United States. He found much satisfaction, too, in the sanction by Congress of his desire to build two big battle-ships. Scarcely less gratifying should be the Senate's ratification of the Santo Domingo treaty in its revised form, whereby the President's appointees are authorized to collect and apportion the customs revenue of the Dominican Republic for an indefinite period. The Philippine tariff bill was blocked, and the bill giving the government the right of appeal in certain criminal cases was whittled down almost to nothing in the Senate. The eight-hour bill, the anti-injunction bill, the child-labor bill, and the bill to confer citizenship upon Porto-Ricans all failed to pass. On the other hand, Congress, having raised the pay of Senators and Representatives from \$5000 to \$7500 a year, voted also to increase the pay of the Speaker, the Vice-President, and the cabinet officers, including the Secretary to the President. The pay of almost every postal employee throughout the country has likewise been augmented, but, feeling apparently that it must stop somewhere, Congress declined to increase the pay of the government clerks employed in the departments at Washington. We observe lastly that it is no longer necessary for an ex-soldier to prove that he incurred any disability through service under the colors. All he now has to show, in order to get a pension from the Federal treasury, is that he is sixty-two years old and served three months in the civil or Mexican war.

Personal and Pertinent

THIS is a Russian year in the musical circles of New York. First of all, there is a Russian bringing the Philharmonic Society into greater favor than it has enjoyed since SCHUBERT's day, upon whose death many of the German lovers of music feared that the end of tune and harmony had come. SAVOROFF is dragging the music out of the band with his two hands, and at the same time, and by the same physical-culture movements, he is tearing at the heart-strings of musical young women, who lunch in his presence, and in the presence of good food, but on ridiculous ecstasy.

"I told him," said one young lady to another, "that he had rejuvenated the old band by ten years."

"And I," triumphantly replied the other, "told him that he had recreated it."

The other day, or night, a gentlemanly young Russian named SCHERERIN listened, in a box at Carnegie Hall, to a performance of his own symphony by the Russian Symphony Orchestra. The house went Russian mad. When the audience was going out one distinguished musical young woman was heard to ask a critic—professional: "What is that Duma that the Russians are composing; is it a chacon or a suite?"

How certain individual lives keep on moving together, parallel to one another or crossing one another! It seems as though they could not get apart, as though they attracted one another. There are, for instance, Senator JULIUS C. EDGAR BROWN, of Michigan, who has just made the priority speech against SUGAR, and ex-Senator ARTHUR BROWN, of Utah, who was recently killed in Washington by a lady who wanted him for a husband. Thirty-four years ago the two were practicing law together in Kalamazoo, Michigan, and BROWN was a very successful lawyer. BROWN was an orator; in his youth he was known as the "Columbian Orator." This was the title of a little book of eloquent extracts which the boys used to declaim on Friday afternoons. BROWN wanted to be a Congressman and BROWN helped him. He was elected in 1872, and he was

defeated in 1874 because he favored inflation. Once again he was defeated, but, with those exceptions, he has been continuously in public life, part of the time an Representative and part of the time as Senator. BROWN rather sternly dealt with BURNSWORTH at times, but one day BROWN made a false step at Kalamazoo and the two lives seemed to separate, for BROWN thought that the air of Salt Lake City was more wholesome for him than that of Michigan. But the two came together again as members of the Senate, and at last BURNSWORTH got unduly mixed up in a question most interesting to Utah, and was fighting SUGAR and polygamy when BROWN came to Washington to be shot. The wayward, meretricious, fair-aching BROWN faded into BURNSWORTH's life from time to time, a life that became, notwithstanding those fashions, more and more conservative, as conservative that the taint of oratory was long ago washed out of it, and BURNSWORTH has grown to be an industrious, hard-headed man of business who knows how to keep his seat in the Senate, while BROWN did not know anything much to his advantage except how to win lawsuits.

Secretary SHAW is to be the president of the Carnegie Trust Company instead of Secretary of the Treasury. It may be worth while to allude to Mr. SHAW as a disappointment, not at all by way of criticism, but in order to indicate how a President's judgment may not always be sure-footed. Mr. SHAW was regarded in Washington as an independent Republican, talented a trifle with free-trade spots. The President's desire to change the McKINLEY cabinet rose first from friction with LYMAN GAGE. On Mr. GAGE's side there was grit, and manifested, some reticence because the President, then new, was not observed in official matters; he was accustomed to communicate directly with subordinates, and Mr. GAGE, on consulting the Treasury book of etiquette, discovered that this was a slight on him, because the President should have communicated indirectly with the subordinates through him. On the President's side, it was thought that Mr. GAGE knew only the banking side of the Treasury, and the President needed some one who understood the tariff and was in favor of a revision that would reduce duties. It will be seen how far back, in thought, this episode is. The President was especially congratulated on selecting SHAW, because now he would have a well-informed Secretary who would sympathize with his expectation to secure tariff reform; and, besides, the President thought him so large-minded, so generous, so independent a politician. "Why," said Mr. ROOSEVELT, "I have always felt particularly attracted to him since he said in a speech that this country 'waited out of a slough of despond on the barkhouse of GROVER CLEVELAND!'" However generous-minded and independent Mr. SHAW may have remained, he, too, has been a public banker, as Mr. GAGE was, while he has allowed it to be understood that, on the tariff, he is the Bourbon while Grover CLEVELAND, his party opponent, is the man who is for what was expected of Mr. ROOSEVELT.

The suggestion that Senator BLACKBURN is to be a member of the Federal Reserve Commission could not have surprised those who recall the selection of Mr. CROCKETT for the Interstate Commerce Commission—and there are others. Mr. BLACKBURN was always intent upon doing his duty in the executive department. In Kentucky they describe him as a "good mixer." He is the genial friend of all classes and conditions of men. In Washington, the air of his committee-room still reels with his admirable stories, the point of each one being inevitably salient. He was one of the best judges of horse-races that a kind constituency ever sent to Congress, and a Republican President found him as communicable and as amenable to reason as his own party associates felt him to be. He was even on good terms with the CLEVELAND administration during those strenuous times when many Democrats in Congress would have nothing to do with the occupant of the White House or his cabinet. Especially friendly was BLACKBURN with the Kentucky Secretary of the Treasury, whom he called "JOHN CARLISLE," and from whom he was willing to accept dry and choking facts which he needed for his oratorical embroidery-work. He was one of the Silver Democrats who were filibustering under the leadership of two true Republicans, TELLER and DUBOIS, to prevent the passage of CLEVELAND's "unconditional repeal bill." But BLACKBURN was not in favor of obstinately standing in the way of the appointing power. Too much of the current business of a Senator—and of his constituents—depended on his retention of his friendliness. So he talked the matter over with his friend JAMIN, who found the Senator reasonable, and JAMIN furnished him with mental food. BLACKBURN then, incidentally, attended the meeting of the Confederate veterans in Kentucky, and then, coming freshly from his people, he made a remarkably able speech in favor of abandoning the filibustering and of permitting a vote to be taken. Then every speaker. A Senator who could have made no such speech said that, "for a man who never thought and never read, JOE was the ablest orator in the country." Soon afterwards BLACKBURN had a serious falling out with JOHN CARLISLE, not about a transitory thing like the silver question, although that might serve as fuel, but about a deeper, more momentous, more sleep-dispelling subject—about an appointment in the Treasury Department.

EXPERIMENTING WITH AUTOMOBILE TIRES

By WILFRED DUPUY

THE pneumatic tire was undoubtedly the most important invention which had to do with the development of the automobile, for without it the touring-car, as at present used for pleasure purposes, would not have been a possibility. The reason for this is not merely that the pneumatic tire gives comfortable riding qualities to the car, but that, by its absorption of the small inequalities of road surface, it saves the motor and mechanism from an enormous amount of vibration. The question might be asked whether solid rubber tires would not serve as well for use in districts where the road surfaces were comparatively smooth. These can be used satisfactorily up to speed of fifteen miles an hour, but beyond that they are impracticable, no matter how smooth the road.

It is a well-known fact that if an object be allowed to drop in the air, after it has attained a certain speed the resistance of the air will equal the acceleration due to the force of gravity, so that the speed of the object will not increase beyond a certain limit. The drag of solid tires against the force of the motor acts somewhat in the same way. The higher the speed the greater the power necessary to lift the wheels over the small inequalities of road surface, until finally a limit of speed is reached at which all of the power is consumed. This limit is comparatively low. By experiment it has been found to be practically impossible to drive a car faster than twenty-five miles an hour on solid tires, even by using engines of very high power. This would certainly not suit the modern motorist. But of much greater moment than the reduction in speed would be the ruin of his nerves and the wear and tear to which the mechanism of the car would be subjected.

Many attempts have been made to imitate the action of the pneumatic tire by the use of spring wheels, pneumatic hubs, etc., but up to the present time with indifferent success. While these devices take up the vibrations transmitted to the wheel to a certain extent, they do not provide a cushion at the place where it will be most effective, viz., in contact with the road. They act as delicate springs in decreasing the force of shocks borne by the wheel, but do not absorb the shocks, as does the pneumatic tire. Inequality and small obstacles sink into the tire, so that the wheel does not require as extra amount of power to lift it over them. For this reason it is very doubtful whether a practical substitute for the pneumatic tire will ever be developed.

With the phenomenal increase in the production of automobiles during the past six years there has been a like increase in the output of the tire manufacturers, so that the available rubber supply of the world has been seriously affected. Imports of crude rubber into the United States alone last year amounted to \$20,000,000, a considerable proportion of which was employed in the manufacture of tires.

The rubber factory which manufactures the manufacturers of automobile tires requires an elaborate and expensive equipment, consisting of washing machines for the crude rubber, mixing-mills for combining the rubber with sulphur, zinc, litharge, and other ingredients which influence the vulcanizing process and serve to give strength and wearing qualities to the finished tire. Large calender-rolls are required to roll the rubber into sheets of the proper thickness to be used in building up the tire. Sheets of great hydraulic pressure, heated by steam, are used for vulcanizing the tires after they have been placed in the moulds. The number of the latter which must be kept on hand depends only on the demand for tires of each size and type.

Before being placed in the mould the tire is built up by hand on an iron form. The layers of fabric coated with rubber are laid on first of all, being drawn tight over the tread and worked down over the "head." When the plies of fabric are in position and rolled smooth, a sheet of rubber is laid on to form the cover. If the tire is to have a moulded tread the latter is formed by being built up of layers of rubber to the proper thickness. It is "wrapped round" to be put on, the tire is moulded with only the cover in place, and after being removed from the mould has the tread wrapped upon it with cloth and vulcanized.

Tires should be allowed to age for a certain length of time before being put into use. During this time they "bloom," that is, become light gray in color, due to the action of the air on the sulphur contained in the rubber. The process of aging requires from three to six weeks, during which time the rubber acquires a certain firmness, which adds to its durability.

The number of different types of automobile tires is constantly increasing, each type being designed to overcome certain difficulties. The most common design has been the wrapped tread, or the mould-moulded tire; but of late the flat corrugated, or "V" type, has been increasingly in popularity. The latter is heavier than the ordinary tire, and should prove more reliable. In addition to these, there is the tread studded with rubber knobs, and one being transverse ridges. These two types are designed for heavy loading, and are effective to a certain extent when used on a few hundred miles of travel they are worn so smooth as to lose

whatever non-skidding qualities they may have once possessed. The tire which is at this time most successfully presented to the public has embedded in its tread several rows of steel studs, the heads of which grip the road so firmly as to assure positive traction. The heads of the studs rest either directly on the rubber tread of the tire or on a strip of specially prepared leather. Their bases are held firmly by several plies of strong fabric. In addition to its prevention of side-slip the wearing qualities of this tire have been unusually good, and it is practically puncture-proof, except through the side wall. The popularity of this tire has been largely increased by its successful use on foreign racing-cars during the past two years, where the study to which it has been subjected on account of the great speed attained is unusually severe.

The motorist whose tires do not afford the proper service is usually too much given to placing the blame upon the tire manufacturer rather than upon his own ignorance or carelessness. It is too much to expect that tires will not deteriorate and give out when the user exercises no more judgment in caring for them than if his car were equipped with ordinary iron-tired wheels. To obtain satisfactory results in the use of pneumatic tires every motorist should familiarize himself with the instructions and rules for their use. It is too much to expect that tires will not deteriorate and give out when the user exercises no more judgment in caring for them than if his car were equipped with ordinary iron-tired wheels. To obtain satisfactory results in the use of pneumatic tires every motorist should familiarize himself with the instructions and rules for their use. It is too much to expect that tires will not deteriorate and give out when the user exercises no more judgment in caring for them than if his car were equipped with ordinary iron-tired wheels. To obtain satisfactory results in the use of pneumatic tires every motorist should familiarize himself with the instructions and rules for their use.

The automobile manufacturers have not been blameless in the matter of providing tire-treads for the motorist. This has not been due to the selection of tires, but to the construction of the automobiles themselves, which have very often been of too great weight and speed for the tire of the size which the manufacturer size tire is guaranteed by the manufacturer to carry only a certain weight, and when this weight is exceeded trouble naturally follows. The catalogue weight of an automobile, which takes no account of water, gasoline, and equipment, often differs largely from its weight when ready for the road. Thus the surest way in which to determine whether or not a car is fitted with tires of sufficient size is to have it weighed when fully equipped.

The motorist, by care and attention, can do more to prolong the life of his tires than any repairman or the manufacturer himself. He should have an accurate pressure gauge, and test his tires at least once a week, in order to be sure that they are constantly inflated to the pressure recommended by the manufacturer. This pressure varies from sixty to sixty pounds, according to the size of the tire. Proper inflation is of more importance than all the other rules which can be laid down for the care of tires. Proper inflation the motorist must interpret as *high pressure*, that is, compared to the degree of inflation which would cause his car to ride easiest. A tire, when properly inflated, should not flatten at all when the car is in motion. If many drivers are afraid of bursting their tires, it is too bad a case for the pump; so let it be stated, finally, that an air-pump for the inflation of tires, either hand-operated or mechanical, is capable of exerting a pressure exceeding 125 pounds to the square inch, and this pressure would not be sufficient to burst a tire which was even one-quarter as strong as tires are now made. A perfect tire will not burst at a pressure of seven hundred pounds. The motorist may ask, then, an explanation for the fact that tires sometimes "blow out." It is answered by stating that the tire must have been injured before the blow-out occurred, which is often brought about by a previous puncture or stone-bruise, which weakens the tire at the spot where the blow-out afterwards occurs. The layers of fabric are a tire's whole strength, and are very easily weakened by eating and by water which is allowed to enter through cuts in the cover of the tire. Water and dirt serve to open the threads of the fabric, and therefore every precaution should be taken to see that all cuts in the tread or walls of the tire are immediately repaired.

In driving the car much can be done to prolong the life of the tires. Tires should be taken at moderate speed, or the tire will be "skinned." The brakes should not be applied so suddenly as to lock the wheels, or part of the thread will be torn off. The clutch should be operated carefully for the same reason. Oil, grease, and gasoline should not be allowed to come in contact with the tires, as they soften and disintegrate the rubber. For this reason all should not be allowed to drip from the wheel bearings or chains.

SHOCK ELIMINATORS

By S. F. HEATH

THE rapidly growing interest in shock eliminators only goes to prove the absolute necessity for some efficient device to eliminate the damage, danger, and discomfort of rough roads. One of the best known writers on automobile subjects states:

"Without question the motor-car is further astray in the matter of springs than in any other one particular. A moment's consideration will show that no single spring suspension, no matter what its shape, can correctly handle a car at all speeds on rough roads. At over twenty miles the spring of any known form fails to meet the requirements. If flexible enough to give good riding on fair roads at moderate speeds, the springs will creak with rough surface and faster pace.

"To meet all requirements the spring effect must automatically make enormous differences in its resistance and recovery effect, and must be helped by a powerful auxiliary, whose services will be called into action by the road level variation impact in the precise degree demanded by the special instance."

The ideal shock eliminator must meet the following requirements:

1. No restraint of the free, easy spring play on good roads, at any speed, or over moderately rough roads at slow speed.
 2. Below and above this normal or good-roads spring action the speed and distance to which the spring goes must be controlled automatically and in just the right proportion required by each individual shock.
 3. Practically all the excessive load and strain of rough roads must be assumed by the eliminators, thus leaving the springs to take care of the normal load only.
 4. The eliminators must be built on principles which will permit of the use of easy, flexible springs, for it is only when such springs are used that the greatest saving in tires can be made.
 5. They must allow an increase of speed over roads as they come, with an increase of comfort and safety.
 6. Must not require constant adjusting, refilling, oiling, or other attention. The working parts must be perfectly protected from mud and dust.
 7. Must have universal or ball joints to compensate for the bodyway on rough roads.
 8. Must prevent the springs from going too far up or down, but stopping them without shock, thus doing away entirely with rubber bumpers and straps.
- It goes without argument that a device which meets these re-

quirements must be of so much real benefit in dollars and cents, safety and comfort, that no man owning a car of any power over five horse-power, or capable of a speed above ten miles an hour, can afford to be without it.

Of the devices now on the market the one coming nearest the ideal can be judged by taking into consideration the medium used for control. Pneumatic or air, of which there is one. Friction and hydraulic, of which there are numerous designs. This medium, therefore, must be elastic in itself, so that under sudden stress it will, even when confined, give way to a certain extent. It must get out of the way entirely when so restrained (as on good roads) is needed. It must be capable of such manipulation as to automatically offer a constantly and instantly variable resistance, according to conditions as they occur.

This medium must be self-renewing without any attention from the car-owner, who, in fact, will forget that his car has these "insurance policies" attached, except when he occasionally admits to himself, after striking an especially hard bump or deep hole, that without them he certainly would have broken springs.

Eliminators constructed with these features will save at least twenty per cent. of tire and brake wear, and this is admitted by those who have had experience and are in a position to know.

Without eliminators nothing like a uniform speed can be maintained. The driver is obliged to apply his brakes very often as the crossings and other bad spots are met with. This means that a very destructive load is thrown on the tires, both in slowing down suddenly and in regaining the speed. The use of a proper shock eliminator, such as described, will save this wear and tear and loss of time.

These statements and others are proven by a series of careful and exhaustive tests recently made by Professor Charles F. Park, of the mechanical engineering department of the Massachusetts Institute of Technology. Among the large number of diagrams taken it is shown to the eye that over a bad stretch of ground there was 25.4 per cent. more average vibration to the car, at a speed of eleven miles per hour, without the eliminators than was the case when the same car was driven over the same road at a speed of twenty-five miles an hour with the eliminators attached. The passengers were tossed free of the seats at the eleven-miles-per-hour speed, but at the higher speed remained comfortably seated. The air we breathe is the only elastic medium which can meet the requirements laid down in the construction and action of the ideal shock eliminator.

GOOD ROADS AND THE NATION'S PROSPERITY

By COLONEL ALBERT A. POPE

A CURSORY perusal of the reports of railway commissioners, and of the data compiled by the departments of Agriculture and Commerce at Washington, would convince the most sceptical theorist that the agricultural and transportation interests of the United States overshadow in importance the manufacturing and all other interests combined. The question of our success as a nation depends not on what we can make, valuable as this element is, but on what can be raised from the soil and transported to the consumer at a cost that will not be prohibitive. Therefore it follows, logically, that our national prosperity hinges in a large measure upon the condition of the highways throughout the country; for if crops be abundant, labor plentiful, and money for transportation to be had at reasonable rates, yet if the roads cut off communication from farms to shipping points, the price of the produce becomes abnormally high, and what ought to be a public benefit becomes a national calamity.

Numerous tests, covering widely separated territories and varying conditions of climate and topography, have resulted in securing valuable figures on the traction resistance with wheels equipped with tires of different widths on macadam, clay, and hard-dirt roads, as well as on sandy and muddy ways.

The lines of inquiry in one experiment, including upwards of a thousand counties throughout the States of the Union, showed that the average length of cartage over country roads was slightly more than twelve miles, with an average weight of a little over two thousand pounds per load, and a consequent cost of about twenty-five cents per ton per mile. Although these figures are correct for the territory covered, they would, of course, be modified by complete data covering the entire country; but they are indicative of the general condition and cost to the farmer of transporting his produce.

Here, then, is the meat in the cocoanut, and the general question of supply and demand must take into account this unusual expense of transportation from farm to station. We would not for a moment permit the railways of the country to charge such an exorbitant rate. State legislatures and the Federal government would quickly intervene and prohibit it as a detriment to the people of America; but the grangers and others have for years past acquiesced in a practice that has robbed them of the comforts and, in many instances, the necessities of life.

While the national handling in a broad fashion of the entire good-roads question would redound to the benefit of all citizens, it seems essential that the farmers should be shown something of the direct profits that must come to them from the extension of good roads.

Several counties in one of the States in the Middle West were thoroughly ransacked under professional supervision, and the data

collected from intelligent farmers were carefully tabulated. When there were included such elements as economy in time, in force of transportation, and the reduction of the cost of wear and tear, it was estimated that each section of land with poor roads represented a loss of \$2432 per annum—enough to construct several miles of good highways. The increase in valuation of each section of land by the construction and maintenance of proper roads was from the same data estimated at \$2750, or about \$9 per acre.

Take an extreme supposition to the effect that in direct appreciation the farmer could count on no more than \$2 an acre. Is there any granger in the land who would not jump at the chance to meet his share of the tax for good roads, and reap this direct and many other indirect benefits therefrom?

On good roads heavier loads can be drawn, and drawn faster, and the difference between the selling price of produce when carried in a wagon over a smooth road for one hour and the price of the same produce transported over a rough road for three hours is sometimes the difference between profit and loss.

The benefits to be derived from a perfect system of communication would be felt by all classes of the community. The farmer reaps a better profit by having easy means of transportation from the farm to the distributing centers, and in like manner the inhabitants of large towns and cities are equally benefited by an economy in transporting the product of their labors to the rural districts.

Railway freights have been steadily reduced by the improvement of roadbeds and rolling-stock, to which work managers have applied all that science, experience, and invention have developed, and in like manner the expense of wagon transportation will gradually decrease as the condition of our highways is improved.

Roads should be so constructed that they will be passable during all seasons of the year, a condition of affairs that would add an element of stability and regularity to the trade of the country. As matters stand now it often happens that the wet season transforms roads into quagmires, causing produce to accumulate until drier weather permits its being hauled to the nearest station, which thus brings about a congestion of traffic because the railway authorities are unable to meet the extraordinary demand for cars. In this way some of its perishes and part is damaged, and, taken all in all, the value of the whole is materially decreased before it reaches the consumer, though the price to the consumer under such conditions is abnormally high. The farmer should not overlook the point that it is to his great advantage to be able to draw produce to the shipping point at a time when regular farm duties are least absorbing, and to have the advantage also of marketing produce whenever the price is highest.

The automobile has of late years become a most aggressive par-

tian for good roads, because each user of an electric or gasoline-driven machine has had an ocular and positive demonstration of the value of proper highways. He knows by experience that the car will run better and last longer when the road-bed is firm and the surface even.

When one considers that more than one hundred million dollars are already invested in motor-cars, and that the number of purchasers is being multiplied day by day, it is not difficult to form an idea of the influence automobiles are bound to exert toward the betterment of country roads. It is true that this machine brings in its train new and untried problems, even in the matter of road construction and repair, but it will bring, too, the successful solving of those problems to the great advantage of all users of the highways and to the community at large.

State aid and supervision for the construction and maintenance of good roads has been demonstrated to be a practical way of

securing the desired end. Federal appropriations will doubtless come a little later on, when we are to take up the consideration of such communicating highways as link together the State roads and form thoroughfares that facilitate interstate communication. Skilled work is as essential in maintenance as in the matter of first construction, and many of the States have recognized this fact and appointed highway commissioners, under whose supervision the legislative appropriations are expended, and by whom an annual report is submitted.

The cost of radical reforms, especially those whose results will bring greater benefits to our children's children than to us, should be borne, at least in part, by coming generations. This has in some instances been very wisely arranged, and the necessary funds raised by the sale of special bonds, to be retired in a term of years by a sinking fund. This is no burden to our posterity, but rather a wise and profitable investment.

COACHING COLLEGE RUNNERS FROM A MOTOR-CAR

By J. B. ROWLAND

It is to Courtney, the famous coach of Cornell's racing crews, that credit is usually given for the statement, "My crews are trained to the minute." It is worthy of note that such a statement should be considered of sufficient value to be treasured as a bit of quotable wisdom, for it is undoubtedly the goal to which all trainers strive. Considered as such, however, it is not surprising that its authorship should be accredited to a man who has had such remarkably consistent success in developing a winning brand of brains.

The training of a crew or team of athletes to compete as a unit is in many respects a far simpler matter than the task of developing numerous individual talents, the joint sum of whose independent efforts must be responsible for the success or failure of the venture. Where team credit is the important point the joint tasks of the individual, if not too serious, may be subordinated to

—Mr. J. B. Crooks, known in the familiar appreciation of the college vocabulary as "Josh" Crooks—with a scheme whereby he hopes to minimize the difficulties of these coaching conditions.

He has provided himself with a 24 to 28 horse-power motor-car, to the dash of which is attached a speedometer. With this combination he has been laboring quietly, but persistently, during the fall with his cross-country runners in support of one of his fundamental theories that a strong cross-country squad offers the finest foundation for a successful track team. If his track team is as successful during the coming spring as he has every reason to believe it will be, it is safe to predict that the automobile will thereafter play as important a part in the coaching of a track team as does the coach's hammer in the coaching of a crew, for it is a somewhat similar part that has been assigned to it. From a

The Dry-land "Launch" of Columbia's Athletic Coach

the development of the team as a team. The recognition of this principle—the relative importance, or rather unimportance, of individuality as compared with team ability—has of late become so pronounced that individual ability is recklessly sacrificed in favor of team-work. It is this that the tendency of football coaching has been to subordinate the so-called "grand-stand play," and to direct the aggressiveness of the individual where it will rebound to the credit of the team as a whole rather than to his fame as a single player.

When a coach, however, must develop, not the energy of a squad, but the capabilities of individuals for a contest in which the fault of one cannot be atoned for by the creditable performance of another, he may truly be said to have a task worthy of his best efforts. Such a task is the coaching of the runners of a track team. On the individual success or failure of each runner must depend the prestige of the Alma Mater for success or failure. Unfortunately, the inherent conditions for coaching of this character tend to increase rather than diminish the difficulties of the task. Your runner, entering a quarter-mile track, is, during the greater portion of the time, far from the watchful eye of the coach to allow of his detecting the subtle faults of form, whose inevitable appearance often means the difference between success and failure, whose success is most to be desired and failure most regrettable. It is perhaps largely on this account that consistency in the turning out of runners has not been an aliding factor in the athletic history of our college world.

Now, however, comes the athletic coach of Columbia University

position of vantage in the car, Crooks is able at all times to keep in the immediate proximity of the squad, so that he is prepared at any moment to direct such corrections in form or efforts as his trained judgment deems necessary, while by directing the chauffeur to hold the indicating arm of the speedometer at a designated point he is able to regulate the pace with absolute precision. He has thus, at one throw, overcome the two principal difficulties in the training of runners, the spitting of a fault at the moment of its appearance, and the direction and constant control of the pace.

Experiments in the method of training have served to show that while driving before the squad as a pace-maker is likely to render the men dependent upon the speed of the car for the pace, a scheme whereby this method is adopted at the start, and a change made during the course of the run so that at the finish the squad is being driven before the car, serves to develop the powers of endurance to their greatest extent. There is also great satisfaction in knowing precisely the capabilities of the various units which compose the squad, and this method supplies the desired information with a completeness that has not been equalled by any other, permitting a more intelligent direction of the light indoor work made necessary by inclement winter weather. Among the minor advantages which the use of the car has developed are the conveniences afforded for the carrying of sponges, restoratives, band-aids, and other paraphernalia which may be needed by the runners, to say nothing of the service it is able to render as an ambulance in case of a sprain or other injury.

THE ELECTRIC MOTOR OF YESTERDAY AND TO-DAY

By F. A. BABCOCK

WHEN I look back eight or nine years, and think of the first electric cars that were placed on the market, and how far short they fell of doing what was stated they could do by those that had them for sale, it is a wonder, almost, that any one ever could be induced to buy one afterwards. I do not think there ever was another line of goods precipitated on the public that represented so much money-value invested that was so utterly worthless, practically.

It now appears to me that pioneers in the electric line were ignorant of the shortcomings of their product, or they would not have placed on the market such large numbers of them as poor as they were. Of course the main trouble met with was the inability to do the mileage claimed, or anywhere near it. The reasons for not being able to run the number of miles were various.

"How much current does it take to run your car?" And the automobile builder (knowing little about storage-batteries and their capacities) put them in his cars, only to learn by sad experience that not half the mileage expected was obtainable. Was it any wonder, then, that they soon became very unpopular?

While the manufacture of storage-batteries had been carried on for twenty years or more previous to 1909, they had been used, principally, for stationary lighting and power work—work that was very steady in its requirements, and where the matter of weight per cell was not such an important factor as it is in an automobile. Is it any wonder, then, that the storage-battery, when put in an automobile, and called upon (as it was) to do entirely different work than it was built for, should fail to do it satisfactorily? And was it strange that the builders of storage-

A modern Electric Victoria—a Type of Motor whose Endurance Run and Speed Capacity have doubled within six Years

Batteries were not capable of holding the amount of current necessary, bearings and mechanical parts were poor and required more current than they should. Besides, motors were very inefficient, and drew heavily on the batteries, soon putting them out of business. So that everything conspired to the failure of electric cars at that time.

Battery-makers would, without a blush, guarantee that the battery they offered for sale would run the vehicle forty or fifty miles under any and all conditions, not deeming it necessary to ask,

batteries were all at sea, so to speak, at the unsatisfactory results?

In the past five years, and especially during the last three years, marked improvements that tend to longer life and greater mileage have been made by battery-makers. Added to these, the knowledge that has been gained in how to care for batteries in use has increased their value three hundred per cent.

While the storage-battery of to-day is giving good satisfaction, I look for many further improvements with the present lead bat-

try, and do not think any one need wait until Edison perfects his much-talked-of battery before buying an electric vehicle.

Just think of the great cab companies that were organized in almost every large city (for the transportation of passengers), and for vast sums: one in Chicago for several million dollars, another in New York, Boston, Philadelphia, and even in this city (Buffalo), and real hard money to the extent of millions paid in. And this before their practicability had been even slightly tested.

Several electric automobile factories were capitalized as high

as in order that they could be intelligently cared for. Manufacturers have learned that while a cheap gasoline-car can be built to serve the purpose for which it is intended, the same does not apply to the electric automobile. The "electric" must be good; nothing else will do. Good motors, good batteries, good controllers, good mechanical construction, good upholstering and painting are necessary or it will fail to perform satisfactory service. To put in cheap anything kills it, so to speak, for the user, and the great reason is that the class of people who purchase

An Electric Runabout of To-day that can make a "Century" Run at an average Speed of fourteen Miles an Hour on one Charge

as \$10,000,000, and money paid in before they knew what they could or would try to build. The promoters of some of these were either fools or knaves. Conceive, if you can, what the product of such enterprises would be, of necessity, be.

Again, we must consider the lack of knowledge shown by the garages and agencies everywhere as to the care and proper method of charging. The electric was looked upon by the dealer as somewhat of a "side-line," and no proper effort was made to learn its mechanical and electric make-up. If a sale was made, the purchaser either placed his vehicle in the dealer's hands for care, or else installed his own charging apparatus; and without practical experience on the part of either the dealer or the owner, it is not surprising that electric cars soon came to have a "black eye," and were held up to the public as a "horrible example" of what one should not buy.

Such a thing as learning how to charge a battery never occurred to the dealer as essential. Consequently, batteries were burned up by over-charging, or else were sent out without being sufficiently charged, and as a result were run so low that cells were reversed, thereby practically ruining the battery. Cleaning the commutator—a simple thing in itself, and one necessary to do on a stationary electric motor—was entirely ignored by the earlier users of the electric; and then they wondered why they could not get any speed or mileage out of their vehicle. Fortunately, all of these shortcomings, caused by ignorance, have been done away with, and the dealers and users of electric cars are learning that while the gasoline will "boiler" (so to speak) if anything goes wrong with it, the electric engine (motor) is unable to make its wants known in that way, but must be looked after regularly.

Is it any wonder that people became disgusted with the electric automobile?

No such conditions ever existed in connection with the gasoline-car. Good, hard-headed business men went into that line cautiously and conservatively, and failures have been few. The initial step taken by dealers in gasoline-cars was to equip the garages so that they could handle them properly, putting in such machinery and equipment as needed, and an efficient corps of mechan-

ic electric cars are of the best class, and logically are the most critical, for they have been accustomed to quality.

The "electric" is essentially the woman's car, not only because it is so easily controlled and operated, but also on account of its cleanliness. And the same good reasons apply to men as well.

When gasoline-cars were first put on the market in large numbers the first thought of the family was, "What fun we shall have taking long trips in the country." And for that purpose an electric would not serve, but they have learned by experience that seven-eighths of the rides they have time or the disposition to take are less than fifteen miles in distance, and the over-ready and clean electric is the convenient car for them to use.

The electric automobile is a "horseless" carriage, and will, in my opinion, remain so. It is not a machine, as is the gasoline-car, for there is little or no machinery to it. Therefore, it is wise, and, in my judgment, pleasing, to follow along the lines of the best in horse-drawn vehicles of similar patterns. The brougham, since Lord Brougham first designed it and gave it his name, has been and always will remain the same in general design, whether drawn by a horse or propelled by current from a storage-battery.

Can one conceive of a headroom or more comfortable—not to say luxurious—vehicle for "mileage" than the brougham? Next to it comes the landaulet; then the coupé (handic-driven)—just for two—ideal for calling or going to a dinner-party in, allowing one to dispense with the services of a servant (chauffeur), and giving freedom in that direction that one often longs for; no horse to get cold; no man to get cross, because kept out late, and a horse other good reasons that present themselves why one should use an electric automobile instead of horses. As a city carriage it has no competitor.

In 1900 the greatest mileage obtained by an electric vehicle from a single charge of a storage-battery was twenty-five miles, under the most favorable conditions. In 1904 a run was made several times from New York to Philadelphia (distance 95½ miles) on a single charge of the battery, and in a regular stock electric car, and with road conditions far from ideal. This shows the progress attained in the past six years.

YOUR bathroom equipped with **"Standard" Porcelain Enamelled Ware** is an absolute guarantee of perfect sanitation in the home. Wherever **"Standard"** Ware is installed hygienic conditions and immaculate cleanliness follow.

Its one-piece construction, without joints or crevices, insures immunity from the accumulation of impurities. Its snow-white surface prevents the adhesion of dust and dirt. Its iron strength and china smoothness are an assurance of life-long service and make it the most economical ware to install.

Our Book, "MODERN BATHROOMS," tells you how to plan, buy and arrange your bathroom, and illustrates many beautiful and inexpensive as well as luxurious rooms, showing the cost of each fixture in detail, together with many hints on decoration, tiling, etc. It is the most complete and beautiful booklet ever issued on the subject, and contains 200 pages. FREE for six cents postage, and the name of your plumber and architect (if selected).

The ABOVE FIXTURES, No. P-29, can be purchased from any plumber at a cost approximating \$45.50—not counting freight, labor or piping—and are described in detail among the others.

CAUTION: Every piece of **"Standard"** Ware bears our **"Standard"** "GREEN and GOLD" guarantee label, and has our trade-mark **"Standard"** cast on the outside. Unless the label and trade-mark are on the fixture it is not **"Standard"** Ware. Refuse substitutes—they are all inferior and will cost you more in the end. The word **"Standard"** is stamped on all our nickel-plated brass fittings; specify them and see that you get the genuine trimmings with your bath and lavatory, etc.

THE GASOLINE CAMEL OF THE AMERICAN DESERT

BY BARTON W. CURRIE

DRAWINGS BY F. STROTHMANN

"I WISH to hire a car for two or three days to take some friends to my lode-picking claim. It is just across the Atlatzian Desert. In some spots the sand is deep, and there is a 4000-foot elevation in twenty miles. Altogether, though, there is only thirty or forty miles of bad going in the hundred. I will send extra tanks of gasoline and water as we cut away from the main route. It would also be wise to carry surplus tires. What's the damage, pal?"

"One thousand dollars."

"Easy. You're on."

The bulging express—a long range car, with big wheels and high clearance—had just brought in a little party of four from Goldfield, an even seventy-eight miles from garage to garage of the motor-stage company.

It was a burning day. The indoor thermometers scaled well above 100. Outside, dust that stung like lime-powder, drove about in eddies and spiral clouds. The express had boomed down the trail, her tabbled horse wheezing a nasal salute in a thick smolder of alkali. The vermilion body of the car was coated a ghastly

white. The faces of the passengers and driver seemed ingrained with chalk; under their goggles the whites of their eyes, cut by the dust, glinted like dull edges of flame. Jumping from the car, one of the party signalled the agent of the automobile station to follow into the Blondo Kid saloon. While sparkling drinks were gulped down thirstily the above brief dialogue took place.

The largess was made as casually as one would hire a hansom on Broadway. Yet this was in a corner of the world where, until a few years ago, the pale stars of heaven have looked down for ages upon neither man nor beast.

Then there had come the intrepid gold-bunters, with their mule-teams and water-bags; some to locate dykes of precious ore outcropping from mountain and desolate valley dip, others to hose their way and, wandering in narrow circles, drop by their exhausted animals and die beside them of the excruciating thirst of the desert that has made scores who were saved babbling madmen.

Now the snorting automobile whirled along these arid wastes in the ceaseless treasure quest. The modern gold-seekers could not wait for railroads, and lost patience with the tedious stage route. So they have installed the Benzine Bus, as southern Nevada calls the big heavy-bodied touring car. In every camp for hundreds of miles in the lower half of the third largest State in the Union you will hear the clatter and rattle of motors day and night. Should you go up in a balloon after the sun had gone deep to rest behind the California Sierras you would see all over the ocean of desolation beneath flashing eyes of searing invisible insects moving swiftly in many directions.

Hundreds of cars are employed in this way. They have conquered the barren gold-fields, annihilating distance, overcoming the hardships and tortures men and animals suffered in the earlier discoveries of the untimbered, unwatered treasure mountains. They are not the tops of science-loving millionaires down there; the hated juggernauts of over-peopled cities; the pests of the humble, conservative farmer—rather they are the new tools of conquest. Expensive tools, to be sure, but what is expense to the folk who are gripped by the lure of gold and spend lives and fortunes in the hunt with grim ferocity.

Experienced motor-drivers on the desert are better paid than many bank presidents in small communities. Gasoline is seventy-five cents a gallon, but water has often been sold to the desperately thirsty prospector for \$50 a quart.

Who brought the first automobile into southern Nevada is a vigorously needed question in the new camps. You will find claimants to this distinction in Tonopah, Goldfield, Bullfrog, Hearty, and Rhyolite. These towns (some of them have almost the population of cities) are strung along, north and south, for more than one hundred miles. Several score cars traverse the new motor trail, that keeps them together, with punctual regularity every day.

One of the original settlers of Tonopah told me last fall that a kilduck came, as far as he had observed, arrived simultaneously. In his opinion they were brought down to the new bonanza country by a San Francisco salesman, who was speculative enough to take the same chance with them he would with alarm-chicks. He sold them all in a day, and went back for another consignment. Then some one introduced the fad of motoring all the way from the Pacific coast to the desert, and many more machines arrived in this way.

The Benzine Bus has done for the desert what the steamship did for ocean travel. It has concentrated widely scattered mining centres that were formerly vague and distant from one another because of the difficulties, hardships, and perils of travel by stage and burro over the rugged sand wastes, through boulder-clogged ravines, and over flatter flat dry lakes, from which the summer sun seems reflected in shimmering waves of flame and white heat.

What was only a few years ago a day's journey is now only an hour's skin. Yes, and there are hundreds of miles of automobile

Drawn by F. Strothmann

You experience what the desert can offer in the way of "Thank-you-nams"

speedways. Not of the metropolitan or boulevard sort, of course; and the method of construction has not attracted any road builders to the country, though some of the wilderness thoroughfares are as fine as Roman roads.

For the most part they are made by the simple device of running a few cars over the most likely line of travel along the dips flanked by the naked hills. Once pressed down in even ruts the sand hardens to a granite durability. Generally the line of direction was established between the already well-settled camps by the early stage routes and burro-trails. But the motor-car did not use the roads followed by the big wagons and trailers, freight-laden and hauled by teams of twenty and thirty mules. The more primitive vehicles sank deep into the sand, and the shuffling wheels sifted drifts of dust to both sides.

For a fast-moving gasoline-driven car such a trail was impossible. Therefore the harder spots and sun-baked mud lakes were selected, making the going sure and facile. The first batch of motorists to appear began running between Tonapah, Goldfield, and Manhattan, and threading innumerable prospect trails all about the country circling by these camps. The successful auto-enters have their own cars, with which they dilt about with parties their dancing circles have attracted from afar. One of these machines has been nicknamed the "Suckers' Steamer," and another "The Good-thing Carryall." These autos have been of immense value in selling "dead holes" and "barren drifts."

It is as impressive proceeding to be whisked away through the stifling silence of the desert in a high-power automobile, luxuriously disposed in leather cushions, smoking a gold-banded pipe, and giving a ready ear to tales of golden marvels. More than one canny Easterner ran back with pain to a Nevada motor-journey, in which he was spun into a fine web of sham and had his fortune robbed by a wild-catting spider.

Though the Tonapah and Goldfield Railroad runs one train a day between these two camps, the two dingy, saved-off cars of the nine-cent-a-mile corporation carry few passengers. Hustling Nevada folk prefer paying \$5 for the thirty-three mile auto express, making the distance in a few minutes more than half an hour, and saving one hour and a half. Now it is possible to travel entirely by automobile from Tonapah to the new camp of Greewater, making an intermediary run from Goldfield to Bullfrog.

The Bullfrog express from Goldfield makes the journey of almost eighty miles in a little more than three hours, if no tire trouble is encountered. There are water and gasoline stations all along the trail; also tiny road-houses that loom up like hermits' cabins in the waste. The distance from Bullfrog to Greewater, California, just over the Nevada border, and fringing close the edges of Death Valley, is peculiarly the same as from Goldfield to Bullfrog. The going, however, is far more difficult, as yet most cross that grim ridge of purple hills known as Funeral Range.

Until you reach the bones works at Furnace Creek, an eye-arresting little oasis on the rim of Death Valley, you do not see a green thing—only sea and gray sage-brush and the cowering Joshua-tree, whose twisted branches resemble a cluster of Mothman's curls. On a moonlight night these stunted growths stand out on the plains like writhing ghosts, and cast long, wriggling shadows across the trail.

There are many stretches of sun-blistered sand-plats, where you will motor for miles without even a glimpse of a Joshua tree. In occasional sheltered spots you may find growths of wood and chamisal. On either side there will be so restless monotonies of stark and naked hillsides. In the utter silence the engine of the car becomes a mighty instrument of torture. Always, after a smooth run, sand-drifts roll up like oncoming billows. Then you have experience of what the desert can offer in the way of "Thank-you-marms." Having passed a rough sea of hummocks, hump and breathless, you shoot down grade onto a dry lake, flat and unyielding as asphalt, and not a whit more dusty than the pavement of many cities. Here you may safely go on three speeds and see the wing of your speedometer jerk up to 60. On one of these dry lakes below Goldfield the local motorists are planning an automobile meet for next spring, and hope to draw entries from all the gold-camps for hundreds of miles about.

Rain is mighty scarce, and showers rare down there in the

Drawn by F. Stockman

To be caught in one of these cloudbursts in an auto is vastly uncomfortable

borderland of the Amargosa and Great American deserts, but they are as treacherous in their way as the mountains and waters. They will wipe a splendidly beaten auto speedily out of existence in a few minutes. These showers come up with great suddenness. A mammoth black cloud will walk right across the sky and shadow a black curtain from hill range to hill range. Then the subtle canopy will break in great rents, releasing sheet walls of water. Wherever there is a gully or indentation on the mountainside a river will shoot down with foaming waves. Like great mist-shrouded serpents they will go twisting across the flat, gouging out the sand to a depth of from two to four feet, and rolling about rocks and boulders with a dull, rattling noise.

To be caught in one of these cloudbursts in an auto is vastly uncomfortable. You can think of no other shelter than crawling under the car, and then one of the made-in-a-moment rivers is apt to plunge after you, beat you with its water, and fill your lungs with its arsenic mud.

Once the sun comes out again you are quickly dried, or rather scorched dry; for the moisture in the air will give the desert sunbath a furnace intensity. Probably an hour afterwards another car will come shooting along the trail and stumble into dry ruts and gullies where foaming torrents had been. Incidents of this sort raise havoc with tires. Often in the big camps you will see a lumbering machine clatter up the roadway with both front

Drawn by F. Stockman

He had seen an entire range of hills peopled with hippogriffs, pterodactyls, and hairy mammoths of gaudy color

tires gone and the metal rims bent all out of circumference. It is far from joyous riding in a crippled motor through that wilderness, be it day or night. By day you have the consuming sunlight, and at night black balls of shadow that blot out all the world except a few blinking stars overhead.

The hills of this agreeable altitude are only beautiful when the rising or declining sun robes them in a purple that has the soft sheen of velvet. More often they are drab or tawny, looking like great calcined mounds; gloomy and terrible in their aspect of external death.

Once, while crawling along in the Bullfrog express, with only one battery sparking feebly and a punctured tire flapping behind (the third that had blown up in twenty-five miles), a strange mirage sprang up before my eyes like a luminous curtain of steam across a distant mountain-top. A huge figure of unearthly and unnatural whiteness was crawling over the rocky shoulder of the hill, seemingly picking its way on a white ribbon of a mile trail that led off to an isolated mine fifty miles beyond. In shape the apparition was like some of the reconstructed monsters of the Mesozoic family. It had many feet, a vast tail that whisked about amid clouds of dust. The head bobbed in an appalling red blotch, glistening with what I fancied were tongues of burning flame.

The terror of the strange mirage had just begun to strike in upon me when it suddenly vanished, and left the mountain again a blighted, forbidding monument of an age when world is crashed together in volcanic labor. The driver of the car smiled sagely when I told him of the mirage. He said mine was a mild fancy. He had seen an entire range of hills peopled with hippogriffs, pterodactyls, hairy mammoths of gaudy color, and tangled clusters of snakes of prodigious size.

"It's this one-color scheme of hill and desert," he said, "and the glare of the sun. Some passengers, old-time gold hunters, told me that these mirages were actual photographs of cloudballs—huge desert hordeas you find in the Death Valley region—and other crawling things. It's a trick of the atmosphere, they said, to slide these pictures across the sky from a hundred or more miles away. That may be, but I doubt if they would ever be magnified to such an extent. Other mirages—upside-down pictures of whole towns, automobiles, and the like—I've seen plenty. Thirst-maddened prospectors perpetually see mirages of springs and water-holes. But none of these, as far as I can learn, are magnified to any great extent. Then, what should the little wriggling things be? Nix. It's either germs in your eye or the heat."

The southern Nevada automobile, however, is not for the poor man. The humble prospector, with a modest grub-stake, can still be seen trekking hill and plain as solitary as the Wandering Jew. His transit equipment is usually a team of mules or a tireless little burro.

A single fare in the Bullfrog express is \$25, one dollar for every three miles. At Tonopah you can rent a car by the day for from \$100 to \$200, according to the capacity of the machine and the

nature of the journey. From \$50 to \$100 extra is demanded when the trip is to be made over little-travelled trails, along which there is no water or gasoline. On the regularly travelled routes there are gasoline stations, and a telegraph wire that may be tapped whenever aid is required. Parties of prospectors often go out prepared for a week's stay in order that careful examinations may be made of remote properties and a deal closed without farther tedious hickerings. Quite frequently a mine-operator will tell you how he paid for his new machine in a day, either in a race for a claim or in the sale of a prospect to which he, as agent for the owner, rushed his party across wastes and through mountain passes, beating out other agents who were negotiating the same sale.

Whenever a new hill range or valley dip is revealed as rich in treasure there is furious activity in mining-camps. Cars are overhauled and geared up to their best for an endurance-run of perhaps one or two hundred miles. Accessories of comfort—hoods and other gear not emergency-needed—are cast aside as boatswain and jettison from a ship, whereupon the stripped machines charge out of the big diggings like racketing racers getting away from the line at the Vanderbilt Cup Race. Men like Charles M. Schwab, the Comstock of Milwaukee, Senator Clark, Iheims, and many other millionaires, who are investing heavily in Nevada mining operations, have their agents stationed at various points of vantage on the desert, ready at almost a moment's notice in mount their *besiege* steeds and get in the running for some new field where a big strike has been made. In this way the very best properties are secured under option by the men of great means.

When the Walker Reservation was opened in Nevada last October a veritable phalanx of automobiles stood waiting on the line, their throbbing cylinders hammering in mighty chorus. At the signal of the government agent there was a thrilling dash around the border of Walker Lake, which in some aspects resembled a chariot race, for there were several bad collisions.

There were many really "woolly" features to this race. Tires were punctured with rifle-balls. There was considerable bloodshed. Prospectors on ponies got into the running with the motor-cars, and the mounted gold-hunters were *dead-shot* when it came to pinning a tire. The small force of Indian police was utterly helpless to preserve order, though they made a few arrests and headed off several crippled automobiles.

There was a great stir in southern Nevada over this Walker Reservation incident, and such a potter was made about the unfair advantage taken by the motoring prospectors that the government declared the opening off and set a later day, when a troop of United States cavalry will go down into the desert to see that there is no claim-jumping, squatting, and unnecessary bloodshed. The charge was made at the time that government engineers had located the richest claims and marked them so that confederates could dash into the reservation in fast automobiles and grab them.

THE GREAT-GRANDSON OF THE PRAIRIE SCHOONER
THE RETURN FROM A PROSPECTING RUN ACROSS THE NEVADA DESERT

DRAWN BY FRANK TENNEY JOHNSON

THE LEGSLATIVE NEEDS OF THE MOTORIST

By DAVE H. MORRIS

Ex-President of the Automobile Club of America

AUTOMOBILE legislation is about as far behind the mechanical progress of the vehicle as a one-cylinder car is behind a high-power racer. Probably no industry in America ever made such rapid strides in so short a time, and yet in New York State alone, where the registration of cars exceeds that of the whole of France, the control of automobiles on the public highway is vested in one awkward, cumbersome statute, framed in the first year these senseless vehicles were used to any appreciable extent. This statute was added to three seasons later, since when the law has not been touched, despite the fact that probably few of the legislators who created it ever saw an automobile, let alone having ridden in one. The statute has practically been allowed to stand a law in two parts with two different interpretations. In the first part speed is left to the judgment and discretion of a reasonable driver; in the second, in the judgment of the police on the miles-per-hour limitations. As a result, automobiles cling to one and the authorities to the other. The magistrates support the police, probably because up to now it has been the popular end of the argument, just as the protest of the automobilists has been the unpopular one. The owner or driver nowadays who thinks he has a good case and attempts to prove it in court has about as much show of a verdict as the stage villain to the favor of the gallery "goes." No matter whether the road be level and straight, travelers few and houses far apart, the driver must not increase his speed beyond the miles per hour allowed, even though his car at thirty miles an hour is under better control than a horse traveling at ten. Let him attempt it, and straightaway he fetches up in a police trap.

If you are in a good humor when waiting for the local J. P., ask the constable where he got his interpretation of the law. The chances are it was "orders" from the town board or the village squire. It doesn't bother him much, anyway, where it came from. Down the road in the next township catching "speed violators" of a Sunday or summer holiday yields the boys "as high as \$200 a day, and makes the job of constable of the country in townships." If Constable Smith is crapping a harvest, why shouldn't I?" argues Constable Jones. In the city the bicycle cops and the traffic squad make their arrests under orders from the desk. It is not up to them to reason why? "Exceeding the speed limit" is the charge, and either way. Reasonable driving is not taken into consideration, and under the police interpretation of the law there is no escape from paying an exorbitant fine. At the same time a reckless driver can force his way through the crowded streets in the heart of the city, he is actually subject of a nuisance to traffic and still be within the law and safe from arrest. We never find the police hunting for speed violations on the narrow pavement downtown. Why? Because under their interpretation of the law there can be no violations here. Upon their theory the most dangerous places are the safest, and the safest the most dangerous. Such is the statute that governs this traffic in the State of New York. The law is crude, unfair, and impracticable. It does not meet the ends for which it was designed, and any law whose real object is not accomplished is a bad law, and will fall utterly through lack of proper support and the respect of the people.

Nevertheless, while the position of automobilists at present is a galling one, the situation is far from hopeless, and we look to the motor car to win its own way towards reform. The benefits of the industry which it has established—good work for the workman and good roads for the farmer, uniting of the classes in popular sport and means of transit—all these things are changing public opinion. The automobile is no longer considered the toy of the rich, but a vehicle of utility and recreation. In price it is coming within reach of those with ordinary means, and already has made itself a necessity in the administration of municipal affairs. If automobiles can forward the cause of good roads, it logically follows that automobiles can influence legislation for a better control of these roads and the administration of justice upon them.

Diligent search of the statute known as the "Highway Law" passed in 1881, amended 1901, will find a passage which reads as follows:

"No person driving or in charge of an automobile or motor-vehicle on any avenue, street, or highway shall drive the same at any speed greater than is reasonable and proper, having regard to the traffic and use of the highway, or so as to endanger the life or limb of any person."

This act of the Legislature of 1881 was the first law passed in the interest of automobiles, and embodied the old common-law rule given above. Later on May 3, 1901, the Legislature added to it by passage, what is called the "miles-per-hour" clause, providing that in the built-up portions of the town the speed of automobiles should be restricted to ten miles per hour, in those districts not built up to fifteen miles per hour, and outside a

city or town to twenty miles an hour. Approaching a descent, curve, turn, or a bridge, and in ascending bridges, a speed of forty miles is specified. The common-law clause, above quoted, was left intact, and is just as much a State law today as the "miles-per-hour" addition. Yet, to the authorities it might just as well never have been written. The man who drives his car, say, thirty-five miles an hour on a wide stretch of open country road, "having regard to traffic and safety of life," is, according to that clause, perfectly within his right, and travelling at a speed which is entirely proper. Neither he nor the occupants of his car has any more intention of trespassing than passengers in a Pullman or coach to a distant destination. They are not afraid to do injury to others, but to use the public highway for travel and recreation, which should be their right. What if they are taking advantage of the smooth, hard road-bed and "making time" with a high-power car the owner is able to move faster than the farmer's gig. Both are bent on the same intent, however, and making the most of the good going. While the man in the automobile may travel faster, his means of transit are under better control, and less likely to do injury either to people along their road or the occupants of his respective vehicle. To speed in the open country is not harmful. In nine cases out of ten the driver caught in a police trap has not been reckless, nor is he an object of danger. He is arrested simply on the "miles per hour" regulation, and himself and party subjected to discomfort, in consequence, loss of valuable time, and often to gross indignities. Nothing but such affronts as these to innocent people, and also, no doubt, the enrichment of the constable's pocket, are accomplished by the "miles per hour" regulation in the country, while the common-law clause is openly violated in the crowded streets of the city. What danger really exists, and where no effort is made to check it. We never hear of police traps in downtown New York, nor special bicycle cops or automobile details stationed here to make arrests. How many automobiles turn the corner approach crossing Brooklyn Bridge at four miles an hour or run between blocks on the lower end of town at a rate of ten?

"They can't break the law down town," declare the police (having in mind only the miles-per-hour regulation), in defence. "Traffic is too thick. It's impossible."

Not a word about the danger? That isn't considered. The guardians of the law banish to the crowded streets, and particularly to the "avenues," where the common-law clause says one may drive at a speed that is "reasonable and proper, having regard to the traffic and use of the highway, or so as to endanger the life or limb of any person." In these "streets, avenues, and parkways" arrests upon arrests follow in rapid succession.

"My car was under perfect control," protests the driver to the magistrate. "I could stop it in less than its length. There was a clear, unobstructed street before me, and not a pedestrian in sight."

"The officer says you exceeded the speed limit," declares the court. "Under the circumstances your argument is of no avail."

Thereupon the driver of the automobile—an intelligent, law-abiding citizen, and an expert in handling his machine—is fined \$25, or \$50, as the case may be, and if he hasn't the money, is forthwith committed to jail.

Is a law which will permit such unjust discrimination a good law? Automobilists and their friends do not believe that it is. They comprise a rapidly growing community of taxpayers, who, in respect of their business standing and integrity, command respect and attention. They demand, and they will receive a fair and impartial hearing. They believe that no law contrary to the spirit of the public will stand, and they are petitioning now that the whole subject of automobilism be investigated for report and recommendation as to corrections. In England a Parliamentary commission appointed by the King has recently recommended that the "miles per hour" regulation, which also exists in the old English common law, be abolished. I, for one, would like to see automobile traffic regulated by a commission which should have the right of the licensing and registering of cars, with a court of appeal for owners or drivers whose licenses have been revoked.

As to a substitute for the present law, automobilists ask, in the first place, the abolishment of the "miles per hour" regulation, and the enactment of a new statute, which, while prohibiting reckless and dangerous driving, will encourage the use of judgment and discretion. To protect the public against an abuse of this latter privilege the law could require all chauffeurs to pass rigid examinations before they may drive a car. Such an examination would remove from the highway that undesirable element which has already done so much to place the sport in such jeopardy. The proposed examination, to be effective, should require into the mental fitness as well as the mechanical ability of the applicant, and as to be severe, in fact, as the examination

(Continued on page 126.)

THE DEVELOPMENT OF THE ELECTRIC AUTOMOBILE

By M. J. BUDLONG

NOTHING more forcibly illustrated the success of inventive genius in transforming forces which exist in nature into practically applied mechanical power than the automobile.

The motor-car must be constructed to withstand a greater variety of shocks and strains than least any other self-propelled vehicle. The locomotive-engine is self-steering, and runs on an always even roadbed, and the motor-car must be steered by hand over driving surfaces that present all manner of depressions and small obstacles, and the same applies to a comparison of the trolley-car and the automobile; and the engine of a motor-boat has to overcome a constant resistance which makes it a simple affair beside the engine of a motor-car, which one minute has to be pushed to the full amount of its horse-power, and the next minute held back with all the force of its braking system, so that its engine has to meet constantly changing conditions of use.

The question as to the best type of power to be employed in a motor-car has been discussed for many years, and the latest practice recognizes three standard types—gasoline, steam, and electricity. The first, in the opinion of the writer, is the one best adapted to general use, and especially for long-distance driving and touring. The special purpose of this article, however, is to advocate the claim that electricity is the best power for cars to be employed in a certain limited but well-defined and important field of use.

Some aptitude for mechanical works is pretty necessary on the part of the driver of a gasoline or steam car. It is true that a

A Modern Electric Hansom

An Electric Runabout which has run 40,000 Miles.

great many men who are far from expert in the use of tools, and very far, indeed, from a complete understanding of the construction of their cars, operate them with a high degree of success; but in order that the driver may expect a minimum amount of trouble, he must have some facility at simple mechanical operations, and this virtually restrains a great many would-be motorists from purchasing cars. It is this class who find their wants and needs so fully met by the electric car as to give it a very important place in the automobile field. The electric is thus the only practical car for a large class of pleasure drivers, for the requirements of a great many physicians, for ordinary town runabout work, for various businesses, for private carriage service in cities, and, indeed, for every purpose where it is undesirable that the driver give steady attention to power generation and the working of a considerable number of mechanical parts.

The field of the electric car has been greatly enlarged in recent years by continued improvement in batteries, by the development of public garages, and by the increasing availability of private charging plants.

When we consider what the electric car really is and what it does, we must admit that it perhaps affords even more remarkable proof than the gasoline car of the resources of modern invention. Through the successive agencies of fire, boiler, engine, dynamo, and storage-battery, potential energy derived from the heat of the sun

and stored in coal is converted into motive force, and its application to the driving wheels of a vehicle reduced to extreme simplicity. By the manipulation of a single lever the operator has this power under full control, but with the transmission of forces involved he has had nothing to do, because experts in various fields of activity have attended to everything. The power is in the battery ready for use, and it is only necessary to cover the supply from time to time as occasion may require. We have in the up-to-date electric car a machine that seems very nearly perfect in its working, and so simple that any intelligent child can be trusted to operate it safely.

Back in 1896 one of the pioneer American concerns in motor-car manufacturing gave out that after several years' experimenting it had passed the gasoline stage and settled upon the electric storage-battery as the best means of motor-car propulsion. For a time thereafter this concern manufactured electric cars only, but soon found it desirable to add gasoline models to its product, and it has since manufactured both types with great success. The history of the company, and of other makers in the electric field, has shown that the rapidly increasing popularity of the electric carriage during the past three or four years has been due to the growing recognition of its desirability as a substitute for horse-drawn vehicles in

The Development of the Electric Opera-bus

What the Electric Victoria offers in Comfort

the lines of usefulness indicated in a preceding paragraph. The gasoline-car occupies a field not filled by previously existing modes of conveyance, and, if it is to be compared at all with earlier modes, should be considered in its relation to long and short distance rapid-travel system, rather than with reference to its bearing upon the use of horses.

The storage-battery is entirely independent of the electric car proper. It can be removed or replaced as easily as a horse can be hitched to a wagon and unhitched. The parts of a well-built electric car are few and simple, and of great durability. Electric carriages are giving good service to-day which have been running constantly for ten years. Of course the batteries have been renewed when necessary.

A great many people seem to have the idea that the storage-battery is a very frail and unreliable piece of apparatus, subject to ills and whims which make it unworthy of confidence. This opinion has been furthered by various spare-writers in newspapers, who have periodically published sensational articles predicting the early coming of wonderfully improved batteries, destined to revolutionize the motor-car industry.

These predictions have at times unquestionably adversely affected the sales of electric cars. As a matter of fact, the leading manufacturers have been constantly on the lookout for battery improvements and adopted them as fast as anything real and tangible in the way of bettering previous constructions has been developed. The light-weight lead battery now in vogue is thoroughly reliable and efficient. There is nothing mysterious in its make-up or in its operation, and if a few simple instructions are followed it will give perfect results within its radius of action. Those who have had the most experience with batteries know that in practically every case where trouble occurs it is solely due to carelessness or unskillful handling. If a steam-boiler is allowed to get out of water, and the tubes burn out, no one thinks of blaming the boiler. If a gasoline-car is run without lubrication and ruins its bearings or cuts its cylinders, the operator and not the engine is held responsible for the trouble; and yet, if the charge in a storage-battery is allowed to run out, to the detriment of its plates, wholesale condemnation of storage batteries sometimes follows, without any thought as to the actual cause of the failure. Storage-batteries for motor-cars, as now manufactured, are capable of withstanding

hundreds of discharges before renewal of any parts are necessary, and cars have been run upwards of 8000 miles before any repairs to their batteries were called for.

One of the most important recent improvements in connection with motor-car use pertains to the charging of the batteries, which has been reduced to such extreme simplicity that no technical knowledge whatever is necessary on the part of the person who conducts the operation. Wherever there is electric current to be had, whether alternating or direct, a simple device can be installed in the room where the car is kept, which automatically takes care of the charging, the operation calling only for the insertion of the charging-plug. Formerly charging was more difficult, as only a direct-current circuit could be employed, and the charging had to be stopped by hand when a sufficient load had been given the battery. This new apparatus stops the charging automatically at the proper time, and also, when necessary, transforms alternating current into direct current before it is fed to the battery.

The great possibilities of electricity as a motive power for vehicles are perhaps most advantageously shown by the unqualified success which has attended the use of electric carriages of the coach type. Electric broughams, landaulets, and hackneys have demanded and won from an undiscriminating class of users a standing and recognition accorded to no other form of vehicle. These carriages take the place, for town use, of an ordinary carriage with three changes of horses, and cost less to maintain. They are always ready when wanted, are always under perfect control when in motion, and when standing require no attention. The average speed is much higher than that of the horse-drawn coach, greatly extending the convenient radius of business shopping, or calling tours. They occupy only one-half the space of the horse-carriage, and therefore are one-half less liable to become entangled or delayed on crowded thoroughfares. They are adapted to comfortable use in all kinds of weather, and on all kinds of street surfaces. They do away with all the uncertainty and inconvenience incident

An Electric Landulet

to the use of horses. These advantages have become so thoroughly understood and appreciated that many owners of fine horses keep their electric carriages for use in the evening and on days when extreme cold, storms, or key payments make it undesirable to expose valuable horses; and others have entirely abandoned the use of horses for town service, reserving them for their country places. There are no more staid and elegant vehicles in the world than these electric coaches of the best grades which are intended for private service only, and are built from plans and specifications representing the expressed desires of purchasers who demand and have the best of everything. They are always clean, noiseless, and free from vibration; their body lines are based on considerations of both art and utility, and their furnishings and appointments are of the most elegant description. There are electric lights outside and inside, electric annunciators, electric cigar lighters, and, when desired, electric fans and foot-warmers. In fact, the electric current is utilized in every possible way to promote the convenience and comfort of the occupants. The various mechanical features used in the application of the motive power represent the results of years of experimenting by leading electrical and mechanical engineers. The controller is so arranged as to give several speeds ranging from four to eighteen miles per hour. There are safety cut-out switches, and effective braking arrangements which insure perfect control by the driver at all times. The use of these unostentatious, serviceable, and luxurious vehicles is rapidly increasing in cities, and their production has become one of the most important features of the motor-car industry.

Some of the lighter electric carriages, seating two people, are also in their way marvels of design and construction. They are "smart," fast, and of very high efficiency, the best of them being able to run seventy-five miles under favorable conditions on one battery charge. Those of the victoria type are the most popular. By reason of their refined appearance, comfort, elegance, and simplicity of operation they are admirably adapted to ladies' own use.

The Electric Phaeton of To-day

THE HORSE OF THE FUTURE AND THE FUTURE OF THE HORSE

By WINTHROP E. SCARRITT

WHEN the Roman eagles' wings were longest and strongest they never flew so far as from Boston Bay to Alaska. Such, however, has been the progress in the transportation facilities during the last century that Boston and Alaska are nearer together in time than were Rome and Jerusalem in the days of the Caesars.

At the annual banquet of the Automobile Club of America, a year ago, among its honored guests was that great man to whom the civilization of all coming ages will remain a debtor, Alexander Graham Bell. After we had discussed the telephone he turned to my hobby, the automobile, and expressed his keen interest therein. Concerning the automobile I made a declaration which I think rather startled him, but to which he cordially gave assent after a little reflection. The declaration was this, that until the coming of the automobile the human race had made absolutely no progress in the transportation of the individual unit of society since the dawn of history. It is true by his genius man had succeeded in capturing the very gods of the ancients and had harnessed them to his big chariots, but the ocean greyhound and the limited express train transport masses of freedom and speed or numbers of individuals. But so far as transporting the individual unit is concerned, until the coming of the motor-car man had no other or different means of transportation than did the ancients when the human race was first cradled on the banks of the Euphrates. When Homer's sagas and the Greek fables on the banks of the Aegean Sea, their horses and their chariots were just as fine and efficient as any we see to-day on the Champs des Elysees or Fifth Avenue.

In the last analysis the automobile means that man has finally segregated a little part of the giant forces of nature and harnessed it to his individual chariot. What human mind can measure the meaning of this mighty fact! Looked at from this view-point the automobile passes out of the realm of the fad and the toy, takes on new dignity and appears upon the scene of twentieth-century activities as one of the great economic forces to be dealt with seriously and which is to play a mighty part in the work of the world and in the advancement of civilization.

Doubtless a vague and indistinct idea of the horseless carriage has been in the mind of all civilized people. On one old Egyptian monument was found a rough carving of a vehicle which had for its motive power a repellant jet of steam. A few centuries later one of the Roman emperors had constructed a vehicle the propelling mechanism of which consisted of a system of springs and wheels. Slaves ran along by its side and wound up these springs from time to time. Sir Isaac Newton planned an automobile, but I do not think it was ever constructed. That great mystic teacher, Swedenborg, wrote to his brother on one occasion that he was planning a harp that could be played with keys, a harp that could travel under water and destroy the enemy's ships, and a vehicle that would run without horses at twenty miles per hour. More than a hundred years ago a French army officer by the name of Cugnot built a self-propelled vehicle which was used for a gun-carriage. It ran away and smashed itself against a stone wall. Later he built another, portions of which are still to be seen in a museum in Paris. In 1820 some Englishmen built steam-propelled omnibuses, and they ran thousands of miles, carrying passengers for pay. The rather suggestive name of one was "Antelope."

Gottlieb Daimler, a German engineer, is called the father of the modern automobile. He devised and built the first successful motor. This motor was taken up by the French firm of Panhard & Lervaux, whose products have since become known all over the world. Daimler's first engine was built only twenty years ago. Somewhere else in history has there been witnessed the development of a new industry so rapidly and to such an enormous extent. What of its future? Before proceeding to this discussion it might be well to consider some of the problems involved in the production of a successful automobile. The locomotive is the product of the concentrated effort of many of the world's best engineers during the past seventy years, and it is yet far from being a perfect piece of mechanism. The problems involved in constructing a successful locomotive are always less than those involved in constructing a successful motor-car. It makes but a little difference whether a locomotive is a few pounds heavier or lighter; it is built to run upon parallel steel rails, the curves and grades it has to negotiate are at the minimum. It is known in advance of its construction about what the conditions are under which it will be called to operate and the load it will have to draw. On the other hand, the engineer who builds an automobile must strive to save every pound of weight possible. His materials, therefore, must be the very best known to engineering practices. Instead of running upon a solid road-bed upon which are laid steel rails, the motor-car must be so constructed that it can negotiate

our vile American roads. It must be built to plough through sand and mud, over ruts and stones, subjected to all sorts of twists and strains, one or more wheels oftentimes passing over an obstruction ten or twelve inches in height. The car must be able to negotiate enormous grades, make sharp turns—in fact, do almost everything that a horse can do. There many and diverse engineering problems are involved. First, there is the framework—what material should be used? how should it be constructed so that, with load and machinery, it will be strong enough to carry the necessary weight and stand the terrible shocks and strains to which it will be subjected? Next come the designing and building of the engine. It must be powerful enough to drive the car and its load up steep hills, and at the same time it must admit of being throttled down so that it will barely creep over level roads or through crowded street traffic. Again, the science of electricity is involved, including coils, batteries, sparking-plugs, insulation, etc. Then comes the problem of transmitting the power from the engine to the vehicle itself, and last, but not least, comes the question of tires, that *bête noire* of all automobilists. Considerable of the industry of this industry and the varied and intricate problems involved, it is surprising that the automobile has reached its present stage of practicability. Five years ago it was a very common occurrence to see the driver of an automobile with his car by the roadside and be himself prone upon the ground underneath it endeavoring to ascertain why it would not go or trying to make the necessary repairs. Although the number of automobiles in use has increased enormously, yet it is only occasionally that one sees a car laid up beside the road for repairs.

In this discussion I am assuming that the horse of the future is to be a motor-car. One of the characteristics of the American people in their restlessness. They are never satisfied to stand still, they want to be on the go constantly. The old-fashioned stagecoach had its day, and its skeleton, unprotected from the weather, is a common sight in our cemeteries. Last year the first car enabled the individual to travel more by means of muscular energy than had hitherto been accomplished by any other device using muscular power the world had seen up to that time. Now comes the modern motor-car, the latest and best gift of all the mechanician gods to mortals. Up to the present time the chief use of the motor-car has been as a means of travel from place to place.

A traveler who had done Europe in the conventional way, by train, boat, and diligence, again and again, until, to use his own words, he was sick of the whole business, last summer was induced to rent a car in Paris and make the trip through France and Switzerland. He started out with expectations of being bored; he ended the journey with the declaration that it was the most enjoyable experience he had ever had. From that time forth this man became an ardent and enthusiastic automobilist. This summer he is planning, with his family, a longer trip on the Continent.

This experience is a typical one. In a public address I heard that fine sportsman and able city executive, Mayor Weaver, of Philadelphia, state that since assuming the automobile he had learned more about the country within a radius of fifty miles of the city than he had ever before known. One of the pleasures in this new and delightful mode of recreation is that distinguished citizen, Judge James B. Dill, of New Jersey. Judge Dill was first to pierce the Maine woods with a motor-car; since then others have followed his example. The coming season will witness many touring parties starting East, West, North, and South. With grand companies the motor-car offers an ideal way in which to spend a summer vacation. Five years ago there was in this country one automobile to every 1,500,000, two years ago there were two to every 65,000, to-day there is one motor vehicle to every 900 inhabitants. But great as has been the demand for motor-cars for travel, for business and pleasure, the development of this great industry is to come along the lines of the construction of a vehicle. This is a field that has been sorely touched. One uses his pleasure car when the weather is fine or he feels the need of fresh air and the mood is to be going where him, but "the butcher, the baker, an candlestick-maker" must come out on the door every day, rain or shine. The best brains in the business are trying to devise a practical car at low cost that will do just this thing. In the line of motor-cars, up to the present hour, there are handiworks which have greatly restricted its use. In the first place, the ideal car has been too small and too light to give the driver the exceptional individual that can afford to pay for \$2500 upwards for a car carrying four people; but when the car is once acquired, like the man that got married, the owner is at the end of his troubles—the beginning end. The repair bills are the things

(Continued on page 142.)

THE SELFISHNESS OF CITY SPEEDING

By RICHARD SYLVESTER

Major and Superintendent of Police, Washington, D.C.

THE running of motor-vehicles in cities and across country has been attended by a great deal of adverse criticism on the part of pedestrians, drivers of horses, and farmers. This condition is largely the outgrowth of a growing familiarity in the handling of machines by operators, and a corresponding want of familiarity with these vehicles on the part of those who have never had occasion to use or manipulate them. It is a fact that the former have become educated on the subject far beyond the understanding had on the part of the laymen. Aside from regarding the motor-vehicles as locomotives off the track, the non-users do not investigate beyond learning how to keep out of the way. Viewing an approaching machine instills a nervousness and fright, they not realizing that it can be brought to a dead stop almost in an instant, if in good running order, and that it can likewise be turned aside from an obstruction or an individual. Laboring under fear, as people do, they have not at all times that command which enables them to avoid contact, and sure causes resentment and adverse criticism. There are many cases where hired operators or chauffeurs have no regard for the feelings of pedestrians or drivers, and to this class most of the blame for any censures on the part of the people may be attributed. An owner is generally cautious in running the motor-vehicle, although there are those who go out for a speed, not caring for financial penalties. Some members of automobile clubs early forget their promises to aid and encourage lawful running, and do not cooperate with the authorities as they agreed. The conductors of motor-vehicles should remember, however, the advantages they have in knowing the machine, its capacities and failings, and should not cause pain and nerve-wrecking at crossings and corners by attempting to exploit their abilities in cutting figures right around vehicles driven by horses.

At the capital of the United States, which is included in the District of Columbia, are the best paved streets in the country, and the outlying roads are improved. These are inviting to speed, and to keep it down sixty members of the police force on bicycles, to which are attached speedometers, do an effective service in bringing about a compliance with the laws. The speedometers are tested every ninety days as to their accuracy, and their readings are

accepted as never-failing evidence by the courts. Twelve miles an hour in the business section of the municipality is permitted as the speed rate, and an great feeling would exist against it if the operators would give special regard and always reduce to the requirements at corners and crossings.

On the suggestion of the Major and Superintendent of Police of the District of Columbia it is proposed to prominently warn drivers of all kinds at corners, intersections, and all leading places by highly colored signs as to the rules governing the road: "Keep to the Right"; "Keep to the Left"; "the Shun"—will soon be posted throughout the District. The whole matter is one of education. The motor-vehicle has come to stay and the people will be with us always, so that friction will continue unless sacrifices are made on both sides. The laws should be enforced, but justly, and it is within the province of the motor-vehicle owners to bring about a solution of the question by considering the feelings of those who patronize the streets and roadways aside from themselves. It is regard for pleasure as well as safety of others that counts for much.

Those who conduct machines for hire, and many others, are indifferent to the appearance of their vehicles. They are careless about lights. How often we see an automobile covered all over with mud, the pasteboard sign broken, and obliterated license numbers in evidence! Dismounting lamps, perhaps for the sake of economy, maybe because the operator is a hired employee, are largely to be met with. The more attractive the machine as to cleanliness, as to lights, and as to numbers, the better the impression created on the public. Those who ride to skylark, visit road-houses, and do not care, are not rare in connection with the operating of automobiles, and often the chauffeur is ordered to make rapid speed. They are dangerous. Not infrequently does a chauffeur take the owner's machine out for his own frolic or to hire for the frolic of others. He cares not for results and is an undesirable agent for the owner who pays him, for the man who may hire him, and for the community at large.

It is all largely selfishness and disregard for the rights of others, that makes all the trouble. The indifferent individual may give many careful people a bad name.

MERRIWEATHER'S MUSICAL MOTOR

BY ROBERT EMMET MACALARNY

DRAWINGS BY DAN SAYRE GROESBECK

EVERY one knows about the Merriweather musical motor now, but then—a short twelvemonth ago—things were different. Sitting on the veranda of any country house of a fine afternoon, one may gambly safely that two out of every dozen of the autos scolding by boasts a Merriweather chassis.

Why shouldn't a careful driver carry *schore* for the inevitable time when, precise upon the mandatum—or, worse, in the sunny mind of a country soul—he must tinker with his gear while the gentle dew of lubricating oil and gasoline does its best to keep him cool? This is what made the musical motor go like hot cakes, once it was put upon the market in perfected form. But perfecting it—that was where we stuck for a time, Billy Britton and I. He put in two-thirds of the capital, and I contributed the other third, plus a bit of practicality. The inventor got a thousand-dollar bonus and royalties; he's getting the latter yet.

He was an odd sort of chap, the inventor, all whiskers and spectacles. Where Billy first picked him up I have never known. But they burst into my office one day when clients were scarier than usual, even for an attorney who had been only five years out of Columbia Law School.

"Larry," said Billy, as explosively as if he were eighty horsepower and taking a hill in a cup event, "here's a man with a million-dollar idea in his attic and thirty cents to push it along. Exert that grinning heat of an attorney, say your shingled deer shot, and let's talk it over. Once this thing gets going, corporation cases will look like pork and dishonest graft."

Well, the "professor" talked to some purpose. It seemed that he'd been inventor of several devices for piano-playing machines, but that his share of the proceeds had been lost in the shuffle.

"Of course, it's easy enough to lash a music-horn to your car and turn the tickle on or off as you may happen to want it," he remarked, by way of beginning. "You can take a real grand piano along, for that matter, if you make your tonneau big enough. But this is different. I've found out how to hang a whole orchestra effect without interfering with the balance of the sulkiest touring-car that ever was born. And you get a change of air"—Billy laughed heartily at the "professor's" merry quip—"whenever you change gears. It's durable, compact, dirt and rain proof, and can be filled with fresh tunes in five minutes."

"All to the good, eh, Larry?" grinned Billy.

"Who's going to buy any such tick machine but the innocent new-rich and a few Broadway press-agents?" I asked.

"That's just it," said Billy, nodding energetically. "Who do you fancy buys two cars every year, and keep a garage jamful but the new-rich? That's the market we're bidding for. We aren't going to enter the Merriweather musical motor—that's the professor's name, and I've promised him that it goes—in any endurance tour. We're going to make a hit with the suburbs of New York, Pennsylvania, and Ohio, where the mill-hands make more money than a college president."

We compromised on one car, the "professor," as I have said, getting his bonus and superintending its construction. Funny thing, he knew nothing at all about driving, although he did know the component parts of a motor up, down, and across. So, in three months, the first Merriweather musical motor was finished. I looked it over in the factory. It surely was a pretty machine, with good lines. The "professor" patted the frame lovingly.

"She's got a double system of ignition," he remarked; "battery and coil and magneto, and there are ten sets of breakers."

"She looks good to me," I said. "Is the music-tank filled?"

"Nax assorted airs," replied the professor.

"I'll try her out instantly," said I.

"The paint's too soft," interposed the foreman, who had been eyeing both of us with growing suspicion. "I wouldn't advise you to take her out before to-morrow, sir."

"It'll be that awkward," I mused.

It really was. You see, Billy Britton was to be married to Leslie Barston on the morrow. He hadn't counted upon his wedding interfering with the development of the Merriweather musical motor, but the Barstons, all to be sure, save Leslie, were going abroad earlier than they had expected, because Mrs. Barston's physician had recommended a trip up the Nile. Whereupon Billy and Leslie had decided to be married in May instead of in June.

We had a church rehearsal that evening, and between aisle gallopes I tried to tell a much-mattered bridegroom about the car.

"Oh, hang the machine and the professor," he grunted. "Say, suppose one should drop the ring at the psychologic moment?"

"You make me tired," I rejoined, sadly. "You're no better and no worse than the painfully frequent proletarian beggarman."

He always asks that about the ring. It's traditional, vulgarly so. And you ought to know by this time that there isn't any psychologic moment at a wedding.

But he stared at me then—prettily as I reminded him that the motor, in which his and my good money was invested, was even then devoutly assembled and waiting to be tried out.

"Do you know," he muttered, clucking my sleeve with agitated fingers, "I don't think I ever saw Leslie looking happier."

Whereupon, finding him hopeless, I turned for sympathy to his sister, with whom, as Leslie's maid-of-honor, I was to have much to say after the custom of best men.

"I don't like his idiotic grin," I confided.

"Who—Billy's?" she asked. "He does seem a trifle upset. She is, too. They're all that way."

"I feel the need of fresh air," I remarked. "The wedding's at one. What do you say to a spin right after breakfast? I'll guarantee you a glimpse of the Vanities City Hall and delivery, f. o. b., at some in plenty of time to dress."

She did not seem terribly impressed, as I whispered.

"The new car"—of course Billy had told his people about the car—"is finished. I'd like the worst sort of way to have you try it, Mary."

MERRIWEATHER'S MUSICAL MOTOR

A Budding Financier

HARRY, a bright youngster, was told by his mother that she would give him five cents for every dozen pins he rescued from the sheets, thus preventing her year-old babe, who was just beginning to crawl, from finding them.

"What will you do with the money when you earn it, Harry?" he was asked by a neighbor.

"With the first five cents," said Harry, promptly, "I'll buy a paper of pins and scatter them all over the house."

PURE AT THE SOURCE.

Milk is the chief article of food in the sick room and hospital. It is very expensive and nurse should know the source of supply before ordering to any dairy. THE DEVELOPMENT OF THE AMERICAN AUTOMOBILE

By E. R. THOMAS, OF BUFFALO.

FASTER and at the same time more thorough work the world has never seen than in the growth of automobile-manufacturing in the United States. Not only has the output grown in an amazing manner, but, what is more important, the quality of the product has more than kept pace with it. The result is to-day the American manufacturer is turning out cars that are the most reliable in the world, cars that run everywhere every day.

The automobile-buying public and the manufacturer have always been a unit in what they wanted. I was demanded a car that will "stand up," in which the materials are the best to be procured, in which the workmanship is as careful as can be achieved on machinery, and a design that will meet all conditions of travel, whether the owner wishes to tour the magnificent thoroughfares of Massachusetts or the rough and faddling surface of Death Valley.

It was a handicap of several years' experience that American manufacturers faced in competition when they entered the market. The thing was an aid to them; the foreign manufacturers had not progressed far enough to have adopted any settled standards of construction; but they were rapidly reaching that position.

When the American manufacturer began business he centered his efforts. Steam, electricity and gasoline all came in for experiments as a motive power, and all this time the manufacturer across the water had found that gasoline suited his purposes best. The American manufacturers, too, continued to experiment with horizontal motors and planetary transmissions, while their rivals across the ocean were taking the advantages of high powered motors with vertical cylinders and sliding gear transmission.

Although he was behind at the start, it did not require a long time for the American manufacturer to catch up. He had the experience of foreigners to guide him after he had dropped a few of his own innovations in construction that only retarded him at the start. Their methods he took and improved on. He soon designed special machinery for the making of parts, and no adept was he at this that American machinery is now in use in every large automobile plant in Europe. As he struck his gait he brought out improvements in construction that are now copied abroad.

Another thing he had to contend with was the fact that during the years of his experiments foreign cars had been shipped into the United States, built, in public reform, the high powered automobiles from across the water.

To capture the trade of his own country was the determination

of the American maker, and to do this he found it necessary to build better and more reliable cars, cars that had higher horsepower, and to sell them for less money. Stronger cars than the foreign product were imperative, not so much because of the demands made by the competition as to meet American road conditions.

It has been customary for the Americans who have toured Europe to use the term "billiard table" in describing the roads they have traveled there, and the term aptly describes them.

American roads, as a whole, are a far different proposition. Even the conditions found in some paved streets in cities in this country would not be tolerated for a moment on the country roads of France and Germany. Here, except in a few localities, the highways are improperly drained, have had little preparatory work done on them, and practically no repaving. The result is that they are filled with ruts, bumps, gullies, and washouts. It is over these roads that American cars are forced to travel, and to their credit it can be said that they do so every day of the year and under all conditions of weather.

That is their great test of reliability.

The absolute necessity of building stronger cars was shown to the American manufacturer just as was the necessity for forging in the front in matters of workmanship, improvements in design, ease of control, and the many other things by which reliability of performance could be brought about. The use of the best of materials, the installation of special machinery, the employment of the best engineers possible, all have been factors in the success of the American manufacturer. Some have gone even farther than this, and have supplemented their corps of domestic engineers and designers with the services of the best talent to be found abroad.

But there is another thing which has played a large part in this struggle for commercial supremacy. That is the systematic cooperation of the manufacturers who operate under the Kellen patent. Some years ago the best automobilists of the country were secured, and laboratories established where it was found that certain grades were the best for certain uses, or where faults were found or where any room for improvement could be discovered; the facts were at once made known to the members of the Association of Licensed Automobile Manufacturers.

In addition, a mechanical branch of the association was formed which has for its membership two representatives from each of the companies in it. These men, from thirty-two of the great automobile companies of the country, meet at least once a month and discuss matters of vital importance to the manufacturing of cars.

THE FUNCTION OF THE GASOLINE MOTOR

By GEORGE L. MUNN

ELECTRICITY is the world's power ideal, but it is as yet very strictly limited; and a base of supply, such as not every country grows, can maintain in a hurry, is a necessity. It binds its wagon almost as the wire binds the trolley-car—to hard-and-fast lines. Time will solve many things in electric traction, but meantime, and for a long time to come, we have the untamed and independent hydrocarbon gasoline car. Other oils are used, but this sleek dealer with gasoline, consumed far and wide in an enormous total quantity that increases almost beyond the power to produce it. We all recall the Channan and the trolley-car, with his puzzled "No pusher, no puller," and even while we know what it is that pushes and pulls, who does not wonder at the tremendous bunch of energy that is hoisting that elephantine truck over the pavements, piled high with merchandise, until its corresponding load makes it look like one of the elephant's gigantic ancestors?

This is not a discussion on engines, however. This is a tale of business, of "let there be and get there quick," for that is the modern age's motto. The writer realizes that the discussion with the keen buyer comes down to mechanical details and the mathematics of the proposition. Let the great public, even the great mass public, eyes little for the calculations of the expert. "What will this machine do?" is the one great insistent question, and aside from those who want a machine, stands that great array of interested ones who have the story of giants had low and height—won. No problem in mechanics ever had bent upon it such an array of trained minds as has solved this motor problem and is ceaselessly perfecting it.

Coming to the front at this time, it has also come in the upswing of the tremendous wave of prosperity, and expense has been almost the best consideration for motor and buyer alike. Yet both are strictly practical. "What is the horse-do and what can the car do?" is the question which nothing but proof will satisfy. Examples are realists, they can tread cool mud of about thirty miles three gasoline motor cars for passenger traffic require thirty-two coaches and one hundred and fifty horses. "Show coaches" to be

sure, and widely abused horses, but that is the story of accomplishment. Operating expense about five and one-quarter cents per mile.

A twenty-four horse-power gasoline truck covers a seventeen-mile round trip four times a day, and delivers four tons of crushed rock per trip, sixteen tons; total expense thirty-four cents per ton. Compare this with a double team making one trip, carrying three tons at the outside, at two dollars per ton expense.

A seven-ton truck averages forty miles per day, on fifteen gallons of gasoline, at eleven cents per gallon. Fuel, \$1.65; oil, 23 cents—total, \$1.90, or \$792.80 per year. The driver receives \$624. Without adding points or depreciation, compare this total of \$212.80 with the cost of running the three heavy teams, three men each at \$624, three expensive horses to feed, and care for as tenderly as a new baby, with a broken leg now and then, and the horse "call in." And this big truck requires but about half the space of the team, to either operate or stand. It will turn in its length, and back and crank in a street where the horses could hardly work and would fret themselves helpless. The truck never gets scared out of its "best sense," which David Harbord declared was a myth, anyway, and the anxious driver, harried by orders from the house, need have no fear of broken wheel or the Human Society.

We hear from Cape Colony that the coast still competes successfully with the railroad. Plenty of wagons, plenty of grass, and time and labor of no account. But some bright day a gasoline motor will revolutionize it all, and they will be unyielded for the last time. What a motley caravan it is that now goes straggling into the miles, to come at last a power has been found that goes where it is wanted to go, and has no zeroes to be accounted for. The prohibitive cost of the Transvaal, the camel, the jack, the burro, the mule, the pack-train, the mule-team, the horse, and all the devices he burns, a prime-time parade that drags from the dawn of time, moving before the locomotive of no rails, the trolley of no wire, and the engine that drinks nothing but its own fuel.

The Stearns

The Car with the White Line

AMERICA has not produced a rival to the Stearns. We are ready to show any intending purchaser of a high-grade car to his entire satisfaction that he must import a car at double or more cost to get its equal.

2100 hours' labor by the most skilled workmen in the world are put on the finishing alone of each Stearns car. No other maker in the world gives so much time to anything but a special racer. It is this unmatched care employed in working out a perfected design from the finest materials so far discovered in the world that proves that the Stearns is "The Best Automobile."

Immediate Delivery. \$4500. 31-40 h. p. The easy-running qualities of a "30" in highest perfection—the power of a "40" when needed. The catalogue tells how. Write to-day.

There is no method of making friends equal

JOHN FARSON, Chicago, says of his last years' service:

"I have used Morgan & Wright Tires on my National this year, and same have been very satisfactory."

A. C. BENNETT, Automobile Dealer, Minneapolis, says that

"By comparison of actual service rendered, Morgan & Wright Tires have given the best satisfaction from every standpoint of any tires used. Have given more mileage with less repair and at the close of the season were in better condition than any of the other makes."

F. E. WADSWORTH, President of the Michigan Steel Boat Co., Detroit, says:

"One of my Morgan & Wright Tires has traveled 5000 miles in this country and 6200 miles in Europe, and is coming back to America without one stroke of foreign air in it. It does not look as though it had run to exceed 10000 miles."

J. A. TILDEN, South Boston, Mass., says:

"For the past two years I have used Morgan & Wright Tires and have found them entirely satisfactory. I ran 30" x 3 1/2" Dunlop-pattern tires 7500 miles without developing defects of any kind, and have obtained nearly as good a record from some others. I do not know of any other tires that give so uniform satisfaction."

After you have ridden on these tires for a few thousand miles you will understand why they are called good tires.

MORGAN & WRIGHT ARE GOOD T

THE uniformly high grade of service which ^{these tires} is commanding the favorable attention of motorists in ^{and} actually reducing the cost of car-maintenance ^{for} to enjoy their cars to the limit.

A handsome twelve-page booklet will be sent you if they are entitled to the character of ^{these tires}

MORGAN & WRIGHT,

Branches, Agencies, or
Dealers Everywhere.

12 Better

unequal to the method of making good

D. FULMER, Cleveland, O., says:

"It affords me great pleasure to state that I have driven my car equipped with a set of your quick detachable tires since March 1st over all kinds of roads, and in all kinds of weather, without a single puncture, or tire trouble of any kind. Your tires have given me the best service of any I have ever used."

F. DICKINSON, Southern Belting Co., Atlanta, Ga., says:

"It is a pleasure for me to say that I have had your tires in continuous use on my car for the past six months and they have proven very satisfactory indeed. Taking into consideration our rough streets, I think their record has been remarkable."

F. C. MALCOMSON, Pence Auto Co., Minneapolis, says:

"I am very glad indeed to add my hearty testimonial on Morgan & Wright Tires. I have driven a set of your tires nearly seven thousand miles during the past season with but two punctures. The record speaks for itself, and I am certainly a staunch believer in the quality and durability of the Morgan & Wright Tires."

RALPH TEMPLE, Chicago, says:

"I feel sure that there is no better tire made, and it has always been a pleasure to recommend them."

WRIGHT TIRES

ED TIRES

It is next to impossible to find a motorist who has experimented with other brands of tires AFTER having tried Morgan & Wright's.

while tires are giving, under every possible condition, motorists in all parts of the country. They are for hundreds of motorists, besides enabling them

ent on request to motorists who believe
vice referred to in the above letters.

Bellevue Avenue, DETROIT, MICH.

Rambler

Model 21. Price \$1,350

The Car of Steady Service

In these "show me" days, the discerning buyer judges a car by its record rather than by promises.

A Rambler Type One, the immediate prototype of Model 21, has just completed a non-stop run of 2,000 miles and this after three years of continuous service aggregating over 40,000 miles.

At the completion of the run the car was turned over to two eminent technical engineers, who carefully examined every working part and reported the condition of the car to be such that an expense of less than \$25 would replace every worn part, and would render the car as good as when it first left the factory, except in tires, paint and finish.

In Model 21 is combined every good feature of the earlier model, with such refinement in detail as would naturally result from three years of logical and scientific development of the simple power plant.

Equipped with the Rambler unit power plant, comprising a 20.22 H.P., double opposed motor, planetary transmission and multiple disc clutch, entirely enclosed in an oil and dust tight case, Model 21 is beyond question the most efficient, reliable, convenient and accessible car ever built.

You cannot afford to order your new car with an eye toward this Supermodel. A demonstration will convince you that it is the right reason for the right price.

SPECIAL AUTOMOBILE STEELS

VANADIUM, THE NEW ELEMENT, IMPARTS QUALITIES TO STEEL WHICH ARE LITTLE LESS THAN MAGICAL

By HENRY FORD

If there has been any basis for the claim that foreign-made motor-cars were superior to the American product it has been the fact that until recently the American manufacturer was unable to obtain metals, particularly steels, that possessed the necessary qualities to fully meet his requirements.

America is by far the largest steel-producing country in the world, but the demands for ordinary commercial steels have been greater than the output, and consequently our mills have had the time nor felt the inclination to go into the special steel branch of the art save in a purely experimental way.

The requirements of the motor-car, with its enormous power in proportion to weight, the high speeds of which it is capable, and the severe stresses, frame, axles, and other chassis parts are therefore called upon to withstand, have confounded the engineers and exhausted the professional lore of our metallurgists. A people who occupied the foremost position in the engineering world—the greatest builders of locomotives, of bridges, and machinery of all kinds—we still possessed little knowledge that was of value to us when confronted with the problems which arose in and are peculiar to the construction of the modern road locomotive: and we had no steels that were at all adequate for our needs.

American methods of manufacture and American workmanship, both of the hand and the machine, are superior to those of the other countries—many heavy superlatives and beliefs to the contrary notwithstanding. European makers are studying American methods and importing American automatic machinery, as fast as they can get it—which, by the way, is not very rapidly, for never before was the demand for all kinds of machine tools so greatly in excess of the supply as at the present moment.

The question of supplying motor-car building, as between the American and the foreign producer, resolved itself into a matter of materials. With proper steels at our command the "Yankee Peril" would become a reality, for not only will the tide of import subside, but we shall soon begin to make serious inroads on European trade.

The problem was not merely to obtain a steel that would carry a load or withstand the severest single strain or shock to which a car would be subjected in the life of the machine, but a metal of such toughness and tenacity as would successfully resist the ravages of vibration and fatigue. Fully eighty-five per cent. of the stresses which the various parts of an automobile are called upon to withstand are of the kind known technically as "dynamic."

In other branches of engineering a steel that would behave well when subjected to a steady load or a slowly applied bending action, and of sufficient ductility to permit of deforming greatly before finally breaking under the load was sufficient for all requirements. When applied to automobile construction, however, it soon became apparent that ductility under such circumstances did not necessarily imply the certainty that the metal would behave equally well under stress applied in a different manner: steel which showed great toughness and ductility under static loads was found to fracture like glass in some cases under the influence of shock or of constant vibration, such as that with which we have to reckon in automobiles.

Various alloys of nickel and chrome steels have been applied, and with varying degrees of success. Chrome adds toughness to steel when used in homopathic quantities, but when used to the extent of more than about one per cent. its effects on the steel are so injurious as to more than counteract the benefits derived from it. Nickel, while adding certain static qualities, is wholly devoid of dynamic virtues.

To quote the views of an eminent English metallurgist, Mr. J. Kent Smith:

"Heretofore the automobile engineer has contented himself with steels which possessed the necessary static qualifications—in other words, about fifteen per cent. of his requirements—and having made sure of this small percentage he hoped that in some way he had obtained the other eighty-five."

Recently a new element has entered the special steel-making industry, and one which will revolutionize American metallurgy. I say America, but the term need not be so restricted, for while this element is known to a limited extent in Europe, especially in England, it is by no means universally known—or for the best of reasons—used in motor-car construction there.

I speak of vanadium.

This mineral element, when judiciously used, imparts to steel qualities that are little less than magical, and which are well calculated to meet the most severe requirements of the automobile engineer.

The question naturally arises, Why have not this valuable element been more widely known and used in the past? The answer is a simple one. Until within a few months the entire output of the world in vanadium has been about two hundred pounds per month. This had to be extracted by very expensive processes, and even then the supply, limited as it was to two or three sources, was sufficient only to give it an alchemical value. In other words, while most metallurgists knew of the existence of vanadium, and were in some extent aware of its value in steel-making, where dynamic qualities were desirable, it occupied a place similar to that of a more recently discovered element, radium—we know its wonder-working qualities, but its price of one million dollars or so per pound renders this knowledge of little practical value to us. Fortunately for the automobile industry, and still more fortunately for the automobile user of the future, a large source of supply of this valuable mineral has recently been opened up, and vanadium in commercial quantities is now available to the American steelmaker. During the past few weeks exhaustive tests and experiments with vanadium-chrome steels have been made at the United States government proving-grounds, both in armor-plate and projectile forms; and no less interesting tests have for several months past been carried on by automobile engineers, with the net result that vanadium steel has proven to be the metal par excellence for automobile construction.

Unlike nickel, chrome, manganese, and other mineral elements that are used in special steel-making, vanadium contains within itself no virtues; but in its action on the other elements it confers upon the steel almost miraculous properties—for be it said the most successful application of vanadium lies in the direction of quality steels, such as chromium or nickel-vanadium steels. In order to obtain the best results with these elements it is necessary to add the vanadium in small doses and with proper precautions, as vanadium is a very powerful medicine and possesses to a marked degree the property of "elusiveness." To use a simple term, it acts as a phobic on the other elements, and in a literal sense retards the aggregation of the carbides, and thereby produces a steel of very fine texture and of great uniformity, as are clearly shown under the microscope.

For service in automobile axles, frames, gears, engine crank shafts, and driving shafts, vanadium-chrome steels have proven superior to anything else ever produced for this particular service. Of course the particular alloy which is the most suitable for frames is not equally suitable for crank-shafts or for gears. But various grades of vanadium steel, various alloys possessing the different qualities in need the different kinds of service—are now produced on a commercial basis in America. One of the advantages of vanadium is that it is so permits of the application of a larger percentage of chromium than would otherwise be permissible for the reasons previously outlined. In short, without going more exhaustively into the matter, it may be said that by the introduction of this new element in steel-making the strength of an automobile axle or a crank shaft may be doubled without increasing the dimensions or weight, and the working capacity and shock-resisting qualities of that member in actual usage multiplied many times.

And to what extent vanadium will prove valuable in brass, aluminum, iron castings, and other metals used in motor-car construction has not yet been fully determined, but many eminent scientists are now at work on these problems, and the results so far have been most gratifying.

Fortunately for automobile manufacturers and users the industry has attained to such proportions that its demands now merit the attention of steelmakers, and vanadium, having come within commercial reach, nothing is left to be desired in the way of materials to meet the severest requirements of the engineer. This, combined with American methods and workmanship, will produce automobiles of a quality unsurpassed by any other particular is rare made in Europe—a claim that in all sincerity and candor we have not hitherto been able to make.

Columbia

MARK XLIX. 40-45 HORSE-POWER.

STANDARD TOURING CAR, \$4500. LIMOUSINE, \$5500

WE submit that no other high-powered car on the American market contains so many exclusive features of definite, genuine value, and to prove this statement the prospective purchaser has only to compare MARK XLIX, point for point, with any other car in which he is interested. With regard to its mechanical features we refer the investigator especially to the quality of the steel used for the saved-out crankshaft, the sliding gear transmission, bearings, axles and all other vital parts. The steel used for these members was chosen after a most thorough investigation, and each is made of the best material that could be found in the world for its special purpose. A prominent and important feature is the new Multiple Jet Carburetor, which positively maintains a correct explosive mixture under all conditions of engine speed and throttle opening without sacrifice of power or fuel. This carburetor combines two carburetors in one, the two devices working together so as to require no more adjustment, attention or care than a single carburetor of any of the older patterns.

MARK XLIX.

MARK XLIX LIMOUSINE

The body structure, both in the Standard Touring Car and the Limousine models, is the best ever devised. The lines of the bodies are determined by considerations of both art and utility. All of the seats are of extra depth and width, and either model carries seven people in perfect comfort. The rear body of each type is of especially ample proportions and has very broad entrances closed by doors with full outward swing. The lower rearward curves harmonize perfectly with the general design and have a tendency to deflect dust. The angles of the seat backs are such as to give, in combination with carefully proportioned cushions, seats that are exceptionally easy and comfortable. The upholstery is of the richest and most enduring character, forming a distinctive Columbia feature. Both in color scheme and execution the painting of these cars is unequalled in the product of any other maker.

Mark XLIX perpetuates, with various important improvements, those high-powered Columbias which in past years have won many contests determining reliability, speed, hill climbing and capacity for all around hard use. Among important Columbia achievements may be mentioned twice breaking the Chicago-New York Road Record, winning the Mt. Washington Hill Climbing Contest in 1905, making a perfect score in the Glidden Tour and winning the Crawford Notch Hill Climb in 1906, breaking the San Francisco-Los Angeles record at better than express train speed, and more than 30 other events in the past three years that prove Columbias to be consistent winners.

IMMEDIATE DELIVERIES

Separate catalogues of Columbia 14-28 H. P. and Columbia 40-45 H. P. Gasoline Cars and Columbia Electric Carriages sent on request.

Motor A. E. A. M.

"Are you going to take the professor, too?" she asked.
 "Not unless you wish him as chaperon," I replied, after which she reflected a moment, and then decided that she would go.
 "I really had to sneak away," she confessed, as she snuggled against the cushions, her face tantalizingly invisible behind a brown veil.

This was the day of the wedding, a sweetly tempered May morning, one quarter-hour past nine.

The home is so exact over Billy's last moments of bachelorhood that there isn't any real breakfast. I had a scrap by myself, and slipped off. You're sure to be careful, Larry! It would be dreadful if I should be late. I need just forty-five minutes to be put into my war-footers. And, oh! isn't it a beauty of a car!"

"Wait until we are out of the city's choking confines," I consoled. "Delay your transports until we slide smoothly beside flowered meads and meadows wild. Then, as we skim like birds along the King's Highway, gentle strains of music, such as shall befit our mood—I broke off from the sheer joy of it. "What do you think of that for advertising language?" I asked. "The professor and I have been talking over a little brochure for property setting forth the merits of the motor."

Mary smiled. "Harry, Larry," she ordered. "We need a breath of meadow air, goodness knows. Think of all the stuffy handshaking the reeving-line will have to endure at Sherry's." But she had allowed time to be a demure eight miles an hour through Mosholu Parkway when I fumbled for key to the fount of harmony. Mary had spoken nothing since we had left Harlem River behind us. Several times I had glanced over my shoulder and observed her, pertly relieved by the leather's dull maroon. She was tired, no doubt. I felt to thinking seriously about Mary. It seemed rather unfair that Billy should do all the marrying in the Britton family—Billy being a great deal older than Mary, too. Of course, I had never said anything that might lead her to suppose—but, then, I had an idea that perhaps she might have guessed.

So it was with a penitent finger that I set the canaries singing. And they did sing. The hum of tires was utterly lost. The "professor's" louch had been too staid. Louder than any automatic piano-player made by man, Morrivether's musical motor sat between the park's fresh green to the accompaniment of the intermezzo from "Uvalde Rusticiana."

Lips behind the heaven veil burst into speech.

"Oh, Larry, turn it off! That is horrid!" they cried, while the intermezzo died away in a protesting wail.

"It isn't my fault," I explained. "The professor chose this musical menu. You see, our idea is to enter to the masses. Therefore he probably stocked up with popular tunes."

"As an invention," she admitted, "it doesn't seem half bad. I can fancy lots of people who might like such a plaything."

"It has big possibilities," I said. "Think of the many cases in which it might prove to be a life-saver. Fancy yourself at nightfall helplessly removed from civilization. To while away the weary hours until daybreak you merely turn on a few nothing bars of harmony."

"And if the wolves are particularly threatening," she continued, "a single wail of the 'Rusticiana,' or, possibly, 'The Angel's Serenade,' delivered at fifteen paces, will lay the whole pack at their feet."

"You are pleased to jest," said I, "but in the end the professor, Billy, and I shall convince you."

Here we came to a dividing of the ways. Either looked promising and I slowed down in indecision. "It wouldn't do to

take the wrong one," I remarked. "I believe it is the right."

"Nonsense!" exclaimed Mary. "Can't you see that road is barely worn. Any self-respecting chauffeur would know at once that it is the left."

"If I remember aright," I ventured, mildly.

"But your memory is a traitorous one, Larry, as I well know," she announced, with finality. Upon hearing which I nodded, touched the speed-lever and swerved to the left. I knew, after we had gone a scant hundred yards, that it wasn't the right way. But I'd learned long ago to sit tight in a boat when orders were given.

As we swept around one abrupt turn, sending last year's leaves swirling—I would have wagered they'd never been touched by wheel before—an hoarsely rocky squirrel clattered at us, anchored in the path dead ahead.

"Look out!" shrieked Mary. "You'll run him down."

"Watch me!" Braggart I! I meant to steer over the foolish thing; and I did it, leaving him astounded where he had been scolding, unharmed, the time having slipped by on either side.

"That," I boasted, leaning in confront her, "is what I call clever piloting. See, the beggar hasn't yet had time to run."

My eyes were intent upon the squirrel and Mary. And as my gaze became fixed my steering grasp relaxed incoherently. No car would have been to blame for taking the hit in its teeth then. There was a tug at my loosened arms, a quick realization of tree nearness, and the machine was trying to lurch a passageway between two young oaks that calmly restrained the whirling object rasping at their bark.

"I told you it was the wrong road," I could not resist saying, as I shot off the power and sprang over the wheel.

But she was in no mood for recrimination. I plainly saw. "Oh, Larry!" she gasped. "It won't do to be delayed. The wedding is at once."

I had clean forgot the wedding on account of the squirrel and letting the motor get its head. The shock of realization set me to work in a jiffy.

Now, even a bumping like this never really puts a good car out of commission, and I loathe the fool who is found sprawling with repair kit, save in extreme cases. But I glanced stealthily at my watch, and saw that it was approximating eleven. I could hear

the tapping of a slight but determined foot as I groveled. When this tapping was louder, I felt that, perhaps, after all, underneath the car was the best place I could find for the moment. Then in my tinkering—the gears were all right, thanks to an honest factory—my wrench touched some nerve position of the professor's system.

Success was there none, for I was helpless, not knowing why my unhappy finger had conjured up the gent who bode fair to wreck my things. There I lay, while, overhead, wearing the cracked tone of a hardy-gurdy in defiance, the ghost-tinkle of an ancient street song—which I had fancied long since laid—made hideous the neighborhood.

"Oh-oh—oh-oh—Ma-

mie!

Ala! - a - you

ahammy!

Tell me are there

any girls at

home like you?

A disposition shady,

But a perfect lady.

A beginner, but a

winner.

Ma-an-mie-eh!"

Echoes of the frightfully cheap ditty smote the new-dressed oaks. Gladly would I have remained comatose. But the summons was not to be denied.

"Get up at once and stop that disgraceful noise," It bade me.

Weakly I emerged. For the first time in

Drawn by Dan Egner Goodrich

"Here's a man with a million-dollar idea in his attic and thirty cents to push it along"

my mad auto career I felt grateful for the screen of grime which, I knew, was partially masking the crimson of my mortification.

"'Pos my honor, Mary," I began in the din. "I'm not at all—"

"Stop it, Larry," she entreated; "even if you have to hurt the car."

"The car is hurt already," I demurred, now the less reaching hastily for the switch, as the glare in her look threatened to become scorching.

Again the blessed silence, but yet her reproachful gaze seared my vision, and the Parkway was not alluring. To me, standing wrapped in ruminative vein, her words came stinging. She spoke, after consulting the ridiculously minute timepiece of her châtelaine.

"The wedding is at one," How distinctly brittle her attendance bell in the wood-knob. "It is now eleven. And, as I told you at the beginning, I can't possibly get into my gown in less than three-quarters of an hour."

Sometimes, tradition has it, the worn writhes into more comfortable position. Thus I: "If the frosting on Billy's wedding cake is half as sharply defined as the chill in your conversation, the caterer has not builded in vain. Belonging to my own poor self, I was to have been a best man this day—some where in town, was it not? I was to have administered a parting vestry-room warning to a man in frock clothes bedecked with a garbain. Yet what says the old saw? 'Forty miles from Schenectady to Troy,' etc."

"Please—Larry."

Vine! It was a plea, and I melted, as is ever the wont of good men and true. Again I peered in unapposed proximity to axles, and five spaces had not been ticked off upon Mary's châtelaine ere,

Drawn by Dan Soren Greenbach

"Stop it, Larry," she entreated; "even if you have to hurt the car"

enjoyed into good humor, the car was heading for town. As we journeyed I felt that the factory would be proud of this motor. I knew none that violated the speed laws more consistently when urged. We slipped up ostentatiously at each distant glimpse of mounted patrolman, and lost a good fifty seconds in skidding over the ribbon-bridges planking. Just as Grant's Tomb barred the Hudson's ribbon, I knew that, fate not frowning, we should yet make St. Rotolph's—a trifle out of breath, maybe, but in time.

"The home-stretch," I called back to her. "The newspapers are full of denatured alcohol these days. As for me, give me god-natured gasoline, and they may have—"

I did not finish. And Mary's screams of warning were superfluous. We were in the minutes now, and that quickening throbbing behind was not the creation of Merryweather. I had the car well in hand when the red-throated policeman drew alongside, his motor cycle snelly and back-jumping. An angry Irish face he had, but I was not faint-hearted. I dared not be, although I did not lean to reassure Mary.

"What is the name of Hilvin?" he flung at me. "There wasn't no need of a stop-watch to get you right. I s'pose you're after imaginin' you're Joe Frazer an' Barney Oldfield rolled into one."

"We may have been a trifle careless, officer," I remarked. No, it would not do to display a yellow hill to this man in uniform. While I pondered, Mary to the rescue came.

"I'm so sorry," she wheedled, "but it was a matter of life and death. We'll be very, very careful if you overlook it."

Hesitation laid its uncertain finger upon Erin. And, marking it, I murmured, "A matter of life and death."

"Of course, if you'll take our number, we'll be glad to send around and—"

"Well, luckily, there ain't many people on the Drive," said the patrolman. "An' I'll just take down your number to make sure—"

I'll swear I had nothing to do with it. I was sitting like a graven image, clutching the wheel, that is, if graven images can feel pained. But to the three of us, as if from some uncolored volume of discord—while the car rolled with the ache of it—there burst the third of the "professor's" unhappy choices. Mephisto himself could not have planned more fendishly.

Our companion in uniform glared, looked puzzled, and then inquired, "You'll kill me, will you?" he blurted. "Come on to the station-house an' be funny with the sergeant."

"They're hangin' men an' women
For the wearin' of the green."

The car's motive swelled to a triumphant crescendo. There was a screech, and then no sound save an Irish policeman's thick breathing.

Upon the station-house threshold, after the tedious transaction of giving cash bail but been completed, I again looked at my watch. It was not at all necessary, for the accusing fare of the precinct clock had regarded me as I chattered, very formally, with a not easily convinced acting captain.

"They threw the eggs at a vauzeville team that tried to get gay with the Irish in Brooklyn the other night," he had stated. I left under a cloud, with magistrate's court and Special Sessions to contemplate. And, from the tail of my eye, I could mark the acting captain suspiciously observing my departure.

I, in turn, eyed the motor as Theseus might have done the Minotaur with the fairest of Greek maiden sacrifices in its clutch. The

He was an odd sort of chap, all whiskers and spectacles

Drawn by Otto Soren Greenwald.

"You blind 'Enery 'Arknesses," I scolded "this is the car, your car, our car"

brown veil had curtailed Mary's features ere we had reached the station, so the advantage of encounter was all hers.

"I don't know how to apologize," I began. "Of course you know that we can't possibly get to St. Basil's for more than the end of the ceremony now, without dressing. To be very frank, we'll be lucky if we beat Billy and Leslie to Sherry's." I waited, but there was really no reason why she should have spoken. Then I said, "It was awfully sandy of you to have stuck by me and the motor, and not to have suggested taking a trolley-car home."

"Personally, I do not care to remain on exhibition longer than is absolutely necessary," she interrupted, lily. "The windows are full of uniforms. And no I should like to at least see Leslie throw her bouquet, I should suggest driving in once to Sherry's."

"But how can we explain?" I murmured, getting in. No answer, but within me my heart beat steadily now, for silent and unobtrusive as Mary was, she had refused to die in my hour of need, a hopeful sign, indeed, in this afternoon of inferno.

Tinglingly I piked the car over slippery asphalt and trench-ripped crossing. It was like charioting a load of nitroglycerin. Long ago I had lost all faith in the "professor's" switch. The little tin garage gods were all that we could trust in.

And now the striped awnings, and, trotting briskly, a pair of shining, wedding coach horses. Billy and Leslie, then, were just ahead of us. We must improve forgiveness while the moment of their fresh gladness was all absorbing, and before the string of carriages with annoyingly chattering freight had followed. Instinctively I sent the motor lurching forward. Bride and bridegroom were across the pavement, scampering lithely up the steps as our tires rasped a neighborly greeting.

Mary was upon the sidewalk carpet, too, ere the liveried carriage-caller had fairly swung the toupée door. "Oh, Leslie, darling," I heard her cry. And then they were in each other's arms, while Billy stared, but a hostile Billy, to whose forgiveness access was easy, I know.

Of course people stared at us, sandwiched among proper wedding-breakfast garments. But you're no idea how distinguished one feels when he regards a lackluster assortment of frock coats, and knows that he is set apart from it all by virtue of his wearing a flannel shirt and leather puttees.

I encountered the "professor," adjacent to the champagne, before I went up-stairs to help Billy out of his finery and pack his suit-case.

"You don't happen to have the wedding-march from 'Lohegrin' concealed in that wheeled charnel-house of yours, do you?" I asked. I told him what our orchestra programme had been.

"Ah, I see," he said, pointing his glass thoughtfully. "No, my young friend, and I regret it. But come to think of it, the next tune will do. It will do admirably. Try it on."

It was odd to find Billy so long motor-ride, old man. I remarked, lighting a cigarette and pretending to be busy with his shirts.

"The non-stop endurance-test-for-life sort, Larry," he said.

"Well, God bless you, Billy," I muttered. "And where the deuce have you put your razors?"

They had run the rice gantlet, and were laughing beneath the porte cochère when the car slid to the curb.

"Hello," cried Billy, "that's not our motor."

I showed them both toward the toupée door, the chauffeur having been instructed. "You blind, blind 'Enery 'Arknesses," I scolded: "this is the car, your car, our car."

More rice, wheezed they embarked lustily. Merryweather's musical motor shot toward the avenue lamps, beginning to wink in the spring dusk.

"Julius Priest!" I heard the carriage-caller mutter.

And, "Oh, Larry!" cried Mary, waving her brown veil toward the tip of Leslie's glove.

For, edging above the hoofbeats of the harness horses and the hum of the homing crowds upon the sidewalks, the departing car swung back at us, defiantly, not-to-be-repressed,

"Rinus 'Eastus Johnson Brown,

What you gwine ter do when de rent comes 'round?"

"Well," said I to Mary, ending, however, her eyes, "I'm glad that's all nicely settled. I've got an engagement to keep in the West Side Police Court."

THE MODERN APPIAN WAY FOR THE MOTORIST

THE PROJECTED AUTOMOBILE PARKWAY ON LONG ISLAND WHICH WILL GIVE THE MOTORIST A CONTINUOUS BOULEVARD NINETY MILES LONG AND FIFTY FEET WIDE, FOR HIS EXCLUSIVE USE AS A SPEEDWAY AND RACE-COURSE

By A. R. PARDINGTON

LONG ISLAND, like the Empire of ancient Rome, is to have its Appian Way—a great wide-stretching parkway, lined by miles of sea and bound coast, by numerous spring-fed lakes, by ancient hills and waving trees, and beautiful vistas of wood and water. Rome's great highway was conceived for military and utilitarian purposes: Long Island's parkway is for pleasure-driving classes only. Unlike the road from Rome to Brindisi, no domestic animals nor commercial vehicles will travel along its way. Motor-cars, designed and built for speed and pleasure, will be its sole travellers. Speed unrestricted, save that necessary to insure the safety of all users, will be permitted and urged. Police traps will be but a memory. Straight east to Firehead and beyond—sixty, eighty, or ninety miles and—this parkway will be the embodiment of the new era. A railroad without rails, and the users supplying the rolling-stock—a smooth, dustless roadbed, hills, grades, and stretches of level—a perfect chute, if you will, with nothing in this country of Europe that can approach it.

Think of the time it will save the busy man of affairs, who likes to crowd into each day a bit of relaxation! He will leave downtown at three o'clock in the afternoon, take the Subway to a garage within striking-distance of the new Blackwell Island East River Bridge. In twenty minutes a 60-horse-power car will have him at the western terminus of the motor parkway. Here a card of admission passes him through the gates, speed limits are left behind, the great white way is before him, and with throttle open he can go, go, go, and keep going fifty, sixty, or ninety miles an hour until Riverhead or Southampton is reached in time for a Scotch at the Meadow Club, a round of golf, and a refreshing dip in the surf—and all before dinner is served or the electric lights begin to twinkle.

Possible? Yes, and sure to be an every-day occurrence, a common one for many. Think, again, what it means, if you live at Great Neck or Oyster Bay or Nassau, to take a cup of coffee and a roll, step into your high-powered runabout, open the throttle, and drive to Riverhead, sixty miles away, and back in time for an early breakfast with your family at seven or seven-thirty, depending on whether you leave home at five or five-thirty. Can it be done? Surely. I know scores of men who are counting the days before they can do this thing—do it regularly—and be "it" when they take up their duties at the downtown exchanges. Think of the greater mental capacity, after two hours in fresh air, driving at top speed, with no thought but to go, go faster, and a thought for the car. There will be no grade crossings along this new Appian Way: every interesting highway, trolley or steam railroad is to be passed either above or below grade, and each bridge to be constructed of reinforced concrete, thus eliminating repairs and vibration.

This magnificent pleasure boulevard, of a sort and for a purpose never before constructed, will be of varying widths—from one hundred to two thousand feet—and with a roadway approximately

fifty feet wide. An artistic steel fence—and there will be no less than one hundred and twenty miles of it—will protect the carriage-man and tourist from the careless pedestrian, the predatory domestic animal, and the heavy-laden farm vehicles or horse-drawn pleasure carriages. No slow-moving "rubber-neck" or "sight-seeing" automobiles will be encountered, as none will be permitted within the toll-gates. Landscape architects and engineers are working out designs for a general scheme of forestry and horticulture, so that within a few years the highway will be a veritable parkway—a beauty spot. The numerous toll-gates, permitting access and egress—and they will be placed at such intervals that the convenience of the motoring public will be conserved—are to be adaptations of the old English inn, unobtrusive architecturally, and so situated as to comport with the general surroundings. That means to the motorist who now uses the ordinary country highways—the driver of a slow-moving team, who carelessly approaches from an erossroad—will be entirely eliminated by the construction of more than fifty viaducts—highway crossings—all of reinforced concrete. From all vibration free, and as permanent as the parkway itself. The two or three stream and trolley roads to be crossed will be treated similarly.

As surely as may be, the roadway will be entirely dustless. Road-building engineers and contractors, because of the unique conditions presented all over the country, are studying those road-building materials which can be combined into a perfectly dust-proof, water proof, and sun-shielding surface. Concrete, hot tar, and heavy Teas or Kentucky oils have been suggested and are under experiment. Because of their abundance on Long Island, it seems probable that pit and creek gravel, sand, clay, and loam, variously mixed and treated, will serve in lieu of the heavier trap-rock material, which is foreign to the locality and inadequate as to quantity.

A most elaborate system of intercommunication, by means of telephones, has been carefully considered, and numerous automatic timing devices are to be installed. The times of any car under test, at any point during its flight, will be possible by the use of a most extensive set of electrical starting and stopping devices. Certificates, substantiating the claims of an owner who has a runabout or townabout which he thinks can "burn up" the miles in seconds less than a minute, will be supplied, and those who need will be coaxed. The many risk chimaeras for this car or that car, the many challenges issued, but never accepted for lack of opportunity, will be carefully considered, and the candidates tried out before they "really" meet—as meet they must. "Endurance" and "fuel-consumption" tests will be of daily occurrence. Motors running consecutively for ten, twenty, or thirty days or longer will be a frequent sight and objects of the most intense interest. Being disinterested, the management of this great "proving-ground" will be able to supply observing officials whose sole duty and interest will be to record facts. The impulse to the manufacturing industry, following the opening of this parkway for these purposes will be instantaneous and far-reaching.

This new Appian Way must, ere it is two years old, become a veritable "white way," rivaling Broadway. It is sure to be bordered in lawns and esplanades that high class which appeals to the outdoor, sport-loving class, who rest better because they have driven long and hard, and who sleep better for having done both. Names as yet but scarcely known will be on the tongue of every user of this great parkway. Promenade them and see how deliciously they roll from the tongue. Think of them, and be reminded of the early history of the island, when fabled lore and traditions were history, when the early settlers "fought, bled, and died," but retained the nomenclature—Rensselaers, Binnbroeks, Googers, Acquabogues, Napeague, Spunk, Hantpague, and many others—all

The County Court House at Mineola, Long Island, where Motor-racing on Long Island was born in the Summer of 1904

have their places in the early history of Long Island, and all to-day are on its maps. Some of them are famous in the history of the country, while others are almost unknown, save locally, or by the clerks in the post-office service. There are others, less conspicuous, but none the less pleasing, as each tells its own story of disaster, deprivation, or early settlement. Read them over and analyze their meaning. One cannot go amiss in understanding the meaning of Seattle Hole, Harborville, Hailing Hollow, Hread and Chevon Hollow, Frie Place, Cator Place, Ham's Head, Hog Neck, or Promised Land. I have known lifelong residents of Long Island to doubt that such names ever did or do exist, but they are readily located on any ordinary railroad map, and they were all prominent long before the "oldest inhabitant" began to have his day. These are but few of the attractions of Long Island. Its chief charm is perhaps its natural and varied scenery. All of the sea and Sound coast of New York State belongs to the four counties comprising Long Island, while the beauties of Continental Europe may be found in the middle and towards the northern portion: Seveland, with its barren wastes, heather, and herbs, is comely at Montauk Point. The south side is indented every few miles by a chain of practically landlocked salt-water bays, affording unequalled yacht anchorages, which are natural havens of refuge in stormy weather and the rendezvous for the New York, Atlantic, Brooklyn, and other yacht clubs while cruising to the eastward. To the yachtsman, whose objective is Newport, Woods Hole, or Marblehead, this motor parkway will be of the greatest convenience. His yacht may be sent to Port Jefferson, Greenvport, or any yachting station to the east end of the island in the morning, while he remains at his desk in town. At closing-time he can meet his motor-car and make the nearest entrance to the parkway in short order. Then it is a dash to his anchorage, and after a night aboard, cruising in Peconic or Gardiners bay, or in Buzzards Bay, he can return to his car and be back in New York before the clerk opens the door at eight-thirty the next morning.

Not alone is the New-Yorker to enjoy the beauties and delights of this new motorway. His fellow enthusiast of Boston, Providence, Hartford, and New Haven will surely find his way to New London, thence to Greenvport by boat, or to Bridgeport and across to Port Jefferson, with but a few minutes' drive over the roads to the parkway, reaching New York hours ahead of the time required were he to follow the Sound road, and in so pleasant and comfortable a manner that his easy will compel him, in time, to see that a truck line from Boston to New York is constructed. The vehicles may a day later be joining the fleet on a "overland" by the use of his motor-car and by means of the parkway. He may do better; he may decide to establish for himself a home, a villa, or an estate,

This Photograph was taken close to the proposed Automobile Parkway on Long Island

in which event he can go either east or west before he boards his "water motor" or goes to his office.

Long Island, is the halcyon days of bicycling, was known throughout the land as the bicyclists' Paradise. Because of the generally good roads and generally fair treatment accorded to the motoring public, Long Island, six years ago, won the very enviable title of "Automobiles' Arcadia." The motor parkway had called attention to the important part Long Island has played in the sport since 1900. The first of no less than six class events, some of which have never been held either in America or in Europe, were held over roads in Queens and Nassau counties. The first international event held in the country, the race for the Vanderbilt cup, was held over roads in part in Queens, but in the majority in Nassau County. The second and third race for this classic trophy was held in Nassau County, and it was because of the one fatality incidental to that race that Mr. W. K. Vanderbilt, Jr., and his associates in the sport decided that to preserve the sport it must be taken from the public highway and transferred to a private track or highway. As the deed of gift prevented the holding of the race on a special track, and as it was planned to construct a highway suitable to the conduct of this event, it was become evident that original ideas must needs be developed. The result was the formation of a company, its incorporation, and the drafting of a plan which is now being closely followed.

The early completion of this special highway—the Appian Way—calls to mind the fact that much within the limits of Greater New York must needs be done to make it conveniently available. The completion of the great Blackwells Island Bridge, destined to be the natural artery of travel between Manhattan and Queens, is at least two years off. There is no assurance that its necessary approaches, both on the New York and Long Island shores, will be in readiness at the time the bridge is declared completed and ready for the enormous volume of traffic which now congests the

ferries. Assuming that the bridge and its approaches are ready, each at the same time, what of the magnificent scheme of boulevard improvement for Thompson Avenue, Hillside Avenue, and the present Hoffman Boulevard, all of which now are totally inadequate? There remains much to be done on the part of the city and borough officials to make the "gateway" easy and safe. Brooklyn motorists are in even a worse plight than are those who claim Manhattan as their place of registration and residence. There is no route even moderately direct from Brooklyn to the great system of roads which embrace Queens Borough and Nassau County. Concert of action, assistance at public hearings, and tireless effort are required to make this modern Appian Way the pleasure spot that it is destined to be and remunerative to its promoters; the financial success of this venture means the construction of others, some longer, some shorter.

The men behind this parkway project—men of affairs,

Lake Ronkonkoma, near which the Automobile Parkway passes

Through Miles of this Sort of Land the new Parkway is to be Laid

of large affairs—having been accustomed to "doing things," may be relied upon to "do this one thing"—build this new Appian Way. The list of directors, all high in the business and financial world, reads like a page from *Who's Who* or the directory of directors; a few of them are William K. Vanderbilt, Sr. and Jr., Harry Payne

Society next October need neither remain up all night nor lose its beauty sleep in order that the start may be witnessed. Racing from mid-morning to late in the afternoon will be possible, there being no general traffic to suffer by interference, incidental to the event or the attending thousands.

Whitney, August Belmont, Colonel Hart, H. R. Hollins, Charles T. Barney, and Frederick G. Bourne. Twenty-six such names complete this, the most remarkable directorate ever gotten together. Their cooperation in a banking, railroad, canal, power-plant, or steamship proposition could hardly be secured, but when the great Appian Way, this motor parkway, was suggested, they were a unit, ready to serve and ready to assist in the financial backing required, all eager to facilitate its completion that they, with the great motoring public, might enjoy to the limit the pleasure of high-speed or more leisurely touring.

The progress now being made is phenomenal. A few months ago, or on October 10, 1907, no steps toward the accomplishment of this great object had been taken. It is expected that by April 1, 1907, work of construction will begin simultaneously at no less than sixty points, and that by October 1, 1907, the parkway will be in a state of completion, making it possible to hold the fourth contest for the Vanderbilt cup on Long Island, but not on Long Island public highways.

THE ADVANTAGES OF THE SIX-CYLINDER MOTOR

By DANIEL FERGERSON

THOSE who, from various points of view, watch the automobile development most closely, cannot ignore the latest radical departure, the advent of the six-cylinder motor as applied to road vehicles. Those who had the privilege of observing the European industry, as evidenced at the last Paris show, and more especially at the Olympia show in London, could not fail to be impressed with the seriousness of the European engineers in this particular. Naturally, the maker and the purchasing public give heed to this evidence of a new and somewhat radical advance, and seek to find the significance and the advantages. There are two ways of accounting for this trend—either it is serious and meritorious, or it is for publicity, pure and simple. In this brief article it is the writer's purpose to submit a few thoughts on the first view, and as applied only to touring cars of high power. The users of high-powered fine cars demand many things, and from their view-point are entitled to them. Quietness, flexibility, highest efficiency, endurance, hill-power, and the full gamut of speed—these they naturally expect and demand. They expect, and rightly, too, that the automobile shall accomplish all these things without failure or undue effort, accommodating itself at the driver's will, without undue stress or mechanical strain, to the requirements of the congested city thoroughfare, as well as to the liberty of the secluded country road, and, I may truthfully add, on the highest gear of the mechanism.

Up to this time the four-cylinder motor has been regarded as the fulfillment of this ideal, and that it has done well is not an overstatement. But to the engineer, always seeking conservatively to achieve perfection, the limitations of the four-cylinder motor have been and still are obvious. He is confronted with the limit in the dimensions of a single cylinder, and finds, when he increases the size, new problems arise. The noise increases, flexibility decreases, there are more mechanical shocks, and vibration becomes more pronounced. Hence the only outlet for this thought is to increase the engine volume by additional cylinders. By actual demonstration he finds the six-cylinder motor a distinct advance at least, and incidentally discovers other collateral advantages.

But the six-cylinder motor must have the benefit of the most expert designing, the finest and most durable materials, and the most careful and efficient workmanship. Given all these, he can supply what the public demands in the most satisfactory manner,

producing a car which promises to outlast in duration of service any yet devised. In this connection it is well to consider, also, the possible disadvantages with such intelligence as can be mustered before the new motor has gone into general public use. Naturally, the motor of given dimensions will weigh and cost more than its four-cylinder brother.

Equally, it is obvious that its base must be greater; hence, with prevailing fashions and good engineering, the wheel-base must be increased. Also, that the duplicating of working parts will entail more care and replacements of these parts. But to offset these, the other mechanical parts—clutch, gears, brakes, etc.—should wear longer and be less liable to break from shock, owing to the constant torque obtained. It is the writer's view that the advantages briefly stated are worthy of consideration, and that the six-cylinder motor, in suitable cars, is a distinct advance, and possibly will herald automobile perfection in mechanical design.

I would briefly summarize the advantages of the six-cylinder motor in this wise:

1. Silence, by reason of the rapid sequence of explosions being practically continuous.
2. Flexibility, by reason of the constant torque obtained by the constant impetus by continuous explosions, and the ability to run equally and smoothly at any speed from 150 to 1500 revolutions per minute.
3. Great power for all purposes, enabling the car to be driven at practically all times on the high and silent gear.
4. Absence of vibration on account of the perfect engine balance which can be thus attained.
5. Absence of mechanical shocks due to the foregoing, and thus making for longer use with less liability of breakage.
6. Less effort in starting the engine on account of the more likelihood of a cylinder being full of explosive mixture, which will be fired by switching on the spark from the seat.
7. Easier to operate, owing to less necessity for changing gears or mousing the engine when running slow or climbing hills.
8. Simplification of speed-change gear, there being no desirability for four speeds ahead, three being ample.
9. Possibility of making a car of a given power for touring purposes even lighter than a four-cylinder car of the same power.
10. Less wear and tear on rear tires, owing to more even propelling impulses.

In rounding turns

a long wheel base exerts terrific strain on your rear tires, and if the rear seats extend behind the wheels this strain is greatly exaggerated by the suspended weight of passengers creating leverage against the axle. In the design, material and making of

Pennsylvania Clincher Tires

the above contingency, and innumerable others equally important, have been deeply considered and successfully met. It is in *practice* that Pennsylvania Clincher Tires "make better" than any other make in the market.

Write for the Tire Booklet.

Bringing Physicians by Automobile to aid in the Relief Work at the Military Hospital, Kingston

The Motor-car put to beneficent Service in transporting Earthquake Victims to the Refugee Camp at Kingston

THE AUTOMOBILE AS AN AGENT OF RELIEF WORK

AN EXAMPLE OF THE EFFICIENCY OF THE MOTOR-CAR IN AMBULANCE AND EMERGENCY WORK WAS FURNISHED AT THE TIME OF THE EARTHQUAKE AT KINGSTON, JAMAICA, WHEN AN AUTOMOBILE CARRIED A NUMBER OF VISITING AMERICAN PHYSICIANS OVER THE DEVASTATED AREA TO AID IN MINISTERING TO THE WOUNDED IN THE RED CROSS CAMPS AND ELSEWHERE

Patents Applied For

An Anti-Skid, Anti-Slip Device Right in the Tire

That's the new, successful "Midgley Tread" fitted to Hartford Dunlap and Hartford Clincher Tires.

Think what it means to dispense with the heavy, cumbersome, unsightly, un-serviceable "Chain Grip."

Think what it means to be able to buy a tire—a tire—mind you, *not* a separate device—that will never slip or skid—even on ice!

Get this fact fixed in your mind and you'll dispense with "chain" grip and any other kind of tire but Hartford Clincher or Hartford Dunlap, fitted with

"MIDGLEY TREAD"

Think of two hundred little "spikes"—like cat's claws—that grip the ground con-

tinuously. Mind you, of the four thousand on every tire, two hundred are always on the ground.

These four thousand "little" "points" are

arranged on four endless spiral steel coils, running right in the tire.

As the tire wears these points become more and more pronounced—the top of the coil always remaining flat on the tread.

Yet this detracts not a whit from the resiliency of the tire.

How and why is this different and better than the chain tread?

Because the Midgley Tread cannot be noticed; it isn't as unsightly as the chain grip; because it never breaks; because it never chafes the tire—it is in the tire; because it never gets too hot from friction; because it never throws mud and never wears the pavement (some states will not allow chain grips to be used); and because exhaustive experiments under every condition prove the Midgley Tread to be far cheaper than the old style chain and tire.

We've just published an interesting, instructive booklet entitled "Helpful Hints on Holding to the Straight and Narrow Road."

We send it free for the asking. Ask for booklet A.

THE HARTFORD RUBBER WORKS CO., Hartford, Conn.

Meriwether Little, the famous driver, says: "There has never been any device to prevent skidding and side-slipping that was satisfactory until the advent of the Midgley Tread. You can say anything good about it and still be telling the truth."

TO the seeker after a car that is absolutely dependable at all times, the WAYNE must appeal. Easy to operate, silent, strong, run at a low cost, its extreme simplicity giving assurance of immunity from trouble and a minimum expenditure for maintenance, it is essentially a machine for general service.

As a refinement of all that is best in automobile construction it stands in the forefront. No other car on the market contains more features that commend themselves to the discriminating purchaser, none so well equipped to give unflinching satisfaction.

The 1907 WAYNE challenges comparison with any other automobile made, either American or foreign, and stands ready to prove the claim that it is the greatest value ever offered for the money.

Komet Magnetos and Dow Coils

We wish to call the attention of every one using an ignition apparatus to our full line of ignition equipments.

The "Komet" high-tension magneto is as perfect as can be made in every detail. No coil is used in connection

with it. The timer is so constructed as to always obtain the same good spark, and it is an easy thing to start your engine with this magneto without spinning it. Back kicking of the engine is impossible.

Everything we manufacture is made of the best material and shows the most excellent workmanship. Our motto is, "The best that can be made is just right for our customers."

Ask for special catalogues describing our magnetos, coils, volt-meters, ammeters, volt-ammeters, ball-bearing timers, switches, mica and porcelain spark plugs.

When you have trouble with your ignition, use the "Dow" equipment, and you will be satisfied in every respect.

FORD

Two Errors Can't Correct One Mistake

Prompt Deliveries

COLONEL INGERSOLL USED TO SAY "to be a successful liar one must have a good memory; for one lie will only fit another lie made for that express purpose, whereas a truth will fit any other truth in the universe."

WE HEAR A LOT THESE DAYS about "hand-made" motor cars. (It's funny, but the same concerns who, a year ago, prated of "quality, not quantity," as if the two were incompatible, now build 1,000 to 2,000 cars per year and still expect you to believe it is "hand work," "personal supervision," and all that sort of rot.)

FORD CARS ARE MANUFACTURED—have been made in immense quantities and by modern American methods from the first. And the first Ford ever made is still giving excellent service—what of the "cut and try" contraptions made in that same year?

HAND WORK AT BEST is but a series of mechanical inaccuracies, each made to fit, as nearly as may be, another. Ingersoll would call them mechanical fits; and making one mechanical fit to fit another does not cancel the error any more than two lies make a truth. And when you want to place a part, the maker will need a mighty fine "memory" to give you one that will fit—you'll find he forgot. You'll find that wherever the "personal equation" is permitted to enter, uniformity and accuracy are impossible.

SIX-CYLINDER (1907 MODEL K) Ford touring cars are the product of the best brains, the most perfect organization, the ripest experience and the most modern machinery known to the industry. Every pound of steel—several different alloys—is made especially for the Ford Company, from Ford Formulae, under the supervision of Ford experts, and then heat-treated in Ford furnaces. Result—no mistakes—no culls—no waste.

FORD COURTESY in the treatment of customers—replacement, cheerfully, promptly, gratis, of parts that show the slightest defect in material or workmanship—is made possible only by the knowledge on our part that (thanks to quality of materials and careful inspection after machining) the percentage of replacements will be very small.

1907 Ford Model K, Six-cylinder motor, 45 h. p. at the wheels; will climb anything the wheels can hold on the "hump"; six in. clay miles per hour by electric control alone—no need for transmission, except for reversing; two complete and separate systems of ignition—magneto and storage battery—jump work; two sets of plugs, 125° wheel base, 34" x 6" tires; all the latest features and improvements; the absence of an electric fan; the flexibility, the steady pulling power of a "six"; the simplicity and reliability of a—FORD. In quality, performance, and endurance a \$5,000 car.

A Demonstration is a Revelation

\$2,800 With top and full touring equipment **\$3,000**

The Legislative Needs of the Motorist

(Continued from page 389.)

passed by the present-day locomotive engineers. Every vehicle should be registered, as well as having its driver licensed. In case a chauffeur is found guilty of taking out a car without the owner's permission he should be put in jail for thirty days for the first offense, and locked up six months for the second, with a revocation of his license in addition.

Where drivers are held up on the public highway and charged with a speed violation, I propose that the officer making the charge should serve the accused with a summons on the spot, note his number, and take his license, giving a receipt for the same. The return of the license to be dependent upon the settlement of the case in court. By doing away in this manner with the old form of arrest, the waste of time, the discomfort to the occupants of the car, and quite often the indignities heaped upon them are all avoided. The case could then be decided without the most of personal feeling, and with much better results to the sport, the public, and the police. No conviction for a violation of the law should be made unless the evidence showed conclusively that the defendant knowingly exceeded the speed limit or that the use of speed at which he was driving was excessive or dangerous, having due regard to the use of the highway by others at the time. These suggestions, if adopted, the motorist would be incorporated in a new law controlling the traffic on the public highway, and with a rigid enforcement of the same it is believed a more perfect harmony between them the public and the police would result.

The Development of the Electric Automobile

(Continued from page 382.)

Electric cars of runaway types perfectly meet the requirements of many city and town users, but for this class of service in general the gasoline runabout is more favorably regarded.

Questions pertaining to the advantage and economy of electric delivery wagons and trucks have been widely discussed, and have brought out a great variety of opinions. All investigators are agreed that vehicles of this class yield a greater return of value than have equipments equal to the same amount of work, and many have decided that the return is much greater. At any rate, the great value of the electric vehicle for delivery service can be measured by dollars and cents, which is the thing of first importance to the business man. There are those who go so far as to say that the electric is practically the only system in use for commercial vehicles which fully meet actual service conditions. These vehicles, as turned out by leading manufacturers, are carefully constructed to meet the actual business and physical conditions of the service required of them, and their operation does not require high priced skill. The mechanical parts are simple and readily understood, and the application of the motive power is free from all elements of danger. The weight of the vehicle is reasonably proportioned to the weight of the load it is intended to carry, and all details of the equipment are carefully and substantially made. Delivery wagons and truck bodies, as supplied by leading manufacturers, conform to styles which time and experience have shown to best serve business conditions and wants, and are symmetrical, well proportioned, and as artistically finished as the service required of them permits.

The future success of electric vehicles of the classes mentioned in the previous paragraphs is abundantly insured. There will undoubtedly be improvements, both in general construction and in batteries, but nothing of a sensational nature is anticipated by those who have given the subject the most thorough study. The purchaser of a 1907 electric car of reliable make may rest assured that he will get a vehicle that is completely up to the hour in style, finish, and in mechanical and battery equipment.

Winchester

Speedometer

An Instrument of Precision

VAGUENESS plays no part in its operation. Under all conditions of the road, up hill and down, over "bumps" and through mire, from one mile to seventy-five, the hand points, without vibration, to the exact speed, and this condition prevails whether the instrument has been in service for one day or several years. It is known as the one "dependable" indicator.

BABCOCK ELECTRIC VICTORIA PHAETON

Easy to Operate—Easy to get into—Easy to ride in—Easy to keep clean—Easy to get out of—Easy to maintain

PRICE COMPLETE, \$1,600.00. All Necessary Equipment Included

No expense has been spared to bring this new No. 6 car up to the very highest standard of carriage making. While it is built along the lines of the most approved type, it possesses an individual grace, harmonious style, and fine finish that give it a distinguished appearance not found in any other car on the market. Owing to its full speed and long mileage. It is well adapted to both business and pleasure. This carriage will show a speed of twenty miles an hour for short trips. The regular running speed is from thirteen to eighteen miles per hour and when properly equipped, over good level, macadamized roads, it will travel from seventy to eighty-five miles on one charge of the batteries. A mechanical duplicate of this car recently made a run from New York to Philadelphia (one mile) without recharging the batteries.

OTHER DESIRABLE FEATURES

The body is of the "Victoria" type with full "V" curve and equipped with common leather trimmings. It is upholstered in either blue or green tawny cloth, the body being painted to match. Tires are 8 x 6 inches. Special Clutch No. 100. WHEELS 31 inches front and back. DRIVING GEAR. (Shoulder) is constructed so as to be very flexible and capable of throwing and starts smoothly. BRAKES. Forward operating brakes in both front wheels and auxiliary brake on motor counter shaft. RANGE OF SPEED. 6 to 20 miles per hour. WEIGHT. About 1,200 pounds. MOTOR AND CONTROLLER. D.C. P. (overhead) with no gear overhead capacity. It is equipped from chain drive motor. One can choose with four forward speeds and the same reverse, in addition to which there is an accelerator lever which increases each one of these four speeds. You make the switch of driving to purchase any car and you have measured further into the merits of this car. Your name and address on a postal will bring you full information concerning our complete line of Electric Carriages. And you have seen what we offer, you will want to be satisfied with our own use of our cars. They are well adapted for perfectly service.

BOSTON, U.S.A.

GET THE BEST

THE OLDEST AND MOST SUCCESSFUL MAKERS
OF PIANO-PLAYING DEVICES ANNOUNCE THE

MELODANT A NEW AND EXCLUSIVE FEATURE OF THE ANGELUS

In every composition there runs a vein of melody commonly called the "air," frequently lying wholly in the treble, sometimes interwoven with the accompaniment or wholly covered by ornamentation.

The function of the MELODANT is to automatically pick out and accent the melody notes, even when such note or notes appear in the midst of a full chord, giving to each its proper value as previously determined in an authentic interpretation.

This most desirable and long-sought-for effect is obtained in the MELODANT ANGELUS by the performer simply using the pedals in the ordinary manner. Thus with an ANGELUS equipped with the MELODANT the performer has at his command two methods of accentuation.

He can accent either, automatically by means of the MELODANT, or by his own manipulation of the Melody Buttons, which have been and which still are one of the most valuable features of the ANGELUS.

NO OTHER PIANO-PLAYER CAN OFFER SO MUCH

The addition of the MELODANT does not impair the efficiency nor detract from the value of the simple yet complete expression devices also found upon the ANGELUS. These will still be the means for individual interpretation, which to many persons constitutes the chief and unrivaled charm of our instrument. The ANGELUS is absolutely the only piano-player with whose aid the best artistic results can be obtained.

The ANGELUS in cabinet form, the KNABE-ANGELUS PIANO, the EMERSON-ANGELUS PIANO—are all equipped with the MELODANT.

The introduction of the MELODANT is another step forward in the steady progress of the ANGELUS, which has been continuously developed from the pioneer piano-player—brought out in 1845—to the truly wonderful instrument of to-day.

For sale in all the principal cities.

Descriptive literature upon request.

THE WILCOX & WHITE CO.

MERIDEN, CONN.

THE HORSE OF THE FUTURE, AND THE FUTURE OF THE HORSE

(Continued from page 364.)

which tend to bankrupt an automobile-owner, spiritually as well as financially. Too often the material used is fragile. Under the terrible strain to which it is subjected over our American roads something quickly gives way. Hence our manufacturers charge from four hundred to twelve hundred per cent. profit for supplying and attaching a broken part. That the industry, under such a terrible handicap, not only survives, but actually prospers, is conclusive evidence of its wonderful inherent vitality. Again, our motor cars have not been reliable; they could not be depended upon. When a man takes hold of the knob at his office door he knows that, year in and year out, the knob will perform its proper function. When the housewife sits down to her sewing-machine she knows that hardly once in a thousand times will it fail to do its work, and do it well. Unthinkable as an indictment to which our cars must too often plead guilty, in America we have done a lot of foolish things in motor-car building, but we are approaching wiser methods and more correct lines. The car of the future, either for business or pleasure, but not yet born full down. He would be a bold, perhaps a rash, prophet who would undertake any detailed description of this car. Nevertheless, reasoning a priori, there are some features we may prophesize. In the first place, it will be built of better steel than we have been accustomed to use. In the next place, the cars will become standardized, and when standardized they will be built by machinery in enormous quantities at an exceedingly low cost. The wheels will be large, built of wood and of the artillery type. Hard rubber or some enduring substance will take the place of the present high-priced unsatisfactory pneumatic tires. The car will be light, simple, strong, and easily kept in repair. Mr. Edison once said the automobile will never be wholly practical until it is fool-proof and the ordinary repairs can be made on the highway by a dandy with a monkey-wrench. The present highly unsatisfactory system of change-speed gears will be supplanted by a variable-speed device. There are not wanting good judges who believe that the problem will be solved by a system of hydraulic transmission. The fuel of the future will be kerosene or grain alcohol. Thirty-five per cent. of the population of America are farmers. The farmer will be the chief automobile owner and user. The maximum speed of his car may be only twenty miles per hour, but that is twice as fast as his present mode of travel. The car will be an invaluable adjunct to his work on the farm. The adjustment of a belt, the turn of a crank, and the automobile engine furnishes power to thresh his grain, cut his woods, chop his feed, and pump his water. After being in constant use all the day, the car is ready to take the entire family to the social gathering in the village at night or to church services on Sunday morning. The farmer will

use the automobile as will the butcher, the baker, and the store-keeper—when he can in no other way get the same amount of work done at so low a cost; and when the business man can deliver his goods more quickly and more economically than he can by using the horse he will do so.

There will always be motor-cars *de luxe* for the rich, but they will be merely the fringe of the garment of a great industry. The countless millions of tons of freight now slowly and painfully drawn over country roads and through city streets by poor dumb brutes will go spinning along, the motions of the heavily laden trucks answering a tune of rich content, and all the thousand tongues of commerce will sing the praises of the motor-car.

Let me suggest a few practical things that the tireless horse of the future will accomplish:

1. It will solve the problem of the overcongestion of traffic in our city streets.
2. It will free the horse from his burdens. A few years ago, in the city of New Orleans, an old dandy came in from the country and for the first time saw the electric street-car, which had taken the place of the mule-drawn car. The old dandy threw up his hands, and looking up to heaven, said, "Bless de Lord, de white man freed de nigger, now he done freed de mule."
3. The automobile will furnish relief to the tenement-house districts.
4. It will stimulate the good roads movement throughout the United States.
5. It will save time and space and become invaluable to the physician, the fireman, and to many classes of citizens.

It will tend to break down class distinctions, become one touch of automobilism makes the whole world kin.

As to the future of the horse, man's best beloved friend among the dumb animals, as a least of burden, he will be largely replaced by the motor-car. No one who has observed horses in our city streets during the last storm, slipping and falling on the hard pavement, but could wish that they could be emancipated from such work. This emancipation, so devoutly to be desired, will come to pass. The horse will not go out of use, but he will be used only for light work—for riding and for pleasure driving. There may not be so many horses in the world a century hence, but they will be better horses, better bred, and more kindly and humanely treated. The motor-car is to emancipate the horse, and it is to solve many problems that cannot now be enumerated. Is it the automobile to be known as the most tireless and faithful servant of man throughout the world where civilization has a home or freedom a banner. Yesterday it was the pleasure of the few, to-day it is the servant of many, tomorrow it will be the necessity of humanity.

CARBORUNDUM

Carborundum Grinding Wheels save money in the manufacture of

AUTOMOBILES

They do their work so much more accurately and uniformly than other grinding wheels—
They cut so much faster and last so much longer before wearing out that they are a distinct money saving force in any grinding department—
They are now used exclusively by many of the leading automobile manufacturers.

**Free Sample of
Carborundum for Valve Grinding**

We believe Carborundum Powder to be the best thing ever produced for grinding valves of motors—

We want as many people as possible to know about it, and with this end in view will be glad to send to manufacturers sample packages to be placed in tool-kits.

Let us send you the Carborundum Book.

GRAY MOTORS

Gray Motors
Wonderful Boat Engines

6 H. P. COMPLETE \$97.50

Elevated base.
Twin gears enclosed.
Fuel feed Carburetor.
Long bearing.
Engine is reversible and runs in either direction.
Counter-balanced crank.
Starts without cranking.
Positive riding design for crank pin.
Drop forged crank and connecting rod.
Hinged plate in base for quick examination of connecting rod bearings.
Ball bearing thrust.

The High-grade Engine at a Low Price.

Made in 1, 2, 3 and 4 cylinder sizes.

Built in the most modern and up-to-date plant in the world, devoted exclusively to the building of 2 cycle Marine Engines and guaranteed by a separable firm 2 1/2 to 40 Horse Power. Write for catalog.

GRAY MOTOR CO., 62 Leis Street, Detroit, Mich.

Write for prices and description of our 2 1/2 h. p. Motor, the lowest priced Boat Motor ever sold.

We guarantee, absolute reliability, take into consideration, just as well, the lowest priced motor as you can find. Suitable for either in the boat, or for boat launchers and upwards.

It Settles Down to the

Remington

This is the testimony of every typewriter user who knows by experience the relative performance of writing machines.

The man of all men who swears by the Remington is the man who has tried to get the same service out of some other machine.

A man may know the Remington or he may know some other typewriter, but the man who really knows typewriters is the man who knows the difference between the Remington and others.

The Base Ingratitude of Mr. Dooley

THE original Mr. Dooley, now gone his way, was a character well known to George Ade, John McVieken, Vance Thompson, and many other Chicago newspaper men, long before Peter Dunne made him a national celebrity. It was Vance Thompson, by the way, who swooped down on the old grub-man in a sleepy hotel, borrowed two dollars from him before he rightly realized it, and vanished again into the outer darkness while he was still rubbing his eyes. The little episode he subsequently referred to as "the hurricane touch."

Similar anecdotes of the old man's wit are cherished as particular possessions. George Ade has one that he calls "Human Gratitude." Late one night he was surprised to find the proprietor asleep behind his own bar. On being roused, that worthy showed a marked disinclination to business and a strong desire to be let alone. Ade pulled down the blinds, started to the cash register, looked the cash register and called a cab. With some difficulty he elicited an address and then, for what seemed hours, they jinked over out-of-the-way streets until at last the cabbie drove up before a ramshackle little box of a frame house with a stairway running up the outside. All this time the passenger had slept soundly.

Out of the cab and up the rickety stairs, puffing and blowing, Ade landed his client on the top step, but his footing and the two of them rolled helplessly piggy-back to the street. The old gentleman sat up, regarded Ade with the utmost indignation, and spoke the first words of the evening.

"Jarge," said he, "ye thipped me."

Automobile Electric Horn

THE electric horn for automobiles, an English device, is an electric buzzer, fitted to a common automobile "horn" horn. A brass cylindrical case contains a steel vibrating disk, held at its periphery by two flanges and two electro-magnets, and the rapid vibration of the disk, caused by the magnetization and demagnetization of the magnets, yields a sound which is magnified in volume and effectiveness by the horn. The current is provided by an electric accumulator. The signal can be maintained as long as is necessary or desired, the blast being louder and more continuous than that of the ordinary whist horn, and with the switch on the steering wheel the driver can give his warning without removing his hand from the wheel.

The Limit

A stout man out in the suburbs who owns a large place has among the many people employed to keep it in shape an Irishman of whom he is particularly fond, on account of his unconscious wit. This Irishman is something of a hard drinker, and as his income is limited, he is more particular as regards the quantity than the quality of his liquors. The other day the employer, who had been availing a good opportunity, remarked in a kind tone, as the closing sentence of a friendly lecture:

"Now, Pat, how long do you think you can keep on drinking this cheap whiskey?"
To which Pat instantly replied:
"All my life if it doesn't kill me."

A Fifty-per-cent. Saving

"Is you find it more economical to do your own cooking?"
"Yes, indeed. My husband doesn't eat half as much now as he did."

The Remedy

TRAMP: "Madam, I am suffering from indigestion."

LADY: "Why, I'm sorry. What can I do to help you?"

TRAMP: "Madame, you can cure me instantly by giving me something to digest."

Capt. John Ericsson

*"One of the few, the immortal names,
That were not born to die."*

ERICSSON was precocious in childhood; born in 1803, at a small town in the mining region of Sweden, at the age of ten years he designed a pump to drain the mines, and, before his majority, a machine for engraving and a flame-engine. His younger manhood comprises a whole series of inventions. Among them are surface condensation, as applied to steam, and compressed air for conveying power. In the forties he caused a revolution in naval warfare by the application of the screw propeller to vessels of war, and his naval inventions culminated in the construction of the Monitor of national renown, familiarly known as the "Little Chess-Box on a Raft," which went out to meet the Merrimack and to victory on that memorable March day of 1862. This invention compelled the reconstruction of every great navy of the world, along the lines laid down by Ericsson, and was of such wide-reaching effect as to cast around his name an international fame so great as to eclipse all other useful products of his wonderful genius. Comparatively few

people are, therefore, aware that Ericsson invented the calorific engine, through which hot air successfully takes the place of steam, and at a great saving in expense for all operations requiring moderately low power; as, of course, much less fuel is required to heat air to some expansive power than is needed for the turning of water into steam. *Herein lies the chief economy of the Hot-Air Pump*, which was really Ericsson's pet invention, and in improving which he spent many years of an exceedingly active life. There are various imposing monuments the world over to the memory of the great inventor and patriot; yet those who knew Ericsson best will testify that the kind of memorial which would please him most, were the choice his own, would be every one of his Hot-Air Pumps, which he knew of, as delivering its Domestic Water Supply into the homes of the civilized world. Is it asking too much, then, of every buyer of a Hot-Air Pump to give a thought to the memory of its great inventor and what his life meant to mankind?

Over 40,000 Hot-Air Pumps are now in use.

China's Home-made Railroad

The first railroad in China built by Chinese capital has just been completed and opened to public traffic. The length of the line is thirty miles, and it has four stations between the terminals, Chaochow and Jowatou. The grade of the road is low, with very few curves. Japanese hard-wood ties, and American steel rails, angle bars, and spikes were used in the construction of the line. The road's motive power consists of three fifty-horse-power locomotives of Japanese manufacture. The coach equipment of the company consists of twenty-two cars of Japanese manufacture, built on the corridor plan. They have a seating capacity of fifty passengers to a coach. The first-class cars are fitted with silk seats, and the second-class cars are upholstered in American patterns, and are upholstered in patterned; the second-class carriages have only plain wooden benches. The coaches are of the automatic type used in this country.

A standard train consists of four coaches and a guard's van. The latter is the only car equipped with brakes, the American air-brake on the locomotive being relied on to handle the train with safety. Six freight-cars complete the list of the company's rolling stock.

Prior to the formal opening of this road, trains had been running for eight days, three or four times a day, and the daily average number of passengers carried was 1,000. The fare from Chaochow to Jowatou is sixty-seven cents (gold) each way for first-class accommodation, and twenty-seven cents for second-class. Thirty miles are run in about an hour and a half.

At present the line is continually passed by armed men stationed at intervals of about one mile. The engineers, conductors, and train-dispatchers are all Japanese, but the ticket-collectors on the trains, and all the other employees are Chinese. The train-dispatching is done by telephone.

Our Frugal Soldiers

ALTHOUGH the American soldier is not highly paid, he is not to be considered a thrifty fellow when his savings account comes to light. Last year 54,260 enlisted men saved and deposited with the paymaster's department \$1,410,228. This quite respectable sum represents about twelve per cent. of the total pay of all the enlisted men for that period. There are but few wage-workers who can boast more a ten-per-cent. saving out of their earnings. Had every enlisted man made a deposit, the average saving for the year would have been \$27.50, but that is the least interesting feature of the system. The figures show that the soldier can deposit, under the law of 1872, only sums of \$5 and over, and as the pay is small, the total deposits for the year show that the saving habit is continuous with many enlisted men.

These deposits bear interest at the rate of four per cent. per annum, but they cannot be withdrawn until the soldier receives his discharge. Last year there was paid to ex-soldiers the sum of \$1,164,234; interest was also paid to the amount of \$73,115. The number of men discharged is not ascertainable, but the amount repaid shows that their average saving must have been considerable.

Since the enactment of the law of 1872 the total deposits have amounted to \$27,780,533, and discharged soldiers have received \$1,582,983 in interest on deposits withdrawn. There remains on deposit with the paymaster-general the sum of \$291,737.

Probably Catching

A VOICE from the Baltimore, upon entering her nursery, found her youngest in tears.

"Why, what's the matter with Harry?" she asked the nurse.

"He's mad, mum," explained nurse, "because I wouldn't let him go to the Simpson's' about the strait."

"And why wouldn't you let him go, Nora?"

"Because, mum, they're havin' charades, as he said, an' I wasn't sure whether he'd had him or not."

CHARRON

GIRARDOT

VOIGT

VISIT the palaces of America, the great country places famed for their beauty, their taste—the richness of every portion of the establishment—and you will find a C. G. V., a 50 H.P. or 75 H.P. touring car. It is the last touch, the finishing detail that marks the class of its owner as definitely and as unmistakably as an hundred Bradstreets or Almanacs de Gotha.

WHEN the list of men who drive one make of car includes a long list of the world's greatest financiers, then the supremacy of that car is definitely established. Those men have every opportunity of finding out just which car is the best in every way—and they do find out before they buy. Their brains and their resources forbid the unforgivable mistake of accepting any but the best.

ASPEED of 80 miles an hour, unlimited power, the most that the world has ever yet produced in motor-car beauty, comfort, convenience, splendor and luxury—these are a few of the points of the C. G. V. These are a few of the reasons why the C. G. V. is brought from France to this country, to England, to Germany, to St. Petersburg, to Rome, to Castile, to Caracas, to Vienna, to Sydney, to wherever a man has decided he will have that one car, which, beyond all doubt, is the greatest car in the world.

Many other points are embraced in our Catalog No. 30. Send for it it's free.

Among the many prominent Americans now driving the C. G. V. are

W. Waldorf Astor
O. H. P. Belmont
Clarence Mackay
Oliver Kahn, Jr.

Mrs. Ogden Corlett
Whiteley Reid
W. K. Vanderbilt
Chas. M. Schwab

James Gordon Bennett
The Duchess of Rosburgh
Concetta Boni de Castellano
Frank J. Cooke

SOLE IMPORTERS FOR UNITED STATES AND CANADA

C. G. V. IMPORT COMPANY

1849 Broadway, at 61st Street, New York City

"The Factory behind the Great Arrow Car"

A TOURING CAR is what it is made to be. The factory is important in the case of any product; it is paramount in the case of an automobile.

A touring car is not a simple unit. It is an assembling of many parts. To make a perfect car means that every man in that factory has done his work well. A perfect factory produces a perfect car.

The factory in which the Great Arrow is made has been built not only to afford every convenience of arrangement, but also to enable each man to do his best work under the most favorable conditions. We have the factory—the most complete, we are told, in the world. So when we say "The Factory Behind the Car" it means that the Pierce Arrow is an American car built to meet American conditions in a factory designed to accomplish just that thing.

HARPER'S

APRIL

CAPTAIN ROALD AMUNDSEN'S OWN ACCOUNT OF HIS VOYAGE THROUGH THE NORTHWEST PASSAGE

HARPER'S MAGAZINE is the one magazine which makes a point of having its articles on the great achievements in exploration and travel written by the very men who have accomplished these feats of daring—not by some writer getting his facts at second-hand.

In the April HARPER'S, Captain AMUNDSEN tells for the first time of his wonderful and adventurous voyage in the little ship *Gjøa*, the only vessel which has ever come through the Northwest Passage from the Atlantic to the Pacific, of his discovery of the North magnetic pole, and of his visits among new tribes of Eskimos, who never before had seen white men. Despite the smallness of Captain AMUNDSEN'S vessel, he earned a complete outfit of instruments and made a most elaborate series of scientific observations, the importance of which can scarcely be overestimated. His article is illustrated from his own unique photographs.

RECOLLECTIONS OF A DIPLOMAT'S WIFE

The author of these delightful letters and recollections is Madame DE BUNSEN, whose husband, Carl de Bunsen, was prominent in the German diplomatic service. Madame DE BUNSEN, an Englishwoman of the well-known Waddington family, went as a bride to Turin, where her husband was Secretary of Legation. She writes with great originality and intimate charm of the social and political events of their life there—of great personages, royal marriages, of her personal meetings with many of those who made the history of the day. Her article is illustrated with many quaint photographs from her private collection.

HOW MEDICINES ARE DISCOVERED

Everybody knows how medicines are prescribed and how they are sold, but few know how chemists are constantly at work experimenting with new medicines for the help of mankind and how these medicines are discovered, tested, and manufactured. This is what Professor ROBERT KENNEDY DUNCAN tells about in HARPER'S for April. His article is full of intensely interesting revelations.

OTHER NOTABLE FEATURES OF THE APRIL HARPER'S

HAVELOCK ELLIS, the well-known English writer, tells of his visit to the lonely Monastery of Montserrat, the Home of the Holy Grail. His article is illustrated from sketches by WALTER HALE.

CHARLES H. WHITE, the etcher, has made a delightful series of etchings of scenes in Richmond, Virginia, which are accompanied by amusing comment.

HENRY W. OLNEY contributes a nature paper of an uncommon sort on "The Music of Man and Birds." The music of many bird songs is reproduced with his article.

SOME REMARKABLE SHORT STORIES

A romantic and quaintly humorous two-part love-story of the days of the Georges, by JAMES BRANCH CABRELL, begins in the April HARPER'S. Nothing more delightful of this sort has appeared since "Monsieur Bequairen." The story is illustrated in color by HOWARD PYLE. The other short stories of the number are: "Springtime," by HARRISON RHODES, a young love-story, with pictures by ELIZABETH SHIPPEN GREEN; "The Leaving of a Doff," by LAWRENCE MOTT, a strenuous story of life on the Labrador; "The Last Visit to a Scholar," a powerful character-study by MURIEL CAMPBELL DYAR; "The Great Squash Syndrome," a deliciously funny child-story by MARIE MARVIN; and "Miss Solide's Title," a sketch of an old maid by LILY YOUNG. Another story of psychological interest is "A Portrait by Collyer," by CLARE BENEDICT.

Shall the Adirondacks be Destroyed?

The resolution now pending at Albany is only one of many perils which threaten the most beautiful public park in America.

READ

SILAS STRONG

By IRVING BACHELLER

and you will know the people and the perils and the value of this wonderful land. You will see the ravages of greed and the thrilling battle of its forces with a sturdy old woodsman. There's a laugh or a smile on every page of this remarkable book by the author of F.B.N. HOLDEN.

"Mr. Bachelier's novel is a healthy sign of reaction against the rampant commercialism of the United States. . . . It is a novel for the American people to digest, and their thanks are due to Mr. Bachelier."—*Edward Garnett in the London Daily News*.

"The people who ramble through these pages are unforgettable."—*London Sketch*.

COMMENT

Mr. Harriman appeals to the Public

IT IS TRUE, OF COURSE, AS SUGGESTED IN THE WEEKLY last week, that Mr. HARRIMAN would be a first-rate man to build the Panama Canal, but since that suggestion was put into type doubts have much increased as to whether he could be spared for that service. He has suddenly taken up a new line of railroad work, one that up to last month he had never meddled with, but which he now considers, and rightly, to be of the first importance to railroad prosperity. He has seen, and proclaims, that unless the people of the country, the government and the railroads, can come to a better understanding and work together in harmony for the good of all, the railroads cannot do the work which is cut out for them for the development of the country. "There has got to be cooperation," said Mr. HARRIMAN, "on the part of the railroads on the one hand and the public and the government on the other. It is the only way in which the matter can be worked out." He went on to say that the railroads had left legislation to their lawyers and explanation to subordinate officials, and that it had not worked, and there was nothing for it now but "to come out in the open [meaning the newspapers] and tell the people the railroads' side of the matter." And he did so to the extent of four or five columns of the New York Times of March 10, going into some of the history of American railroading in the last twenty years, pointing out the great strain that has now come upon the railroads' resources, and discussing various methods of helping them to meet demands that have outrun equipment and the methods both of the roads and their customers. He expressed his belief in the need of a broader gauge than the one in use, and the probable substitution of electricity for steam for traction purposes, pointing out that either of these expedients would cost a vast deal of money, and laying constant stress on the assertion that the railroads must have a fair deal and the cooperation of the interests concerned with them if they are to meet in reasonable measure the demands of the country.

What He Wants

One specific thing Mr. HARRIMAN asked for. Asked if he wanted to have "pooling" legalized, he said, "No"; that he did not believe in railroad pools, and that they accomplished nothing when they were legal. What he does want is to have recognized by Federal statute the making of enforceable agreements between railroads for a distribution of traffic, and to have such agreements binding for a given term of years. He explained in some detail how such a privilege would make for economical railroading, and would put a stop to all such railroad combinations as he had himself been so urgent to bring about.

Too Many Rival Wonder-workers

The leading railroad men of the country seem to be in general agreement with the view that Mr. HARRIMAN has

expressed. Their solicitude to come promptly to an understanding with the government is indicated by the meeting, said to have been arranged by Mr. J. P. MORRIS, and at this writing still in prospect, between the President and the heads of four or five of the leading railroad systems of the country to discuss the business situation, and, if possible, to find means to allay the public anxiety as to the relations between the railroads and the government which now obstructs railroad investments and holds up necessary construction. The most urgent question of all is how to deal with the States and their legislative and railroad commissions, and induce them to give the railroads a chance for life. Here is a despatch from the newspapers of March 9:

BOSTON, MARCH 9.—The Sunset limited of the Southern Pacific was annulled yesterday because it was fifty minutes late, the annulment being due to the recent order of the Texas Railroad Commission, requiring passenger-trains to run within thirty minutes of their schedules. There was a large number of Northern and Eastern tourists aboard the train going to the Pacific Coast, and they were compelled to remain here twelve hours.

That is a good example of what is going on. It does not take a seventh son to foresee what the difficulties of railroad management will be if every State on its own hook shall prescribe in detail to the railroads that traverse its territory what service they shall render in its borders and how, and what they shall charge for it. Irresponsible meddlingness of that sort may quickly put an end to economical and profitable transportation. If carried far enough, it would work its own cure by the bankruptcy of the railroads and the collapse of their service, with consequences that would come home vehemently to the voters, who are finally responsible for all legislation. It is doubtless to avoid a cure so expensive as that that the railroad presidents are taking counsel with President ROOSEVELT. He has had as much as any one to do with letting the anti-railroad genie out of the bottle, and his influence is naturally thought to be the most efficacious force available to get some of it back. Congress, under executive stimulation, has taught the State legislatures how to do things to the railroads. It is like the case of Aunus and his red. He worked wonders with it, and immediately the observing magicians worked similar wonders with theirs. But presently Aunus's superior red swallowed all the other reds. The Interstate Commerce Commission can hardly swallow all the State railroad commissions, but neither can all those commissions go on working independent wonders. Interstate traffic cannot possibly meet the demands of so many rival masters.

Senator Spooner a Poor Man

The other day Senator SPOONER resigned from the Senate because he is too poor to remain there. That this explanation of his resignation is the truth is known to his friends and to many of his acquaintances, both those who agree and those who disagree with him in politics and on economic subjects. Less than a year ago a careless article about Mr. SPOONER was printed in a series of articles entitled "The Treason of the Senate." It was one of the articles of a well-known kind in which passion, prejudice, and demagogic rhetoric prevail over temperance, justice, and truth. It was the fundamental assumption of the writer of this article on Mr. SPOONER that any agreement with what the writer called the "interests," or any defense of any position taken by them, is positive proof that the one who agrees or defends is a member of a band of conspirators whose constant design is to rob the government and the people.

Absurd Charges against Him

In the first place, the writer called Mr. SPOONER the "head spokesman of the interests." This meant that, although a Senator, he was paid counsel on the floor of the Senate for the "interests." He was, therefore, violating his oath. Mr. SPOONER's attitude on the rate bill would sufficiently answer this accusation except to the mind of a man who had promised in an article that would be untainted by a weak fairness. The charge that Senator SPOONER has been the paid attorney of public thieves to speak for them on the floor of the Senate is made in detail in this article. The writer asserts that in his early life Mr. SPOONER became the hired agent of "two bands of thieves engaged in robbing the people." As such agent he served to the "Omaha" railway lands that should have reverted to the government. This crime, strange to say, was consummated by procuring a decision from the Supreme

Court. Having become a member of the State Legislature, it is intimated that as a lawmaker Mr. Spooner was the useful tool of "the thieves." When the people of Wisconsin rose "against railway thieves" he "side-tracked" into the job of solicitor for the Omaha. On the return of a corrupt Legislature a certain "deal" was completed, and, when that "deal" was going on, SPOONER was not only *general solicitor* of the Omaha, and therefore in charge of all its legal business; he was also a *stockholder* and a *director* in the system.¹⁹ (The italics are those of the author of the article in question. Their intention is clear.) Then PHILIPUS SAWYER, who is described as "coarse, rough, a hater of men," made Mr. SPOONER Senator, because he was a "plib fellow, a first-class lawyer, and a plausible 'wind-jammer,' as well." Then the author sustains the charge that Mr. SPOONER's election was bought, by corrupting the Wisconsin Legislature, for \$52,000. Mr. SPOONER's denial is laughed at, although the author confesses that he has no evidence to sustain the charge except the discredited confession of a bribe-giver who had become hostile to Mr. SPOONER. Various instances of robbery by the United States Senate, participated in or led by Mr. SPOONER, are given. He is charged with helping to rob the Northern Pacific and with other crimes unnecessary to mention. He is, of course, accused of receiving enormous fees, and of having acquired from one to two million dollars of the plunder for himself.

Why He leaves the Senate

All this is worthy of notice because it indicates a recklessness in bringing accusations against public men which have sometimes resulted to the benefit of overcautious men, and of some who are really bad. We all recollect Mr. Roosevelt's remarks about "muck-rakers," remarks which were inspired by articles like this on Mr. SPOONER. The truth is that Mr. SPOONER was very particular, as he has glibly explained, to refuse fees for business which in some form might come before the Senate. He has never been a rich man. When he entered the Senate he possessed a small competency, not so large an amount as a lawyer with his practice should have had, for unfortunately it is true that Mr. SPOONER has speculated in stocks, and he has speculated unwisely. It seems strange, if he were really the slave of the railway and lumber "thieves" whom he was aiding to rob the people and the government, that they should not have "put him into good things." It is the usual theory that rich and predatory clients do this for servicable lawmakers, such as Mr. SPOONER is described as being. But Mr. SPOONER was left to invest his money on his own judgment, and he put it into bad things. When his second term was expiring, Mr. SPOONER announced that he would not accept a reelection in 1903. He did this because he was, as he is now, poor; because he had nothing to leave to those for whom he felt that he ought to provide. But the Republicans of the State wanted him so much that he felt obliged to accept a reelection, and Mr. LA FOLLETTE could not defeat him. Now he is as poor as ever; the necessity for him to earn something for his old age and to leave behind him is the greater, and in going out of the Senate because of his poverty he not only does his duty by himself and those dependent upon him, but he meets and answers the bitter and cruel attack upon him. The case suggests that one who in a public print assails the character of any one ought at least to offer sufficient evidence to make *prima facie* case. It is not often the case that an episode of his life can prove that a reckless charge against a man is defamatory.

Municipal Socialism in London

The municipal elections in London resulted in a popular verdict against municipal socialism. This result is due to a general dissatisfaction with the extravagant municipal trading experiments which have been made by the London County Council, and notably by the Battersea Borough Council. The Progressive party, which favored the municipal ownership and operation of "public utilities," had been able to maintain its majority in the County Council by the abstention of voters from the polls. This year the voters turned out, and the vote of women was especially strong in opposition to the socialist schemes which have been tried by the advocates of municipal trading. Those who are unfamiliar with the London County Council's attempts and with the

plans of the Progressives for the future will be astonished to learn how far these people were desirous of going in their efforts to drive private individuals and corporations out of business and to establish a municipal communism not only in transportation and in communication, but in the business of production, of entertainment, and of providing homes for people at the public expense. The latest proposition was that billiard-rooms should be provided at the public expense.

Extravagance and Loss

Municipal socialism has not only been greatly injurious to individual effort; has not only resulted in the defective service to the community which always, or always after a propitious beginning, marks municipal effort, but it has enormously increased the London debt and London taxes. Last year, for example, the County Council started the ill-starred Thames steamboats. Some of the councillors estimated that the city would make a profit of \$450,000 a year on the enterprise. Mr. JOHN BRAY, although greatly in favor of establishing the line, modestly estimated that the boats might lose to the city the first year a small sum, not more than \$50,000 or \$65,000. As a matter of fact, the capital required was \$1,500,000, which was much in excess of the estimates. During the first nine months of the running of the boats the city lost about \$250,000; for the current year the loss is estimated at \$265,000. This sum of \$515,000 must be made up by the ratepayers. In purchasing the water-works of the private companies the city expended \$187,000,000, and the water furnished by the city costs more to the consumers than when it was furnished by the companies. The cost of the electric plants to the city was three times more than the estimates. The investments of London in trading will soon reach the sum of \$97,000,000, water-works excepted, and thus far all of these enterprises have been mismanaged. Individuals have been driven out of business, and the public has not been benefited; on the contrary, it has not been served so well by the city's tramways, for example, as the American public is served by private companies. We may judge of the expense of municipal trading in Great Britain if we compare the local indebtedness of the United Kingdom with the local indebtedness of the United States. If the cities of this country should undertake to do what British cities have done in the way of owning and operating public utilities, our local indebtedness would be more than doubled. It is no wonder that the conservative citizens of London, including the women, should turn out of power by a vast majority those who have made the metropolis known to economists as "The World's Greatest Spendthrift."

Judgment against a State not Enforceable

An interesting condition arising from a suit between South Dakota and North Carolina shows that the law and the Supreme Court continue to recognize the sovereignty of States within their proper sphere. South Dakota came properly into possession of some North Carolina repudiated bonds. An action to recover was brought by the creditor State against the debtor State in the Supreme Court. The decision was in favor of South Dakota, but the court could not find a way to enforce the judgment. The other day some one in New York offered to present South Dakota with \$1,000,000 more of the repudiated bonds, but South Dakota had had enough of the poor little game and refused to accept them. In effect the court holds that in such a case the debtor State can get all the judgments and all the decisions it asks for, but a sovereign debtor, whether it be North Carolina or the United States, cannot be made to pay against its will under the law. It may be compelled by war, but in case of war, such is a qualification of a State's sovereignty, the United States must defend it, while, such is another qualification, the Constitution forbids one State—South Dakota, for example—to make war on another State, or, indeed, to make war at all.

To Neutralize the Philippines

An interesting proposition has appeared in one of two newspapers, one of which is very near the administration. It comes from Washington and, with much forthrightness, has been cabled to London, where the idea has been immediately received. The proposition is said to be the invention of "one of the ablest members of the United States Senate on the Republican side." It is, in brief, that the Philippine Islands

should be neutralized. This means that this government remains charged with the cost of governing them, but that we should be relieved of the cost of defending them, by an agreement between all countries that any one of them should leave them untouched in case of war between it and the United States. The reason for our strongly desiring this is explained to be that the islands have turned out worthless commercially, while they are officially recognized as a cause of weakness in time of war. In effect, if the plan should go through, we might continue our experiment in Americanizing the brown man without the fear of possible humiliation at the hands of Germany, Japan, Siam, or Coochin-China. Apropos of this, the Pacific coast says that we have no battle-ships that we can spare for the Philippines; they are all wanted on the home side of the Pacific.

Mr. Perkins Makes Good

MR. GEORGE W. PERKINS has satisfied the supposed claims of the policy-holders of the New York Life Insurance Company by paying to the company \$54,919 16. This sum is made up of \$48,500 principal and \$5,519 16 interest. Mr. PERKINS paid the original sum at the request of the officers of the New York Life Insurance Company to the Republican campaign fund of 1904. Subsequently, according to agreement, the New York Life Insurance Company reimbursed Mr. PERKINS, so that the money was really taken from the funds belonging to the company's policy-holders. Mr. PERKINS was indicted, but the courts have held that in taking the money from the policy-holders the persons concerned, including, of course, the receivers, had not committed a crime according to the statutes of the State of New York. It seems to have been a close question, and even the favorable decision alluded to the taking of the money as immoral and its use for campaign purposes as "foreign to the chartered purposes of the corporation." Mr. PERKINS felt his position so keenly that he properly made restitution. If he should have done so, which cannot be successfully disputed, what ought his fellow officials and the recipients of the check to do? But that is a question that may be left to Mr. PERKINS'S associates and the Republican campaign committee.

Governor Hughes

Governor HUGHES is rapidly becoming a national figure because he is doing the executive work of the State for its benefit. He is doing the work in the presence of the people, and is actually showing them that he has excellent reasons for his conduct—not party reasons, but public reasons. He has taken his job not as a Republican job, but as a State job, and there have been very few Governors of New York like him; so few that it would be inconsiderate to undertake to mention them. In Mr. KELSOY'S case he forced, by an official examination, an officer who had asserted his own competency to prove himself incompetent. The people of the State thus learned that the Governor was right in demanding KELSOY'S resignation, and learned, too, that his intended removal was for the public good, and not part of a game of personal or party politics. It will be of great advantage to the State to feel that it has a Governor who is not a party leader or an intriguer for his own advancement, but who is devoted only to these public interests with which he is intrusted.

Name the Rascals

So many people who are, or have been, so placed as to have special opportunities to know whereof they speak, have said that the police of this city are, and have long been, protecting criminals for pay, that further neglect to furnish names and proof will look like a serious failure of good citizenship.

Mr. Murphy's Argument in Print

The very able and exhaustive argument of Mr. EDWIN GARDNER MURPHY, of Alabama, against Federal intervention in the child-labor question, and especially against the plan advocated by Senator BRANNON in the last Congress, was published in full in the New York Evening Post of March 9. Mr. MURPHY was one of the first organizers of the fight against child labor, and he knows his subject thoroughly. He is the best-qualified person we know of to set forth the reasons why the protection of children is a matter best left to the charge of the States.

Baseless Charges by Mr. John Burroughs

A letter printed on another page has to do with certain drastic criticisms made by Mr. JOHN BURROUGHS in a published article on two "nature-pieces" recently published in HARPER'S MAGAZINE. Mr. BURROUGHS charged that the facts recorded in these pieces were not observed but imagined; that the pieces were "fake natural history," and that the writer of them had imposed both upon HARPER'S MAGAZINE and upon the general public. We believe our correspondent has made it sufficiently clear that not one of these injurious charges has any basis outside of Mr. BURROUGHS'S imagination.

Japan's Credit

It may be that London's reception of Japan's recent attempt to borrow \$115,000,000 suggests why the Japanese representatives at Portsmouth should have been eager to make peace with Russia. London declared that it did not fancy the securities which Japan offered, and the Morning Post predicted that "Japan will have a very heavy task in establishing its finances on a sound basis."

Mr. Olney Sustained

Recently, HAYASHI, Japan's Foreign Minister, in a reply to an interpellation, showed that he agrees with Mr. OLNEY'S interpretation of the treaty of 1894. In speaking of the second article of the treaty he declared that it was inserted in order to secure ratification by the United States Senate. It was this article which Mr. OLNEY said did not grant the right of Japanese children to admission to the schools, but left the whole question to the States or to the nation.

Bad Days in Wall Street

The first nine days in March were painful days in Wall Street. Stocks went down, and then went lower, to be still further depressed the next day. It made the people who had to sell them feel bad. But on other people it had no perceptibly depressing effect, but rather the contrary. The natural man is not depressed at seeing his fellows lose money in stocks. He rather likes it. What makes him feel bad is to see them win, and not without some reason, because poverty and riches are relative, and the more superfluous riches one's acquaintances and neighbors and fellow beings acquire, the less comfortable it is to lack a corresponding superfluity. So times of great rises in Wall Street in which some people get rich make for uneasiness in the minds of the rest of the people, and times of falling stocks and bear markets make for resignation and contentment in those who have taken no chances. Indeed there is no better preparation for general retrenchment and the philosophical endurance of restricted means than the knowledge that folks who had money to lose have lost some of it. It is the being poor and continuing poor while other folks are getting suddenly rich that tries philosophy and makes folks restless and jealous.

The Last of Dowse

JOHN ALEXANDER DOWSE is no more; Mrs. DOWSE is infirm, and seems to hold her sceptre in a very shaky hand and rule by proxies who control her. But DOWSE'S cult and works survive him, and it cannot be doubted that Christian Science will survive Mrs. DOWSE, with modifications in some particulars, but without any vital disturbance. DOWSE'S extraordinary rise and long-maintained ascendancy over his thousands of followers is a remarkable illustration of the human propensity to follow a leader. DOWSE had in him a great deal of leadership. He was shrewd, practical in details, building over with simplicity and energy, and had doubtless the great advantage of believing himself in the delusions which he preached. He dealt with two subjects, cure and religion, which are both of surpassing interest to the human mind, and both of which are bounded by a borderland in which faith and credulity dispute for dominion. It is not easy even for instructed minds to know where true religion ends and false teaching begins, or to know precisely the point where medical knowledge stops and empiricism finds its opportunity. DOWSE worked in the borderland between things ascertained and things imagined or hoped for, and found there very substantial returns for his curious labors. Such a career as his reminds us once more how large a proportion of mankind have rings ready fixed in their noses by which they can be led by whoever can see the rings and tie the proper strings to them.

The Prospect of Woman Suffrage in Great Britain

THE friends of woman suffrage on both sides of the Atlantic need not be discouraged by the unfavorable outcome of the debate on the subject in the House of Commons on March 8, owing to the Speaker's refusal to apply the clause, the DICKINSON bill, providing that women shall have the Parliamentary franchise on the same terms as if it were granted to men, did not come to a vote on the day allotted to it, and was thus practically killed for the present session. It will come up again a year hence, however, and is then almost certain to be passed by the present House of Commons. Meanwhile it is worth while to dispel some misconceptions concerning the scope of the present bill, and to note the singular weakness of the arguments with which it was opposed.

In order to appreciate just what the DICKINSON bill, if it becomes a law, will do for women, we should bear in mind that manhood suffrage does not exist in England, and that the exercise of the Parliamentary franchise depends on the possession of certain qualifications which the majority of married women, and also of unmarried women dwelling under their parents' roof, do not have. A married woman possessing property of her own, and self-supporting widows or spinsters, separately domiciled, would be enfranchised, but they would constitute only a minority of the women over twenty-one years of age. What women really want in England is what they enjoy in four of the United States, namely, adult suffrage, that knows no distinction of sex. A member of Parliament who earnestly advocated the bill on March 8 admitted that it would not enfranchise more than a million and a quarter of women, but of these, eighty-two per cent, he said, would be of the working class. Its limited scope is, of course, no argument against the bill, but, on the contrary, an argument for it, considered on a stepping-stone to something better. It should, by the way, be kept in view that in the United Kingdom women already possess the municipal suffrage in the sense that their sex does not debar them from voting at elections of county and borough councils, provided they have the other qualifications. They took no active part in the recent County Council election for the British metropolis, and are credited with contributing to the defeat of the Progressives, which, perhaps, accounts for the fact that most of the speakers who opposed the DICKINSON bill on March 8 were Liberals. It is obvious that Great Britain, having heretofore conceded to women the right to vote for all public officers except members of Parliament, cannot logically stop at that point. That the United Kingdom has already done more for women than any other nation in the world is shown when we recall the fact that only in Wyoming, Colorado, Idaho, and Utah do they possess suffrage on equal terms with men at all elections. In nineteen States, including Massachusetts, New York, Ohio, and Illinois, women possess school suffrage, and in Kansas, municipal suffrage as well. Two States, Montana and Iowa, permit women to vote upon the issuance of municipal bonds; Louisiana gives all women who are taxpayers the suffrage upon all questions submitted to taxpayers; and New York has a law providing that a woman possessing the qualifications to vote for village or for town officers, except the qualification of sex, and who is the owner of property in the village assessed upon the last preceding assessment roll, is entitled to vote upon a proposal to raise money by tax or assessments. In about half of our States, however, women do not possess even partial suffrage. In Australia and New Zealand, on the other hand, and also in the Isle of Man, women have full suffrage, and in Cape Colony, Canada, and parts of Indiana they are, on various conditions, allowed to vote for municipal or school officers.

It is amusing to note how during the debate in the House of Commons the long-expected arguments against woman suffrage revisited the glimpses of the moon. Thus one Liberal member opposed the enfranchisement of women because of their physical inferiority. They could not fight, he said; were not fitted to be soldiers. Well, the same thing may be said of those men who have passed beyond the limit of military age, and yet those are the very men who in ancient and modern times have been deemed "best for counsel." Another liberal member stated the opinion alleged to have been wide-spread among Orientals, that the British are a mighty race with a disposition toward lunacy. He asked whether the House were prepared to confirm that opinion by passing the DICKINSON bill. We wonder whether this member realized that, by implication, he was accusing such British colonies as Australia and New Zealand of a tendency to lunacy because they have adopted woman suffrage. Still another Liberal member made a more serious plea against the bill, declaring that there was no public demand for it, and that, in fact, no good young women were known to be opposed to it. On March 8, indeed, a petition against the bill, signed by 21,000 women, was presented. Mr. JOHN F. REMOND, the leader of the Irish Nationalists, retorted that "you can always get people to hug their clains." Touching this point, upon which the opponents of woman suffrage are always disposed to dwell, JOHN NICHOLAS MUIR may be said to have spoken the final word many years ago. He rounded us

that the concessions of the privileged to the unprivileged are as seldom brought about by any other motive than the power of the unprivileged to extort them, that any arguments against the political prerogatives of the masculine sex are likely to be little attended to by the generality as long as they are able to say to themselves that women, as a sex, do not complain of them. Exactly the same thing may be said of the women in the harem of an Oriental—they do not complain of not being allowed the freedom of European women. A like phenomenon is observed in all other cases of servitude, at least in the beginning of the emancipatory movement. In Russia the serfs did not at first complain of the power of their lords, but only of their tyranny. In England the Commons began by claiming a few municipal privileges; they next asked an exemption for themselves from being taxed without their consent; but they would not at that time have thought it a great presumption to claim any share in the King's sovereign authority. If the slaves of the United States could have been polled on the question in the spring of 1860, it is probable that a large majority of these would have voted to remain in servitude, under the masters whom they knew. The case of women is now the only case in which to rebel against established rules is still looked upon by many of their own sex with the same eyes as was formerly a subject's claim to the right of rebelling against his king. Then, again, a woman who joins any movement which her husband disapproves, makes herself a martyr without any assurance of being able to be an apostle, for in one way or another the husband can generally manage to put a stop to her apostleship. Women, in fine, are expected to devote themselves as a sex to the emancipation of women until men in considerable number are prepared to join with them in the undertaking.

In the present House of Commons not only a considerable number, but an actual majority, are believed to favor woman suffrage. It is certain that the leaders of the four political parties in this body are enlisted on behalf of the movement. The Prime Minister, Sir H. J. CAMPBELL-BANMANN, advocated the DICKINSON bill, and, although Mr. J. A. BALFOUR, the head of the Unionist Opposition, did not speak on March 8, he had previously expressed sympathy for the same cause. We have seen where the Nationalist chief, Mr. JOHN E. REMOND, stood, and we may add that Mr. KENNEDY, the leader of the Laborites, introduced a measure similar to the DICKINSON bill last year. It would be strange if the avowed enemies of these four men should not avail soon or late to sway the decision of the House of Commons.

But, it may be asked, admitting that woman suffrage may be ultimately sanctioned by the Commons, will it not encounter inevitable resistance from the Lords? This question is answered by most persons in the affirmative, but there are two reasons why the Upper House might now acquiesce in the proposal. No doubt the Lords would oppose adult suffrage that recognized an distinction of sex, just as they have set their faces like flint against manhood suffrage. The DICKINSON bill, however, as we have pointed out, enfranchises only a fraction of the women over twenty-one years old, and experience has shown in the case of the London County Council election, that this restriction is more apt to be for Moderate or Fabianist candidates than for their Progressive or Liberal competitors. We do not mean, of course, to say that Moderates and Fabianists are absolutely equitable terms, but in practice they are acceptably so. There is another ground on which the Lords might accept the DICKINSON bill. If that measure became a law and thus made a great addition to the electorate, precedent would compel the Liberal government to appeal both to the constituencies, which, in view of the reaction against it attended in recent municipal elections and by-elections, is the very last thing it desires to do.

The Jamestown Exposition

EXPOSITIONS, like mill-stones, mark the world's progress, each showing the distance, not from the starting-point, but from the most recent predecessor. The Jamestown Exposition is, however, unique in that it has a double function—to show the progress from absolutely savage beginnings of one of the greatest nations on earth, and as a minor function to show what progress has been made since the expositions in St. Louis and Chicago.

We are to celebrate the founding of the first English-speaking settlement in this country. The exposition is held in sight of the place where, in May, 1607, three small bark-like anchored just off the peninsula which jutted into the James River thirty miles from its mouth. Besides the crews of the vessels there were a hundred and five Englishmen, all on adventure and possession bent. There then lay a vast virgin forest where are now trening cities, towns, farm lands, as high and as complete a civilization as there is on the globe of the globe.

Founded as this civilization is, upon two great wars, the war for national independence and the war for national principles, it is entirely natural that there should be as a side issue a display of the world's navies and armaments. If we are among the

foremost nations in moral progress and social ameliorations, this has not been accomplished without being prepared with proper means of defence. "The full military powers of our country," Admiral HAMBROTON says, "will not be displayed, but the national guard of the several States and the army and navy will be modestly represented, and the officers and men will be there in a spirit of friendliness to all our visitors from foreign lands. It is understood that upon the opening of the exposition by the President of the United States and upon the arrival of any military representatives or naval vessels of friendly nations, there will be present such of our national military and naval forces as may be assembled without detriment to the public service in the course of their regular employments. The ceremonies will be on the exposition grounds, and they will be chiefly of a civil character. The scene will be splendid in its civil nature, and it is intended that the battalions or companies of the army, navy, and national guards shall fill their proper place in an imposing event commemorative of the history of the nation. Subsequently there will remain at the exposition a detachment of each arm of the military service and a division of naval vessels for the purpose of exhibiting to the citizens of the United States."

The exposition is to be opened on the 26th of April by the President of the United States. The site upon which it takes place contains four hundred acres of land, enclosing a forty-acre water-lake and one hundred and sixty square miles of water surface of Hampton Roads. The grounds are enclosed by a pine and wire fence heavily overgrown with locust-wood, crimson maple, rose and trumpet-tree. The buildings are pure Colonial in style, forming a great pale red and white city, shaded by great live-oaks, magnolias, and other native trees. There are groves of fruit trees, fragrant bay-hedges, and innumerable beds of flowers and decorative plants. The greatest credit is due to the skill with which the landscape gardener has handled the wealth of native flowers and plants.

The most interesting exhibits will be the historic exhibit, including very full and detailed social-economy and educational exhibits.

Naturally and logically education and social economy are housed in spacious buildings to the left and the right of the Auditorium which marks the physical centre of the exposition plan.

At the Lige Exposition, in 1903, the United States exhibit in social economy ranked third, Belgium coming first and France second. In this important branch St. Louis not only did not emulate and rival former exhibits, but even failed to hold its own. So far the Lige Exposition has made the best showing, but it is to be hoped that the Jamestown Exposition may surpass any that have yet been.

If the period since the last great world's fair in the United States has been notable for commercial and industrial combinations and the huge organizations and activities resulting, if we have been shocked by distressing evidence of commercialism and greed invading every department of life, we have at the same time been cheered by seeing, on all sides, the greatest civic interest displayed. The patriot, the altruist, the philanthropist, are joining forces to uphold the weak against the oppressor. Never before have there been so many such effective organizations for the betterment of those who have not yet reached the plane where they can help themselves.

And the exhibit of these organizations is to be a very full and complete one. The civic, the improved tenement house, the juvenile courts, safety devices, the bureau of labor, the hygiene and Jewish charity exhibits have all been granted ample space. The life-saving-devices exhibit is an especially important and valuable one.

That there is to be any especial stress laid upon the naval program and the war exhibit seems a rather anomalous anti-social move. So long as men read history, politics, or literature, the knowledge of warfare will be spread, and that we should see the navies of the world riding at peace together in this beautiful harbor will be anything but a brutalizing or unworthy spectacle.

Personal and Pertinent

GROVER CLEVELAND tribute his friends to make public demonstration on his seventieth birthday, which came on March 18, so they contented themselves by pouring upon him a heavy shower of letters of congratulation. JOSEPH CHAPIN had done his part at the Service memorial meeting when he introduced Mr. CLEVELAND as the "first citizen of the nation."

The papers say that MARSHALL FIELD's two little preposterously rich grandsons have been entered by their mother at the school at Rugby, England. It is a good school; as good, possibly, for those boys, as any in America. Some very respectable, and even useful, Americans have been educated at English public schools. We believe the Lieutenant Governor of New York had that experience, though an English public school training does not neces-

sarily lead to the particular line of usefulness that Mr. CHAMBER affects.

HENRY VAN DYKE's resignation from Princeton suggests something about professors. In Oxford and Cambridge not much teaching is required of professors. These have grown famous, or at least notorious, in their several subjects, and it is expected as then, after their serious and hard experiences as tutors and lecturers, that they shall especially add to the glory and distinction of their universities by writing books and by otherwise illuminating the intellectual world. When Mr. VAN DYKE went to Princeton he had become enough for his literary work, and it is with that work that he is especially concerned. But has he sufficient leisure now? The new system established by WOODROW WILSON keeps the professors, as well as the young preceptors, on tap pretty nearly all the time. It is a great promoter of education, but how has Mr. VAN DYKE found it for professors who have in them large capacity for work that will cheer, amuse, entertain, and help the world? He liked the preceptorial system a year ago, and used to tell his friends how much he enjoyed sitting by his study fire with a group of students and talking with them about literature. But has he found the consumption of time caused by an increase in the number of his groups too exacting for a man who wants to write, and who ought to write? His experiences would be of use and they ought to be narrated.

A statement has been made by a Mr. BERNALL, one of the Congressmen from Iowa, that Mr. ROOSEVELT is the "one really great man who was actually born in the great city of New York." That may be; and it is to be regretted that this Mr. BERNALL did not proceed, and further illustrate his knowledge of the "great city" by showing that even THOMAS ROOSEVELT did not get the good that is in him from his birthplace, but that he was raised and toughened on Long Island, educated in Massachusetts, and farther raised and toughened in the far West. It is to be regretted that the foreigners who were born in other States, and who have moved here to a cave heaped full of riches, that have grown great in the city, and Mr. BERNALL may safely deny as to name these, for we are not prone to invite his swift denial. MARY BOOTH, who used to be editor of HARPER'S BAZAR, and who wrote an accurate history of the city of New York as far as it had gone, used to say that no one was ever born in New York. Once, at one of her Saturday evenings in Madison Square, there was present a man who had been born in New York, and who, in his young manhood, had won an enviable reputation as a writer of editorials and news articles for a country weekly in the northern peninsula of Michigan. He had returned to take the place that he felt was yawning for him in New York journalism; but an Ohioan, named RICH, was editor, and the New-Yorker was obliged to carry back his soul and pen to Michigan. On this Saturday night he was congratulated by Miss BOOTH, NICHOLAS SMITH, OLIVER JOHNSON, STEADMAN, STODARD, HAWELLA, and other allies, on being the New-Yorker who had won the highest literary distinction, and, farther, on having escaped as young. It is to be noted that the way you look at a town lies in your frame of mind.

Mr. LITTAUER, of New York—"up State"—retires from public life. He has been a Congressman a good while and has lived a wholesome enough life in Washington. He had some difficulty with the War Department and an investigating committee, and with some of his constituents, about gloves and guantlets, which he was charged with selling to the government contrary to law, which denies to Congressmen the privilege of selling goods or services to the United States. However much or little may have been the merit of the accusation, Mr. LITTAUER has apparently lived it down and passed by it, and his pleasing reticence has maintained itself in influential places. Once Mr. ROOSEVELT announced in a public speech that Mr. LITTAUER was the politician upon whose judgment he most depended and whose advice he most sought. The President has broadened his scope, widened his horizon, and met other men since then, but the public does not know that he has lost faith in LITTAUER. LITTAUER is a persistent as well as an agreeable man, and often his views have coincided with Mr. ROOSEVELT'S. In Philadelphia, in 1900, Mr. LITTAUER was one of the foremost supporters of Mr. ROOSEVELT'S desire not to be nominated for Vice-President in order that he might continue to be Governor of New York. This sympathy led him into an error of judgment which was painful to cooler observers. When, one evening, Mr. ROOSEVELT preferred Senator PLATT from presenting his name as the candidate, or successor, offered by New York and rejoined with joy in the privacy of his apartment, Mr. LITTAUER rejoined with him. When Mr. ROOSEVELT announced that he had driven PLATT to take TIM WOODWORTH, LITTAUER smiled with him, for he thought that ROOSEVELT had won. But the late Mr. HOLLS—"Old Holls," as he has been called by some—knows better, for he judged more wisely. "Well, Governor," he said, "if New York has decided to name TIM WOODWORTH, that nominates you, for the convention will know that New York is not serious in making such a ridiculous suggestion. It is the same as saying that they want you or nobody." And then HOLLS'S judgment seemed bigger than LITTAUER'S.

Correspondence

MR. JOHN BURROUGHS AND FAKE NATURAL HISTORY

To the Editor of Harper's Weekly:

Stu.—In the February *Outing*, Mr. John Huthrough, under the title "Fake Natural History," has an article three-fourths of which is devoted to comments upon his version of the contents of two "Hibernian Sketches" which appeared in HARRIS'S MAGAZINE for October, 1865, and May, 1866. After characterizing them as "a tissue of lies," "a tissue of imposture," "entirely false as 'natural history,'" and "blundering caricatures of the wild life they assume to describe," he says: "In fact, I have never seen so much fake natural history crowded into two magazine articles as these thirteen pages show. . . . I have never before in my life glimpsed upon so much fantastic natural history in so brief a space." The article is signed "J. H." and is a very good illustration of the following up of "clips and hints, and skilful suppression of the spirit of the real matter student."

St. Augustine's sweeping and unrestrained denunciation of moral iniquity requires a helpful justification that the presumed good intentions of the person making the accusation. If a naturalist reading one of Mr. Burroughs's dogmatic statements as to what certain animals never do should fly into print with the assertion that Mr. Burroughs had "invented" his facts and, to use his own expression, was carrying "gold bricks to editors," it is probable that Mr. Burroughs would feel righteous indignation that his honesty was impugned. Courtesy and fair dealing are not necessarily inconsistent with objectivity, as a naturalist.

Every chipmunk family is a family of nuts in underground burrows, but every now and then one can find their storehouses in pecks, or in hollows some little distance up a tree, and very often in fallen trees and stumps with underground communications. Every now and then, as a chipmunk may be seen running from some hole in the ground, or from a tree trunk, or from a stump, these simple, intelligent creatures are referred to by the Shroveton writer in these words: "A family of chipmunks were more friendly. They hunked in a cavity in the cedar wall [the sole specimen of what was a claret-barked tree] and a few minutes later they were out, and the biggest maple near by." In another place he says, "A chipmunk was peeping from his knothole in a maple trunk near the woodpecker. Mr. Thurnage says, contemptuously, 'He makes his chipmunks store their nuts in hollow trees, and live in hollow trees.' I don't know whether he is right or not, but I don't like the kind, the dogmatic generalization that all chipmunks do this, and then with a fine display of dogmatism but very fallible conscience on his own part, adds, 'This ground-squirrel is a ground-dweller, and a ground-dweller lives in the ground.' The chipmunk is not an earthworm, Mr. Thurnage."

Again, in the marshes along the shore, home the red-shouldered blackbirds, called locally cowbirds, make their nests by hundreds and hundreds. You can readily find numbers of these nests so near together in the close-growing bushes that they seem almost in the same bush. Yet Mr. Burroughs denies this commonness of facts without the slightest hesitation, and, in the interest of "truth," as opposed to "falsely" natural history, says, emphatically: "He [the Brantown writer] should be told that red-shouldered blackbirds do not nest in the marshes, but make their nests in one locality." Such unwarranted dogmatism could seem impossible if one did not read it here in cold print.

The Brierton crowd tells us that "Cruse"—or so he was observing—had a rugged spot in the primaries of his right wing. Surely it was no surprising matter for one who had a pair of keen eyes and was used to watching and identifying birds to recognize a crow when it came strutting eye-to-eye with him. Furthermore, how can a witness observe for an hour with Mr. Cruse, and then free air of heaven and know that he has always got the same crow? . . . Every crow looks like every other crow, and even if one had a bell upon some particular individual or some conspicuous mark, how could he follow him and learn his secret and then tell it to the crowd? . . . The only way to tell the truth is to say that Cruse had any distinguishing or identifying mark.

The reader will search the *Hibernian Sketches* in vain to discover where "Brierton" is situated. I have suspected that it was in New England. Mr. Burroughs, in his comments upon these sketches, does not scruple to invent a location. He begins his comments by saying that "the editor of *Harper's* has been recently fooled by two sham 'nature sketches' from Brierton, New Jersey." And later he speaks of the flora of *New Jersey* as if it were Brierton. It is a fact that I have been in *New Jersey* that a contributor to *Birds and Flowers* found hummers building a nest in *late July*. In unparadoxical ignorance of one of Mr. Burroughs's laws of nature.

Words so full Mr. Harringtons to express his contempt of the shocking ignorance that can speak of the wild grape as blossoming when wood-lilies and meadow-lilies are in bloom that he has recourse to exclamation points. Yet in the region with which I am familiar it is a matter of common observation that the blooming seasons of the lily and the grape overlap.

One of the things that interests Mr. Hetherington is what the British writer says of king birds. King birds are very numerous in the United States, especially in the South. They sing at all hours of every day, full of the spirit of mischief and, in his observation are ready for a fight whether near or far from their nest. After their nesting season, the American writer says, "the king bird is like a king." The British writer remarks about the report, "as a matter of fact, the kingbird only attacks its enemies when they appear in the vicinity of its nest."

But what interested me in Mr. Hetherington's comment was his assertion that the American writer made a pair of kingbirds "attracted to each other by mutual dislike," while the British writer said: "The aggressive lawgiver who merely, without provocation, attacked."

blue heron chose to shift his hunting-grounds and capture a few frogs in the neighborhood of their nest." Even with Mr. Burroughs's sanction the king-birds under those circumstances might have "attacked" the heron without doing violence to their bird nature, and perhaps they did, but the *Illustrated* writer does not report any attack, and yet Mr. Burroughs says that he does so report.

Since Mr. Huxslo's savage attack upon the "Brierton Sketches" I have read them with care, and I find in them no dramatic generalizations on the habits of birds or beasts, no posing as a "scientific naturalist," no arrogant assumption of superior knowledge, much less any assumption of all knowledge. They read as the reports of actual observations. The writer may have misobserved, but so may Mr. Huxslo, so we have seen.

There is not an observation reported in the "Hicktown Sketches" that any intelligent person might not have made if equipped with a pair of keen, well-trained eyes, and willing patiently to watch.

When, for example, he says he saw a crow perched on the head of a shrike, he holds a bright piece of tin and flits off with it, and he saw the crow drop the tin, then search for it again, find it and fly off with it again, these statements, if he is a man of good character, necessarily outweigh all the clamorous shrieking of a chorus of bird experts that he didn't see what he says he saw. So, if he saw humming-birds do something, and reports what he saw, the fact that a bird expert finds it different from anything he ever saw may make what he saw more likely to be true than his own bird expert's report, and certainly does not prove him an intentional falsifier.

Out of the myriad of bird nests, the Brierton server inspected upon, he saw one so placed as not to drain as freely as it should. This is a most unusual occurrence. He reported it, it was, through a vast. The finding is important, for it may be that, possibly, some common, or irrelevant, platitudes as to the well-firming character of bird nests, and says, "Not from the mud-lined nest of the robin" will hold water. But it will, if not placed so as to drain properly, and the bird will not be able to do so. The bird, in fact, the nest is found. It was just because this summer's nest was so placed that it did not drain as it should, and in consequence the eggs in it were chilled and lifeless, that the phenomenon was worth

The Hometown writer saw a pair of humming-birds build a nest in late June and early July. He was not writing a treatise on natural history or making sweeping generalizations. It interested him to find a pair of hummers nesting at this season. He reports the fact. Says Burroughs, "No humming-bird builds a nest later than early in June." And so on interminably.

The Heferton writer observed a male hamster help his mate build a nest, and later actually sitting upon the nest. He reports the facts. He doesn't say that all male hamsters do these things, but that he saw this male hamster do them. He doesn't generalize at all or degenerate. He only reports what he saw. Mr. Heferton's observations are not at all different from all the other observations of male hamsters displaying at the nesting season; therefore the Heferton observer never saw this male hamster in the neighborhood of the nest, much less assisting his mate, and his alleged observations are pure inventions. True who, after reading Mr. Heferton's savage attack, turns to the Heferton sketches themselves and finds that they are not at all different from the observations of Mr. Heferton's own perversion of the Heferton writer's statements and the wonderful laws of nature which Mr. Heferton promulgates. The more one studies this Heferton article, the more one is amazed alike at its infernal tone, its unwarmed expressions of another writer's good faith, and its reckless display of the grossest and most unbecoming and of transient temper, which is not only bad style, it is absolutely repulsive.

CURRENT NEEDS AT TUSKEGEE

To the Editor of Harper's Weekly:

[illegible]

Our needs are in two directions: first, fifty dollar scholarships with which to pay the tuition of students through school; and, second, money with which to increase our endowment fund so it will not be necessary to spend so much of my time away from the school collecting money for its current expenses.

BOOKER T. WASHINGTON,

OUR REAL WAR WITH JAPAN

THE IMPENDING STRUGGLE FOR COMMERCIAL DOMINANCE IN THE ORIENT WHICH WILL TEST TO THE UTMOST OUR RESOURCES AND OUR INGENUITY

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

YOKOHAMA, February 9, 1907.

THERE is a form of conflict in which the United States must forthwith meet Japan—the warfare of commerce. Although there are many elements in which each nation is helping, and must continue to help, the other, there is no doubt that these two must contend for the carrying trade of the Pacific, and ultimately for the business of supplying food, petroleum, and other staples to the vast population of China and other Far-Eastern countries.

The struggle for commercial supremacy will be exceedingly interesting to political economists as well as to the parties engaged, for the government of Japan, by taking over an active partnership in the chief manufacturing and trading companies, is virtually incorporating itself into the greatest trust in the world. The wise politicians who have been active in this policy are clearly how much every nation in the world is gaining or losing in the struggle for life, probably will furnish most entertaining reports of the coming conflict between the trust nation and the trust-worshipping nation.

The war itself has long been imminent in the eyes of men familiar with conditions in this part of the world; but, curiously enough, a formal declaration of it was made only a few days ago, by Viscount Hayashi, Minister for Foreign Affairs, in reply to interpretations in the Diet. After declaring that the Japanese government relies entirely upon the assistance of the American government as to the San Francisco sugar affair, and reiterating that Japan is not increasing her armament with a view to fighting Russia or seeking more territory, Viscount Hayashi boldly proclaimed Japan's intention to wage another kind of war.

"In matters of navigation, commerce, and trade," he declared, "we are bound to expand ourselves in foreign countries, and will take necessary measures in the encouragement of the same. This strife is that of peace and virtue. No nation or people is without this heavenly endowed right."

So far as the navigation of the Pacific is concerned, the Japanese have already made great advance. Aided by subsidies and other government favors, the Japanese steamship companies have taken and are taking much of the Pacific carrying trade away from American ships. Unless the Japanese extend their business in navigation, declare that unless American lines are aided by subsidies they must go to the wall, an American who is not interested in any shipping line, but who has had for years vast experience in the Pacific trade, told me yesterday that the case is nearly hopeless.

"I don't see how we can take control of the carrying trade of the Pacific," he said. "The Japanese are crowding us out. They can build and equip ships more cheaply than we can, and their cost of maintenance is much lower than ours—to say nothing of the direct help given by the government. Unless Congress shall grant generous subsidies our days on the Pacific are numbered. And if Japan should go to war at any time, and draw off her ships in the Pacific trade for use as transports, etc., our Far-Eastern commerce would be badly crippled."

This American took a most cheerful view of our trade prospects in Manchuria and Korea.

"Japan will be our good customer rather than a competitor," he said. "In the first place, it is settled that Japan is not going to try for exclusive trade rights in Manchuria or Korea. She cannot, dare not, violate her treaty obligations to maintain the open door in those countries. It is true, however, that the method of distribution of American-made goods is going to be changed. There are already many thousands of Japanese shops and stores in Manchuria and Korea. The Japanese evidently became familiar with the language and business customs, and so in the actual distribution of goods they have a big advantage. But they will buy more from us than from any one else, because we can deliver to them machinery, flour, cotton, etc., cheaper and better than any one else."

"The only difference will be that heretofore the American middleman is eliminated. His place will be taken by the Japanese. Nevertheless, I know that if American firms, desirous of selling goods in the newly opened country, should send responsible men to New-Chang and Chongking they will find a big demand for their stuff. But it will be useless to send ordinary commercial travelers—mere drummers. The natives look down on them and won't do business with them. They want to deal with members of firms, with the big men. And, of course, it would be useless for us to see they must do business in our way. They are bound to have their own way, and if we want to sell goods to them we must humor them."

So the open door in the East is a real, strong enough open door, and the outlook for American producers is most excellent—at least until such time as it is settled whether or not Japan is to become a great manufacturing country.

And the working out of that problem will afford for the next ten years one of the most fascinating studies in the world. In-

deed, it is not beyond possibility that if the Japanese paternalistic trust system of carrying on manufacture and commerce is a success, then all other governments must change their methods and take an active part in trade, under penalty of dire distress if they should fail to do so.

It is hard for the foreign visitor to grasp the idea that Japan is not a mere nation—it is one family of fifty million souls. That fact has to be reckoned with in every valuation as to this people's future. The organization is really very simple. The Mikado is the direct descendant in unbroken line from Minno Terao, the Son of Heaven; also, he is the Father of his Country. From every human being in the empire he expects—and receives—implicit obedience and affectionate trust. To each individual and the people at large the Mikado owes protection and anxious care. Their Emperor is their father, and they are his children. They are, therefore, criticizing error, praising worthy deeds. How beautifully this system of organization works in time of war was illustrated by the Japanese in the late conflicts with China and Russia. The army and navy were marvelously efficient, full of such burning enthusiasm for the Emperor that men counted it a pleasure to lay down their lives for him (spirits of ancestors hovering, meanwhile, over battles and smiling approval); and, most remarkable of all, the army and navy were absolutely free from any taint of graft. The Spirit of Japan, the Bushido, or chivalrous devotion of sovereignty to people and of people to sovereignty, secured an unquestionable success in war. Can it be adapted to the needs of the nation in time of peace, in the struggle for commercial supremacy in which all the nations of the earth are engaged?

For many countries the Japanese have been profitably engaged in fighting, fishing, and agriculture. Can they safely change themselves into a manufacturing and trading nation? Will Bushido endure? Will competition with Caucasian peoples, and their methods of high finance and the many intricate meanings of "business as business," including the Japanese people with the world-wide money-hunger and money worship? Thus far the graffer has not become indigenous to Japanese soil. There is no reference in these lines to the many allegations of too great shrewdness and overreaching which have been made against Japanese financiers. The question of the Japanese people with the world-wide money-hunger and money worship? Thus far the graffer has not become indigenous to Japanese soil. There is no reference in these lines to the many allegations of too great shrewdness and overreaching which have been made against Japanese financiers. The question of the Japanese people with the world-wide money-hunger and money worship? Thus far the graffer has not become indigenous to Japanese soil. There is no reference in these lines to the many allegations of too great shrewdness and overreaching which have been made against Japanese financiers. The question of the Japanese people with the world-wide money-hunger and money worship? Thus far the graffer has not become indigenous to Japanese soil.

Thus far Bushido has endured the contact with the West. The great American Togo receives hardly as much salary as a New York captain of police, and lives in a style of far less luxury. Zeal for the welfare of the country and a contempt for wealth are taught in the schools from the highest to the lowest. Here, for example, is an announcement in one of this morning's newspapers:

"General Baron Nogi has been made President of the Nobles School. This appointment is much welcomed by the Tokio press. General Nogi was last year appointed by the Emperor to be an official of the school, and it came to be known that he would resign his military duties on account of age, his purpose being to live with the students and set them an example of frugality and diligence. The Emperor has now decided that, while carrying out that purpose, he shall retain his military position."

As for the activities of the Japanese government in business, they are so vast and so varied that one hardly knows where to begin to enumerate them. The government ownership of railway, telegraph, and telephone lines and the salt and tobacco monopolies is already well known. Most of us, however, do not know that the Japanese government is an active partner in the business of manufacturing and exporting iron, beer, sugar, and cotton goods, and is presently going to take part in the refining of oil and other industries.

The great Mitsui company, the richest in Japan, made up of gentlemen who serve the Emperor by earning profits as zealously as their ancestors supported his ancestors with their swords, has been by imperial decree appointed as the selling agency for Japanese manufactures. The government has ordered its banking-house, the Yokohama Specie Bank, to advance, at 4½ per cent, interest, the money required by manufacturers and exporters of cotton yarn, cotton goods, etc., to the extent of 6,000,000 yen, equal to \$1,000,000 in American gold. When the value of exports rises above a certain amount the rate of interest is reduced to 4 per cent. In the same way many millions of dollars have been lent by the government to companies which loan beer and other goods for export. The government is a silent, but none the less active, partner.

American firms have been busy for months installing flour-mills in this country. The government fosters the milling industry in this way: the import tariff on wheat is 25½ cents gold per measure of 135 pounds, while the tariff on flour is 7½ cents for the same amount. With a difference of 44 cents tariff per 135

pounds in his favor, the Japanese miller will be able to make many mistakes and still earn a profit while learning the art of flour-making.

The import tariff on kerosene oil is about half a cent, gold, per gallon, while crude petroleum is admitted free. A Japanese company is being formed to obtain crude petroleum from the independent California fields. Whether or not the Japanese can master the art of oil-refining remains to be seen.

Should the flour-milling and oil-refining industries prove a success, the Japanese people will gain the further profit of importing the raw material and exporting the manufactured product in their own ships. And in every step of the journey, from wheat or oil field to consumer, the government is working with the miller and the merchant.

No matter how able they may become as manufacturers, of course, the Japanese will still need our raw cotton, wheat, and oil, for their country produces none.

It is by no means certain that all Japanese manufactures, even with government aid, are bound to be successful. The government iron foundry at Wakamatsu is running at a great loss. In the fiscal year 1906-7 the excess of outlay over income was \$1,531,000, gold. In the budget for 1907-8 it is estimated that the excess of outlay over income for this year will be \$2,103,000, gold. During the nine years in which the government has operated this foundry the total loss has been \$9,400,000, gold. The government is now seriously considering the question of turning over the foundry to a joint stock company, itself holding a majority of the stock in return for the \$10,000,000, gold, already paid out by the national treasury.

It is possible that even under this plan the foundry may still be a failure; but the Japanese are as hopeful as ever of making it a success. The South-Machurama Railway, for which, by the way, the rails, cars, and locomotives are bought in America, has been organized on this basis—the government owning the majority of the stock, and the people individually owning the rest.

Enough has been told here to indicate in how many industries the Japanese government is investing. If the present plan is followed out the Japanese government will soon be at the head of the richest, most powerful trust in the world—a trust based upon the labor and the soil of 50,000,000 frugal, industrious, temperate people. The government is conducting the greatest industrial experiment of the age. If successful it will inaugurate a new adjustment of the industries of mankind. If the Japanese trust proves profitable it will inevitably crush out all competing individuals or firms or corporations in every part of the world. The outlook, therefore, the most interesting speculation. Must our government ultimately become a great trust, too? For without

some such orderly union of our industrial forces how can we compete with the Japanese trust?

Political economists, of course, declare that the industrial scheme contemplated by Japan destroys the hope of individual profit, and therefore destroys the incentive to individual effort. Again we must remember the vital difference between this race and all other races. In this family of 50,000,000 members it is still accounted the greatest honor in the world to work with success for the common good. Take the policemen, for example, whom one finds so uniformly polite and efficient in every Japanese city, town, and village. These men are the very pick of the youth of the country—strong, alert, intelligent, active, industrious—yet they serve as policemen for much lower wages than they could earn in other callings, simply because the honor of working for the Emperor more than makes up for the smaller pay. At this juncture I can see the cynical smile of the American reader, who wonders what the graft is worth to the Japanese police.

"I'd as soon think of holding an American resident responsible as a Japanese policeman," a veteran American resident remarked the other day.

And from the lowest to the highest the same spirit of devotion animates the Japanese officials. This statement is not intended as a platitude of praise, but as a mere clinical record of fact, just as one might assume that the Japanese have black hair; for they have defects as pronounced as their excellences. The effort here is to present to the American people some sort of idea of the industrial-commercial army with which we have to compete for daily bread.

Of course the great trust experiment is not going to be carried out without some severe bumps. The land of Japan is now in the throes of a fever of speculation which recalls the history of the South Sea Bubble. Trade on the stock exchanges is booming as never before. The Jap is as fond of gambling as an Apache chief or a Pittsburg street-king, and the present boom in industries seems to be helped along by the gambling spirit rather than a calm appreciation of values. In the last ten months Japanese industrial corporations have been organized to the extent of \$600,000,000, gold. Wise men say that a financial crash is bound to come within a year—some even say it will happen within four months. But even when the speculative conditions have been eliminated there will still remain the actual working structure of the industrial corporations.

It is certain that the Empire of Japan must make a success of its industries or collapse. The nation has proven its ability in the art of war, but as army or navy, however powerful, can make it great unless it rests upon a basis of financial prosperity. The Japanese have made success a habit. Are they going to teach us the right way to regulate the trusts?

THE TRAGIC LOSS OF THE STEAMSHIP "BERLIN" OFF THE HOOK OF HOLLAND

THE BRITISH STEAMSHIP "BERLIN" STRANDED ON THE NORTH PIER OF THE HOOK OF HOLLAND, ON FEBRUARY 21, IN A BADLY BLIZZARD. MORE THAN ONE HUNDRED OF HER PASSENGERS AND CREW WERE SWEEP OVERBOARD AND DROWNED.

WHAT TO DO IN AUTOMOBILE EMERGENCIES

By WILLIAM HEMMINGWAY

THE automobilist is born into trouble as the sparks fly backward. Yet that need not worry him if only he keeps his wits awake. No matter how thick and fast emergencies may flock around the car, a quick eye and a cool head will always carry him through.

All of which is very true, says some impatient amateur, but how am I to acquire the quick eye and the cool head? To a certain extent these come by nature, like Deberry's reading and writing; to a greater or less degree they exist in every man. And it is a most cheering fact that, no matter how meagre these gifts may be in the beginning, they can soon be greatly developed by sedulous practice. All that is needed at the beginning is the spirit of fair play and a medium of common sense. Practically all the automobile accidents we hear of and read about in the newspapers are due to carelessness resulting from overconfidence or to a selfish, selfish disregard of the rights of mankind. For every case of this sort there are thousands of instances of careful driving that one never hears about. And if some enemy of the most delightful sport of motoring should say that there are many men driving automobiles who are unfit to be trusted with the responsibility, one may reply yes, and there are thousands of rash, overbearing, reckless men driving horses and trolley-cars and sailing boats who are unfit for it at large in any sort of vehicle. Indeed, it is not impossible for a keen observer in Prospect Park to find certain reckless postures running great risks with high-speed baby-carriages. Yet there is no public clamor to abolish any of these forms of locomotion.

Not that the writer would be understood for one moment to defend or even excuse the foolish motorists who seek a cheap and nasty notoriety by driving madly through crowded streets, or along thoroughfares in which at any turn a collision may occur. It is a pleasure to know that the men who are guilty of this sort of conduct form a very small minority of the army of automobilists. And in view of the lives they take, the bones they break, and the other damage they do, by so saying of the odium they cast upon all the rest of us, it would not be amiss to consider them as the first great emergency before the automobile world today.

How to be rid of them? An excellent plan has been suggested—imposed for a certain number of days or weeks the motorist car that has been used for over-speeding. The selfish, reckless scoundrel always does his worst in his favorite—and therefore hated—car. Deprive him of his top tier for thirty or sixty days, and his vicious habit will break more effectively than by any fine, no matter how great.

It is hardly worth while to give advice about the minor accidents that bother beginners in motoring, the little rills within the lute that oftentimes make the sufferer mope. These difficulties, chiefly relating to falling back or ignition of the gasoline, are soon overcome by a few months' experience; besides, the liability to hazards of this sort has been almost done away with by improvements in construction. I shall assume, then, that the reader has begun by learning to manage a runabout or some other small car, and has gradually worked up to the point at which he can run a big touring-car with a reasonable amount of confidence.

What is the most valuable asset a motorist can have? Judgment of time and distance, I should say. To give an exact definition of this complex quality is rather difficult. His perception may help somewhat. Every champion swordsman or boxer, every champion at billiards, tennis, racquets or polo, is a keen judge of time and distance. He always knows exactly how fast he is moving, the precise point and moment of time at which he will strike the antagonist or avoid him.

So with the skilled motorist. His perception of the movement of his car and of everything that may possibly get in its way is as accurate as if his brain contained a chronometer of perfect balance, a range-finder of perfect certainty, and a quick-calculating apparatus that never fails. It is marvellous to note what great improvement every driver of a motorcar makes in these respects. And to watch a really expert performer threading his rapid way through a crowded thoroughfare is a great pleasure.

Herei Fournier, for example, will dash down the Champs Elysees at a rate of speed terrifying to a novice, yet with such exquisite judgment as to when to start ahead, just how many inches to turn to right or left, precisely which vehicle will have moved out of his way and what others will have failed to come near to him, that his performance seems like magic. Of course, he cultivated his judgment in the beginning by riding a motor-cycle, so that he not only knows time and distance to a nicety, but can whirl even a big car around as quickly as a bird turns in mid-air.

It was this remarkable quickness of thought and action that saved the lives of Fournier and his three companions in the accident near Mincio not long ago. They ran at a fair rate of speed up to a blind railroad-crossing of whose existence they knew nothing. As he neared the track Fournier saw a Long Island

locomotive charging swiftly down upon him less than ten rods away. His car speed was too great to permit the stoppage of the automobile this side of the railroad track, and still not fast enough to carry the auto across the track in time to avoid the locomotive.

Fournier saw these things in the twinkling of an eye. Remember, he was completely taken by surprise. Yet in one-tenth of a second he saw, planned, and acted. With a swift turn of the steering-wheel he spun his automobile around to the right, so that it ran almost parallel with the track. The locomotive barely hit one of the rear wheels and spilled Fournier and his party. They were pretty badly hurt, it is true; but if Fournier had not acted precisely as he did the machine would have been crushed at right angles by the locomotive, pushed along the track and ground under the train. That would have meant death, without doubt. The quick eye and cool head of Fournier saved them by the very narrowest margin.

Yet such extreme skill as this is dangerous unless the temptation to take chances is always curbed by unlimited common sense. Poor Tom Cooper, who was killed in Central Park a few weeks ago, was one of the most experienced and skilful drivers in America. A few days before his last ride he remarked to a friend: "You'll never catch me speeding on the road. On the track I'll go as fast as any one, but in a city I wouldn't think of it."

Nevertheless, after dining with some friends Cooper took them down the dark West Drive at high speed. Suddenly confronted by a carriage, he overrode to the right, only to discover that a dead car was lying directly in his way. He whirled his car to the left. The whole movement was as if the car were running around the curves of a letter S. It happened, inevitably, for the fore wheels were twisted under the chassis, and as the machine tumbled over and over, the steering wheel crashed to Cooper. If he had not been overconfident of his ability to spin his car out of any possible difficulty the accident could not have happened.

It is a curious psychological fact that in the mind of any man we shall find sooner or later what for want of a better name I may call his "blind spot." I refer not to the habitually underestimated individual, but to the careful, accurate man who has done some delicate and dangerous bit of work thousands of times with complete safety, yet on one particular occasion will make a fatal error that no type would ever commit. A most cautious and veteran locomotive engineer, for example, will run out a red flag and cause an accident. Why? Because some nerve center in his brain has failed for the moment to act, failed to notify the controlling intelligence that the danger-signal is waving before him.

In many of these cases it is found that the careful man's perceptive faculties, usually so precise, have been benumbed by too long continued strain of work or lack of sleep, or some such abnormal condition. And for this reason I would urge every automobilist to be certain before going for a drive that he is in his best mental condition. And if one can manage somehow to refresh his sense of caution very often, to recall frequently that no one is quite so apt to make a gross error of judgment as the veteran expert, much will have been done to avoid danger.

The recent fatal accident on the Brooklyn Bridge is another illustration of this quality that must be paid for too great skill in driving, as well as by sufficient prudence. The expert chauffeur evidently saw a chance to slip past a slow, heavy truck, tried it, and suddenly had to stop. The motorman of the trolley-car close behind had no apprehension that the brisk progress of the automobile would be checked, so he was unable to stop his car. There was a collision that threw a passenger out of the auto and she was run over and killed.

While it would be manifestly unfair at this time to lay the blame on any individual, it is still proper to point out that the accident was due to a lack of caution resulting from long and successful experience. And here we come to a most perplexing problem: How can the driver of an automobile exercise due caution without lagging and losing time on the drive? It seems to me that the only safe rule is, in case of doubt, slacken speed. There will be plenty of chances to speed. The old proverb, "It is sure you're right, then go ahead," sounds very true, and it is vexatious to lose a minute here and five minutes there when on a journey.

But one must always expect to lose time when motoring in a city street or in any other crowded thoroughfare. Not that I would for a moment suggest that safety can be achieved by dawdling about at a snail's pace; for it is an indisputable fact that there is more danger in a motor car skidding at six miles an hour than in one carefully driven at twenty-six.

The great Frenchman who declared that the ruling spirit of a general should be *l'audace, l'audace, et toujours l'audace* would, I am sure, with equal positiveness insist that the motto for the chauffeur must be *prudence, prudence, et toujours la prudence*.

TOP SPEED AND 40-CUPID POWER

DRAWN BY ALDEN DAWSON

THE INTERNE

BY CYRUS TOWNSEND BRADY

ILLUSTRATED BY WILLIAM HURD LAWRENCE

ILLINGWORTH stood staring through the closed window of the operating room. His grand fascinated, charmed as it had been by a serpent's eye, at what lay before him. All his faculties were concentrated in vision. The dull roar outside, punctuated by the deeper detonations of the dynamite, fell unresponsive upon his ear. Aliter was he unconscious of the subdued noise from the wards behind him, not less conscious in its infrequency than the hideous diapason of portentous sound that came to him from the city beyond.

The patients in these wards usually said nothing. Many of them were beyond speech, and others saved their energies to meet the favorable demands of anguish in silence; but today a confused murmur came from them, with now and then a muffled cry—a shriek, if there had been back of it the power for such a sound, one would have said.

Duty the most terrible ever laid upon the soul of man called Illingworth back to the wards of the great hospital; a duty he had realized from the beginning, although its demand had burst upon him with the suddenness of the catastrophe itself. This duty he meant to perform—ay, though it killed him; though his heart broke under the strain; though he damned his soul in the doing of it. It was to be done. It should be done. Yet he lingered. To the reluctance inevitable from the horror of what lay before was superadded a strained attractiveness, ghastly yet real, in the present situation. It was as if from some point of impersonal detachment he were witnessing the end of the world. Indeed, in the hushed still faces of the dawn of the day before that same idea had been lightly written. The time was at hand. Everything had conspired to bring about the destruction—the earthquake shock, the strong wind, the total lack of water, the seething sea of fire.

And now, as of old to the prophet, after these things there spoke to him a "still, small voice." He was not quite sure whether it was God's voice or some other that pierced his inner consciousness with stern prelection. The habit of the age, the world-wide desire to cure and not to destroy, the physician's training in the art to heal, cried clamorously against his conclusion. There was strife in his soul. He had made his decision promptly enough, for he knew that it was the only determination to which he could come. Illingworth told him at which he had arrived was a righteous conclusion. And yet, every voice of heart and life and day spoke against it.

The trembling of the earth had ceased. The air was vibrant, but it was with the fire. Yet the man shook and quivered as if the very foundations of his being were uprooted. The noise in the nearest ward grew louder. What he was to do, he must do quickly. He tore himself desperately away from the window and put his hands up to his face—not pale, but red and flaming with the heat.

As he moved toward the door of the room, it was suddenly flung back, with a crash. In the way stood a helpless figure, a woman. Blood streaked the white robe she wore; her eyes were blazing with fever. Her voice, thin and shrill with terror, cut sharply athwart the dash of his hesitancy like a scolding blade. It pierced to the core of his decision.

"What are you going to do?" cried the woman, bearing at her breast with both hands. "The fire's all around us. We can't get out. My God!—the old, old appeal that comes to human lips, alas! when all else has been tried, without an appeal of despair, without trust, without faith, without hope, and yet an appeal which somewhere had somehow invariably meet with a response. "Lord, here am I," said the old prophet, whose lips, like Illingworth's, were torned as with coals of fire, "and me."

Illingworth stepped swiftly forward. The woman sank in a cramped mass. She collapsed at his feet, her face whiter than the gown she wore. He bent over her quickly, laid his hand upon her heart, and rose with a sigh of relief. There was one disposed of, and by that wait the problem less complicated. The woman

had been a hopeless invalid two days before, dying of an incurable disease, the nature of which had been revealed by a major operation undertaken in the desperate hope of saving her life. The sad terror of the hour had roused her to her feet and brought her there. With superhuman force, she had thrust aside the detaining hands of the frightened nurse.

Leaving her where she lay, for he realized that he had no time to waste upon the dead, he stepped across her lifeless body and entered the ward. A faint, feeble cry coming from lips and hearts to whom only the extremest terror lent strength to give a sound, burst upon his ear.

"Doctor, for God's sake . . ."

"For the love of Christ . . ."

"Don't let us burn!"

"Pity!"

"Mercy!" rose the cries, dying away in dull murmurs of hopeless expectancy.

As he faced them, stern, unsmiling, his voice broke harshly—and he was a tender-hearted man—across their futile murmur.

"The fire," he said, "is all around us. It has come with a swift—undreamed of. There is no water, dynamite has failed to check it. We can't get you out of the hospital."

A woman in the nearest bed shrieked pitifully in a way that set his teeth on edge. He went on, controlling himself by a great effort, clenching his jaws and shaking the words out as if each cost him a blood pang, a birth throes.

"We can't take you out. There's nowhere to take you if we could. There's nobody to carry you out, if there was a place."

He stopped.

"Blessed Mother of Heaven," cried one, "have pity on us and help us!"

"What will you do?" asked another.

"I . . . we . . . there's . . . chloroform," he gasped out. "I can give . . . I can put you to . . . sleep. . . . You . . . won't suffer."

"Then it's that or burn," whispered one woman faintly—it was singular how the sounds of these low, sibilant whispers were heard by every one in that long room. "Give me the chloroform," she added.

"And me."

"And me," came from the different beds.

He was practically alone in the hospital. There were three or four faithful nurses in the other wards, but no other physician.

"In a moment," he said, starting toward the door that led to the dispensary.

There he met Alden, grimy with smoke, singed with fire, ghastly, with bloodshot eyes.

"I came down to help," he said, "through the fire. What must I do?"

"There's only one thing," returned Illingworth. "Get the chloroform."

"My God! You don't mean . . ."

"Yes. We'll take the women's ward first, and then the children, and then the men."

"Are there any nurses in the building?"

"Three . . . I believe."

"And the rest?"

"Time with such patients as we could get out this morning."

Alden hung in the air, as it were. He had not had time to realize the necessity. The only thing present to him was the danger.

"The head nurse might make cure of the children," he said, finally.

"No, we must do it, Alden. This is no woman's work. They can help, none."

The two turned and went swiftly along the corridor. In a moment—which seemed like an age to the waiting patients in the ward—they were back again. There is a kind of courage which

He bent over her quickly

Drawn by Helen Frank Lawrence

comes to the most timid when the inevitable is at hand. It was a land of heroes that lay stretched out upon the narrow beds before Illingworth and his young assistant.

"The weakest first, doctor," cried one woman.

The doctor nodded and stepped to a bedside. He lifted his hands up before he did a thing.

"May God," he cried hoarsely, "have mercy on your souls—and on mine!"

"Amen! Good-by!" whispered the pale-lipped woman nearest him.

"Good-by," returned the doctor, simply, administering the chloroform.

Back and forth through that ward nurses and doctors went. Then up-stairs to the little children, and finally down-stairs to the men. The little folk, realizing little, whimpered pitifully, but they were small, and with them it was the sooner over. Thank God for that!

The men patients, less accustomed to the "slings and arrows of outrageous fortune," fought hard, but the flame was around them now like a wall; the hospital itself was on fire. Illingworth paused at last.

"You must go now, Alden. I can do the rest."

"I can't leave you, I won't."

"These women here," returned Illingworth, pointing to the nurses, who, with heroism as great as his own, had remained faithful to the solemn obligations of their calling—"they must be taken care of. You have time yet to escape."

He glanced out of the main door, fortuitously opening away from the heart of the fire, although to escape, if hardly that were possible, the fugitives would have to run a furious gauntlet of leaping flame.

"You have time. For God's sake, go!"

"And you?"

"My duty is here."

"But I . . ."

"Your duty is to the women."

Alden turned. There was no question as to his renouveau, but what Illingworth had said was plain.

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

"We'll stay with the women."

lorry, cried a feeble voice from the nearest bed. "We'll be burned in death while you stand there talking!"

Illingworth stretched out his hand and Alden wrung it, a great sob choking his throat. The three women approached him. The tall white-capped head-nurse, old enough to be his mother, kissed him on the forehead. The others clung to his hands.

"If we are to go at all," said Alden, hoarsely, "we must go now."

They turned and went out of the door. For a few seconds Illingworth watched their blanket-threaded figures stumbling blindly through the wall of flame. Whether they made it or not, he could not tell. It was a last chance, as he had said. No other could pass that barrier of fire now. Above his head, the upper wards were blazing; the glass in the windows had cracked and broken; tongues of flame were licking at the wooden sashes. The room was filled with blinding heat and blinding smoke which choked and tore him. Feeble cries, pitiful appeals, came from the few who still remained alive.

He groped his way from bed to bed and did his office. The last man whispered to him.

"You've left some for yourself, doctor, after you've finished me?"

Illingworth nodded. And presently he alone was alive in that great building. There was some left for himself. He lifted it in devotion to his face, and then tore it away and dashed it down and trampled it upon the floor. He stood upright with his hands uplifted, his face to the flame, a man erect and free, made in the image of his God. Life had been given to him for his Creator, and he would keep it until it were required of him, in whatsoever way and shape and form it might be. He could take it, but he would not. He had no ministered to those poor people under his care that they had died easily, painlessly, peacefully—if death can ever be any of those things. He had faced and he had conquered the heaviest problem that could have fallen to mortal men, and in that great moment of self-sacrifice, when he put his life behind him and chose agony and death, it seemed to him that if he had

Back and forth through that ward the doctors went

St. Nicholas, Jan. 1911

THE NEXT WORLD-QUESTION

By SYDNEY BROOKS

LONDON, February 24, 1907.

There could not be a more complex of European politics one could not do better than study the Bagdad Railway question. There is perhaps no enterprise that focuses so many and such divergent ambitions. There is certainly none that so well describes the best thought England can give to it. It touches Macedonia and all that Macedonia implies on the one hand and the vast possibilities of the Near East on the other. It directly affects British trade in a region where British trade has hitherto predominated, and it must, as time goes on, exercise a profound influence on the relations between Germany, Russia, and England. The great diplomatic struggle of the future, now that the Far-Eastern crisis has been temporarily settled, will centre round the Tigris and Euphrates. Those lands have still an enormous part to play in the world's history. Mesopotamia may be reconquered again the granary of the East, and cities more magnificent than they may yet cover the sites of Babylon and Nineveh. A quarter of a century hence Anatolia and Syria, Mesopotamia and Persia, may be as insistent in their problems and as familiar to the students of international politics as Manchuria and Korea are to-day. Before very long the Bosphorus will be linked by rail to the Persian Gulf, and branch lines will be ramifying to the Caucasus and the Caspian in one direction, and towards Mecca and the Suez Canal in another. In this network of railways, commanding the cross-roads of three continents, Russia long ago secured independent rights of construction for the northern section. Who is to control the southern section? Who is to own and operate the line from Constantinople to the Persian Gulf? It has been built by German money and under German auspices so far as the foot of the Taurus. To swing it across that formidable mountain-barrier and carry it a thousand miles onward to its objective, more money is needed. The Germans require from Turkey a state guarantee of \$6,000,000 a year. This is a sum which the Porte is unable to raise without the consent of the Powers to an increase in the customs-duties. The present tariff is eight per cent. The Sultan wishes it to be raised to eleven per cent. The efforts of Germany to secure the money are being, and for the past four or five years have been, directed towards inducing the Powers to agree to the increase. Negotiations, said Sir Edward Grey a few days ago, are now in an advanced stage. One way or the other the question will soon be settled.

Let us see roughly how the Powers stand in the matter. Germany so far has had little success with her trans-Asian colonies. If she is ever to found a veritable tierceur Germany, one that will spread German thought and the German tongue, revolve the surplus population of the Fatherland and become an integral part of the Empire, it can only be in Asia Minor. Her influence is already predominant in Constantinople. With a German line running thence to the Persian Gulf, with through rates arranged for her traffic from the heart of Germany to the Middle East, and with her subjects gratified by excursions and preferences all along the route, Asia Minor would become in time a vast German colony. The Wilhelmstrasse wishes therefore either to construct the line by German money eked out by a Turkish guarantee or, if English, French, and Russian capital is found necessary, to retain a dominant interest, commercial and strategic, in the undertaking. When efforts were made a few years ago to raise the required funds in St. Petersburg, Count Witte took the unique course of publicly requesting Russian capitalists to leave the matter alone. His reasons are worth summarizing. Russia objects to the railway because it will open up the wheat-fields of Mesopotamia and so increase the agricultural distress in Russia; because it will compete with the Siberian and Trans-Caspian railways; and because the claim for the state guarantee will interfere with the already irregular and backward payments of the Russian war indemnity. These of course are not the only grounds of Russian hostility to the scheme, but they are the only ones that can be publicly and officially avowed. Behind them all lies that intense suspicion of the growing influence of Germany in Asia Minor, which is likely at some time or other to jeopardize the power of Europe.

The Sultan, for his part, is swayed between the dread of admitting Western influences on so vast a scale and his hope that the railroad, when completed, will ennobles his realm and enable him, if necessary, to dominate effectively in the most important corner of "The Turkish Empire." It has been said, "provided with the modern machinery of transport; able for the first time to concentrate all its forces towards the Balkans, the Caucasus, Egypt or Persia indifferently; with plans of mobilization worked out in peace by German officers who would provide over their execution in time of war—would become once more one of the most formidably military factors in the world." England, France, and Russia would be deterred if they were induced to finance such a scheme without better guarantees than any mere community of construction could provide. Germany, especially, deeply suspicious of the Germans and not least when they come bearing gifts, and in

flexibly resolved to maintain her preponderance in the Persian Gulf is coming to feel the stretch of railway between Baghdad and the Gulf must be under her own control. France again, as the builder of the present line from Smyrna, is interested financially and commercially in the question, which moreover is complicated by the natural and notorious desire of Russia to have free access to the Persian Gulf.

For the moment these manifold interests are grouped round the question of the increase in the Turkish customs duties. Are they to be raised from eight to eleven per cent? The proposal touches us in England more than any one else because over sixty per cent. of the increased duties will fall on British trade. They are expected to yield \$3,750,000 a year. Of this sum twenty-five per cent. must be applied to the reduction of the Turkish debt. The remainder, or \$2,800,000 a year, then becomes available for any purpose that may be agreed upon between Turkey and the Powers, or, in the absence of any such agreement, for any purpose to which the Turkish government chooses to apply it. These sums moreover will virtually be increased if their collection is vested in the Council of Public Debt, the one honest and efficient department in the Turkish government; and it is over the question of how and through whom they are to be disposed of that considerations of the first moment arise. All the Powers have agreed that the revenue raised from the new duties shall be applied to making good the Macedonian deficit. Here a new complication comes in. Why is there a Macedonian deficit? The principal reason is that Turkey is maintaining in Macedonia an army of nearly 80,000, and that the military expenditure on the vilayets is nearly double that of the civil. The second reason is that the scheme of reforms devised by the Powers has proved nothing but an elaborate international hoax. If the military expenditure were reduced to proportions that bore some relation to the needs of Macedonia, and if the Porte were to accept a genuine measure of reform, there would be a good chance of converting the deficit into a surplus. At present that deficit amounts to some \$1,500,000 a year. This is almost certainly the sum that the Powers, that the Council of Public Debt, and the Council of Public Debt; and the Powers who, by forcing the appointment of an International Commission of Finance upon the Porte, have made themselves peculiarly responsible for Macedonian finances, and feel themselves bound not to wreck their own scheme of reforms by withdrawing the funds to work it, have therefore resolved to devote the proceeds of the three per cent. increase to balancing the Macedonian budget.

This may be an inevitable, but it is at least the less a most curious, proceeding. Consider what is implied in it. The Powers have apparently agreed that the proper way to introduce reforms in the Turkish Empire is to make any one and every one but the Turks pay for them. They are, it would seem, of the unanimous opinion that even a fraction of the Turkish Empire can only be helped towards a more stable civilization at Europe's, and particularly at England's, expense. They have therefore launched themselves on a policy that rests on the assumption that the money needed to Macedonia for the dubious prosecution of strangulated reforms cannot be forthcoming either from Salonica or from Constantinople, unless the military funds already furnished are increased by a deduction from them, and that the administration of the Turkish customs-house is honest and efficient to the last dollar. On what terms is the British government ready to concur in this arrangement? A few months ago they were fully stated in the House of Lords. They included a stipulation that the revenue from the increased duties should be collected by the Council of Public Debt, and that the duties themselves should only come into operation after fair notice and should be limited to seven years. They also included some improvement in the machinery of the Turkish customs-house—the methods of levying duties and classifying goods—and a reform of the Turkish mining laws. But they did not include—that clearly is at the root of the matter—any guarantee for the reduction of military expenditure in the three vilayets. Unless these guarantees are forthcoming there is nothing to prevent Turkey from increasing her army in Macedonia in exact proportion to the increase of revenue. But the paramount objection to the whole proposal is that by adding some \$3,000,000 a year to Turkey's revenue, the Powers liberate an equivalent sum that may, and may not, be applied to the maintenance of the Bagdad railway. For the Bagdad railway, Turkey no doubt has other claims upon her exchequer, but that would not necessarily stop the Sultan from diverting that the Bagdad railway was the most important of them all.

In England at any rate this is felt to be a real danger. English opinion has averred round to the conclusion that the Bagdad Railway question is now to be settled not with Turkey but with Germany, and that to agree to an increase of the Turkish customs duties before terms have been come to with the Wilhelmstrasse is to throw away the strongest card that British diplomacy at present holds.

THE SEARCH FOR AN INTERNATIONAL TONGUE IN COMMERCE

By W. G. FITZ-GERALD

NOT a day passes without our consuls reporting to Washington the utility of our merchants sending out thousands of price-lists, catalogues, and letters in English to lands where our language, as well as our weights and measures, are utterly unknown; and for that reason all communications, however artistic and laboriously produced, are promptly thrown away.

Beyond doubt the commercial world, trade associations, tourist clubs, seafaring bodies, and other organizations have been seeking a universal language for many years, but hitherto all attempts at the ideal Volapük have for one reason or another been unsuccessful. Whenever an international congress—social or scientific—is held, the need for such a language is recognized and freely discussed.

At this moment an international committee is being formed in Berlin with the view of selecting a universal auxiliary language subject to certain generally accepted limitations. This, it must be able to serve the needs of daily life, as well as the demands of trade and commerce, and the leading purposes of science. Also it must be easy for persons of average education to learn, but it must not be one of the living national tongues.

Now, if this committee adopts a language, it is almost certain to be the ingenious hybrid Esperanto. This is a language with few rules and no exceptions. It has an irregular verb, and its pronunciation, accent, and spelling may be learned by any person of ordinary intelligence in one lesson. The vocabulary is small, and many of the words the pupil already knows or can guess. It is, moreover, a clear, flexible, and serious language. Our consuls abroad are already recommending that manufacturers and dealers should make use of this medium in their campaigns for trade with foreign countries. Chambers of commerce and trade organizations are everywhere giving it careful consideration.

Our big exporters are astonished to find how readily this new universal tongue may be acquired, and their managers, clerks, and travelling salesmen are acquiring the language with extraordinary facility. There are in Germany twenty-four great cities in which

Esperanto is thoroughly well understood by the business people, and new groups of adherents are being formed every day in other cities of the German Empire.

Throughout the world there must be nearly four hundred and fifty important towns, as well as sixty or seventy great trade and scientific organizations, conversant with the new tongue. Their members are all Esperantists, or else use the language when writing to a member in another nation. Fourteen periodicals are printed wholly in Esperanto, seventeen partly so printed, and twenty or thirty other well-known journals devote more or less space to the subject of the new Volapük.

Within the past two years at least eight international business and professional congresses have recommended or actually adopted Esperanto as the international medium of communication. It is curious for the globe-trotter to come across, in South America, India, and many other more or less remote nations, European and American salesmen glibly talking Esperanto to one another and their prospective customers.

The language is already being taught in Japanese schools, and even far-off Peru publishes a journal printed wholly in the new international tongue. In cases where an Esperanto correspondent thinks the addressee in another country may not be able to read his letter he has only to put in a key in the addressee's own language, or refer him to the nearest Esperanto group, which will translate for him free of charge. This key is published in all national languages, and weighs but a very small fraction of an ounce.

By its use any letter may be easily read, and the advantage of communication of this kind is fast being realized not only by our own traders and exporters, but also by the whole business world, literally from China to Peru. For an international language, a tongue common to every man of affairs the world over has long been the dream of commerce. Many more or less uncouth languages have been invented, but the latest of all, instead of falling like its predecessors, has now thoroughly taken root and spread the world over, to the great advantage of the business world.

TWO DISTINGUISHED CONSULS-GENERAL WHO ARE LEAVING NEW YORK

Sir Percy Sanderson

BRITISH CONSUL-GENERAL AT NEW YORK

M. Alcide Ebey

FRANCE'S CONSUL-GENERAL REPRESENTATIVE IN NEW YORK

SIR PERCY SANDERSON has become so well known during his twelve years' residence in New York as Consul-General of Great Britain, that his departure next month—not to return—is deeply regrettable. Sir Percy, having reached the age limit, is retiring on a pension, after nearly fifty years spent in the service of the crown: first as an officer of artillery out in India, and after that in the diplomatic field. He represented England as *chargé d'affaires* in Roumania, and as British delegate on the International Commission controlling the navigation of the Danube, before coming to America. He is younger brother of Lord Sanderson, so long the permanent chief of the Foreign Office, and is, like him, a grandson of the first Viscount Canterbury. Sir Percy is a

Knight of the Order of St. Michael and St. George. His French colleague, Consul-General Alcide Ebey, is likewise leaving New York, on his promotion to the rank of Minister, and his transfer to the diplomatic service, in recognition of the excellent work which he has done for his country during his two years' stay in America. As foreign editor of the *Revue des Deux Mondes*, and a member of the staff of the *Revue des Deux Mondes*, he was regarded as one of the leading French writers on international politics, until his appointment to the post of Consul-General in New York, which is considered the blue ribbon of France's consular service. In Paris, up to the time of his appointment, he was known as the right-hand man of M. Delcassé, then Minister of Foreign Affairs.

AN AVERTED "WAR FOR HUMANITY"

By THOMAS SPEED MOSBY

ONE of the few great Indian tribes which were never formally at war with the United States was that of the Pawnee, which, at the time of the occurrence presently to be detailed, was the dominant tribe of the great Western plains. During the early part of the last century it was the friendly attitude of this tribe which made possible the very profitable trading expeditions to the Northwest in that early day. By allying themselves with the hostile tribes adjoining them they could for years have seriously impeded the onward march of those pioneer trading and trapping expeditions which were then paving the way for the settlement and civilization of the West.

How these peaceful relations were nearly severed and how narrowly a great Indian war was averted, and all because of an Indian child, is known only to the few who delight to delve into the obscure and forgotten nooks and crannies of American history.

It was in the month of August, 1824, a year before the famous Santa Fe Trail was opened, when a company of one hundred and sixteen Americans, under the command of Captain Sylvester Pattie, halted at the village of the Pawnee Loups, on the Platte River, in what is now the State of Nebraska. The majority of the company had served under the command of Pattie as a lieutenant of the Rangers, in the war of 1812. The present expedition had been fitted out by a son of General Bernard Pattie, a partner in the American Fur Company, and they were bound for Santa Fe, New Mexico.

At this village of the Pawnee Loups resided the head chief of the Pawnee, and by him the Americans were hospitably received.

While the Americans were in camp a Pawnee war party came in, bearing with them as trophies a number of scalps, and a little Indian child. After due preparation, the braves having subjected themselves to the utmost degree of personal adornment according to the barbaric ideals, and the scalp having been erected upon a pole in accordance with the custom in such cases, the warriors gave full rein, for the next three days, to their dancing and screaming propensities. These ceremonies having been appropriately concluded, the captive child was taken into the medicine-lodge, where the medicine-men proceeded to pronounce the prescribed mummery incident to the dedication of the little sufferer to the Great Spirit.

It became at once apparent to the Americans that the Indians proposed to burn the little one at the stake. Horrified at the contemplation of such fiendish barbarity, and moved to pity for the helpless and innocent victim, the whole company of Americans appealed to the chief to spare the child. They first offered to purchase it. The chief seemed offended at the proposition. The Americans continued to press their objections to the sacrifice, and with such vehemence that the chief was astonished.

"What?" said he: "if you found a young rattlesnake in your path would you spare it because it was too young to bite?"

When he was called upon to observe the difference between a snake and a human being, and told that the infant, if allowed to grow up among them, would so yield to its environment that it would be as one of his own tribe, the chief sagely shook his head.

"No, no," he rejoined: "It would be like hatching the egg of a partridge. You may bring the young fowl up in a cage ever so tenderly, but when you release it the bird will show its nature, not only by flying away, but by bringing back other partridges to eat your corn. By raising the egg at once, you would not only provide food for yourself, but you would avoid future trouble. We have tried the experiment with our captives, and have raised them and spared them only to bring us into difficulties."

Nothing daunted by the obstinacy of the savage, the Americans then exhibited a roll of red cloth, which pleased the chief and seemed to tempt his cupidity. They then asked to see the child, and were taken into the medicine-lodge.

They found the little creature, an infant scarcely four years of age, so tightly bound with thongs of rawhide that the leather

strings had sunken out of sight beneath its tender and swollen flesh. They learned that it had been tortured by starvation and thirst for four days. Although it hardly seemed to breathe, it appeared to revive somewhat when the rawhide thongs were severed.

The chief was then offered ten yards of the cloth for his captive. He at once stood erect and began to expatiate grandiloquently upon the perils his warriors had dared and the privations they had endured in capturing the child, and commended his address by demanding a greater price. Perceiving that the wily savage designed to seize upon the humane spirit of the Americans as an opportunity for extortion, Captain Pattie turned toward his men, and in a terse and manner that electrified the camp, exclaimed:

"My boys, will you allow these unnatural devils to burn this poor child, or practise extortion on us as the price of its ransom?" And the immediate response was a thunderous "No!"

All this in the depths of the wild prairie, and in the midst of the Pawnee, whose numbers were then more than ten thousand!

Captain Pattie again offered the cloth, which was again refused. The American Captain then assumed that it was his intention to take the child, "with or without ransom."

The child was then hurried to the American camp and the Americans ordered to prepare for immediate battle—a battle, too, which meant certain death to them all.

The old chief regarded Captain Pattie with an air of profound astonishment.

"Do you think you are strong enough to keep the child by force?" he asked.

"We will do it," answered the veteran pioneer, "or every man of us will die in the attempt: in which case our countrymen will come, gather up our bones, and destroy your nation."

This statement was effective; effective, because it was true. Although he could not understand the sentimentality that moved the hardy pioneer as it has frequently inspired his posterity since that day, the savage knew that these rough, kindhearted men were speaking the truth; that they would die for the friendless child, and that their deaths would be avenged by the extermination of his tribe. Besides, this chief had been to Washington, where (to use his own words) he had seen "guns as big as logs of wood, and bullets as big as human heads." He agreed to accept the ten yards of red cloth, provided Captain Pattie would kindly add a paper of vermilion, to all which assent was readily given and the bargain closed.

The chief then started with Captain Pattie toward the American camp, but was startled when he found that the Americans had made breastworks of their baggage, behind which they were resting on their arms, awaiting the command to fire. After hesitating a while he entered the camp, and, noting the warlike preparations, asked Captain Pattie with some eagerness:

"Did you think I would fight my friends, the white people, for that little child?"

"We were ready for you, if you meant to do so," was the reply. The chief smiled as he shook hands with Captain Pattie and bade him good-by, saying:

"Me good friend. Save powder and lead to kill buffaloes and our enemies."

And they fared forth on their march to Santa Fe—these one hundred and sixteen Americans who had agreed to lay down their lives for the infant captive—happy, as we may well believe, in the knowledge that they had nobly obtained in a trying hour that noblest attribute of American character, a chivalrous regard for the helpless, the persecuted, and the innocent. And the reader will be pleased to know that, a month later, while travelling among another tribe, the humane interest of these dauntless souls was rewarded by the unexpected finding of the father of the Indian child, and the surviving members of this Indian family were thus happily reunited.

PERFECTING THE TREATMENT OF CANCER

By C. W. SALEEBY, M.D., F.R.S. (Edin.)

In this article Dr. Saleeby, who first gave to the world through the pages of "Harper's Weekly" the news of Dr. Beard's remarkable discoveries touching the cure of cancer, outlines several important steps which need to be taken in order that the curative properties of "trypsin" may be rendered unflinchingly effective

RATHER more than a year has elapsed since my first announcement of Dr. Beard's work regarding the nature of cancer and its treatment appeared in this place, but despite all the difficulties, some of which I am about to discuss, the time has been long enough for us to ascertain whether or not we are face to face with something real at last, and the answer is an unqualified affirmative. In my last article, as the reader will remember, I drew attention to some of the positive results which have already been obtained: these are now being rapidly added to, both in America and in Great Britain, but my immediate purpose in the present case is not merely to announce additions to their number, but to discuss a most important matter which bears vitally upon the whole possibility of treatment and upon the length of time that must elapse before the potential life of Dr. Beard's work is realised for suffering humanity. The work which we are now to consider has only just been completed and the results have not yet been published anywhere. I hasten to announce them with all possible speed because of their profound humanitarian importance. Furthermore, I do so in this place because experience has proved its fitness for my purpose, and because I know that there are not a few men and women now living, and even enjoying life, who would be under the sad but for these articles.

In critically preparing all the results that have hitherto been obtained, we have found ourselves compelled to observe certain anomalies, the explanation of which was not forthcoming. It might quite well be expected that certain kinds of cancer—those, for instance, which are known to grow more slowly—would yield more quickly than others to treatment by the pancreatic ferments. But no such general rule could be ascertained. The response to the treatment bore no particular correspondence to the type or the previous history of the growth. Indeed, it was found that when the treatment, apparently unaltered in details, was applied in various cases which, so far as could be ascertained, were precisely similar, the results obtained were quite discrepant; whilst in one case the tumor responded at once and most satisfactorily, in another the injections might have consisted of salt solution and nothing more so far as any observable results were concerned. All kinds of malignant tumors, at one time or another, showed response to the treatment—a point which is evidently of the greatest importance. But they have by no means always shown the same response; nor, indeed, always any response at all. Furthermore, whilst one observer has obtained results within a few weeks, another observer, working upon cases apparently identical, and giving doses that purported to be the same, has had to wait many months.

There were and are, of course, certain details, already noted, which would go a long way to explain these anomalies. There were, first of all, the practitioners who did their work in what, not to put too fine a point on it, must be called a dirty fashion; whether by ill luck, such as may sometimes attend any one, or by carelessness, their injections were followed by local symptoms which would suggest that Puscher and Lister had never been born. Nothing more could be expected as to the production of abscesses by the injections, for the experiences already published abundantly proved that these should and need never occur.

Then, again, there were the practitioners who, quite consciously ignorant of the delicate nature of the ferment, subjected to each the hypodermic needle after boiling it, or failed to wait for the cooling of the water with which the injections are diluted, and which of course must first be boiled so as to render it sterile. If the ferments be heated above only 60° Centigrade, they are rendered absolutely inert.

Nevertheless, when all these sources of failure were excluded, the anomalies to which I have referred still remained. It became necessary, therefore, to begin at the very beginning, and to discover the facts of ferment solutions in general.

These facts have been startling enough. The various firms of chemists who now supply these ferments in the form of injections for the treatment of cancer are quite above suspicion as to their probity. They doubtless all use the best methods known to them and use them with the most scrupulous care. Nevertheless, the results which they obtain are in some cases singularly unfortunate, as we shall see. Furthermore, let us note that if such results are obtained by firms of the highest repute, we need not look far ahead in order to prophesy that very soon, when firms all and sundry enter into competition in this matter, the market will be flooded with preparations that are simply worthless. Quite sufficient harm has already been wrought in this way. In the first place, many patients have failed to find relief because, as we shall see, they were undergoing the pancreatic treatment only in name—perhaps along with the "domestic" remedies of soap and Chlor-

turpentine. More serious still, because of its wider results, is the fact that these failures and abortive experiments are in some cases recorded, with the result of gravely discrediting the treatment and delaying its general acceptance. It is for this very sufficient reason that I write at the earliest possible moment. It is absolutely necessary, as we shall see, that we should demand and insist upon a quite new series of requirements before undertaking the prosecution of this work.

For some months past in London there has been conducted a long series of chemical experiments with the pancreatic gland, and to the mode by which its ferments may be best extracted from it. At the same time there have been in process a very long series of observations upon the actual digestive activity of the various preparations that are already upon the market in Great Britain. Lastly, a great deal of work has been done in the attempt to ascertain how long these various preparations will retain their activity, assuming that they possessed any to begin with.

In the first place, then, we have found that various preparations stated to contain ferments of considerable strength and such a percentage of trypsin or amylase or both, may differ in their activity in ratios actually so high as that of one to five hundred. This is to say that two injections, supposed to be identical, may actually differ so much that five hundred drops of the one will be required to digest the same amount of milk as will be digested by one drop of the other. Now this is a very easy fact to state, but let any reader consider for himself what it signifies in practice. It means that if the dose of the more active preparation be adequate, that of the other is only one five-hundredth part of what it ought to be. This is as good as to say that the use of the second preparation is an expensive, painful, and fatal farce. Ferment injections of which no more may be said are being employed at this moment, I cannot doubt, here and there, in all parts of the world. Plainly, in the interests of humanity and of science we must put a stop to this.

It is not yet quite clear how it is that in the course of making their preparations certain European manufacturers, even though they use fresh pancreas gland, and extract the ferments from it with glycerine in a perfectly correct fashion, manage somehow to reduce their work to uselessness by the time the injections are sealed up in the little glass phials in which they are dispensed. There the fact remains, however. The same remark applies to preparations made from trypsin in powder. Some of these will be found to be highly active; others, even in concentration, will effect no change in dead milk in an hour. Evidently it is a sorry business attempting to cure cancer with such.

We must find in the first place, then, some accurate and certain means—simple, if possible, but at any rate accurate—of determining the activity of any given injection. This is now being done, as I shall show. I am anticipating the publication of this work in the scientific journals, but I have been doing an all along with the full consent of the original workers and for the best and most shorts of all possible reasons.

There has been some discussion amongst the papers presented to the Royal Society, one by the late Sir William Roberts, of Manchester, who, until his death a few years ago, was the greatest living authority on digestion. Roberts showed that of the various means which may be employed for estimating the activity of the digestive ferments, one of the best is what he called the "metanasein test." At the time when his work was done not even the wisest could guess the importance which it would afterwards assume, but there is no sterile knowledge in the whole realm of things, and this is now bearing fruit. The test in question depends upon certain observable changes wrought by the digestive ferments in the chief protein of milk, which is known as casein. For purposes of accuracy it is necessary in the first place to obtain a standard milk, and that which has been employed is what we may call "London County Council milk," which contains the four per cent. of protein demanded by that body. To a fixed quantity of this milk under fixed conditions of temperature, there is added a fixed quantity of the ferment preparation that is to be tested, and the time it takes to change the milk completely is then precisely noted in minutes and seconds. Whereas our preparation, diluted ten times, would produce the metanasein reaction in perhaps forty-five seconds, another, undiluted, will effect nothing that can be observed in an hour.

William Roberts, as was his fashion, went thoroughly into this matter. He provided a convenient form whereby the result of such experiments can be expressed in units of digestive activity. The mode of construction of the formula is immaterial here. It is comparable to the formula employed, as many readers will know, for estimating the activity of the diaphoretic antiseptic. In that

case it was soon found impossible to make any progress so long as the strength of injections was expressed in terms of what was put into them. In a case like this you must express the strength of an injection not by what you put into it but by what it does. The business of the diphtheria antitoxin is to neutralize the toxin or poison of diphtheria, and so the dose is now expressed in units of neutralizing power. Similarly the business of the digestive ferments trypsin and amylopsin is to digest, and therefore the proper mode of expressing the quantities employed would evidently be in units of digestive capacity. This digestive capacity is "D" in the formula of Sir William Roberts, and this mode of nomenclature is as superior to that at present employed as science to vulgar opinion. Observe a proof of this superiority. Two injections, both honestly prepared, may purport to be identical. Subject them to this new mode of description, and whereas the value "D" of one is found to be 200, the value of the other is found to be 8.7—these figures referring to digestive capacity, which is of course the vital matter and the only vital matter in this connection.

Very plainly, then, we must make a new demand of the chemists, and this is simply that just as they have standardized their preparations of other drugs, so they must standardize their preparations of these ferments. When a doctor prescribes five drops of tincture of aloe vomica, he knows that this will always contain a certain definite quantity of stychnine, and so in other cases; but I know of no other case in which the importance of this principle of standardization can be compared with that of the case we are now considering. The chemist must standardize his ferments, and when that is done, the public and the profession must absolutely ignore all preparations which, whilst professing to contain this and that proportion of the ferments, are not standardized. The stated proportions of the ferments may very well have been put into the preparations, but if they are now incapable of digesting milk in months, it is not well to expect them to cure cancer.

When this most necessary advance has been achieved, we can begin to attach some significance to the reports of those workers who fail to obtain the results they desire and may reasonably expect—if such reports are forthcoming. Furthermore, we shall then be able to attack the question of dosage, which has hitherto been in a state of chaos. Obviously you cannot come to any agreement if you imagine that twenty drops of a five per cent. solution of trypsin always means one and the same thing, whereas twenty drops in one case may really be equal to ten thousand in another.

Now let us turn to another question which is, at any rate, of considerable interest for the patient. The injection of trypsin in a plain salt solution would cause no pain whatever beyond the mere prick of the needle. The trouble is that the glycerine necessary for the preservation of the trypsin may cause pain. Worse than this, free acetic acid has actually been found in some of the injections—and that, as every student of drugs well knows, is one of the most painful and harmful of local irritants. The addition of a very little alkali in the solution will neutralize the acid, but hitherto we have had to dilute the glycerine injections with water in order to lessen the pain which the glycerine sometimes causes. As we have seen, this dilution entails requirements as to sterilization and asepsis which have not been met. There seems to be little doubt, however, that before long these who have been working at the subject in London, and also the great American firm which has done so much for the treatment, will overcome all these difficulties. Some means will be found of preserving the trypsin in its active state without the use of glycerine or any other irritant substance.

The importance of all these small points can no longer be questioned. The accumulation of positive results during the last year is now far too great. Those who are acquainted with cancer are

able to appreciate such results in duly afflicted cases at their due worth, and of course every case in which the pancreatic treatment does not come up to expectations is a disaster—both for the patient in question and for others. That is why I make this formal demand for the standardization of the preparations that are put upon the market. That requirement can already be completed in a few days. Before very long, I do not doubt, the chemists will also be able to do the work that still remains, so that before long we may have upon the market preparations which are sterile, will keep for considerable periods, contain no irritating substance whatever, require no dilution, and do just so much work as they profess to do, neither more nor less.

Meanwhile, in the face of many difficulties, some of which almost must be attributed to human nature as well as to chemistry, the new treatment pursues its course. Let me add a point which is of considerable interest, and which is worthy of the attention of the many medical practitioners who, as I know, read these pages. There is now obtainable in Ascarin an active preparation of the second pancreatic ferment, amylopsin, the utility of which in cancer Dr. Beard predicted last April. Now it is part of the wonderful story which Dr. Beard has elaborated that there is a fundamental identity between the irritable trophoblast of a cancer and the normal trophoblast which plays its early part in the cycle of our lives, and which, when its work is done, is killed, as Dr. Beard asserts, by trypsin. Now Dr. Beard is led to believe that not only do the symptoms of the terrible disease known as ectoplasia resemble those which often appear in the course of the treatment of cancer if trypsin alone be employed, but that the symptoms in both cases are due to the same cause—poisoning by the chemical products of the degeneration of the trophoblast—normal trophoblast in the case of ectoplasia, or trophoblast in the other. Dr. Beard therefore predicts that the injection of active amylopsin—known to relieve these symptoms in the treatment of cancer—will prove of value in the treatment of ectoplasia—a disease for which, as for cancer itself, until the other day, no kind of specific remedy was known. I mention this revelation in connection to the consideration of the medical reader. Certainly the utility of amylopsin in cases of ectoplasia will have to be tested sooner or later, and why not sooner?

Let us now also, in concluding, that the various preparations of amylopsin that have been put upon the market differ as widely in their powers as those of trypsin. The test of activity in this case is a very simple one, depending upon the application of the familiar iodine test for the presence of unabsorbed starch. In this case, also, the activity of the preparation can be expressed in units of digestive power, and hence a double preparation of this ferment also must be standardized before very long.

Meanwhile, however, for the matter is serious, let me at least make this most necessary demand: every one who employs these ferments, until they are standardized, must at least make some rough test of their activity as he goes along; if only by adding specimens of trypsin to milk, and observing the time required to develop the bitter taste which is produced by its digestion at 100° Fahrenheit, and in the case of amylopsin by the easy and striking test with starch and iodine. Furthermore, let me add that to one who has any acquaintance at all with the facts of these ferments can possibly pay any attention whatever to any negative results that may hereafter be published in which the activity of the ferments employed was not formally demonstrated. The time may come, I repeat, when this question to the contrary of the results will itself be regarded as quite sufficient proof of the ineffectiveness of the ferments employed. Meanwhile I send this article forth in the earnest hope and belief that it will be of no less service than his predecessors.

A JAPANESE GUIDE IN PLAIN ENGLISH

IT is not often in this dry and dusty world that one finds in the preface pages of a guide-book a bubbling spring of poetic fantasies most daintily expressed. What seeker of literary beauty has ever lost himself in the volumes of Murray, or Baedeker? It has been reserved for Mr. C. J. Tsuchiya, of Mishima, Japan, to create, in the little monograph entitled "A Guide on Hakone," a work whose chapters will be read with the keenest delight.

The author declares that Mr. T. Matsui, the master of Yenshoya, earnestly requested him to write it. With too much modesty he adds:

"Not consenting to my apology in regard to imperfect knowledge of English, he forced me to write even an abbreviated outline which I have just sketched. I was afraid that the actual beauty of the place should be left out of my pages."

Most readily, Mr. Tsuchiya begins:

"A GENERAL REPORT ON BAKHOE."

"For the most part, the celebrated places and the famous ruins preserve mostly in steep and unapproachable points, as in precipices or valleys. Here, the most steep and precipitous point in Tokaido is Hakone Mountain to whose summit we can reach after ascending about ten miles from its eastern base. Owing to toll-rose ascent, many difficulties must be endured by travelers. The result of toleration is pleasure. There the Imperial palace (Palace stands) Hakone Gogen, a Shinto temple, adorns itself with per-

petual unchanging dress of forest; the Ashi lake spreads the face of glowing glass reflected upside down the shadow of Fuji which is the highest, noblest and most glorious mountain in Japan, and the mineral hot-spring naturally entertain the guests almost yearly to visit them during summer vacation. The purity of air, the coolness of summer days, and the fine view of landscape are agreeable to all visitors; for these facts they do not know how is the summer heat and where is the epidemic prevailing."

Komatsudake, a peak of Hakone, used to be a fierce volcano: "but lately," Mr. Tsuchiya assures us, "its activity became quite absent."

Think of the pleasure to be derived from visiting such a place as this:

"H. INABAHEAVEN.—Although the valley has not so much population, the degree of hilliness of the inhabitants is comparatively excellent. Their natural disposition is gentle and honest, and their mutual friendship is so harmonious as that of a family."

"H. A.—Brought of quite air so-pure no poisonous mixture and always changes the deliriousness of our spirit. During the winter days the coldness picks up all persons from our hands, but at the summer months they are set free."

Myth, words, these, and well worth pondering. But let us proceed:

"H. YAMATO.—Whenever we visit the place, the first pleasure to be enjoyed, is the view of Fuji Mountain and its summit is (Continued on page 499.)

THE SEASON'S PLAYS

SYMBOLISM AND WAR

By "I"

IT was almost as interesting as the performance itself to note the comments which were made by the audience as it trooped out of the New Amsterdam Theatre during the first of the performances of Ibsen's "Peer Gynt" by Richard Mansfield and his company. One woman said, "It's just like the Hippodrome; you never know what is coming next." This is an adequate example of the impression received by any number of persons during the presentation of the drama. And yet, the unfolding of the drama did not arouse so much curiosity as to what was coming next, although it is not likely that many persons in the audience had read it, as to what Mr. Mansfield would elect to do in his delineation of the strange character of the hero and how many of his previous and well-known characteristics he would employ.

Richard Mansfield as "Peer Gynt" in Ibsen's Play

to this is the impost that the lines are metrical—a fact which Mr. Mansfield unfortunately makes very prominent—and his lack, aside from that of interesting his audience, must be appreciated.

Ibsen's poem is phantasmagoric; it relates in its more or less unfortunate details the life of a wilful, beautiful, dashing, liar of a man, the heedless sensuality of his desires, and thetribution which overtakes him. It is something to read, it is more, much more, to be heard in the music of living, but it is not suited in any way to serious stage production. It might be utilized by an extravaganza company with a great show of scenery, lights, and costumes in such treatment as is given to fairy tales. But even then it would have to be expurgated most carefully and scientifically, as has been the case with many of the stories in the "Arabian Nights' Entertainments." Mr. Mansfield goes back to his Prince Karl in his representation of the happy-go-lucky exposition of the youthful and libidinous Peer Gynt. Toward the end he reverts to Ibsen's *Character*, and this is by far the best part of the performance. But there is entirely too much of the whole thing. It becomes dreadfully tiresome long before it is time for the curtain to fall. To be sure, Mr. Mansfield has seen to it with a careful eye that there shall be an obvious abundance of stage management, re-enforced by a series of stage pictures which are fairly unconvincing. The scene aboard Peer Gynt's ship in a storm is amusing, although this is probably not what it was intended to be.

The dominating impression produced by the play is, that Mr. Mansfield has attempted too much both for the capacity of the actor and the forbearance of the audience. It is asking much that a theatre full of people shall sit for three hours and listen to the exposition of a drama which does not, in it is hoped, com-

home to them in many ways. This is not intended to indicate fault-finding with symbolic drama, but with "Peer Gynt" itself, which could never have been intended for stage production. That it contains nothing pleasant is not an argument against it; it fails to appeal. And if one may hazard the guess, Mr. Mansfield will not play it long.

In "On Parole," a new four-act play by Mr. Louis Evan Shipman, now on view at the Majestic, we are presented with the agreeably disappointing spectacle of a wartime drama which does not depend for its appeal upon a more or less continuous fusillade of melodrama; but it has been absurdly taken to task for this very reason. For many years it has seemed as if a wartime play—especially one dealing with our Civil War period—must inevitably be loaded down with trills of the obvious and external sort. Mr. Shipman, in "On Parole," has shown that this need not necessarily be the case. His play does not lack excitement—in deed, it is often moving and virile. But its conflicts are interior—matters of character passion—rather than external and fortuitous. One does not miss the war-time atmosphere—the feeling of great events impending or in progress; but these things are not insisted upon—we find ourselves, as it were, in a place a little removed from the center of the stage where that tremendous drama was enacted, and the sensation of being there is both novel and pleasant.

The story concerns a comely young woman, an *Estimatee* Finckney, a Virginia maiden and, of course, a Confederate sympathizer, whose self-assumed role is that of a secret despatcher, and who occupies her time in carrying important information through the lines to General Lee. Major Francis Dale, a Yankee officer and a member of the Intelligence Staff of the Union army, is on the trail of the mysterious rider, when he meets Miss *Estimatee* and, at first ignorant of her identity, falls promptly and quite excusably in love with her. What happens when he discovers who she is is simply a variation played upon the antique theme of the conflict between love and duty—a conflict which Mr. Shipman sets forth simply, sincerely, without extravagance, yet, on the whole, very effectively. The tangle is, of course, straightened out in the end without either sacrifice of duty or remuneration of love.

The play is very well acted by a company presented by Mr. Miller. Miss Charlotte Walker of the Madams line countenance gives an appealing and delicately restrained portrayal of the *Estimatee*, without extravagance, and Mr. Vincent Serrano is manly and gallant in bearing as the stern though enamored Major Dale. Those who have sensed Miss Walker and Mr. Serrano of overacting did these two players an incomprehensible injustice; for that is the last thing in the world that may, in this case, be charged against them—on the contrary, their action at times lacks point and emphasis, though it is excellent on the whole. Mr. Frank E. Allen as the venerable and sweet-spirited General Finckney, Mr. Francis N. Conlan as Tom Greer, and Mr. Robert Cummings as a Confederate soldier, do some exceedingly good work, and Miss Helen Graham, as Lucy Green, contributes a dexterous and vigorous character study.

MUSIC AND THE OPERA

DEBUSSY'S "THE SEA"

By LAWRENCE GILMAN

Boston, March 3, 1909.

FOR a certain small but (let us hope) honorable minority in the world of music, the emergence of a new work by the Frenchman Claude Debussy is an article of prime importance. Within a few years this singular tempo-pret has impressed himself upon the minds of those who are more concerned with music as a living voice than as a completed record, as one of the three most interesting living musicians—and the word is used here in its important, its creative sense. We have already discussed in this paper, at some length, the art of Debussy in its general aspects, so it would be superfluous to advert now to its characteristics. It may be as well to recall, however, that until the present season Debussy has been known to the musical public of this country as the composer of but two works for orchestra: the "Prélude à l'Après-Midi d'un Faune" (after the poem of Mallarmé); and the three "Nocturnes." We had not heard his "Danse Sacrée" and "Danse Profane" (for chromatic harp or piano with orchestra), or his newest and most imposing instrumental utterance: the "Trois Esquisses Symphoniques"—as he calls them—"La Mer." These "sketches," published in 1905, were produced at a Lamoureux concert in Paris, on October 13 of that year, under M. Camille Chevillard's direction. The Boston Symphony Orchestra, Dr. Karl Muck conducting, performed them last night at Symphony Hall for the first time in America. The performance would have delighted the fastidious and hyper-sensitive Debussy, for it was in the last degree revealing and eloquent. Stridens has this astonishing orchestra so covered itself with glory as in its exposition of this fantastic, perturbing, whimsical, and most startling score—one of the most unconfined and unrepentant essays in orchestral writing that have ever been put upon paper. Dr. Muck's reading was exquisitely lucid, yet admirably plastic and imaginative.

It is doubtful if the music made a very definite impression upon many of those who heard it; for it is nothing if not elusive, and it wears none of the hall-marks which long conversation has associated with music which assumes to express the sea. It has none of the expected furies and obvious raptures of the traditional seascapes—how well we know the precise orchestral methods by which the average music-maker will depict his waves and tempests, his moderating winds, and the long roll and swell of his waves! There are prescriptions—do we not all know them!—for denoting exactly the shriek of the gale (chromatic runs in the wood wind); the swirl and roar of the storm (pompeian figures in the horns under string tremolos); recovered gladness and serenity (an evenly rhythmical and gliding passage for the horns). These things are as unvarying as inevitable, as painfully cliché, as the close and muted strings of the pastoral, the diatonic tremulous harmonies of the chorale. Debussy, unostentatiously and without affectation, has subverted them. He has contemplated his theme from a wholly novel standpoint, a standpoint unobscured by tradition or preconception. To begin with, he has chosen for expressive phases of the subject whose freshness and novelty of suggestion strike one at once. His "three sketches" are thus entitled: (1) "Le Faute à midi sur la mer"; (2) "Jeux de vagues"; (3) "Dialogue du vent et de la mer." They are scored for a full, though not an unusual, orchestra; in the second movement

("Jeux de vagues"), a celesta is used as an alternative for the glockenspiel, and the former and more delicate instrument was used last night with delicious effect. One's first impression of this music, as has been said, is of the manner in which it diverges from the too-familiar seascapes of orchestral tradition. We are not reminded, in listening to "La Mer," of the sea as it appeared to the imagination of Rimsky-Korsakoff, of Wagner, of Rubinstein, of Mendelevich, of Macdowell. Nor is it the sea as Swinburne knew it—a sea which, as the echo of it lives in his verse, said W. E. Blissley, contains one of "its vastness and vehemence, the rapture of its inspiration, the palpitating, many-thinking miracle of its light." Nor is it the thunderous and surging sea of Whitman—"the sea / of brooding swell and mark, of mellow hurricanes"—that has quickened his spirit. The sea does not speak to him "with bulky, hangly lips," as it did to that musician who intended supremely his models of elation and terrible beauty, its majesty no less than its awe, its exhilaration no less than its allurements. For Debussy the sea is wholly a thing of dreams, a thing vaguely, yet rapidly perceived, a bodiless thing, a thing of shapes that are gaunt or lovely, wayward or exuberant; vague that are full of bodiment, or pitiful, or passionately insistent; but that always pertain to a supermundane world, a region altogether of the spirit. It is a sea which has its shifting and lucent surfaces, which even shimmer and traditionally mock, but it is a sea that is shut away from (unconsciously or involuntarily) whose murmurs or imperious commands few have needed to pay heed; a sea whose eternal secretaries and imitable enchantments are hidden behind veils that open to few, and to none who attend without, it may be, a certain apt and curious egotism.

From an exclusively musical point of view, "La Mer" is not in a mood that differs either strikingly from that which shaped the inspiration of Debussy's earlier orchestral writing. At the risk of being misunderstood, one is moved to say of it that it is more vigorous, more emphatic in accent, more dynamically various. It is less fluid in movement, less shadowy in profile, than the Mallarmé piece or the "Nocturnes"; it has, manifestly, a more obvious body. One does not mean to imply by this that it owes more admirable traits than its predecessors; we are not exalting mere energy, mere dynamic effectiveness, as the expense of a static beauty and eloquence—indeed, this music seems, because of its greater palpability, less characteristically a product of Debussy's brain than those much earlier writings of his as the "Nocturnes" or "Pelléas et Mélisande." Yet it is manifestly his; it is full of his rich flavor, and it grips and engages the imagination in an exceeding degree. Strangely, it is crowded with exquisite and ingenious detail, and it is put upon the orchestra with a surety, a freshness, a variety and fertility of invention, a sensibleness, a restraint, a mastery of effect, both later and external, that compel fervent praise.

As Mr. Philip Hale has remarked, to those who have anxiously charged Debussy with a lack of "virility" this music is a complete answer; yet it was an answer that need not have been made, at least as a rejoinder; for such a thing as his earlier "Nocturnes," evanescent and shadowy as it is, is not less truly "virile" because it is less firmly articulated. There is a virility of the spirit which rather avoids than seeks emphatic utterance.

A characteristic Portrait of Dr. Karl Muck
CONDUCTOR OF THE BOSTON SYMPHONY ORCHESTRA

A Japanese Guide in Plain English

(Continued from page 57.)

covered with permanent undulating snow, and its regular configuration hanging down the sky like an aproned white fan, may be looked upon as equal shape from several regions surrounding it. Every one who saw it ever has nothing but applause. It casts the shadow in a contrary direction on still glassy fave of lake as I have just described. Buildings of Imperial Military Palace, severity of Gorges, all are spontaneous pictures. Wind proper in quantity, suits to our heat to slip by sail, and the sun still shining on the sky shivers quartz faster over ripples of the lake. The cuckoo singing near by our hotel, plays on a harp, and the gulls flying about to and fro seek their food in the waves. All these panoramas may be gathered only in this place.

What, then? Stations all! Up anchor! Hunt in your jib-sail! Stand by bow and main sheet! We're off for glorious quartz Japan to hear the cuckoo playing on his harp.

The "Jamestown" Postage-stamps

ALTHOUGH the designs were decided on only a few days ago, the Bureau of Engraving and Printing at Washington is already at work upon plates from which the stamps will be issued in commemoration of the Jamestown celebration, and there is need of haste, if the idea of the Post-office Department, to place the stamps on sale upon the opening day of the celebration, April 26, is to be carried out.

This series—if series it may be called—is to consist of but two denominations, one and two cents. A strong effort was made by many persons connected with the collection and stamp-collectors to have the series include a five-cent denomination, but this the department declined to do, the first intention having been to issue only a two-cent stamp.

The Jamestown stamps will be rectangular in form, about the size of the Pan-American series, longer horizontally than vertically, and printed in one color—emerald green for the one-cent, and the two-cent stamps carmine. The one-cent stamps will bear a vignette of Captain John Smith, and the dates of his birth and death—1580 and 1634. In the upper left-hand corner will be a profile of the Princess Pocahontas, and in the upper right-hand corner a profile of Pocahontas.

For some time it was thought that the stamps in commemoration of the three-hundredth anniversary of the settlement of Jamestown would be possessed of a very small negative feature, in that they would bear neither the likeness of the brave Captain Smith nor the Indian maiden who had saved his life. As soon as it was definitely decided to issue the series, a search was immediately instituted by the Post-office Department for authentic pictures of these two celebrated personages, with the result that it soon developed that but few were in existence, the few of the Indian princess being either of a nature to preclude their circulation in a civilized country, or, being and legend to the contrary notwithstanding, simply too ugly for consideration. A fairly good portrait of Captain John Smith was finally secured, however, and a compromise was effected with those who insisted that it would be incongruous to picture the settlement of Jamestown, by placing the profile of Pocahontas upon the upper left-hand corner of the one-cent stamp, while the picture of Captain Smith occupies the center.

The design for the two-cent stamp gave less trouble, though provoking some little discussion. It was intended from the first that it should be a representation of some historical event in connection with the settlement of Jamestown, and many urged that it picture the first church of the colony. As this church, however, consisted merely of four upright poles, over which was stretched a ship's sail for a roof, the

artistic results obtainable with such a subject were obviously limited. The stamp as it will be issued will be a fine engraving of the landing of the first Jamestown settlers, rescuing somewhat the two-cent stamp of the Columbian issue, which represented the landing of Columbus.

The Jamestown stamps will be the fifth commemorative series issued by the United States government. First came the Columbian stamps in 1893, comprising sixteen denominations, from one cent to five dollars, and these are generally regarded as among the most beautiful postage-stamps ever issued. The Omaha, or Trans-Mississippi, followed in 1898, with nine denominations; next the Buffalo, or Pan-American, of six denominations, famous because of their two colors and "errors" with the central picture upside down, of which a copy of the two-cent denomination is valued at about \$200. The next series was the Louisiana Purchase Exposition stamps, of five denominations.

Jamestown stamps will be on sale only during the continuance of the celebration, although, of course, they will be good for postage at any time. Being a special issue, it is not probable that they will be on sale at all post-offices, as the department will furnish them to postmasters only on special requisitions. Some little profit always accrues to the government from the issuing of a special series of stamps of this nature, as there are some million-million stamp-collectors in the country who purchase stamps which will never be used to pay postage, to say nothing of the several million which will be bought by foreign collectors. A few years back, the frequent changing of their stamps was regarded by several minor South-American republics and European states as a legitimate source of revenue, and was often resorted to, to the expense and intense disgust of stamp-collectors desiring complete collections.

The wish for a five-cent denomination of the Jamestown stamps was mainly on account of foreign mail-matter—with but the two denominations, three stamps, will be required for an ordinary letter, and a package requiring sixteen cents postage must have at least eight stamps upon it.

Proceedings

A FELLOW meets a "sudden fair,"

He offers her a rose.

At once a something in the air

Pocahontas he will propose.

"Oh! know, I guess—

4th year!—

And thus upon acquaintance short.

Ye modern knight proceeds to court!

II

The marriage state, despite its aims,

Proves but a singular pill:

She cannot stand his "ways"; she claims

That she has "shame" ill!

And then, of course,

Divorce!

And so to make the marriage night

Ye moderns make proceeds to court!

WALTER PUTNER.

Lobsters

LAST year a professor in one of the Paris universities resolved to study the habits of lobsters in his laboratory. As they live in salt water, the first race of the professor was, of course, to procure a supply of this medium. The common mortal will probably consider it a most simple task—to provide a few barrels of sea water. This, however, is not so in France. Sea water contains salt, and the production of salt is a source of revenue. This made it necessary for the professor to first obtain the permission of the Minister of Finance before he could travel and transport the water. When his application reached the ministry a subliminal official was directed to inquire into the standing of the petitioner. This involved considerable correspondence, which passed through numerous channels and finally reached the chief of the department, who now initiated another investigation before order to ascertain why a Parisian professor

should be so anxious to lower the level of the Atlantic Ocean. After several weeks the inspector made favorable report. Some days later the petitioner was notified of the favorable consideration of his request in the usual elaborate official language, accompanied by circulars giving extracts from the penal code relative to infringements of the salt monopoly.

Finally, after months of waiting, the professor was enabled to have some casks filled with salt water, at a designated point on the seashore, of course under the supervision of another official, who duly issued a permit for the transportation of the liquid into the interior.

On Time

A New-Yorker, who travels much in the South on business, says that one day not long ago, while in a Virginia town, he was desirous of catching the 11:15 train for the North.

When he arrived at the station he was much surprised to find that the 11:15 started promptly on time. "Well," said he to the conductor, "they like you North, where they say your trains are never on time, either coming or going."

"The Northerners are right," was the unexpected response of the conductor, "We never got a train off in time in our lives."

"Why, this train got off on time. It's the 11:15, isn't it?"

"Yes, my friend, it's the 11:15, but it's last Tuesday's 11:15. To-day's 11:15 won't start much later Monday, I reckon."

What Did She Mean?

PROFESSOR GRANGER SHAKESPEARE indulged with an anecdote a Shakespeare-Bacon discussion at the Players' Club in New York.

"A literary wag," remarked Professor Matthews, "said one night to her husband:

'When I get to heaven I am going to ask Shakespeare whether or not he wrote those plays.'

"The husband chuckled.

"Maybe he won't be there," he said.

"Then you ask him," calmly replied the wife."

FOR THE NURSERY—FOR THE TABLE.

ADVERTISEMENTS

ON "THE ROAD"

And it's Really Lots of Fun.

An Ind. woman asked the food question with regard to road eating. She says:

"For almost ten years I suffered from poor health, which was plainly the result of improper food."

"I was always drowsy, had headache, stomach trouble, was getting a little complexion—was short, was simply miserable."

"Yet I did not realize the real cause of my trouble until recently. I have given Grape-Nuts and the exercise in the little book, 'The Road to Wellville' (which I found in the pig), a thorough trial, and they have worked wonders for me."

"I noticed a change from the beginning. My headache disappeared, and at the end of the first week my stomach did not trouble me so much."

"Now, in less than a month, my nerves are strong, and I begin to have some ambition to do things. I have gained six pounds, and feel full of life."

"Grape-Nuts food, with cream, makes a delicious drink, and I never grow tired of it. I consider 'The Road to Wellville' one of the most valuable books ever printed, for I owe my present good health to it and Grape-Nuts." N. S. Smith, Boston Co., Boston, Mich. Get the book, follow your pig. "There's a reason."

(Continued from page 427.)

done wrong, there was a sort of dim expiation in it all.

He knelt down in the long still ward, murmuring: "Christ have pity! Lord have mercy!" By and by he fell prone upon his face, his hands outstretched, a stark cross upon the white sheet, and lay there as still and as quiet as the dead. The flames roared about him, the smoke blew over him, he moved not nor stirred. Christ had heard that prayer, and there was peace in his heart that passed all understanding.

The flames lit into him, the smoke enshrouded him, the walls overwhelmed him. In days to come they found not one vestige that looked him, but the memory of his dead lived and will live. Alas knew, the women knew, the world knew, tied knew, and he himself realized it in the light of another country—a heavenly one.

The Pulse of Change

Tar old order change, yielding place to new.

Especially with us.
The sugar crowns that "Paradise" once drew.

"Salome" now disarms,
"Dorrie" usurps the place of "Nancy Brown."

Change upon change we see.
The chorus cry, "No way back and sit down."

Is had in "Twenty-three,"
So from the first eternal order run.

From Pige is Clere to the Age of Ann.
The poet finds the compass out of Bar.

Another guide never true,
"True as the gyroscope my heart to thine,"

Such is his figure crew.
And loathed swains of "plant creations" speak.

That Barback did decree.
"Soft as a cat's in the smacking cheek,"

The modern lover sighs.
From indeed is gone with all its name,
Late balloon sleeves. And other ghores, who knows?

From shops where once rhyme valentines
we bought.

The picture post-card stanzas;
Little boy dogs, with roset and patios fraught.

Give way to Teddy bears.
And so we see how rolls this mundane ball.

Why, for a purpose quest?
How dumb that this will soon become of all.

Possible worlds the best,
When very children broaden slowly down
From little Fantasy to Buster Brown?
P. L. A.

What He Could Do

In 1892, the late principal of Glasgow University, while taking a holiday in the country, was met by the minister of the district, who requested:

"Hello, Principal! You here? Why, you must come down and relieve me for a day."

The Society replied:
"I don't promise to relieve you, but I will relieve your congregation."

In a Manner of Speaking

A female witness was being examined as to the sobriety of the defendant and, in his anxiety not to express an unfavorable opinion, had made so many evasive answers that both judge and counsel became exasperated.

"Now, sir," cried the judge, "answer the question. Was he or was he not intoxicated?"

"No!" said Sandy, "I wouldn't deny that he was intoxicated in a manner o' speakin'."

"And pray, sir, what do you mean by that?" roared the justice.

"I mean," Sandy replied, very calmly, "that he could walk straight, but he couldn't talk straight."

Big Baggage-trucks Run by Push-buttons

THESE have been placed in use on the Broad Street Station of the Pennsylvania Railroad in Philadelphia. Baggage and mail trucks which are in themselves miniature automobiles. These in use now are, in a sense, experimental, but the satisfaction which they have given points clearly to the fact that they will ultimately take the place of the old hand-pulled trucks in the larger stations.

Every passenger is vitally interested in his own baggage, and particularly in having it go on the same train that he does, and reach his destination with him, rather than one or two trains afterward. This is one of the conditions which led to the development of these new automobile trucks. It does happen that a passenger doesn't deliver his trunk in the baggage-room until five minutes or less before train time, and yet he expects to have it in the baggage-car before the train leaves. What this means in the great Broad Street Station may be readily realized, for there are in the neighborhood of six hundred trains a day entering and leaving the station, each carrying its share of baggage which must be promptly cared for.

It is not an uncommon thing to see several baggage porters pushing and tugging at one ordinary loaded hand-truck in their effort to deliver its burden within the allotted time. Today one may be attracted by a heavily loaded truck running along at a good speed and controlled wholly by a man who holds the tongue and guides it simply by pushing a button as easily as he would if he were actually pulling the load.

Of course this improvement makes easy work for the men who handle the trucks and they very thoroughly appreciate it, for it enables them to accomplish so much more in a day, without danger of overstraining themselves, or of being routinely sworn out at night. The general appearance of the trucks is similar to that of the old hand-pulled affairs, but beneath the platform are boxes containing a storage battery and one electric motor.

In order to do work satisfactorily these trucks must be safe. They must neither run away nor get away and control is accidentally left for a minute. In this respect they have proved highly satisfactory, for their speed is controlled from a small lever on the tongue by which they are slowed, and it is further arranged so that if this tongue is dropped or let down, the current is shut off and the brakes are put on. A catch is also provided, so that the tongue can be fastened up against the front of the truck, in which position the current is also shut off and the brakes are on the same as when it is on the ground.

Quite So

"WHERE is it, of course a platitude to say that a wise teacher learns by instructing others," recently observed an instructor in a preparatory school in Brooklyn, "it is permissible to remark that he frequently picks up some curious information in this way."

I once asked a boy to explain, if he could, the difference between animal instinct and human intelligence. It was a pretty hard question, but the lad was equal to it.

"If we had instinct," he said, "we should know everything we needed to know without learning it; but we've got reason, and so we have to study ourselves 'till blind, or be a fool."

The Usual Place

MRS. MILLAR: "I saw your auto standing in front of Brown's drug-store, but I didn't get a glimpse of you."

MR. MILLAR: "I was right there, on the front seat."

MRS. MILLAR: "I fear not! I never thought of looking anywhere but underneath."

Columbia

Electric Victoria Phaeton

MARK L&X

New Model Price \$1900

THE attention bestowed upon this car at the New York Automobile Show caused it to be regarded as the sensation of the Electric Section.

In dependability, simplicity of operation, safety, comfort, superb finish, graceful proportions, smartness of style, and, above all, in radius of reliable action, this Victoria phaeton is without a peer among light electric vehicles.

In actual road tests it has been run upon of 75 miles on one battery charge. This mileage has never been equaled by a regular stock electric of any other make.

Since the first model was presented three years ago, this carriage has been the most popular light electric. It is a special favorite with physicians, and no other is so perfectly adapted to ladies' use. Its control is so simple that a child can run it with perfect safety. The other Columbia Electrics—Broughams, Hansoms, Landaus and large Victorias—are equally desirable in their class and are to be seen in greater numbers on all of the fashionable boulevards of the world than any other electric carriages built. Catalogue on request. Also separate catalogue of Columbia 24-28 H. P. and 40-45 H. P. Gasoline cars.

MR. BROWN: "I was right there, on the last seat."

MRS. MILLAR: "Dear me! I never thought of looking anywhere but underneath."

Columbia

Electric Victoria Phaeton

MARK LXIX

New Model Price \$1500

THE attention bestowed upon this car at the New York Automobile Show caused it to be regarded as the sensation of the Electric Section.

In dependableness, simplicity of operation, safety, comfort, superb finish, graceful proportions, smartness of style, and, above all, in radius of reliable action, this Victoria phaeton is without a peer among light electric vehicles.

In actual road tests it has been run upwards of 75 miles on one battery charge. This mileage has never been equaled by a regular stock electric of any other make.

Since the first model was presented three years ago, this carriage has been the most popular light electric. It is a special favorite with physicians, and no other is so perfectly adapted to Indian use. Its control is so simple that a child can run it with perfect safety. The other Columbia Electric—Broughams, Hansoms, Landausets and large Victorias—are equally desirable in their class and are to be seen in greater numbers on all of the fashionable boulevards of the world than any other electric carriages built. Catalogue on request. Also separate catalogue of Columbia 24-28 H. P. and 40-45 H. P. Gasoline cars.

Christian Science

By

MARK TWAIN

IN this great work Mark Twain devotes himself seriously and logically to a serious theme; the result is an earnest, painstaking, and impartial study of Christian Science in all the details of its growth and church organization.

This book is the result of years of careful investigation of Mrs. Eddy's cult and writings, and of the church which she has founded. It is an honest effort to answer seriously those questions which the public generally has been asking about Christian Science.

The reader will like the way Mark Twain goes vigorously into details, writes plain English, and gets to the bottom of things. He is equally frank with praise or censure, as the case demands. And while his book must be ranked as the most serious and extended criticism of the subject that has yet been made, it is not without repeated tinges of humor which make it, while instructive, also deeply entertaining.

DIVIDEND PAYING INVESTMENT IS NOT SPECULATION

Cecil Rhodes, the Maker of the British South African Empire, said in a speech made in London:

"Of course you can lose your money in mining if you put your money in a mine that is worthless, that has no mineral in it, and in the same way you can lose it if you invest in a share which contains no merchandise, or is a bank which contains no money. Investigate your mining company as you would any other business. This is easily done, and you will then make no mistake."

"So, in answer to your question, I would say, that I believe investing money in good mining stock is the most profitable of investments and very, very much the safest."

THE MODERN BUSINESS OF MINING, properly and conservatively conducted, is as safe and legitimate a business enterprise as is banking, manufacturing or railroading, and so conducted is a science and not a gamble. Having these facts in mind, the Directors of the Bagdad-Chase Gold Mining Company (the owner of the well-known Camp Rochester Mines in California, which have produced in the past two years over \$700,000) decided to take up the exploration and development of mines and to devote to that business the same careful, thorough and energetic attention which they had given to the conduct of their own business in other lines.

The result is the examination of over five hundred mining properties, the careful investigation of about one hundred of those offered and the final purchase of three only, which have been proved by actual development to contain ore bodies capable of producing annual dividends of at least 3% on the entire capital stock of the Company.

Mr. Wayne Darlington, one of the most successful and experienced mining engineers in America, and who was for five years in charge of Mr. John W. Mackay's mining properties, is the General Manager of the Company, and his judgment has been followed in the selection of these properties, which are:

THE SOULSHY MINE (on the mother lode, at Soulsbyville, Tuolumne County, Cal., equipped with a 50-ton milling plant. Has produced \$1,000,000 in gold above the 400-foot level. The company is developing the property to the 800-foot level. Planned to be in full operation by March 1911, and producing net returns of not less than \$40,000 per month.

THE PETTIT MINE, in the Atlanta district, Idaho. Developed to the 600-foot level. One blocked out to the value of at least \$1,200,000. Planned to be in full operation by July 1911, and producing net returns of not less than \$8,000 per month.

THE SOUTH MOUNTAIN MINE, in Owyhee County, Idaho. Robert N. Bell, State Mining Inspector, estimates that this contains 1,000,000 tons of ore, averaging \$30 a ton. Planned to be in full operation by December 1911, and producing net returns of not less than \$75,000 per month.

The estimated net return from the three properties aggregate \$95,000 per month, or \$1,140,000 annually. These earnings would give a dividend rate of over 3% on the preferred stock.

The stockholders of the Bagdad-Chase Company have unanimously voted to make their issued \$2,000,000 of stock all common stock, and to sell so much as may be necessary of an authorized issue of \$1,000,000 of 8% cumulative preferred stock for the purpose of completing the purchase price of the three properties, for further development and the erection of the necessary reduction works thereon.

That is to say, these holders of the \$2,000,000 of stock, originally issued, have put \$1,000,000 preferred ahead of their own stock so far as dividends and ownership of all property are concerned, and have agreed that 8% per annum in dividends shall be paid upon it before the common shareholders receive a penny in dividends. Furthermore, they have provided that after all stock has received 8% in dividends the remaining earnings shall be equally divided among all the shares, so that the holders of this preferred stock will, in addition to their protection as preferred stockholders, receive equally as much in dividends as those who are not protected by preference.

THE BAGDAD-CHASE GOLD MINING CO. owns, free from all liens and encumbrances, besides the well-known Bagdad-Chase Mines and the three new properties described above, the Ludlow & Southern Railway, the Barstow Reduction Works, the town of Camp Rochester (Stedman P. O.), Cal., and accumulated tailings of 50,000 tons, worth \$150,000.00.

Capital, \$3,000,000, Consisting of { Common Stock, \$2,000,000 } Par value, \$5.00 per Share
{ Preferred Stock, \$1,000,000 }

OFFICERS AND DIRECTORS:

JOHN N. BECKLEY, Rochester, N. Y., President (President Toronto, Hamilton & Buffalo Railway Company)

EDGAR VAN ETTEN, Boston, Mass., Vice-President (Vice-President New York Central & Hudson R. R. Co.)

JOHN H. STEDMAN, Rochester, N. Y., Secretary (Secretary O'Brien Fare Register Company)

BENJAMIN E. CHASE, Rochester, N. Y., Treasurer (President Central Bank and East Side Savings Bank, Rochester, N. Y.)

JOSIAH ANSTICE, Rochester, N. Y., Director (Josiah Anstice Company, Hardware Manufacturers)

ARTHUR G. YATES, Rochester, N. Y., Director (President Buffalo, Rochester & Pittsburgh Railway Co.)

General Manager, WAYNE DARLINGTON, M. E.

There is no mortgage or other lien on the property of the Company.

Application will be made to list the stock of the company on the New York Stock Exchange.

Regular quarterly dividends of 2% on the preferred stock will be payable on the first of January, April, July and October, and extra dividends will be payable on the same dates.

Dividend checks will be drawn upon The National Bank of Rochester, Rochester, N. Y., but will be payable at their face value by the correspondent of such bank in the city of New York.

The price at which the preferred stock not already disposed of is now offered for sale is \$6.50 per share.

The Company reserves the right to close the subscription list at any time without notice, to reject any subscription, and to allot less than the amount subscribed for.

If an allotment is not made on any application, the Company will return to the subscriber the remittance received in full.

Copies of the prospectus and the detailed reports of the engineers will be furnished and subscriptions will be received by

The Treasurer of the Bagdad-Chase Gold Mining Company

Beckley Building, Rochester, N. Y.

and also for the Company by The National Bank of Rochester, Rochester, N. Y., and

Knickbocker Trust Co., 66 Broadway, N. Y. City

As it is expected that the preferred stock offered will be largely over-subscribed, the Company will make allotment on subscriptions in the order received.

The character and standing of the officers and directors can be obtained by addressing the above banking institutions.

The Charm of the Orient.

Japan and China are peculiarly fascinating to the American traveler. The hospitality of their people—the varied customs, climate, scenery and temples—inspiring inspiration, winding rivers and beautiful valleys, invite a journey to "stay longer."

Japan is at her best in April and May and June, the season of blossoms and beautiful valleys, when the cherry and wildflower are in bloom and all Japan is in holiday dress.

Why not go this spring? The trip is not expensive, and is made with great comfort on the ships following the mid-Japan current between Boston and Japan.

What Prominent Men are Saying of this New Book—

The Future in America

By H. G. WELLS

BOOKER T. WASHINGTON—"I have read with cordial interest Mr. H. G. Wells's *Future in America*. He has written with an alert, open mind, and has discriminatingly set forth in his admirable study the trend of American institutions. I find myself with him especially in his deep sympathy with those parts of our American citizenship that most deserve and need at this time the helpful sympathy of all good citizens."

A. CONAN DOYLE—"I think there is as much wisdom and political insight in Wells's *Future in America* as in any book I have ever read."

FRANKLIN H. GIDDINGS—"Mr. Wells's observations are so keen, his style is so vivacious, Professor of Sociology, Columbia University and his humor so kindly that his study of the future in America appeals to a multitude of readers merely by its interest and charm. But to the thoughtful it is far more than so much good reading. It is safe to say that Mr. Wells is one of the ten or twelve most up-to-date men just now alive, and in his 'search after realities' he has found and described some realities here in the United States that we shall do well to face and examine. Impressionistic as it is, Mr. Wells's volume is quite as serious a challenge to sober thought as Mr. Bryce's more detailed and conventional account of our institutions."

ROBERT C. OGDEN—"The sympathetic spirit of Mr. Wells's study of American conditions stamps his work with a winning note of sincerity. The book is stimulating, instructive, interesting. It should be carefully read by every American with a weary head and an anxious heart concerning present-day problems in this country. The chapter on the 'Tragedy of Color' is impressive and masterful."

COMMENT

The Decline in Stocks

WHATEVER else may be said of the recent serious and threatening conditions in the stock-market, the long-continued decline in the value of securities has been accompanied by strange phenomena. The special property that is now of much less worth to its owners than it was a year ago is railroad property. It may be said that this property is actually worth as much to-day as it was before, both as tangible property and as a running business. Of course we realize fully that people who want to fix rates on the scrap-value of railroads are not very willing to consider the good-will and possibilities of a going concern; but all economists must differ with them unless, indeed, they are ready to sink their economic principles in the turbid waters of socialistic politics. The unfortunate people who own railroad securities find their property greatly reduced in value, and they have the right to demand a possible, even probable, loss of income. If this great decline had followed the usual course of like financial depressions, the country long before this would have experienced the distress and the ruin which accompany panics. That it is true that in a large way panics are perished phenomena has been demonstrated now as seldom before; and it is perfectly clear to every observant man that all intelligent conservative forces of the country have been put forth to avert such a gradual decline that the country would be spared the frightened mind that makes a panic epidemic. How much the Treasury has aided is still a question. Certainly Secretary CLEVELAND has tried. But this time, unlike 1893, there has been little loss of confidence because of a scarcity of money. Therefore, while Treasury aid may retard, it cannot prevent. In the mean time the equanimity with which bankers and investors have sustained their great losses is admirable.

Effects of Attacks on Railroads

There is a reason for the peculiar situation which is patent. The general attack upon the railroads has resulted in a loss of confidence in that kind of securities. It is explained that a principal reason for the decline is a general liquidation; that, so far as the railroads are concerned, a good many people have been getting rid of their bonds and shares. The profits of the railroad business are threatened, and railroad extension has been checked at a time when the business of the country demands that it should be greater than ever before since railroads began. New securities for new work could not now be sold in our market. The Transvaal road has been able to borrow in France, but in the money-markets of this country the roads have been obliged to borrow of the banks on three-year notes and to pay very large rates of interest. The Federal government has led in the attacks, which we will not now criticize, and the States have followed. These may have been stimulated by Mr. Doer's so-called warning that if the States do not perform their duty as the administration sees

it, the Federal government will usurp their powers by construction of the Constitution. The result of this stimulation by the administration has been a mass of State legislation, actual and pending, much of which, if carried into effect, will tend to bankrupt many of the roads in those parts of the country which are most in need of railroads. That railroad presidents and managers say this may cause it to be questioned; it is, nevertheless, true. If this Federal-inspired State legislation is persisted in, there is a black future for railroads and for those whose business is dependent on the service of the roads.

Disastrous Possibilities

The roads themselves, if they are wise, will not decrease their service because of adverse legislation; indeed, pure business considerations require that they maintain their trains and all their activities as long as they can; but it must be plain to the simplest, railroad enemy though he may be, that if the present war goes on, the railroad business and all business served by it must suffer disaster. In the mean time danger to other and smaller businesses hides in the fact that so much of the money of the banks has been lent to the railroads. The time may not be distant when the small business man, or the large, will find that there is no money in the banks for his necessary accommodation. Then we must look for squalls. The assumption of folly in that behind every movement, or even suggestion, of the railroads is a predatory motive, and this, unless abandoned, must eventually bring disaster.

Exactions of the San Francisco Labor-Unions

It would make appreciably for joy in the hearts of the American public if the labor-unions of San Francisco could be so enclosed in one physical frame that they could be drawn firmly across a pair of competent knees and spanked by a hand of due left and application until they gave convincing evidence of a fervent yearning to be good. They doubtless include many decent men, but the impression prevails, and seems to be amply founded, that they are controlled and their policies shaped by the most coarsening brand of irresponsible monopolists that anywhere occupies a position of equal power. Of their ability to regulate the relations of the United States with Asia we have lately had an impressive illustration. They do not look so handsome sitting on the neck of the fallen San Francisco that is struggling to her knees. That is in effect the posture in which they are exhibited by a writer in the *Argonaut*, who tells some particulars of the means used to make it as difficult and as costly as possible to rebuild San Francisco. This writer does not complain that wages in San Francisco are excessively high, for everything else is dear there at present. It is the more wanton exactions and hindrances that he dwells upon. The unions have not only succeeded in exacting an extremely high rate of pay for themselves, but they refuse to use building material brought in from outside the city unless it has been prepared or manufactured by union men paid at the current San Francisco rate. Boards must be "surfaced," not at lumber-mills where normal wages are paid, but at San Francisco rates; stone must be cut and dressed, not at the quarries, but at local yards. Metal sash and door frames must be either of San Francisco make, or manufactured by labor paid at San Francisco rates. Masons fight inch by inch against the concrete walls needed for anti-earthquake construction. Skilled workmen from out of the city cannot get employment, because the unions refuse to admit them to membership. Finally, builders say that the prevailing spirit among the workmen is bad, and that they do not get the service they get when wages were a third lower. Mischiefs like these mean not only delay and infinite vexation of spirit, but that the new San Francisco will be worse built than she should be, and at far greater cost.

Useful Immigrants for Southern States

The question whether or not the Southern States can afford to expend money for the importation of useful immigrants is economic, and its solution ought to be left to the States themselves. It may be that such a use of public money is neither proper nor profitable, but each State ought to decide this for itself. Any attempt by the Federal government, through Congress or otherwise, to prevent the States from deciding this matter each for itself is paternalism of an exasperating kind. If this action is dictated to Congress by

labor-unions, then the Federal government manifests a weakness which is ominous. We have seen more than once the power of labor-unions over the Federal government. The exercise of it has more than once determined Federal action, which has affected all the States, for the supposed benefit of an important body of voters in one State or in one section. The question is now whether the Federal government ought, out of consideration for the labor vote of the North and West, to interfere with the South's effort to increase its foreign population.

Japanese Immigration Restricted

The Japanese-San Francisco incident seems to be closed with the proclamation of the President putting into effect the law restricting immigration of Japanese and Korean laborers to this country. This is the manner in which the Federal government has settled the peculiar controversy between the nation and a city school board. It has not yet been determined, and it will not be in this case, whether or not the nation can enforce a foreign subject's treaty rights against the laws of a State. The State of California, indeed, may still complicate matters, notwithstanding its early yielding to President ROOSEVELT's request, by passing new laws, and the question is still open: "Why did the administration admit that the Japanese had these rights?"

Useful Exercise of Kingly Influence

In his book on the English Constitution, Mr. BAGEHOT shows very clearly that the great usefulness of a king comes from his influence over the political powers. He is speaking, of course, of a king of England. In the matter of foreign relations, for example, the king's intimate knowledge of what is going on through his relation with the crowned heads of Europe is of immense value to the Foreign Office. Mr. ROOSEVELT exercised such influence as King ELEANOR exercises when he prevailed upon the State of California to refrain from any further anti-Japanese legislation; an important difference is that EDWARD's influence is not exercised through the medium of the Associated Press, and, therefore, *per se*, cannot excite opposition. It is fair to add that for any neither has Mr. ROOSEVELT's.

The Amended Subsidy Bill

It ought to be pointed out, now that Congress has adjourned and the question is out of the way for the moment, that the defeated subsidy bill of the session was favored by a good many anti-subsidy men, and that it was not liked by the subsidy advocates. The reason for this support was that when the bill came out of committee and reached the House of Representatives, it had become merely a bill for the establishment of a few mail-routes between this country and South America. These mail-routes would give to us a nine day's mail-route to certain of the South-American ports with which we now communicate through Europe, by routes which are several weeks in length. The subsidy men did not like the bill because, they said, it was not in the least such a measure as they wanted; it would not benefit freight-carriers or ship-builders; and it would prevent future legislation such as they desired. Granting that the anti-subsidy men who favored the bill were right, the episode shows how the long agitation for subsidy has tainted a measure which has merely the appearance of granting money gifts to shipping and ship-building. Mr. McCALL was one of the friends of the bill because it did not grant subsidy; but the name, and not the substance, killed the measure.

Insubordinate Police Inspectors

The performances of the New York police inspectors at Albany this winter ought to be a warning. It is charged that the chief subordinates of the police force have sought, by the expenditure of a large corruption fund, to prevent the passage of bills desired by their superior officer, the head of the force. The purpose of the bills was to make the inspectors and all the men of the force really subordinate to the commissioner. The opposition to the bills, even if unattended by corruption, would alone be evidence of their necessity. Subordination is as essential in a police force as in a military force. Without it a corrupt body of men may safely laugh at the efforts of a good commissioner who wants to bring about reform. If the district attorney's office is correctly

informed, there is a regular partnership between New York policemen and thieves which renders thieving a safe business, profitable to both parties. It is hard on a community like New York that men who are paid to defend citizens and their property should be interested in robbing them. If this be true of the New York police, it is probably true of the police of other cities, and such abominable and criminal conditions, if they exist, must be promoted by a system which Mr. HANCOCK has sought to destroy, and which the inspectors and other policemen have done their utmost to perpetuate.

Reasonableness of the new Duma

It is now clear, as the WEEKLY surmised, that the new Duma has all along been willing to accept any reform which will mean the beginning of a progress towards the establishment of a constitutional government, even though it involve the adoption at first of the German system, which does not provide for ministerial responsibility, but for communication with the imperial government through the chancellery. The Russians, liberals of all shades of opinion, desire an ultimate responsible government, and when a people untried in the art of government express a willingness to move slowly to their end, they show that there is much more to be expected from them than the dismal cries of the Russian people used to predict not long ago.

Jamestown Militarism

It is not disputed, that we know of, that the present-day world is annually wasting an enormous sum of money on warships and standing armies. Everybody—except possibly Captain HANCOCK—believes that the money thus spent could be put to much better use, and might to great advantage be left in the pockets of the world's taxpayers. It would be left there if this was the millennium, but while the millennium continues to hang back and other nations continue to feed away vast sums annually in the maintenance of armaments which they cannot afford, it is the judgment of a large majority of our people that the United States must stay in the game and keep up such a navy as its international relations and obligations require. To preach disarmament is a useful service if the preaching is effective, but disarmament must come by agreement of all the nations concerned. No great power can safely undertake it on its own hook. It seems to us that the bishops, preachers, legislators, editors, and others who are making what hubbub they can about the coming military and naval show at Jamestown show a curious inability or disinclination to face the real facts of the case. They talk about "the Jamestown militarism" as a glorification of war, and consider the display as something insidiously contrived to turn the heads of the American people and make them want more soldiers and more warships. The truth is, we believe, that the Jamestown naval review was contrived chiefly in the interests of economy. It was the cheapest conceivable thing the government could do to help the exposition. Hampton Roads is an ideal place for a show of warships. A good many ships will be there; a good many people will see them and will know more about navies than they did before. The gathering of ships and soldiers will provide entertainment, but it will also diffuse knowledge. The taxpayers who see the ships will see what they are paying for, and will surely be by so much the better qualified to judge whether they want to spend money for warships or not. If our friends who oppose spending money for warships think they help their case by keeping the taxpayers as ignorant as possible of what a warship is, one can understand their opposition to the Jamestown naval review; but if the diffusion of knowledge helps their case, then the review will work for them and their side.

The Opposition to Intercollegiate Athletics

There is one reason which leads to opposition to intercollegiate athletics that is not thoroughly understood by laymen, but which must always be in the mind of so sincere and thoughtful an educator as President ELWELL. It is too much the habit of earnest friends of these athletic contests to deal with all critics of them as if they were enemies of athletics, and perhaps it is the truth that those who favor physical temperance are driven further towards extremes than they wish to go. But the truth is that whatever opposition there is in reality directed against a strong disposition on the part of

undergraduates so to magnify athletic contests between colleges as to make them the dominant interest of our institutions of learning. Not only are the studies of the courses put in the background, but those who devote themselves to them become objects of commiseration and even of a certain kind of contempt. To the minds of many students, perhaps of the majority in some institutions, the real men, the heroes, are those whose achievements are physical, and those who possess the real college spirit are those who spend four years on the bleachers cheering the heroes. The men whose achievements are merely intellectual, and their work, are negligible. It is against this dominance of athletics, with its commercial accompaniments, that opposition is felt, and it is only because the athletes and their friends have created and maintained this false perspective that the hostility seems to be directed against all intercollegiate athletics. The remedy resides with the students. When their sport ceases to be business and becomes sport, and especially when contests between colleges are subordinated to athletics within the college, no one will make a pretension such as Mr. ELIOT has made in his annual report; for there is no friend of youth, such as a teacher must be to be successful, who is opposed to true sport—sport for all, and not for a selected few.

Mr. Cleveland's Birthday

The flags were up on the City Hall staffs in New York on March 18 in honor of GROVER CLEVELAND's seventieth birthday. Many other flags were shaken out hereabouts in honor of the same distinguished son of New York. Mr. CLEVELAND paid no attention to the day thus marked by his admirers, but being in Florida, he stayed there and went fishing. He shows a notable willingness to let other, and disinterested, persons do whatever may be necessary to keep his memory green. But very little is necessary to be done. Mr. CLEVELAND's reputation is taking wonderfully good care of itself. His remarkable qualities and memorable public services were never so heartily appreciated as now.

Head-line Improperities

One aspect of the TITUS trial, as it is reported, is a subject for proper comment and for serious consideration. For several weeks the trial has been in progress. It has been, or it ought to have been, a solemn judicial inquiry for the purpose of doing justice, in order to vindicate the laws of the State if they have been violated, to do justice, in a word, between the accusers—the people of the State of New York—and one charged with crime against them. Theoretically the proceeding has had for its purpose the ascertainment, as far as the human mind may be able, of the truth. As the case has been reported, however, it has been mainly a contest between two lawyers, a trial of wits that has been talked of as men talk of a battle between pugilists. "JEROME scores," "DELMAS draws blood," "The District Attorney gives a Staggering Blow to the Counsel for the Defence," have been some of the published impressions which, used by the newspapers, have given to a judicial hearing in which a man's life has been involved the appearance of a prize-fight. This kind of reporting of what should be so high and dignified is not conducive to civilization or supportive of it.

A Club for Women

A woman's club has been opened in New York in a beautiful house that has been built for it, and with a carefully selected membership. There is a good deal of discussion whether it will succeed. Most of the successful clubs in New York are maintained largely by the contributions of men who very seldom use them. It is argued that women are more thrifty than men, and will not loathe go on paying for the maintenance of anything that they do not use; that they will not use their club much; and that presently they will let it fail. But how much will they use it? The men's clubs are most valuable to the unmarried men and to men who stay in town in summer and work while their families go out of town. These men are the chief patrons of the club restaurants. A woman's club would hardly get patronage comparable to what these unattached men furnish to the men's clubs. Women are not at all likely to crowd a club dining-room in the evening at any time in the year. They would be much more likely to lunch in their club sometimes, and the membership of such an organization as this new Colony Club must include many ladies who live within easy

reach of town in summer, and who will find a club a convenient place to go to at midday when they come into town in summer when their town houses are closed. That sort of patronage is the mainstay of a very successful ladies' club in Philadelphia which has long since passed the experimental stage and has come to be a substantial institution. We do not think the new Colony Club will fail. There is plenty of money back of it and uses enough for it to warrant its maintenance. But it will have to be kept up, like most of the other clubs, chiefly by the dues of persons who very seldom use it.

An Amended Thrill

Ex-Senator SPOONER says that he resigned without the promise of a single client, but we doubt if he will feel the same thrill that the young lawyer feels when he hears the step of his first client on the stairs.—*Chicago News.*

Not quite the same. The thrill is now produced in these parts by the stopping of the elevator. Do stairs still survive in Chicago!

Mr. Sinclair is Burned Out

Mr. URBIN SINCLAIR's experiment in community life got a grand advertisement on the morning of March 16 by the burning up of Hollicon Hall, the edifice at Englewood, New Jersey, which had sheltered his hopes of bettering the plan of life. The material loss was considerable, and it remains to be seen how far it was offset by the value of the advertisement and of the sympathy excited by misfortune. Five of the colonists were injured in getting out and a workman lost his life, but the rest escaped with no worse harm than loss of their effects. Mr. SINCLAIR saved a valuable practical experience in the regulation of cooperative human life, and possibly he will have another try at cooperative living. The desire to live happily for less than the prevailing rates is exceedingly earnest in these parts at this time, and a plan that made its practitioners even a little happier than they were before might win ample patronage even though it fell considerably short of perfection.

Forests, Watersheds, and Floods

Chief-Forester GIFFORD PINCHOT declares that the great flood which has devastated the upper Ohio Valley is due fundamentally to the cutting away of the forests on the watersheds of the Allegheny and Monongahela rivers. Commenting upon Mr. PINCHOT's statement the *Sax* says that he is fundamentally right, but that Congress will not be ready to transact business again until next January, and then the lesson will have been forgotten. Yes, by most of us; but will Pittsburgh have forgotten it? She has had the worst flood in her record, has barely got her head above water, and, as we write, is threatened with a fresh submersion. Surely Pittsburgh's memory of her losses will still be lively enough ten months hence to make her stir up Congress to do what can be done for her future protection. Maybe the flood-taught people will back up Mr. PINCHOT.

Thomas Bailey Aldrich

The returning spring will miss Mr. THOMAS BAILEY ALDRICH, whose office it has been, like that of spring itself, to add new charms to creation and new pleasures to human life. It was only the other day that he reached his seventieth birthday, and seemed as young as all good men ought to be at that age. His life, while not in actual years prolonged beyond the ordinary term, embraced an unusually protracted enjoyment of literary celebrity. The volume of verse which he published at nineteen made him a poet of national reputation at twenty, and the distinction won at that early age he maintained unimpaired during half a century of literary work. That is a remarkable record, and implies not only a very notable and genuine talent, but a scrupulous literary conscience, and persistent adherence to high and exacting standards. His place in American literature is secure. Certain of his books continue to add to the happiness of each generation of young readers as it comes along, and certain of his verses are sure to be included in the anthologies to come. Writers of his quality were never common nor ever will be, and are rare, if anything, in our American world of letters to-day than they were when Mr. ALDRICH began to write. A charming poet, an admirable story-teller, one of the best of editors, and one of the best and most delightful of men; it is a treasure to part with so old and so little a friend.

Railways and State Legislation

Most people seem to have forgotten that Mr. CLEVELAND during his second term said in an annual message that, because of the absence of adequate powers delegated to Congress, the Federal government could not deal efficiently with monopoly within the borders of a State. He went on to show that, in order to qualify the Federal government to deal with inter-state monopoly, the powers delegated to it by the Constitution must be enlarged, either by a new constitutional amendment or by decisions of the United States Supreme Court which should stretch the definition of "regulate" and of "commerce among the States," where these words are used in the Federal organic law. Mr. CLEVELAND was alive to the difficulty of getting a constitutional amendment passed, and he by no means advocated the surreptitious stretching of the Constitution by the highest Federal tribunal. What he did recommend was recourse to a lawful and practicable expedient. He urged that the States, in their separate capacities, should voluntarily congregate with Congress in the suppression of corporation monopolies. Little or no heed was paid to his advice at the time, or during the eight or ten years that followed. Since, however, the Federal government, by the railway rate act, asserted a determination to regulate interstate railways, and since Secretary Root declared at the Pennsylvania dinner in New York that if the States neglected to use their powers of regulating corporation monopolies within their borders, the Federal government, in one way or another, would have to assume them, the States have begun to better themselves with a vengeance. A review of the extraordinary amount of interference with rail-ways accomplished or threatened by States during the last twelve months, and especially during the last three months, fully accounts for a change in the attitude of railway managers, who are beginning to evince a decided preference for Federal over State control.

Let us glance at the recent record of some twenty or thirty States and Territories, and note the extent to which they have undertaken to prescribe passenger or freight rates, or both, or to interfere in other ways with the management of railway business. We take them in alphabetical order. The Alabama Legislature has cut down passenger fares from three to two and one-half cents per mile, and has fixed railroad freight rates on more than one hundred articles, reducing the charges almost one-half in some instances. It has also provided for reciprocal demurrage in the matter of delay in providing transportation facilities for freight, or in unloading cars. In Illinois, the Lower House of the Legislature has passed a two-cent-per-mile passenger-fare bill applicable to all roads in the State, and the Senate has also advanced a two-cent-fare bill on the calendar. A measure relating to car shortage is also likely to be passed. The Indiana General Assembly has likewise enacted a two-cent-passenger-fare bill, and, as regards freight rates, has given the Indiana Railroad Commission powers almost equal to those conferred by Federal statute on the Interstate Commerce Commission. The Iowa Legislature has passed, and the Governor has signed, a bill requiring railroads carrying annually \$4000 a mile to sell passenger tickets at the rate of two cents a mile, those carrying less, but over \$2000, to sell them at the rate of two and one-half cents, and those earning less than \$2000, to sell them at the rate of three cents. In the Maine Legislature a bill is pending to compel the Bangor and Aroostook Railroad, 482 miles in length, and the Washington County Road, which has 133 miles of track, to adopt a passenger rate of two cents per mile. The Maryland Legislature has enacted a law that any railroad in the State which charges a flat passenger rate of more than two cents a mile shall be required to sell mileage-books for trips of a thousand miles or more at two cents a mile. In the Minnesota Legislature a two-cent passenger-fare bill is pending, and is deemed certain to become a law. Another bill makes more rigorous the existing statute that forbids railway companies to issue new stock without the consent of the State Railroad Commission, which must be informed of the purpose to which the stock is to be applied. In Missouri a two-cent-fare bill and a bill requiring railroads to equip all cars with air-brakes and automatic couplers have been passed, and a maximum freight-rate bill is pending. The Nebraska Legislature has reduced passenger fare from three to two cents a mile, and a bill clothing an elective railway commission with a power to make freight rates will undoubtedly become a law. Nevada has created a railroad commission with which railways must file schedules of freight rates that must not be changed without thirty days' notice. The law forces connecting lines to make joint rates, and prescribes a maximum freight charge of about half the present rate. Another bill which has passed the House fixes the maximum charge for carrying passengers at five cents a mile, which is about half the present rate in Nevada. In the New Jersey Legislature bills are pending for a two-cent passenger fare, and for the creation of a State railroad commission to exercise absolute control over the roads of the State. Another bill provides that freight-rates must be furnished for all shippers when demand for the same is made. In the Territory of New Mexico, the legislative House has passed

a three-cent-per-mile passenger-rate bill, which the Council is expected to ratify. The bill also provides that children under six years shall be carried free. Both Houses have passed an anti-trust law forbidding combinations in restraint of trade, as well as discrimination in freight rates. In New York, aside from the public utilities legislation recommended by Governor HUGHES, a bill providing a passenger fare of two cents per mile on all steam railroads and several freight-damage bills are pending. The North Carolina Legislature has passed a bill making the railway passenger fare two and a quarter cents a mile on all roads more than sixty miles in length, and empowering the Corporation Commission to prescribe the same fare on lesser lines. The North Dakota Legislature has passed bills providing for a two-and-a-half-cent fare, with thousand-mile books at a flat rate of two cents, and providing also for reciprocal demurrage. In Ohio a two-cent-fare measure has been operative for nearly nine months, and for six months a railroad commission has been authorized to regulate freight rates and traffic abuses. The Oregon Legislature in the session just closed enacted a law patterned after that of Wisconsin, providing for reciprocal demurrage in the event of delay in getting cars or in unloading them, and also conferring on a railroad commission power to regulate both passenger and freight rates. In Tennessee a bill providing for a maximum passenger rate of two and a half cents a mile is expected to be passed, and in South Dakota the State Railroad Commission has been authorized to fix just such a rate. Another law in South Dakota prohibits railroads from making campaign contributions, and this law defines the amount of damages to be paid by road agents or shippers for delay in furnishing or unloading cars. In West Virginia a two-cent passenger-rate bill has become a law, with the result that already the passenger service is being cut down by the trunk lines. Finally, we observe that in the Texas Legislature more than eighty anti-railroad measures are pending, among which a two-cent-fare bill and a reciprocal demurrage bill are likely to be enacted.

Now, if we examine the newspaper reports of the debates in the legislatures of the States by which the above-mentioned laws have been passed or advanced, we shall find them swarming with arguments of the anti-railway type based on two assumptions, each of which is, to say the least, disputable. The opponents of the railroads assume, first, that the railroads can afford to carry passengers for much less than the rates usually charged; and, secondly, that the railroads could afford to transport freight at rates much lower than those now levied if they were not over-capitalized, and only needed to earn reasonable dividends on their actual cost. As a matter of fact, men thoroughly conversant with railway statistics know that in the case of most steam railroads the passenger business can be conducted with but a relatively small part of the net earnings, and that in the case of some steam roads it is already transacted at a loss. If the reduction of passenger rates to two cents per mile were to be enforced in all of the States and Territories, it is doubtful whether a single steam road could be named which would not, on the whole, lose money by its passenger traffic. If we turn to the question of over-capitalization, we shall find that the steam railways of the United States are by no means deserving of indiscriminate criticism on this score. What may be true, for example, of the Chicago and Alton Railroad is certainly not true of the New York, New Haven, and Hartford Railroad. If, again, we take American railroads as a whole and compare them with European railways, we must recognize that the former are comparatively free from over-capitalization. Black-glaring misrepresentation of the facts is current. For instance, Governor Hogg Suttin, of Georgia, speaking the other day to the Cincinnati Dealers and Shippers Association, said that, whereas the railroad properties of the United States are capitalized at over thirteen billions of dollars, "careful estimates" of their actual values show them to be worth less than six billion dollars. We do not know where the Governor got his "careful estimates," but these certainly do not agree with the computation made in 1904 by the statisticians of the Interstate Commerce Commission, who then computed the aggregate actual value of American railroads at eleven billions. If he was right then, and we take into account the money since invested and the general rise of values during the three subsequent years, the railroads should now be worth intrinsically about two billions more, or, in other words, almost exactly their present capitalization. It is, indeed, the belief of most engineers who have considered the subject that, in view of the increase in the cost of terminals and rights of way, American railroads could not be reproduced for the sum of the securities outstanding issued them.

Let us look at the matter from still another point of view. Our railways are capitalized at \$57,000 per mile; those of Great Britain at four times as much; and those of Continental Europe at twice as much. The 178,000 miles of railway in Europe are capitalized at twenty billions, while our 216,000 miles are capitalized at about thirteen billions. On the other hand, the gross earnings of the two systems are about the same, ours being \$2,100,000,000 against \$2,200,000,000 a year. In a word, while our gross

earnings are but five per cent. less, our capitalization is less by some forty per cent. than that of European railroads. It would, obviously, be much easier to bring home the significance of these facts and figures to President ROOSEVELT and the Interstate Commerce Commission than to the Governors and legislatures of forty-five separate States. That is why some railway managers are beginning to evince a preference for Federal over State regulation of railways.

Easter

It cannot be by chance that the festival of the resurrection falls together with the springing of the year and the rebirth of the earth. The strange fitness of times and events only strikes us now and then when we stop to reflect; but this side of life, the beautiful, undulating order of the universe, is what gives man his sense of security: it is the root of all the gaiety and the buoyancy with which we tread the appointed paths. What! shall the orbit of the star be snipped out, and the hip-point of the leon's leg be set so that he can make mule through the hot and sunny nights, and the blows that fall upon the yearning soul of man be meaningless and hapless? Only when we are too tired to think do we fail to feel the necessity of the existent order of the universe.

It is not to detract from the value of a symbol, therefore, to realize that it is in its essence of the intrinsic nature of the human heart, the result of that inevitable preoccupation of man, and that in all ages, all climes, he has reacted in some way or other against the seeming conclusion of a possible ending. In the lowest tribes and the farthest days some cure was taken to provide the dead with solace on the long journey, dark and mysterious, upon which they were supposed to go. Who can look unmoved to-day upon this relic of a past age, in a negro cemetery, and see the toys laid about a little child's grave, the photographs and favorite possessions about those of the older human child, without being touched by this groping of the mind into the darkness beyond which it cannot yet see clear. In its own way this is a reaffirming of the unity of all life; it, too, is a realization that it is the same universal life showing a new face. Man himself, myriad-minded, confused by feeling one thing at one time and a wholly new one at another, yet holds ever in some dark chamber of his thought the conviction that all things are one, and that noniformity is but a way of looking, by turns, at the paradoxical figures of the universe. It is as in the child's song of a new poet:

"What does it take to make a rose,
Mother mine?"
"The God that died to make it, knows,
It takes the world's eternal ways,
It takes the moon and all the stars,
It takes the night of Heaven and Hell,
And the everlasting Love as well,
Little child."

No atom of dust, no star-burst nor trailing comet, must fail to the making of the whole perfection which is the thinking body of divinity. All the snows and the storms, the short, cold winter days, go to the making of the sweet and watchful hours of the long twilight. It is just this faint hint and premonition in the air of what is to come which makes spring the season of deepest gladness: it is a foretaste of desolvent wanderings through a warm-breathing earth when the unexpected visitations of the best thoughts fall, such thoughts as can only dawn in come in blessed likeness to the power mind. And who at such a moment, in the presence and renewal of all life, could recklessly hazard a doubt of lasting bliss? How often, in looking upon Greek vases, we see the flowerlike white figure of Persephone falling lay in the arms of the fiery chariot-driver, Adonis. And who can forget—who at any rate, that has ever looked upon the green-verdant pillars sorrow of the wandering Demeter of Calais, in the British Museum, can forget the grief of the desolate mother and the resultant sterility of the earth, the sad news handed on by Hecate, who heard the ravished maiden's cry, and by Hecate, who saw the theft. Then Zeus, taking pity upon the earth, sent Iris with a message to Hades ordering the redressance of Persephone to her mother, that the grief of death might not be devastating and overpowering.

No, it has always been in the mind of man, this strange anguish and despair at the glowing human life which seemed to suffer and then relieve in death, and its reaction, till, from the annual rebirth of the year, he fashioned himself a hope and a consolation, securing himself that even as the seed falls into the earth and darkness, only to come forth in the sun when in more glorified aspect, so the soul of man suffers momentary and partial eclipse to be born more gloriously; but alas! not within the scope of our vision.

The festivals of Demeter were held in the spring and autumn. The 7th of April was the day set apart for the games of Ceres. Demeter corresponds to Helios in Hecate and to Ananias in Zoroastrian mythology. Ananias, too, wanders in sorrow from

place to place. She caused all growth and pervaded the whole material world, even being said to dwell in the hearts of men, and fruitfully there into fair activities and noble pursuits.

How intimate and familiar, how strangely modern and near, seems the last great fact of resurrection, as we turn to it from the more ancient aspects! How *summons* and *living* are the words of the medieval ritual:

Die nobis, Maria, quid cibetis in riu?

And the detailed verification of the antiphonal chant:

Sepulchrum Christi cunctis et gloriam ride resurgit.

To know One risen from the dead, to feel the life once reaching only a handful of folk on a strip of land by the Mediterranean, now filling the world and looking men everywhere, is to know that as surely as the spring follows winter, so surely does life follow death, and how little it matters what the form of that life be, since at least we know that nothing is lost.

Personal and Pertinent

MR. HERBERT THAYER, in the Philadelphia journal of insurgent humanity called the *Commoner*, is having an inordinate amount of fun with Professor BLISS PERRY. Dr. PERRY wrote a life of WALT WHITMAN in which he made statements about WALT's financial responsibility in his earlier years which were very displeasing to Mr. THAYER. Mr. THAYER, who was a disciple and familiar of WALT's, thereupon summoned Dr. PERRY to appear and give his authority for what he had said. But Dr. PERRY has not appeared to Mr. THAYER's satisfaction, and has not been willing to disclose his authorities, so Mr. THAYER, being lacking of other satisfaction, has had to take what he could get out of Dr. PERRY's hide. He has helped himself liberally, and must be experiencing all the joys of repletion. As for WALT, he has arrived, and no early details of his record can affect his standing. As a whole it is a good record. Careless sometimes in some particulars we have always supposed him to have been, and Dr. PERRY says nothing worse of him than that, while he finds a thousand admirable traits, actions, and talents with which to credit him.

There is a lesson to be pondered on about municipal government, a lesson that is furnished by Birmingham, England, and by Mr. SMITH. Mr. SMITH is town clerk of Birmingham. He is not of that sort; he is not "advising" his present post because his fellow townsmen hoped to honor him, or because his fellow townsmen thought of him as a possible distributor of patronage to their profit. Birmingham is his client, and he is running its business as he would manage the affairs of any client. Mr. SMITH was a London solicitor, earning at his profession £2000 a year, and those who possessed authority in Birmingham became enamored of his intelligence, his energy, his ability in the management of corporate affairs, and they asked him if they could hire him for town clerk. He said that they could if they would give him enough, and so they paid him the equivalent of what he had been earning at his profession. He became, then, nominally the town clerk, and really the tyrannus of Birmingham. He was the boss, not the boss of a hall or a party, not the organization, but the boss of the town. He carried on the business of Birmingham, and while the Mayor and Common Council supervised him, they generally did what Mr. SMITH advised. He has brought water to the city from Wales, spending millions of pounds, unthought by the politicians and unopposed by the citizens. One of the Aldermen of the town, who sold Chicago beef in his butcher shop, remarked: "What we want for a government of a borough, such as this, is a 'big-priced' one with a 'iron' and a 'solid' glove."

It was published in the newspapers the other day that HARRY GARFIELD was likely to be elected president of the Massachusetts Institute of Technology. There is not much basis for this, unless it may be said that every man who has been sentenced for the place by persons who have a vote is likely to be chosen. The Massachusetts Institute of Technology is feeling one of the effects of the failure to merge with Harvard. Most men who are big enough to be president of the institution realize that the failure was a misfortune, and that the institute is going to have very hard experiences because of its ensuing competition with the rich new school of engineering which is to be established at Cambridge. As for Mr. GARFIELD, who is perhaps the ablest of the sons of the ex-President, he is pretty sure to be the next president of Williams College. He would have been president now if he had not refused it - not because he would not have liked the office, but because he was under business obligations that prevented him accepting. Mr. GARFIELD has enough education to possess scholarly tastes. He went to Oxford after he was graduated from Williams, and is now, after a useful life as a lawyer and a good citizen, a very busy professor at Princeton. It is expected that he will do a good deal for Williams College, for which he has a great affection. It is the GARFIELD college. The President and his four sons were graduated there.

Correspondence

LOCAL VERSUS FEDERAL GOVERNMENT

NEW YORK, February 21, 1907.

To the Editor of *Harper's Weekly*:

Sir.—I have read Mr. Michael O'Sullivan's letter headed "Local versus Federal Government" in your issue dated February 23, 1907. I have also read your comment on the letter.

Just now in this country the picture presents only one side, that of centralization. This has been the trend of the party in power at the present time in this country, and is in keeping with the principles which have fostered and fed what have become known as "trusts." A trust is no more, no less, than centralization of power. The condition presents a curious phase when one comes to examine it.

This country appears to be gliding along contrary to the current of affairs in every other country in the world. Founded on individual rights and the rights of individual States, the central government was, if one might so style it in corporation parlance, the advisory committee of the individual States, with powers limited by agreement; in other words, the system of government was founded on decentralization of power. The persons who framed this system were born in other countries or were descended from those who had emigrated from foreign countries, and as the scheme itself shows, the founders of the United States government were bitterly opposed to the system then in vogue in Great Britain.

Today we find ourselves drifting towards monarchical principles, putting greater power into the hands of our central government, while monarchical countries are gradually stripping their central governments of many of the attributes which the accident of birth conferred on the rulers.

It is quite true that autocratic power can more quickly deal with affairs than limited power; but the use of autocratic power is only justified by the existence of extraordinary circumstances, and has no place in the general run of business. Besides, it is very costly for autocratic power to become despotic. We would do well to keep our eyes on our neighbors, and see how the increase in individual rights works out, and take care that the word freedom does not lose any of the reputation it acquired by travelling in company with liberty.

I am, sir,

B. SMITH.

RESPONSIBILITY FOR CENTRALIZATION

KNOXVILLE, TENN., January 31, 1907.

To the Editor of *Harper's Weekly*:

Sir.—In the editor's article on "The President and the Constitution" in the issue of the *North American Review* for January 18, there occurs a statement of opinion which I beg to submit, is hardly to be justified. In commenting upon Secretary Root's remarks on a "tendency" toward an extension of Federal powers to include various functions of government at present manifestly discharged by the States, the editor is of the opinion that these remarks give evidence that the Secretary's manners have been corrupted by Presidential communications. He says:

"It was the apparent effect of association and environment upon the main aim of the foremost administrative statesman. In our opinion, now living that seemed to us so startling to demand full exposition and due reprobation. The real question relates to the responsibility for the 'tendency' towards centralization. Upon this point we differ from the Secretary of State. He endeavors to fix it upon the people. We charge it directly upon the President."

It is scarcely just, I think, to lay all the responsibility for this "tendency" upon the President. *Ubi forte citat ante Theodori*. Other persons, much less conspicuous, to be sure, but of sufficient importance to have their proposals discussed by writers on political science, have given utterances to views very much like these prophesies of the Secretary,—even if he did prophesy in the name of Roosevelt and not in his own. In that admirable book, *The State*, by President Woodrow Wilson, of Princeton University, there is a passage (see, 116-117) in which this "tendency" is seen to be antedated, by an appreciable period, the present administration. Having called attention (in sec. 118) to the disadvantages attendant on "the plan of leaving to the States the regulation of all that portion of the law which . . . in effect determines the whole organic action of industry and business . . . disadvantages which make themselves more and more expensively felt as modern trademarks of social and political development" (the italics are mine) "more and more prevail over the old conservative forces," he goes on to discuss proposals of reform. "Various extensions of the sphere of Federal government have been proposed," he says, "by sanguine reformers, who would have all interests which need for their advancement uniform rates of law given over to the care of Congress by constitutional amendment." This book was copyrighted in 1888. It may be that an examination of the writings of Theodore Roosevelt will yield evidence warranting his inclusion in the list of these "sanguine reformers" of that time, but it is obviously out of the question to charge the whole thing "directly upon the President."

Further, President Wilson points out (see, 116) that "with the regulation of interstate commerce Congress has always been charged. It was to give Congress this power, indeed, that the great constitutional convention was called; interstate commerce was one of the chief sources of friction between the States which marked that time of crisis." That is to say, it was for the extension, or rather creation, of Federal control over functions of government, then inadequately discharged by the States, that the convention to which we owe our present system of government was brought together. But the most significant language, in this connection, is that of sec. 118, in which President Wilson—not President Roosevelt, or any one speaking for him—says, "Of course, too,

this is a jurisdiction which must necessarily advance with lengthening strides as the movements of our already vast commerce become yearly even wider still and more rapid." That language may fully be compared for certainty of tone with the language of Secretary Root. Both deliverances are properly predictions rather than "threats." The only language, it seems to me, that can fairly be construed as despotic or arbitrary in its suggestion is that of the famous sentence which speaks of the extension of Federal powers by judicial interpretation, and judicial interpretation has long been recognized by political writers as one of the chief means by which Federal powers have historically been extended. Now, for instance, an article in the *Athletic Monthly* for October, 1905, on "Our Changing Constitution," I quote the closing sentence of that part of the essay which deals with this subject: "The great corporation is the most potent force in our economic life of today. These great artificial beings, the creatures of State law, have entered the control of their creators. It is inevitable that the nation should take hold where State control has broken down. A hundred years ago the only media of interstate communication were cowhide sailing-vessels and the occasional stage-coach that lumbered across State lines. But to-day steam and electricity are welding the States together, commercially and industrially. With the destruction of the States as industrial entities will follow, in the fullness of time, their destruction as political entities. Historically, federalism is like the grave: It takes, but it does not give."

It will be clear from this that the idea of a tendency in centralization, President Roosevelt is not mentioned at all. He can fairly plead *non mea culpa, et temporis*.

I am, sir,

BERNARD SPENCER.

SUFFRAGISTS AND ANTIS

NEW YORK, March 4, 1907.

To the Editor of *Harper's Weekly*:

Sir.—As a suffragist I desire to thank you for the gratifying cartoon which appeared in your February 23 number, "O Save Us, Senators, From Themselves!"

We suffragists have an fear of the antisuffragists, but we do pity them—these laboring women whose desire for the very political activity they pretend to oppose leads them to deny themselves, along with the rest of their sex, and to stand against a reform whose need they do not feel, because they have never come into competition with men, nor have they taken pains to find out what it means to those who do. Many of these antisuffragists pride themselves on their charities for working women, yet they oppose the suffrage which might enable the working women to rise above charity. Their position is pitiful and unphilosophical.

We are always glad to find among men those who, like HARRISON WELSH and Mr. W. A. ROGERS, are at least so far with us as not to be against us.

I am, sir,

KATHARINE ELLENWORTH COOK,

Secretary Equity League of Self-supporting Women.

A CURIOUS COMPLAINT ABOUT SOME INTERESTING PICTURES

PHILADELPHIA, PA., February 26, 1907.

To the Editor of *Harper's Weekly*:

Sir.—I have been waiting since the latter part of January to see in your paper some acknowledgment or apology for the publication of the pictures headed, "When the President Makes a Speech." It seems to me that this is a publication that your good sense should have taught you to avoid. You say, in answer to the enclosed clipping of January 31, that there has not been a grain of personal malice in your criticism of the President. While the President is, of course, a public personage, I do not think you have any more right to publish photographs of him in ridiculous positions than I may have the right to publish those of a private person, and even if you have the right, it strikes me as very bad taste, and I for one want you to know that one of the common people is not with you in such an effort.

I am, sir,

W. B. S.

We are surprised at the impression the pictures have made on our correspondent. To our mind they are not ridiculous, and, of course, were not printed with malicious intent. The President in action is a very interesting object.—EDITOR.

"ANGLO-SAXONS"

St. LOUIS, Mo., February 23, 1907.

To the Editor of *Harper's Weekly*:

Sir.—Will you kindly favor an admirer of your excellent journal with your explanation of the term "Anglo-Saxon" as used when referring to the American people. Does the term embrace only those of English descent, or does the term also include those of German descent? because the original home of the Angles and Saxons was in Germany.

I am, sir,

A. T. J.

It was chiefly in England that the Angles and the Saxons were intermingled and became a composite race, therefore "Anglo-Saxon" commonly suggests England. The term may properly include, however, the descendants of the Angles and Saxons who stayed at home as well as those who migrated to England.—EDITOR.

BULLYING THE WOMAN-WORKER

HOW FEMALE LABOR IN THE SHOPS AND FACTORIES IS OBTAINED BY MEANS OF RUTHLESS OPPRESSION AND VIOLATION OF THE LAW ON THE PART OF UNSCRUPULOUS EMPLOYERS

By RHETTA CHILDE DORR

AT half-past three o'clock on a winter morning, a year ago, two young women hurried through dark streets in the neighborhood of Lincoln Bridge—streets deserted save for night prowlers and an occasional policeman who looked suspiciously after the girls as they passed. At that hour few cars were running, and the young women walked the entire distance across town to the Hoboken ferry. They were just in time to catch the four o'clock boat. Hoboken was reached five minutes after a car had left the ferry, and the selected passengers knew that they must wait an hour and a half for the next one. That is the way the street-car service "serves" in Hoboken. After ten minutes past one the cars run at intervals of an hour and a half. The girls sat down to wait in the ferry-house, but not for long. The man in charge leaned out of his window and gruffly ordered them to move on. "This ain't no place for all-night loafs," he bellowed.

"But we have to wait for the car," cried the girls in dismay. "Can't help that," returned the man. "Ain't nobody allowed to sit in here after midnight."

The women fled from the place and stood outside in the cold all the early morning. They dared not walk the mile that lay between them and home. Across the street a hallway offered shelter, and there they sat and waited in silent terror until a car finally came. It was just dawn when they reached their home.

Am I writing a melodrama? Not at all. I am relating a commonplace incident in the lives of respectable working women in New York city. But women don't work until three o'clock in the morning, you say. The State law prohibits any woman working after nine o'clock at night. So indeed it does. Nevertheless, women do work after nine o'clock at night, not one or two here and there, but thousands and thousands of them in many industries. They work until ten and eleven o'clock in most of the department stores, not only during the Christmas season, when the law is suspended, but all through January, February, and into March. I worked in a department store myself once, and the head of my department told me when he hired me that I should have to look forward to working from eight o'clock in the morning until ten at night, from December 15 until the middle of March. Should I receive overtime pay? No, but the firm would give me my supper. My wages were eight dollars a week, the head of the firm who is a great philanthropist, would not ask a girl to buy her supper out of eight dollars a week. He only forces her to give him four hours' work after supper.

The auditing and accounts departments of the great stores are out of sight, and the Consumers' League and other agencies which have done so much to ameliorate the hard lives of the salaried and cash children, know not much of conditions there. Slugs high up on the "White List" are just as hardened offenders against the labor law, so far as night work of women is concerned, as the shops which are under the list.

In the busy season of millinery and dressmaking nobody knows how many girls are obliged to toil until midnight and after, often until two o'clock in the morning, that fashionable women may have their finery on the moment. Talk about sweatshops! Some of the dressmaking establishments in the Fifth Avenue district are so much worse than the average sweatshop, in their heartless and cynical attitude towards their slaves of the needle, that comparisons are unfair. It is a common thing for girls to be kept at work for eighteen hours, with three-quarters of an hour off for the noon meal and a cup of tea and bread and butter handed around for supper. Few, if any, dressmakers pay their girls for overtime. The girls work far into the night to finish rush orders, and are laid off for a day or two to recover. They are not paid anything for the days when they do not work, of course. How could they expect it?

Down-town in the big factories it is more difficult to keep people working at night. There an inspector did find a group of women in a box-factory after midnight, but it was explained to him that they were not there to work. They were having a tea party. The inspector was quite satisfied with the explanation. However, if the factories must close at nine o'clock, it is not difficult to induce the workers to take home bundles of hats to prepare for trimming, needles to finish garments to sew on until early dawn. It is not difficult, because the workers know they must consent or lose their jobs. The rush season in any trade, especially in the sewing trade, is the workers' harvest time, and if they are not busy then, they face starvation the rest of the year.

Just now it is the rush season in the millinery trade. The millinery trade that I refer to has nothing to do with those beautiful hats that adorn rich belles on Fifth Avenue. This is another kind of millinery, in which models are turned out by the thousands for the medium and low priced trade. Most of the hats are the so-

called "ready to wear" affairs, very simple in design, little trimmed and usually cheap in material. It requires small skill to handle these hats. Most of the women in the trade are known as preparers. They do what little the machines have left them to do in the way of making the hats, lining their brims, and getting them ready for the trimmers. They do everything, in fact, except put on the bow or the quill or the flower which decorates the hat.

Millinery is supposed to be a very "gentle" trade, and the workers imagine that they are on a pretty high social level when they make hats. It would be better to say, "I am a milliner," than to admit, "I work in a hat factory." For this, and one or two other good reasons, the trade is overcrowded, and even in the rush season about fifteen per cent. of the workers fail to find steady employment. It is a condition of things which the manufacturers are not slow to take advantage of. The girls are exploited in every possible way. Wages are low, and are based on a piece-work basis. It is customary to take in many learners each season, rather than to employ girls who already know the trade. The learner, you see, signs a contract to work from two to four weeks for nothing, and the rest of the season for from \$1 to \$1.50 a week. Sometimes the boss finds an excuse for turning off these girls after they have worked for nothing while learning. He can then take on a new set of girls who want to be milliners. As a girl of average intelligence masters her task in about a week, the boss gets a great deal of his work done by learners, and doesn't cost him a dollar. Such a state of affairs in a trade makes it quite easy for the manufacturers, even the best of them, to force the workers to take work home after the shop closes. And they do it. Women are timid, they are weak, they are unorganized; they think they are needed in industry, and they are not. They are not organized. They accept conditions as they find them, and cheerfully waste the frame of their lives for a pittance. This is what the manufacturers mean when they say they employ women because women are more easily handled than men.

Go down to the corner of Grand Street and the Bowery any evening in February or March, watch that amazing procession of women and children pouring out of the factories, hurrying to their homes after a day of toil. Note that many of them carry bundles under their arms. Ask them what they carry.

The factories are not the only places from which girls are forced to take work to be completed before they can seek their beds. A girl friend of mine pointed to a picture of a famous actress in one of her most popular characters. "That gown," said the girl, "was finished in my kitchen at three o'clock in the morning. My sister brought it home from ———," naming a palatial store in whose dress-making department many stage wardrobes are made.

It is the book-binders, rather than the shops and factories, that are the worst offenders in the matter of night work for women. A month or two ago a big firm down-town was actually advertising in the daily papers for girls to work from eight o'clock at night until four in the morning. Until very recently two well-known magazines (one of them a celebrated "novelizer") had a system in their binderies by which two weeks in the month, the girls worked seventy-eight hours a week, the other two weeks being slack. State law is the legal work, one night, and sometimes two, some of the girls worked all night. A representative of the Consumers' League went to one of these magazines and labored with the millionaire owner. He admitted that he broke the law, but he added that in his opinion the law was a nuisance, and that he sometimes thought of having it declared unconstitutional. However, he disliked lawsuits and preferred that some one else should bring the test case. He agreed to change the system in his bindery until the law was made over in suit him.

I knew a girl who is employed in a bindery in the West Thirties. She works at the wiring machine. There is only one wiring machine in the shop, and it happens that in the middle of the week there is a great deal of wiring to be done in order to get a magazine ready for the next process. So this girl works all day Wednesday, all Wednesday night, and until ten o'clock Thursday morning. She sleeps all day Thursday and goes back to work Friday morning. She does this every week.

I know another girl who, until lately, worked every Friday twenty-four hours at a stretch. She spoke of it frankly to me, and asserted that she was not strong enough to continue the long hours. Both of these girls belong to the union, and they receive the usual time and a half allowance for their extra hours of work. They are not forced to work at night, the foreman will tell you. Are they not? Even under union conditions the average skilled woman in the binding trades makes little more than \$2 a week. The men in the binderies average \$13, but they have so hypnotized the women that the men are able to monopolize all the highly skilled parts of the trade, leaving the simpler operations to the

women. No woman is allowed to go higher than the sewing together of the sheets. The girls at the sewing machines make from \$7 to \$8 a week. The work requires intelligence and a fair amount of skill, and if it were a "man's job" it would command twice the wages. However, the women except the half-bred are better than so broad at all. When a chance offers to double her wages by working a night or two in the week, is it any wonder that an energetic girl jumps at it? Most of the binders agreed, when we talked it over, that it wasn't so bad, if they only wouldn't ask you to leave the shop before daylight. That was the worst, the going home in the dark, when the cars and ferries are running at such wide intervals, and such terrible people are hanging around the streets. One girl said that in her shop they let the night shift lie down on the floor and sleep until six o'clock. Her foreman was too kind-hearted to turn a girl out. Another said she used to wait for daylight in an all night restaurant on the corner.

Accidents? Oh yes, accidents do happen sometimes, when a girl gets too tired and sleepy to be careful. Usually they manage to keep their wits about them, but not always. Catherine used to work as a painter, and as she was a very quick worker she made as much as \$12 a week. Big wages for a woman. But Catherine wasn't satisfied with that. She was bright and ambitious, and when the boss offered her \$25 a week to work at the cover machine all night she was delighted. Twenty-five dollars a week is a princely income for a working girl. It opens up possibilities of dazzling luxury to the entire household, for few girls have only themselves to provide for. So Catherine went to work at the cover machine, all night long feeding magazines to a great hungry steel and iron mouth. One night she was unusually weary. Perhaps she had not slept enough during the day. Even working girls like to have a good time, and sometimes they are so foolish as to sacrifice their sleeping hours to pleasure. Of course no one defends such nonsense. A working girl should work. On this particular night the girl at the cover machine was tired and sleepy. The cover didn't run smoothly between the jaws of the monster. Several times they got all wrinkled up and ruined. So, when the very last cover she ever fed it began to wrinkle she forgot caution and retained her hold on it a fraction of a second too long. The great jaws snapped at her hand. She shrieked—and shrieked. They stopped the machine, but not before the jaws had devoured her arm just below the shoulder.

What became of her? Oh, she stayed in the hospital quite a while, and the shop got up an entertainment for her, and made \$1000. She bought a cork shoe, which makes her look all right, and the firm took her back and gave her a job as copyholder at \$7

a week. The other copyholders get \$8 a week, but the boss said she was lucky to get any job at all, with only one arm.

Did the firm do anything for her while she was in the hospital? Well, they bought some tickets for the entertainment. Of course they were not responsible for the accident. The girl was working at night voluntarily, and was getting well paid for it. She knew the machine was dangerous. Anyhow, she couldn't sue the firm, because she was breaking the law just as much as they were.

There are people whose minds are so logical that they cannot see why if women will get into the trades they should expect the trades to adapt themselves to feminine necessities. If a trade needs people to work at night why should not the women as well as the men do the night tasks? I can think of several answers to that. I can think of two or three ways in which the night itself menaces women as it does not menace men. Only the other day the press despatches from Lincoln, Nebraska, told a horrible story about a girl of fifteen being assaulted on her way home from her night-work in a telephone exchange. Every once in a while the working world hears tales of girls running for more than their lives to reach the shelter of their doors. No, not down on the East Side among the foreign population. East Side streets are as safe as any drawing-room. Most of the girls live in Jersey City, Hoboken, Brooklyn, or far up in Harlem, where rents are comparatively cheap. It is hard on the parents of these girls when they don't get home until late.

I was thinking of Jeanne. Jeanne was a young French girl, one of a prosperous Jewish family, where it was never intended that the daughters should work. The father had a little cigar store down on lower Broadway, and all the children were to be school. The Trust noticed the little store one day, and naturally ate it up. They gave the father a job, but the salary was small, and the two eldest girls had to find work. Jeanne got a job in the modeling department of a big store and worked until almost any hour of the night. When she stayed out after ten the father used to go down to the corner where she got out of the car and wait for her. One December night he waited there in a furious storm, waited a long time. Jeanne was very late that night, and all the way up in the car her little heart was depressed with anguish, for she thought of her father standing there in the snow. When she found him he was speechless with cold, and when they got home he lay down on his bed exhausted and ill. He died about ten days later.

There are lots of girls who wouldn't dream of entering the dark door of a saloon in the daytime, but on the way home in the dark hours, when there are few to see and none at all to care, and

THE COMMISSION WHICH IS INVESTIGATING CHARGES OF GRAFT IN THE CONSTRUCTION OF PENNSYLVANIA'S STATE CAPITOL

THE COST OF THIS STRUCTURE WAS OUTGOING TO BE \$1,000,000, BUT THE AMOUNT EXCEEDED \$1,300,000. THE ITEM OF \$300,000 FOR "FURNITURE" ENDED \$2,000,000 FOR ELECTRICIANS, WHICH WERE CONTRACTED FOR "BY THE PHASE." AN ARTICLE DEALING IN DETAIL WITH THE EXPENSIVENESS FOR THE CONSTRUCTION OF THE BUILDING ENTITLED "IN PENNSYLVANIA'S NEW CAPITOL, A PALLIAT MONUMENT OF PRATITY" WAS PUBLISHED IN "HARPER'S WEEKLY" FOR DECEMBER 3, 1904. A REPLY TO THIS ARTICLE, "A BIRK FOR PENNSYLVANIA'S CAPITOL AND ITS BUILDERS," BY ISAAC A. PENNAPPAH, WAS PUBLISHED IN THE ISSUE FOR DECEMBER 29, 1904.

THE SHADOWS OF PARIS

By ROWLAND STRONG

PARIS CORRESPONDENT FOR "HARPER'S WEEKLY"

"AND above all be careful of your planet!" This was, according to M. Félix Bracquemond, a pupil of a pupil of Ingres, the supreme dictum of the great classical French painter. Braving taught Ingres, is merely an indication of the luminous and sombre masses, and of the light, which determine the values of the objects to be represented.

The luminous and sombre masses, the shadows of this great capital, whose history covers so many hundreds of years, are instinct with delicate suggestions, with subtle lessons. Every city has the shadows that it deserves, the shadows that it makes for itself, just as the deeds of men and women color and model their lives. The Old World and the New have each their characteristic shadows—shadow-marks as full of significance if not as tangible as landmarks. In respect of its shadows London differs no less from New York than Bruges from Pilsborg, though the contrast may not be so striking. New shadows, varying in sharpness and intensity, are cast by new events, new people, new buildings; and the old shadows linger even when that which gave them birth has long passed away, enveloping in a ghostly atmosphere the impalpable spirit-world in which we live with our ancestors. Not even the levelling of a house or a street can banish the old shadows altogether, can exorcise them wholly. Their immaterial presence still clings to the sites of razed cities and abandoned temples. They are, as it were, "earth-bound" for generations; and when at last they take their leave, Time has indeed made a complete revolution, and so troubling have been their reposedful or merely reminiscent whisperings, their evocative note becomes so penetrating and acute by its mere attention, as change follows change, that our coarsest natures not infrequently hail their departure with something like a feeling of relief. Shadows are the letter-half of History.

Modern Paris is stately, she poses; a magnificent statue of stone, and, generally speaking, her shadow is soft and blue, of great depth under an appearance of lightness. Her features are classical, her look and bearing imperial, but wars and revolutions, the passions of love and hate, have left deep lines upon her face and furrows upon her brow, which, if examined singly, may appear harshly sceptical, cruelly ironical, bitter, or sad, but they do not destroy the antique nobility or the intellectual serenity of the expression as a whole. The mask of Napoleon with the smile of Voltaire! The beauty of the bust is heightened, not marred, by its "patina."

The old shadows commingle and contrast with the new. The sharply cut, new-shown shadows of tall twentieth-century mansions seem all the harsher and colder when they come in contact with the warm if dingy tones of some such quaint relic of pre-Revolutionary days as that little old patched and red-tiled wine-shop on the Quai de Passy, with its ragged windows of ancient ivy still clinging to its roof, and all around it the stone-faced apartment-houses of the wealthy—a company of modern millionaires gazing in horror at a mummified *sans-colotte*. Then to go

back to almost prehistoric times, to the brick and marble period of the Roman occupation, we have mystical shadows such as fall in deep amber and russet folds from the broken walls which now surround the Cluny Museum, and which at different epochs have enshrouded a Roman bath and a Carolingian abbey. The Middle Ages still contribute their share to the shadows of Paris, notably on the

The Shadow of the Law—the ancient peaked Turrets of the Palais de Justice recalling the Steel Caps of the feudal Guardians

quays, where the cross-hatching of the long fishing-rods bending over the swirling Seine from the embankments and the river-shore give to the black and white of city, Seine, and sky a quality and tone which you may look for in vain outside of a Gaillon etching. And with their medieval dignity unimpaired by inheritance, the successors—themselves centuries—of those ancient trees, whose roots ages ago were bathed by the Seine waters, turn aside from the surging life behind them, indifferent to the human hustle, as if nothing worthy of the notice of a tall and noble poplar had been or ever could be going on. The river breeze with its song and capdery, its eternal caress, is still their one play-fellow—*but not enough!* And their deep greens and sluggish masses of branch and foliage are those of the old French "verMORE" tapestries, spun in lonely and by high-roofed maidens and leather-jerkined youths long before the Gobelins looms, with their silk and gold threads, were set up in rivalry. Also of medieval shadow, though the reconstruction be more recent, are the pointed roofs and sugar-loaf turrets of the Palais de Justice which overlook those same Seine banks, recalling the steel-peaked caps and spiked armor of the feudal *garde de la paix*, grim and iron-handed sentinels over virtue. Here, indeed, is the antique shadow of the law. And hard by at Notre Dame, in deep shadows of serene obscurity, tremulous with divine harmonies and perfumed with immemorial incense, from hundreds of saint-bordered niches, from the intricate tracery of the great rose-windows with their swirling kaleidoscopes of painted glass, from the dated pillars rising in pure jets of stone to dimmer and dimmer heights, from the roof of the vast nave poised like a moth on wings of Gothic lark, from the two slighly towers lifting their shivering arms to heaven, falls the shadow of the church. From nowhere can the shadows of Paris be better observed than from the North Tower of Notre Dame on a sunlit afternoon, with, for preference, big billowing white clouds driving across the blue sky—immidiatly beneath you the myriad convolutions of the old Island City, through whose cobble streets, as through a brain (to quote the subtle poet of "The City of the Soul"),

... "men creep like thoughts";

farther away, the varied ranks of those closest groves, lit up in spring by their sampler cones of bloom, which Napoleon I. planted as a guard to the ancient splendors of the Luxembourg; farther to the left, the "blossoming know" of the Pantheon, the seventeenth-century magnificence of the two round towers of Saint-Stulpis, crowning the classical and reposed lines of the great Louis-Quatorze pile like the curls of a monumental peruke of the period;

The little old Wine-shop on the Quai de Passy—a mummified "Sana-colotte"

then along the white Seine with its score of sparkling bridges like so many rings on the white fingers of a queen, to the blue and black and gray of succeeding divisions of the city, blue as the eye reaches the more distant and modern quarters, to the Paris as yet unlit that lies bare and formless—*terrena cupra*—outside the fortifications, and beyond to the misty purple horizon and the washed eminence of Bellevue, Montreuil, Saint-Ouen, and Versailles. From laughing youth to extreme old age, in all its moods grave and gay, the life-story of the great city lies before you; and at your side, the "Penseur," that sphinx-bearded gargoyle of Notre Dame, which for ten centuries has gazed out upon the slowly changing scene, and watched its multitudinous and multicolored shadows with the same prophetic mystery in its eyes and grim humor on its lips, thinks your thoughts and dreams your dreams, for in the direct line of its vision rises up the Eiffel Tower, menacing symbol of a world yet to be born, monstrous finger-post of progress.

Not less suggestive than the shadows of the Paris that dreams are the shadows of the Paris that thinks and works, and of the Paris that plays.

In the Luxembourg quarter, where the aristocracy of intellect expands the edifying influence of its grave presence, the shadows have a quality of their own, born of their environment, and determining it. Take any of its old streets, say the rue Cassette. Owing to the solemn companionship of Saint-Sulpice, a stone's throw away, and the aristocratic survival in its midst of the Hôtel d'Alençon, now the Catholic Institute, but until recently the town mansion of one of those great French families that have preserved intact their religious and social traditions, the rue Cassette wears an outward air of pious contemplation, a mask of spiritual decorum, the estate ferry, as it were, of a domestic life of the upper clergy. Mainly composed of old-fashioned printing houses, including that of the Archbishop of Paris, no family hideaway is very bound in more mournful black or raven. Across the strait-laced facades of its white-leaved walls the shadows fall narrow like black stoles. Two moribund monarchist and clerical organs issue daily from its presses. Look at these high-pointed cobblestones which constitute its "pavé," its "metal"—resembling too like metal to the horse's hoofs and the wheels of passing vehicles. Note the delicate dark-gray shadows which surround them at their base, growing less as the road gradually sinks to the curbstones on either side. By their constant ripple they suggest a babbling brook. The brightening of the dark-gray shadows of these old-fashioned cobbles teaches you the meaning of that idiomatic expression "*le haut du pavé*." That part of the old Paris thoroughfare, before the introduction of "trédars," or paved sidewalks, which was farthest away from the gutter, and, therefore, at the highest level, was the "*haut du pavé*," a favored position, to hold which was the privilege of wealth and rank. In those days the gutters ran through the middle of the street, and the "*haut du pavé*" was nearest to the wall, where the sidewalks now are. A few old thoroughfares paved in this way are still to be seen in Paris, notably the rue Bertin in the sixteenth arrondissement, and the *cour du Dragon* at the corner of the rue de Rennes. And though it is no longer permitted to the insolent lackeys of great nobles to push more citizens into the gutters of these narrow streets, a certain aristocratic air still pertains to them by reason of these humble stones which yielded every prerogative to the "carriage-folk" and nothing to the pedestrian. In the rue Cassette the "*haut du pavé*" is now in the middle, two little strips of sidewalk having been added on either side, but the cobbles are of the ancient shape which for three centuries has not been modified, and their shadows are the same. Shaded in summer by trees, the tops only of which are visible above high walls that once surrounded extensive gardens, streets

The Clerical Street, Rue Cassette, "sedate, erudite, and contemplative," where the Shadows fall Narrow like Black Stoles

of the type of the rue Cassette, equally sedate, erudite, and contemplative, are common enough on the left bank, in the neighborhood of Saint-Sulpice, and in the university quarter. At most times of the day, a subdued and harmonious illumination fills them, spending over their surface a kind of rich atmospheric varnish, such as was used by the old masters, banishing all crudities of light and shade: the very asphaltes seem to reach these solemn alleys through a patina or veil, which exists perhaps only in our imaginations, but is suggested by the elderly spirit of the place, its almost alienated echoes. In any case, the impression is there, and if so many of the dealers in old furniture and large-bear have opened shop in the rue de Rennes, which is a kind of highway through this old-world quarter, but yet so far from the track beaten by most American tourists, it must be that here are constant atmospheric qualities peculiarly precious to them, and that the background, or rather the circumstance of gray-green wall, with the aërial lengths of chestnut-trees floating above, and the rich stippling of the cobbled roads, is just what is needed to show off their faded treasures to the fullest advantage. Certainly the exorbitant prices which they charge would simply justify this supposition.

Here, also, the shadows of the human face tend to accentuate particular lines and develop typical expressions. In both look and dress the Parisians who belong, as a native, to these regions, would present an unusual, if not eccentric, appearance in any other part of the world. He is both graver and grayer than the inhabitant of the right bank of the Seine. It is here that the pier-head, the "stereotype" hat with the flat and somewhat downward-sloping brim, forms part of the local dress, and the "trémoulin" or blunderbuss of half a century ago, that wholly revolutionary infant of the Imperial heaver, is still to be seen, though its proportions, becoming with succeeding generations, only just earlier to indicate a true but diminutive descendant of the giants. Fashion moves slowly in this neighborhood, where shoddy work and imitations comfort, proud characteristics of a highly cultivated bourgeoisie, are the order of the day. The frock coat is constantly worn, and is long and ample in the skirts; trousers disdain the pressed median line; the brown boot is rare; patent-leather and the pointed toe are rarer still; the elegancies are subdued, though real. The swallowtail coat, together with an elaborately patterned white shirt-front, is still de rigueur at marriages, at funerals, and on all occasions of official ceremony; and these old-fashioned plantings seem to be imitated or repeated in the thousands of white-slatted shutters enfaming the windows of all but the most modern houses, and giving to them a fresh and dignified air of being always in clean linen. There is a provincialism too in this well-haunted look which has its charm. There are streets in this working and thinking quarter of Paris which have all the appearance of respectable public notaries, such for instance the rue de Fleurus, with the Luxembourg gardens as its vernal background. The older and smaller and darker streets take us back to earlier epochs of fashion before Brunel had invented the clean collar, to the days of laced ruffles of such delicate casimir that they slumped a too frequent staring and remained beautiful but yellow; and there are quite poor streets where Paris and students live, whose dilapidated shutters are nearly black.

That the left bank of the Seine monopolizes all that is treasurable in the ancient harmonies of line and shadow that enfold the heart and history of Paris is a popular error, but that the right bank is, on the whole, kinder to the eye is constantly denied, though with eternity before us the past is in a sense apocryphal. As Bürger says, "Hilf ist Hülfe!" But that the right bank is entirely distinguished from the left by the diversity of its shadows is perfectly true. In the note of the comparatively new houses of which the opera is the centre, the shadows, owing to the prevalence of fresh stucco, are harder and bluer, the wide streets, the broader

The Shadow of the Church—Notre Dame's famous Gargoyle, the "Penseur," gazing toward the Eiffel Tower

The Government Buildings, with their hard, cold Shadow of ministerial and diplomatic justice

pavements, leave a free inlet to air and sun, the planes are lower, and the backgrounds have a relative absence of chiaroscuro. Where a bright and burning sun can play with unbroken rays upon such massive walls as those of the Madeleine and the Bourse, with their colonnades in pure Greek style, we have shadows so violent cut and of such a rich deep blue as to transport us in imagination to those rugged and stony landscapes of the Midi and the Mediterranean, where, to quote a recent outburst of M. Jules Janais, the sun shines with such force upon the bare rocks that the birds as they wing past "se débâillent"—"double themselves"—as in a mirror. There are no such luminous effects as these on the left bank, where the bluest shadows are in the unlovely and artisan quarters, but are as hard, dreary, and cold as the lives of the toiling folk who dwell there. The Chamber of Deputies, and the official buildings that are in line with it, the palace of the President of the Chamber, and the Ministry of Foreign Affairs, forming an architectural sequence to the Bridge and the Place de la Concorde, the Madeleine, and the rue Royale, although actually on the left bank, belong by the nature of their shadows and planes, to the right bank. They speak its language and obey its customs. The zone of the right bank extends as far as the Faubourg St. Germain to the south, and to the Pont des Arts on the west. Its line of demarcation literally cuts in two the Chamber of Deputies, of which the facade opposite the Seine is a Parliamentary inscription upon the more ancient town residence of the Marquise de Bourbon, the real front of which looks towards the Faubourg St. Germain, and is of the left bank proper. Such overlapping is inevitable in a city where centralising tendencies are constantly on the increase, whose administrative mass is ever opening wider, but in all other respects the left bank remains intact, without any influence from the right in seriously affecting its insular spirit, and the right continues its development towards the west and north, multiplying

streets of classic line, white with their tree-bark, are sleek green and white in summer, or white and gray-black in winter, until a prolonged stroll brings us to the nineteenth century upheaval, the real if somewhat inept beauty of that vast avenue leading to the Bois de Boulogne, with its plethora of floral bed, and decorated stone, and lime slate, recalling the rigid domestic propriety, the flowered crinolines and staid silk of the mid-Victorian era, and which was once named, and in point of shadow and scenery still is, the Avenue of the Empress. We have passed through the ministerial and ambassadorial suburbs, rest and pateted with gilt like a diplomatic uniform; we have left behind us that other section of Paris that thinks and works.

To the west, but farther to the north, lies a vital and swelling quarter, of all periods and of none, whose streets are populous and tranquil, or so solitary and silent as to appear to be heaving up a crime, but they have this in common that their shadows are, as it were, deaf and dumb, without receptivity or power of expression, being indeed merely shadows of shadows—shadows of scenes which are dormant during the day, and whose echoes are for the moment mute. This is the so-called European quarter, and it is here that Paris plays its quarter that gets up very late in the morning, in a state of somnolent gracefulness, pallid, and not overtly, the depiction of "mal aux cheveux" or "katz-en-jammer" visible upon its tired face, in its awful desolitude. Those eyes of a street which are its windows remain in the European quarter, or at least with respect to most of its dwelling townships, sleepily closed all day, and in some cases for the whole of the day, only opening at supper

The Shadows that play along the Balconies of the Rue de Clichy at Dawn

Rustic Shadows in a Montrouge Courtyard in the Heart of Paris

time, when the rattle of cabs and carriages and automobiles on the cobble pavements below announce that the nocturnal Pandemonium of Montmartre and Clichy and Rochefort, of the Place Blanche, the Place Pigalle, and the rue Notre Dame de la Lorette is once more in full swing. Then the Paris that plays heuristics and lemmetries itself in vast masses of shadow, the depth and correlative powers of which are intrusted and aided to by the brilliance of the illumination which streams from cafes and restaurants and the bacules of music-halls and dancing-salons, from a thousand and one dens of delirium and doubtful delight. Draped in these fantastic shadows the circular Place Clichy and Place Pigalle, with their flaring all-night houses, the Abbaye de Thelene, the Bat Vert, or Dead Rat, the Nouvelle Athene, or New Athens (with the mark), resemble huge merry-go-rounds, loaded by madmen and madwomen, the whole European quarter turns itself into a roaring Vanity Fair, and when at last the frantic scene is over, its black masses of shadow, of which the blazing sails of the Red Mill are perhaps the most notable luminous flyer, gradually fade into relative nothingness, inapt to hide the red-headed "Apple" of thyme from the belated traveller, his unsuspecting prey, having lost all character or reason after as shadows of Paris that plays, as shadows of evil, or shadows of death, fleeing the daylight, what time a pale sunbeam creeps along the balconies of the rue de Clichy like some shambling yellow cat climbing furtively home at dawn after a night's drench upon the tiles.

AMATEUR "WHITE-WINGS" DAY IN SAN FRANCISCO

HANDS ACROSS THE COUNTER

HOW THE THRIFTY ENGLISH IN JAPAN ARE UTILIZING THE SAN FRANCISCO AFFAIR TO PROMOTE TRADE WITH THEIR ORIENTAL ALLY

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

Yokohama, February 26, 1905.

WITH the venture San Francisco school question settled, or at least held to sleep for a while, the American observer cannot shut his eyes to the fact that England is trying hard to elbow us out of Japanese trade; also that our government must sooner or later come to grips with Japan on the question of exotic immigration. The labor problem really underlies the school incident, for it was the eagerness of the San Francisco laborers to throw a sop to the feverishly anti-Japanese labor organizations that precipitated the awkward mess over the exclusion of Japanese from the schools.

The present indications are that Uncle Sam will have to pay pretty high for the Californians' fun. He may or he may not compel Californians to admit Japanese children to the white schools. That matter lies in the hands of the Supreme Court of the United States. But for the sport of jap-baiting, the favorite amusement of less than one per cent. of his citizens, Uncle Sam has already begun to suffer. Only a few days ago a cheerful English editor remarked in a column of his Yokohama newspaper, not without certain appearance of joy, that "since the action of the United States in the California incident the Japanese government has taken a firmer attitude vis-à-vis Russian aggressiveness in Manchuria."

That utterance looks innocent enough at first sight; but let us take a second look. Ever since the Peace of Portsmouth, Russia has been obstructing the Japanese in Manchuria, and there have been many complaints that Russia was trying to lank Japan of the fruits of her victory as she did after her triumph in the Chinese war. For many months there have been almost daily conflicts in Manchuria between Japanese enterprise and Russian inertia. It was not until a fortnight ago that Russia suddenly announced the immediate withdrawal of her troops, and at the same time began to move them out of the territory. Now who knows the Far East better than the Russians? They are impressed by the profound respect paid by the American government to Japan's sharp protest against the exclusion of her school children. And it is noteworthy, too, that Russian interference with and sagging at Japan have suddenly ceased. It may or may not be true that the Japanese have used America's defense as a whip to snap out the head of Russia; but when the English editor of a pro-Japanese journal chuckles in public over Japan's "firmer attitude vis-à-vis Russian aggressiveness" the coincidence is striking. If Japan should reap no other substantial benefit from the San Francisco incident than this sudden ending of Russian from Manchuria, she would still be a great gainer. As to how cheap Americans must feel at this being used as a handy Japanese implement, it is not the province of this writer to say.

Agencies to the chuckling of the English editor it may be well to draw attention to a significant matter—the tone of the English press in Japan during the whole California campaign. Americans have had the pleasure of reading day after day such charming trifles as this:

"London—Later.

"Notwithstanding the rabid intemperance of certain American politicians and the wild imaginations of the American sensational press, there is no longer any doubt that the firmness and wisdom of Japanese diplomacy will arrive at a satisfactory settlement of the troublesome school affair."

Now reading, is it not? If the Japanese were not allowed they might, after absorbing enough of this stuff, believe that they have "cornered" all the wisdom of the world and so can spare enough to manage the affairs of the rabid and sensational Americans. It is hardly necessary to point out that the native Japanese are not moved by such flattery. And the funny thing is that the editors who publish it are just as full as ever of "hands across the sea." "Blood is thicker than water," "our dear country we are the pond," and all the other pretty sentiments with which we are so often regaled.

But the fact is that Great Britain and America are rivals for the trade of Japan and the Far East, and that these chuckling editors, with an eye toward using every honest effort to eliminate the Japanese from us—purely as a matter of business—never fail to make the most of each opportunity. They love as much as ever, but they need more Japanese business. An American friend lately asked me this question:

"Of course, it is right their love to disavow, but why do they kick as down-stairs?"

Still, one is apt to feel less resentful upon considering the powerful incentive there is for this sort of conduct. Philosopher agree that the warfare of the future will be the struggle for the survival of the fittest, carried out in the form of commercial combat. And competent students of present-day history who have scrutinized events in Japan for years assure me that the desire to get more trade was Great Britain's principal motive in forming her recent offen-

sive and defensive alliance with Japan. Thus for the British traders have obtained the lion's share of commerce with Japan.

But to return to the subject of exotic immigration. There is not enough room in already overcrowded Japan for her 50,000,000 of people, who are increasing at the rate of 100,000 a year. Many men still living have witnessed the transformation of the Japanese from a simple feudal people, whose occupation was fishing, farming and fighting, to a modern first-class world-power who must subsist by manufacture and commerce rather than by agriculture. Only one-twelfth of the soil of Japan is available for cultivation, so that a large and constantly increasing proportion of the nation's food must be brought in from abroad. To earn this food the people of Japan must find work somewhere, anywhere—at home or in the most profitable market the world affords.

It is fascinating to study the swift transformation of Japan from feudalism to the most advanced phase of modern high-pressure living, to observe these hardy, industrious, persistent people, guided and governed by a ruler of the highest intelligence, trying to achieve in one generation the growth which in the case of the most advanced European nations required ten generations. The Japanese have made many blunders, but they have always been corrected, and they are learning with great rapidity.

But with the nation's advance in manufacture and commerce there has come a corresponding increase in the cost at living. It costs nearly twice as much to live in Japan to-day as it did one generation ago. So the Japanese people and government are being constantly pressed by the problem of how to find work for the hands and food for the mouths so rapidly increasing in their land. So long as they still live, they nevertheless find the struggle for life growing harder each day. Manufacture and commerce have not increased fast enough to keep pace with the growing needs of the people.

Therefore they must look abroad for the means of living. But where? Manchuria, Korea, Formosa? I have heard so many opinions as to the possibility of the Japanese doing well in these territories that it would be confusing to set them down here. The gist of the matter is that, on the whole, they probably will thrive in these new fields, while it is certain that in the future north of Manchuria as well as in the tropical island of Formosa the Japanese laborer quickly deteriorates. He is the product of ages of living in a climate like that of England. He cannot endure the extremes of heat and cold; and if he can find in our country a climate like that of home he will go to that country and thrive.

The Pacific coast of the United States fulfills that condition. Moreover, the standard of wages is higher in America than anywhere else in the world. This golden land is no haven of rest for the Japanese laborer, but a well-established business. The Japanese laborer can live in comfort on the Pacific slope, work no harder than he does at home, earn more than twice as much pay, eat better food, enjoy more luxury, and save a great deal of money. That is why the Japanese have been rushing to America in such mighty throngs since the close of the war with Russia.

Prohibited by imperial edict from going directly into the United States, the Japanese cheap laborer has found a simple means of eluding the letter of the law. He uses the Hawaiian Islands as a stepping-stone, as a take-off for his leap into the rich, hazy fields of America. Incidentally the Hawaiian Territorial government collects \$5 poll-tax from every immigrant. There is an prohibition upon the emigration of Japanese laborers to Hawaii. They have only to show good health and the ability to support themselves. Having once established themselves in Hawaii, the newest Territory of the United States, the laborer finds it an easy matter to take the next ship to the United States. So there is now going on a brisk trade in exotic-carrying across the Pacific. Nearly every ship that leaves Yokohama for Honolulu carries from one hundred to three hundred Japanese coolies. These men remain in Honolulu for a few weeks, then sail for San Francisco. The progress of this roundabout immigration is as well ordered as the advance of a billiard ball that escapes of another and rolls to its destination. The pressure of these coolies is one of the most serious problems on the Pacific coast to-day.

How is the cheap exotic to be kept out? That he must be kept out is the opinion of Americans in Japan—not on account of any feared inferiority in an ethnological way, but purely for economic reasons. A political economist who has given much thought to the subject presents it in a temperate way that carries conviction.

Americans cannot stand the influx of cheap labor," he said the other day. "It does not matter whether the coolies come from Japan, or China, or England, or any other part of the world. The American laboring man, whose standard wage is more than twice as great as the Japanese standard, cannot and will not tolerate the

THE WILD DOGS OF SAN MIGUELITO

BY NEILL SHERIDAN

DRAWINGS BY GEORGE GIBBS

PEJOL was a shepherd of the Hucayan breed, and as honest a dog in the beginning as ever was born. Alas, he loved the little José with a dog's singleness of devotion. Pajol was snarly, as shepherd-dogs sometimes are, but as gentle as the mother ewe with lambs. Lambskins are gentle, and gentleness brings forth after its kind. It was wonderful, when the little José began to creep about the dirt floor of the herder's adobe hut on the San Miguelito mesa, to see how patiently the surly dog endured the petty tyranny of the infant. José would fasten his little fat brown fingers in Pajol's long hair and wool him with such baby might that tears would come into the great brown eyes, but there would be no resentment. The dog would merely sigh patiently, and would go away when the pain became too great to be borne. Moreover, Pajol was a dignified dog, and it did not become him to be wooed—which made the thing all the more remarkable. The herder's wife, Anita, respecting the dog's dignity, would take the child, frequently, to save Pajol, whereat the dog would thank her with his eyes, and with two thumps of his great tail on the dirt floor—and presently would go off to sleep in the sun, and the child, creeping to him, would sleep also, with his little black head on the red dog's shaggy breast. Not the south wind of summer breathed more gently than Pajol, that the slumber of the little José might not be disturbed.

As the child grew in strength and in waywardness, the dog took him in particular charge—and the mother, going to gossip with her friends at the Mission, knew that the boy was in safe care. Pajol was of the Hucayan breed, and could be trusted. The boy and the dog were inseparable—so far, at least, as Pajol could spare time from the care of the sheep. Later, when José was big enough to go with his father to the high hills, the sheep were still not neglected, though the boy and the dog hunted the cottontails from the cañons and chased the ground-squirrels in panic flight

across the breezy uplands. Always the dog felt the responsibility of the sheep, but was careless, as dogs even to be, and always, also, he found time to play with the boy. It was perfect companionship because it was perfect equality.

Then, when the dark days came, Pajol was faithful. That is the distinction in favor of a dog friend. It was in the rains, when the sky wept into the sea that rolls forever at the foot of the mesa, that the smother came to the little adobe hut and left the herder and his wife dead on the dirt floor. Little José, a boy of ten then, sat in the doorway with the still rain beating ceaselessly upon his bare head—and an old red dog laid its head in the boy's lap,

pressed close in his legs, and looked up whining as the lad's tears fell.

Neighbors came from the Mission, presently, missing the herder, and then the priest came also, and there were muttered prayers and smoking candles, and the dead were taken away. But nobody minded the little José. The priest, it is true, put a kindly hand upon the black head, plying the boy, and spoke to some of the women. But the good Padre was old, and a priest has so many cares.

A woman took José home with her that night; a loud-voiced, shrewish woman, but she had no use for Pajol, and told him so, driving him off with gestures and coarse words and thrown sticks. He was an old dog, and his strength and his steadfastness of foot were going. The new shepherd, who came with the hounding party, had young dogs of his own, and these fell upon Pajol, driving him from the sheep and tending him. The dog's world and the boy's world had gone to pieces under their feet. And so Pajol streaked away toward the Mission, tall and ears down, following José, but at a distance, to avoid the tongue of the shrew. He became, after a little time, a hunted vagabond of the Indian ranchería, but every day he managed to keep the little José in sight.

José was set to keeping swine. The shrew was no drone,

Then, when the dark days came, Pajol was faithful

Drawn by George Gibbs

and tolerated no drones about her. There were more cubs than carcasses in the boy's life, of course. It was not that the woman was actually unkind. But she knew little of childhood, and José grieved for the love that is childhood's right. More than ever his little heart swelled almost to bursting under his calico shirt, and more than ever he was sent to keep the swine without his dinner, deprived for some petty fault.

Upon such a day, hurt and hungry, he threw himself upon the sand in the river-bed, while the swine wallowed among the willows, and wept for that he was so alone and so desolate. And as he wept a cold muzzle was thrust against his cheek. Pujol had understood. Looking up quickly, José saw the brown eyes in which faith lay like an inspiration. With one long wail, he threw his arms about Pujol's shaggy neck. Pujol whined, and the great tail wagged, but the dog stood still otherwise until the storm had spent itself.

José arose from the sand, and in his eyes was the light of a new resolution. His mother had told him once, long ago, that far above the hills that towered over the mesa of San Miguelito, there were other hills, golden and glorious, where dwelt a Man who loved children, and took them to Him when they sorrowed and were weary and friendless. How the sight of Pujol's honest face brought it all back, that day when she told him the story and pointed to the far hills of the Santa Ynez, where the snow lay white and still in winter! He had not seen the Man. But he had told the tale to Pujol, in turn, and he had remembered. Surely he was sorrowed enough now, and he had no friends. Even the Mission Indian children looked down upon and despised the swineherd, and the Padre had forgotten him altogether. Now he would seek the Man. Who knows? Perhaps Pujol had remembered also, and would lead him. Pujol knew all the hills. The dog must have reached the Golden Mountains in his wanderings with the sheep.

And so, in the hot afternoon sunshine, the boy abandoned the swine in the river-bed and toiled across the mesa, Pujol at his heels, and on up the steep peaks where the grass lies only in those spots sheltered from the sea wind. They reached the summit at last, and José saw before him other hills, rolling away to the northward infinitely, and the highest of them above white in the sun. Behind him the mesa ran into the broad valley of the river, going down to meet the white line of the surf, and out in the sea blue islands gleamed. But José looked not backward. There, on the high white hills, reaching into the sky, must be where the Man lived—the compassionate Man. It was in December, the soft winter of that land, and snow lay on the mountain tops, but snow was in no part of José's small life. He pressed onward toward the white hills, crossing deep ravines and climbing many high ridges. Pujol, faithful always, kept at his heels. But the dog would look at the boy and whine, now and again, Pujol had forgotten the Man long ago, in the press of more immediate duties, and did not understand this quest.

For three days the boy climbed, the white hills gleaming distant as ever, and Pujol followed on. Once, in obedience to an order but against his better instinct, the dog crouched close behind a clump of sage-brush, lest a shepherd on a distant hill should sight the fugitives and chase them back. Still they went on, and still the white hills seemed farther away. Pujol, guided by instinct, led past all the water-holes, but neither boy nor dog had eaten since leaving the Mission. On the fourth day Pujol caught first a rabbit and then a ground-squirrel, and laid them at the boy's feet. José did not know that the dog sought to have him eat, and the game was untouched by either. On the fourth day, at sunset, as the boy sank, utterly exhausted, at the foot of a great live-oak, the dog lay at his feet for a moment and, looking up, seemed to stroke the child's face tenderly. Presently José slept, the sleep of exhaustion, and then Pujol arose and galloped swiftly back over the hills toward the adobe hut on the mesa. When José awoke in the gray of the morning, shivering, a little lamb lay dead at his feet, and there was blood on Pujol's muzzle. The dog looked and felt guilty—yet was strangely self-complacent. It had passed in the dog's heart to murder one of the lambs he had reared for, and the necessity of the master salved conscience. Yet the sacrifice of

Drawn by George Chiles

For days the dog watched beside the boy's body, scaring away the vultures and fighting vagrant coyotes

Pujol's honor was without avail. The boy was faint with hunger, too faint to care whether he lived or not. Also, the sight of the blood sickened him, and he lay aslepsy. He arose, staggered a few paces from the dead lamb, and fell down fainting. Pujol dragged the dead lamb to where the boy lay and licked his hand. José, revived, drew his hand away quickly. He arose again, and again staggered a little distance before falling.

"Wicked Pujol," he said, "you have killed the lamb. There is blood upon you."

The dog looked at him and whined. It crept closer, but the boy motioned it away. Then Pujol lay down also, at a little distance, and with the body of the murdered lamb between them, these two, who had been friends, abandoned themselves each to bitter grief.

As the sun went down, and the long shadows crept across the canyons, Pujol arose, sniffed at the dead lamb, and ventured a step toward his master. There was a faint repelling gesture, but the dog crept closer. Closer and closer, and his cold muzzle touched a colder hand—and if Pujol had remembered the Man he would have known that José's quest was ended. The dog did not remember, and it filled the season with bitter howling.

For days the dog watched beside the boy's body, scaring away the vultures and fighting vagrant coyotes. Then, one day, Indians came and bore the body away to the Mission, driving off the dog with stones when it would have stopped them. For days after that the dog mourned alone under the live-oak. Then one day the old wild blood that is in all the Illescan breed, away back, rushed to Pujol's head, and that night the shepherd in the adobe hut on the mesa heard dogs fighting among the sheep. In the morning he found that six sheep had been killed, and their throats torn for blood. His two dogs were badly crippled by the marauder. Pujol was a powerful brute, although in his twelfth year.

That was the first of the wild dogs of the San Miguelito. Pujol grew more cunning as he grew older, but also he grew weaker, and, after a time, feeling that the day would come when he could not hold his own with the sheep-dogs, he went down into the Mission and enticed from his home a foolish puppy into the wild life of the hills. The old dog was seen to do this. That was the second of the wild dogs. It was easy with one recruit to get others, and so there came to be a band. For many years Pujol led them. Afterwards the other dogs nursed for him. A shepherd on San Miguelito, searching in the hills for stray lambs, once saw two young dogs apparently leading an old one, nearly blind, to the carcasses of a sheep just slain. He drove them away, but that night the dogs broke into the corral again, and in the morning he found the body of an old red dog upon his door-step. Pujol had come home to die. The shepherd did not know that at the last the old dog had turned, in defence of the sheep, upon the wild companions he had led so long.

SPEED MANIA AND HOW TO CURE IT

By HENRY UNDERWOOD

All the world loves a racer. It is only when the man in the motor-car endangers life and limb that we clamor for his suppression. Yet no one can ride in an automobile without waiting to go fast. The desire for speed is as natural as the desire for breath. We are all subject to it. Neither age nor sex exempts any one. A charming old lady was taken for a ride on her one-hundredth birthday. She smiled all the way.

"Weren't you frightened, grandma?" they asked her when she alighted at home.

"Why, no," she replied. "I was a little scared at first, but that soon passed and I found it rather slow toward the last."

And there is the experience of all of us who go down the road in motor-cars. There is an exhilaration in flying through the air at forty miles an hour or faster that no other sport can give. On a smooth road one has no consciousness of jarring or any other suggestion of coming in contact with the ground. The asphalted or oiled loose track is level as a billiard-table. The wheels are running on thick, cushiony air. The perfectly inside, well-oiled machinery moves without any trace of friction. Even the flight of a bird is not so swift and effortless as this. A subtle intoxication creeps into the veins of the automobilist as all the world seems past him in swift, silent, glorious panorama. He is conscious of only one wish—to go faster.

There is only one thing to prevent the realization of the wish—the fact that the roads are used by other people, afoot and on wheels, and that it is little short of homicide to hard through this army of waylayers a great steel projectile that weighs a ton and flies at the rate of a rifle bullet. A decent regard for the safety of mankind will always preserve the normal man from giving way to speed mania. The police power of the State, if force of public opinion is insufficient, must prevent the outbreaks of the speed maniacs.

If we carefully examine the criminalists who are given to dashing madly along the roads in motor-cars we shall find that in every case their mania arises from an overbearing sense of their own importance, accompanied by very slight capacity for self-restraint. The type of man who motors at dangerous speed is the same type that speculates in mere stocks that he is able to carry, cats and drinks more than he can assimilate, covers himself with gaudy jewels, makes an objectionable exhibition of himself on every possible occasion. The strong arm of the law is the only effective curb for this sport; for it is a notorious fact that the logical conclusion of such disordered lives as these is in State's prison or the electric chair.

Yet most of the motorizing accidents, especially about large cities, are due not so much to criminalists owners of cars as to reckless hired chauffeurs. A curious state of things has arisen. Saboteurs have sprung up in the neighborhood of all the big garages, and they are often too well patronized for the safety of the public. Chauffeurs after a hard day's run drop in and take a drink or two.

Now, it is a fact well known to physiologists that a man who has been whirling along the roads for hours with the lives of a car-load of people in his care in a depleted and irritable condition at the end of the run. Alcoholic drinks act upon him with much more potency than on a normal person. It often happens that he seeks an alcoholic stimulant to restore balance to his overwrought nervous system. He meets friends. Drink succeeds drink. The chauffeur quickly reacts from a state of depression to one of extreme exaltation. He lungers for a dash through the cool night air; also for a chance to show some girl what a really marvellous driver Dick of a chauffeur he is. Away they fly through the Park on a ride that ends in the hospital or in the morgue.

A friend of mine employs a man when he proudly describes as the best chauffeur in America. As a measure of his admiration, it may be remarked that he pays the chauffeur \$250 a month. A few days ago this very same man was driving my friend and his family at a rate of fifty miles an hour. They had traveled in safety at this speed hundreds of times. There was nothing to fear.

But suddenly they were confronted by a new and appalling prospect of death. Rushing to meet them they saw an automobile on the left side of the road—with the certainty of a horrible crash if both cars held their course. You can't swing aside a mile-a-minute automobile suddenly without running a spill. My friend's chauffeur swerved the car very gently to the left and steered safely between a telegraph pole and the advancing car by a safe margin of less than twelve inches.

Arrived at home a few minutes later, my friend said: "That will be all for to-day, Antoine." And Antoine, the best chauffeur in America—stately, wiry, sober, powerful in mind and body—fell back in the car and went to sleep. The natural reaction from the nervous strain he had just come through, you see. That sort of thing, perhaps in less degree, is encountered often by every chauffeur. And that is why I say that a great source of danger to life and limb is the tired motorist who drinks.

There is a certain gloomy satisfaction in noting that this type of chauffeur, although numerous in the last few months, is beginning to disappear. He is glacially silent, and Nature has a shrewd way of making the glacially until the agent of his own elimination.

We find, then, that speed mania attacks two classes of subjects, each clearly defined, and the latter beginning to disappear with gratifying rapidity. How shall the first class be dealt with—the overbearing, reckless, springing individuals who think that, because they see it to risk their own necks, all other necks must be risked with them? Obviously when a man has grown to full age without learning to submit himself to restraint out of consideration for others, there is little hope of curing him by appealing to his better nature. He must be repressed by the strong arm of the law.

But before discussing the remedy let us for a few moments consider what reckless and dangerous speed really is. Up to this time unfortunately neither the Legislature nor the police nor the courts seem to consider the question in a broad, comprehensive sense that will best conserve the rights of the general public without oppressing automobilists. They have no regard for the common danger, but concentrate all their attention on the question of so many miles per hour speed. How many miles per hour has become a fetish. The attention of the police is focused upon preparing traps for the highway so that if they exceed the strict letter of the law they shall be fined and the policeman shall have one more arrest to his credit on the record. It is sad to relate, but undeniably true, that no motorist is arrested for driving to the common danger while practically none of the motorists failed to coast at a speed of violating speed laws have done so to the common danger of the public.

All of which is a startling commentary on the speed laws as they are framed and enforced; yet the experience of the average motorist will prove his criticism. Only a few days ago a friend of mine was stopped by a New Jersey constable.

"I wasn't going too fast," he protested.

"Yes, you were," said the constable. "You were going at the rate of twenty-five miles an hour. I timed you."

"But the law allows me to run twenty-five," my friend insisted.

"Sure, it does," cried the constable triumphantly; "but not when any other vehicle is coming toward you."

"But there wasn't—"

"Oh, yes, there was," the constable chuckled.

"Didn't you see that Jew-wagon? Well, just as you came near it the driver said 'Giddap' and the horses began to move."

And my friend was duly fined for violating the speed law.

How much better the safety of the public would be guarded if this piece of the speed law of the State of New York were really carried out:

"No person shall operate a motor vehicle on a public highway at a rate of speed greater than is reasonable and proper, having regard to the traffic and use of the highway, or so as to endanger the life or limb of any person or the safety of any property."

The italics are mine. Every decent motorist wishes that this statute could be burned into the consciousness of every official who has control of automobile traffic. Then, perhaps, we should have fewer instances of policemen lying in wait for motorists on a down grade where a car he apt to run faster, so that they can "make a case" against some unlucky man, rather than undertake the arduous task of capturing a really dangerous scorcher.

And as an absolute speed limit the standard proposed by the Automobile Club of America is excellent.

"If a person runs a motor vehicle at a rate of speed exceeding twenty-five miles an hour outside of a city, town or village, or at a rate exceeding fifteen miles an hour within the limits of any city, town or village, it shall be prima facie evidence that the vehicle was run at an unreasonable and improper speed."

The automobile has been so developed, and still among motorists is so general, that out on the open road a speed even of forty miles an hour is safe for practically all occasions. A thirty horse-power car which answers perfectly to helm and throttle is only juggling when it moves at thirty miles an hour. But, some one may object, a horse trotting at that rate is a dangerous thing on the road, if therefore why exempt the automobile? But a horse at a two-minute clip ran hardly be stopped in less than two hundred yards; whereas an automobile at the same pace can be stopped in less than thirty yards. But the twenty-five miles an hour limit would make the roads absolutely safe.

And the best punishment for the reckless motorist? Take away his license. Then, if he is caught driving a car in the period of his suspension, put him in jail. The State should revoke the license of any driver who is so careless as to render the license of a dangerous locomotive engineer or steamboat pilot. And your speed mania who laughs at a fine and boasts of it among his fellow maniacs would tremble with fear at the prospect of having his license revoked for a month, or six months, or a year.

The Encroachment of the Waters on Liberty Avenue, three Blocks distant from the Allegheny River

Various kinds of adventurous Street Traffic on Sixth Street while the Flood was at its Height

PITTSBURG'S FIFTY-MILLION-DOLLAR FLOOD

IN THE SECOND WEEK OF MARCH THE OHIO RIVER, SWOLLEN BY THE SPRING FRESHETS, ROSE TO UNPRECEDENTED HEIGHTS AT PITTSBURG. PROPERTY TO THE AMOUNT OF \$50,000,000 WAS DAMAGED, AND A SCORE OF LIVES WERE LOST. TO ADD TO THE CITY'S FLIGHT, FIRES BROKE OUT WHILE THE MUNICIPAL WATER PLANT WAS SHUT DOWN BY THE FLOOD, AND IT WAS NECESSARY TO RESORT TO THE USE OF DYNAMITE TO CHECK THE SPREAD OF THE FLAMES. MANY CITIZENS WERE MARINED WITHOUT FOOD; THE ELECTRIC LIGHT, TELEPHONE, AND STREET-CAR SERVICES WERE PUT OUT OF BUSINESS, AND EMBRY RAILROADS ENTERING THE CITY, MAKE THE PENNSYLVANIA, WAS TEMPORARILY CRIPPLED. THE WATERS REACHED THEIR CREST ON MARCH 15; TWO DAYS LATER, PRACTICALLY ALL TRACES OF THE FLOOD HAD BEEN REMOVED, AND BUSINESS WAS BEING RESUMED; ALTHOUGH 10,000 PERSONS WERE DRIVEN FROM THEIR HOMES

THE SEASON'S PLAYS

"MRS. WARREN," AND THE KLONDIKE

By "I"

RELIEVED of the burden of police espionage, "Mrs. Warren's Profession" returned to New York in the hope of alluring to the Manhattan Theatre the countless thousands who are supposed to have weiled and gasped their teeth when a New York Police Commissioner thwarted them by forbidding its production. There has been such a hullabaloo over this play of Bernard Shaw's that the new management at the Manhattan was prepared to erect collision look-ho to meet the onrush of the eager legions. But, behold! Instead of the cohorts charging the entrance and the great roar of expectancy one is conscious

only of the raucous-voiced ticket-speculator crying out his wares with all the despondency of "no takers."

All of which goes to prove the efficacy of the proper kind of advertisement.

Mrs. Warren's Profession had this kind when it first came to New York. It was heralded as a most dreadful presentation of affairs, so somebody read it and the discovery was made.

Then the Police Commissioner dropped in, and that ended Mrs. Warren until the courts took her up and said that she was not so bad as she was painted.

That the play is moneywise there is not the slightest doubt in the world. It deals with a phase of commercial life which no one cares to contemplate. There are innumerable sparkling lines in it, because it is a Shaw play, but it is not a thing which looks well upon the stage.

By this time almost every one has read the play, and knows its plot, its action, and its brilliancy.

Not evidently not many persons in New York are anxious to see it performed, that is, not at the Manhattan.

When one considers the theme of the play, it must be recognized that it does not deal with a subject which is any newer than the oldest Babylonian brick, but it is not one which deserves dramatic presentation.

A great deal might be said of the strength of the play, but it leaves for too unpleasant a taste in one's mouth at the fall of the final curtain. (Of the company at the Manhattan only one person deserves mention for ability. This is Miss Mary Shaw, who plays Mrs. Warren. She is excellent. Mr. E. J. Ratelle, who plays Sir George Grafton, gives a bad imitation of Bob Hilliard. Mr. Walter Thomas, as Frank Gardner, would have been delighted had he been Arnold Daly. Miss Catherine Condon strong in the best of her abilities to do the work of her part, but she tumbled the high places at rare intervals. That excellent character-actor, Mr. John Findlay, as the Rev. Samuel Gardner, was a keen disappointment.)

As the Manhattan is under new management, a delightful little amusement appears in the programme. It says that "Mrs. Warren's Profession" will be presented at the playhouse "until such time as it may pass into the hands of the Venuskyanda Tunnel." The question arises very naturally as to which is meant, the play or the house. The ticket-speculators would probably say both.

Mary Shaw as "Mrs. Warren" in Bernard Shaw's "unpleasant" Play

suggested the above inquiry. The fact that the play under discussion is a melodrama, pure and simple, would seem to be obvious to any even moderately intelligent observer; and it is, so far as the authors are concerned, admittedly so; yet these gentlemen have been foolishly taken to task because their play, while it may be good melodrama, is of indifferent quality as a study of manners or a drama of character. Nothing could be more absurd.

The authors are frankly, obviously, and indisputably a melodrama; to force it into another class of play and then judge it by the rules which apply to that class, is as unjust as it is disingenuous. "The Spoilers," then, is a melodrama, and very effective melodrama. The scenes are arranged as follows:

The prologue is pictorial, it is a landscape—an atmospheric drop designed to convey the sense of "a land of purple distances." Act 1 transports us in "the door of the golden north," on board the steamship *Seneca*; Act 2 shows the interior of the law offices of Thurston & Street; Act 3 passes in the Northern House Ball at Nurem; Act 4 is in two scenes—the first at the Sign of the Shod Road House, the second at the Midway Mine.

For those who are familiar with Mr. Beach's novel (and it may be imagined that those who are not are few and far between), this will convey as idea of the manner in which Mr. MacArthur and Mr. Beach have compressed the action of the novel into a play which is neither too long nor too short, and which is full of movement and suspense, as every well-ordered melodrama should be. The work of the adapters has been ingeniously done; but,

if I may be permitted to note an important exception, would not the physical struggle between McNamara and Glenister be more effectively placed if, instead of occurring in the second act, it were made to occur in the fourth act, where, tumultuously and logically, it belongs? As it stands at present, this last act is the weakest of the four, and is distinctly an anti-climax.

It is greatly to be deplored that the effect of the play is impaired by the activities of an unseasonably weak cast. Much of the acting is so crude and amateurish that it would, one may venture, elicit the derision of the gallery gods in a region of Manhattan much nearer the East River than is the New York Theatre, Campbell Gellies, as McNamara, does the most intelligent and able piece of work in the entire production, although George Olschansky, as *Dezire*, and Edmund Elton as the libelous *Street*, stand forth conspicuously against a background of general incompetency. It is a pity that Ralph Stuart were fit to play *Glenister*, the hero, in a style as impressively stung and unconventional; the part is capable of a very different and far more lifelike treatment, and Mr. Stuart, with an altered method, seems capable of achieving it. It would serve no useful purpose to discuss in detail the weak points of the act; it can only be repeated that Mr. Daniel Frohman, who produces the play, has done very ably by it; had he had the foresight to secure the services of a few first-class actors, the effect of the play would be augmented a hundredfold. There is no earthly reason why, with a little revision of the structure of the drama itself and a side cast of just rivals, "The Spoilers" should not secure a very conspicuous success.

Ralph Stuart as "Glenister" in a Dramatization of "The Spoilers"

BULLYING THE WOMAN-WORKER

(Continued from page 518.)

you are aching with cold and weariness—I know the whole thing from experience. I have felt that gummy exhalation, so different from the weariness that follows a day of work. Now the backroom of a saloon is not exactly a good place for a man, but it is a much worse place for a girl. You see, after all, the night has its own special aspect for women.

All this time I have been talking, not about a few exceptional cases, culled here and there from among thousands of workers, but about things as they are with them all. A little over a year ago Commissioner of Labor Sherman gave it as his opinion that there were between 5000 and 10,000 employers in New York city alone who were openly violating the sixty-hour law. In his report dated January 3, 1906, Mr. Sherman says: "The provision prohibiting night work is openly violated, especially in the employment of women over twenty-one, and the department has feared to test this particular prohibition because it is so closely joined with the prohibition of male and female minors, that in case of an adverse decision both prohibitions might be held to fall together." In this report is a record of prosecutions during the year 1905 for illegal employment of women and minors after 9 P.M. Here it is:

Total number of cases.....	2
Acquitted or discharged.....	1
Convicted, sentence suspended.....	1
Convicted and fined.....	1

Total number of cases known to exist, between 5000 and 10,000.

Perhaps you would like to hear more of the case "convicted and sentence suspended." The report of that particular hinkery as it went to the Department of Labor is as follows:

"They work overtime all the year round. They begin work at eight o'clock in the morning. They do not stop work until eleven or twelve o'clock at night. On Saturday they work until 9:30. They have a half-hour for lunch and a half-hour for supper. They work overtime four days in the week—stopping at five thirty-two days. They would be discharged if they refused to work overtime. They are going to work next Friday until 4 A.M."

In the spring of 1906 it was decided to test the law. Two cases of all-night employment of women in book binderies were brought before the Court of Special Sessions. The employers were convicted, but they promptly appealed on the ground that the law was unconstitutional. The case of *The People ex. Williams and O'Rourke* came up before the Appellate Division of the Supreme Court the day after election. It was to have been heard in October, and arrangements for a public session with oral arguments were

made by the Women's Trade Union League, the Consumer's League, and other organizations. Those interested waited from day to day, anxiously expecting to be notified that the case was ready to be heard. The most extraordinary reticence was maintained about the whole affair, and one November day it was announced that the case had been decided, without oral arguments, without the presence of the attorney-general, without even the presence of a representative from the attorney-general's office. Briefs were submitted on both sides. It is somewhat significant that the verdict was a divided one, two of the judges dissenting. If oral arguments had been heard it seems altogether possible that the decision might have been a different one.

The attorney-general was appealed to, to take the case to the highest court, and after some hesitation he decided to do so. The *People ex. Williams and O'Rourke* is to have just one more chance, in the Court of Appeals, where it will be decided quite definitely whether women and girls shall be forced to work all night. That is what it amounts to, for if the learned judges hold that they may work all night it is perfectly certain that they will have to.

It is not alone the women of New York State who are concerned in this decision. In Rhode Island, Pennsylvania, New Jersey, and half a dozen other manufacturing States agitation for better protective laws for women workers is very active at the present time. It is stated on exceedingly good authority that eight States are waiting to hear whether it is safe for such laws to be passed. If it is not safe, if the highest court in the largest manufacturing State in the Union declares that it is unconstitutional even to protect women and girls from actual physical danger, what is the use of any legislation in behalf of women workers? What is the use of Pennsylvania forbidding their employment in coal mines, Illinois, Nebraska, and Missouri in the slaughter pens of the packing houses? Eleven years ago Illinois set the example of declaring the prohibition of night-work for women unconstitutional. One of the results of that action was that certain New York corporations established branch factories in Illinois that they might force more women to work at night than the local manufacturers needed. Just as New England capital has gone into Georgia and South Carolina that it may take advantage of child labor. If the *People* lose their case *ex. Williams and O'Rourke*, Massachusetts, Indiana, Nebraska, and New Jersey will remain the only States where women are protected against night work. How long will they keep their protective laws? Seven States in the Union have no laws at all for the protection of women workers, and at least seven more have only laws forbidding women to tend bar or to work in mines. What hope is there for the women of these States?

MUSIC AND THE OPERA

MR. S Scriabine's "DIVINE POEM"

By LAWRENCE GILMAN

MR. ALEXANDER S Scriabine, the young Russian composer, has held a somewhat conspicuous place of late in New York's musical activities. We have recently been privileged to hear from him a piano concerto, a symphony, and numerous small pieces for piano, all of them more or less innocuous—indeed, we understand that Mr. Scriabine purposely offered the musical public of New York a highly polished quality of musical fare out of regard for what he believed to be the rudimentary nature of its aesthetic constitution. At the last of this season's concerts of the Russian Symphony Society, however, Mr. Scriabine gave evidence of an altered point of view regarding our musical capabilities, for he set before us an offering of very formidable character indeed: it may, therefore, take heart, since it is now apparent that we have been abused; in Mr. Scriabine's estimation, of the accusations of musical barbarism which our amiable visitor had doubtless been reluctant to accept as reasonable and true.

Claudio Campanini
CONDUCTOR AT THE MANHATTAN
OPERA HOUSE

Tanyeff, Aronnik, and Raloff. Graduating with the gold medal for compositions in 1904, he taught for a few years, but for the past five years he has been traveling through Europe, playing only his own compositions. The December 20, 1908, Scriabine was presented to this public at a concert of the Russian Symphony Society, appearing as soloist in a performance of his first piano concerto.

Now that we have, as it were, oriented Mr. Scriabine in his personal being, we may venture to consider in some detail the remarkable composition which was disclosed to us by the Russian Symphony Orchestra on the evening of March 14. It is said to be the composer's third symphony, and is entitled "Le Divin Poème"—which, being interpreted, is, of course, "The Divine Poem." It was produced in Paris in May, 1905, by Mr. Arthur Nikisch, and it has been heard in St. Petersburg. It is comprised in three divisions, which are performed without pause. We cannot do better just here than to quote the exposition of the symphony which has been made public, presumably with his sanction, since it was printed on the programme of the concert. "The composer of 'Le Divin Poème,'" we are told, "has sought to express therein something of the emotional (and therefore musically commensurable) side of his philosophy of life. Mr. Scriabine is neither a Pantheist nor a Theosophist, yet his creed includes ideas somewhat related to each of these schools of thought. The three divisions of this symphony (they are joined without pause) are entitled *Luttes* (struggles), *Éclats* (ecstasies), and *Jeux Divins* (creative forces rationally exercised). The first and third parts are marked allegro; the second is a slow movement. The slow introduction pervades the opening theme, which to the composer means the affirmation of conscious existence, of the coexistence of matter

and spirit in the Ego. This theme, begun by the bassoon and basses, ends with a militant ascending interval in the trumpet (that may be the equivalent of *Je suis* (I am)). The spirit that affirms is afflicted at the audacity of its thought, and sinks into an abyss of mysticism. A struggle begins between two forms of the new allegro theme of the first movement, as in a soul now confident, now obscured by doubt and fear. The slow movement, *Éclats*, is built upon two contrasting themes. The first, published by the flutes, denotes to the composer the soul's affirmation of the sublime; the second, given out by a solo violin, the desire of the soul for the ecstatic joy of self-annihilation, of the merging of the spirit into nature. . . . The final allegro, *Jeux Divins*, brings up in cultured and triumphant form the theme of affirmation, of the introduction."

Now it will be conceded, doubtless, that a composer who sets out to embody in music such concepts as these, must needs possess a rather marked capacity for eloquent and varied utterance. Mr. Scriabine has been criticised, first, for attempting such a scheme, and secondly, because of the large orchestral apparatus which he demands (his score calls for four flutes, three oboes and English horn, three clarinets and bass clarinet, three bassoons and contrabassoon, eight horns, five trumpets, three trombones and tuba, tympani, cymbals, bells, two harps and the usual strings). Such criticism is as impertinent as it is short-sighted and fatuous. There lies at the basis of the philosophic scheme which Mr. Scriabine has elected to illustrate in his music a subject of large poetic significance, and one eminently suited to a total exposition. The official censure has not an ideal lucidity, and it is not precisely animated by the Spirit of Comedy; yet it is perfectly evident that the theme is a large and momentous one. As to the criticism that has been directed toward the composer's employment of a large and elaborate orchestra, that, as we have said, is sheer impertinence; there is an valid reason whatsoever why a music-maker should not call to his aid whatever expressional apparatus he deems best suited for the setting forth of his ideas, whether it be a string quartet or an orchestra of two hundred, with singers and choirs of thousands—provided always, of course, that the character and quality of his ideas justify the particular means he selects. To object to an expressional vehicle merely on the score of its complexity and extent is both a waste of time and a means of darkening counsel. "The Divine Poem" falls (and we think it does fall) not because of the character of its subject-matter or the instrumental means which have been invoked to exhibit it, but simply because Mr. Scriabine does not command the scope and fertility and eloquence of inspiration which are needed for the adequate musical realization of such a subject. He has essayed a theme which would have taxed the genius of Wagner or of Richard Strauss, and he has, quite naturally, met defeat. His symphony suffers by its monotony of mood, its lack of variety and contrast, its amorphous structure, and, above all, as we have said, by the weakness of its fundamental ideas. It has some moments of splendor; passages that are impressive through their harmonic richness and poignancy and their orchestral plangency. But they are too infrequent to produce much effect upon the texture of the music as a whole; and, most lamentable of all, they are interspersed with passages that afflict by their remoteness or the unadmitted sentimentality.

Let it be said, in conclusion, that Mr. Altshuler and the augmented orchestra played the symphony admirably—with accuracy, precision and sonority.

Some Record-breaking Tusks

THE New York Zoological Society has recently received from London the longest tusks ever known to have come from a living species of elephant. Until their arrival at the Zoological Park, their reported length seemed almost unbelievable. The longest tusk had the astonishing length of 11 feet 3½ inches, while the other measures exactly 11 feet. One measures 18 inches in circumference, the other 16½ inches, and the combined weight of the two is 293 pounds. The next longest tusk on record is only 10 feet 4 inches in length, or more than one foot shorter. These tusks are from an African elephant, evidently of enormous size.

They were purchased by cable of Mr. Rowland Ward, the well-known naturalist

One of the Lords of Creation and the 32500 Tusks

of London. The tusks are the gift from Mr. Charles T. Harney. The price paid in London was \$2500.

It has been stated that three huge tusks were formerly owned by King Menelik of Abyssinia, and by him were presented to an official of the French government. Both the tusks are quite perfect in every respect. They originally set into the skull about twenty-six inches. It is evident from their shape that after leaving the skull they curved inward slightly, then outward and spread in graceful lines. They will be exhibited for a short time in the album of the Lion House, and eventually will be placed in the national collection of heads, horns, and game records which the department of America will shortly form for the society, for permanent exhibition in the Zoological Park.

What It Costs

By J. E. Jenks

THE Treasury Department has a great system of accounts. It goes into details with an inspiring industry of research resulting in a perfect labyrinth of averages and percentages. The Treasury Department is one huge staff-hill of "figures," and succeeding generations of borrowing accountants have wrought some wonderful things with the mass of mathematical records. As might be expected, there are some interesting conclusions and comparisons, and not the least is the series of books—they constitute a veritable library every year—in which is

kept the tally of the receipts of this great and growing government through its one hundred and fifty-eight custom-houses. The aggregate of the receipts last year was nearly \$305,000,000, while the cost of collection amounted to within \$2400 of being an even \$10,000,000. This means that it costs the United States two and nine-tenths cents to collect one dollar of customs revenue.

A dissection of the returns from the various customs districts and ports shows how this is accomplished with a widely varying result, and the comparison of cost cannot fail to be enlightening as well as of interesting to people who do not have to be under the strain of governmental statistics to appreciate it.

The port of New York, which, of course, yields the most in the way of customs revenue, cost the government one and eight-tenths cents for every dollar taken in last year, a rate which was beaten by the record of Springfield, Massachusetts, where the expense was one and four-tenths cents, which was the most favorable rate in the whole list.

The star record in the opposite direction was made by Little Egg Harbor (Tuckerton), New Jersey, where the sole business of the single employee of the institution in the course of a year was the issue of some forty documents to vessels, the aggregate receipts for this service amounting to the meager sum of forty cents, while the outlay was \$365 31; so the cost of collecting one dollar, if such a revenue had been possible at Tuckerton, is reported in the fully accurate decimals of \$1263.273. That is an achievement which stands practically by itself, for the next best record is that of Paducah, Kentucky, where two employees issued fifty documents to vessels and such is a dollar and seventy cents the cost to collect one dollar being \$278.735. There comes Elizabeth City, North Carolina, with its three employees and its annual revenue of ten dollars, requiring the expenditure of \$246.645 to collect one dollar.

The one other notable case of cost is Annapolis, Maryland, \$203.944 being the rate of maintaining two employees who took in \$4 50 in twelve months. Places where the cost to collect a single dollar is greater than that amount are Alexandria, Virginia, \$1.043; Barnstable, Massachusetts, \$4.45; Beaufort, South Carolina, \$2.853; Burlington, New Jersey, \$2.505; Burlington, New Jersey, \$1.0479; Castine, Maine, \$1.056; Crisfield, Maryland, \$42.118; Ellsworth, Maine, \$8.384; Great Egg Harbor, New Jersey, \$1.663; La Crosse, Wisconsin, \$2.722; Grand Haven, Michigan, \$1.472; Norfolk, Virginia, \$1.979; Rock Island, Illinois, \$29.084; Sag Harbor, New York, \$3.415; Salem, Massachusetts, \$1.992; Uxas, Bay, Oregon, \$59.473; Waldoboro, Maine, \$1.265; York, Maine, \$28.270; Apalachicola, Florida, \$2.788; Beaufort, North Carolina, \$1.048; Brownsville, Texas, \$7.17; Burlington, Iowa, \$4.894; Cairo, Illinois, \$6.881; Chattanooga, Tennessee, \$16.182; Edgartown, Massachusetts, \$5.374; Georgetown, North Carolina, \$21.009; Humboldt, California, \$1.768; Machias, Maine, \$4.217; New London, Connecticut, \$1.338; Portsmouth, New Hampshire, \$2.631; Sauc, Maine, \$4.033; St. Mary's, Georgia, \$20.348; Sandusky, Ohio, \$1.325; Bradstreet, Indiana, \$2.492; Wheeling, West Virginia, \$8.310; and Wisconsin, Maine, \$3.375.

But, as the final cost, consisting the aggregate revenue expenses, was only two and nine-tenths cents to obtain one dollar of the customs receipts of the country, the situation on the whole is not discouraging and the investment may be said to have been a profitable one.

Supersutious

A WELL-KNOWN New-Yorker, while doing at his risk one evening recently, observed that his order of oysters on the shell was not complete, there being only eleven oysters, instead of the dozen it was his custom to order. On reflecting that his waiter, an Irishman, was a new-comer, he decided to let the matter pass; but when on the next evening the same thing occurred, to become a trifle impatient.

"See here!" exclaimed he to the waiter, "what do you mean by bringing me eleven oysters when I order twelve? This is the second time that this thing has happened!"

"Sure, sir," quietly responded the Cell, "I didn't think you would want to risk being thirteen at table, sir."

"How?" said Alice

TEACHER. "A mole eats daily twice as much as it weighs."

PETIT. "But how does it know how much it weighs?"

The Dumbwaiter

Is a restaurant once a dumbwaiter

Breaks away on his waiter the top;
And while dimly the waiters all waited,
The dumbwaiter came to a stop.

"Get some weights, you dumb waiters!"
Then shouted

The waiting head waiter below;
"The waiter fix up a dumbwaiter
Is to waiter, as all waiters know."

competition of his low-paid rival. The reason is as old and as well established as the law of evolution.

"Rightly or wrongly, we Americans have developed socially and industrially until we live on a plane of far greater comfort and luxury than the Japanese. We eat better food, wear better clothes, live in better houses. In order to do these things we must have more money than the Japanese. We have raised our standard of living and wages; therefore we must, as a mere matter of self-preservation, keep out ruinous cheap labor, no matter whether it comes. For it is well known that the effect of an influx of cheap laborers among high-priced laborers is to bring down the price. The admittance lowers the high a great deal more than it raises the low.

"The same rule prevails in the vegetable and animal kingdoms. By selection and cultivation we have brought wheat up to a plump, heavy grain five times as useful as the wild grain. But if we relax our vigilance, introduce the wild grain in our wheat-field and let it grow at will, the whole field will soon be overrun with the less valuable wild wheat. So with apples, or peaches, or any other fruit. Mix among the finest trees the old wild stock and let it increase unchecked, and the orchard soon produces the aboriginal, inferior fruit. Or let a herd of thoroughbred horses roam among the wild, and after a few generations we shall find that their descendants have deteriorated to the wild type. The rule is clear—when by selection and cultivation a species of vegetable or animal or man has been brought up to a high grade of excellence, that species must be thoroughly guarded from the intrusion of any less valuable species or it will retrograde.

"And under this rule it is absolutely certain that highly paid American labor must be protected from all invasions of cheap labor, whether from Japan or from any other country; whether the cheap laborers are subjects of a most favored nation or of a nation without favors."

"If one may judge from the American news that filters through to this side of the world, steps are already being taken in the United States to arrange in a friendly way for the exclusion of Japanese coolies from our country. Whether the arrangement will be by treaty or in the form of a diplomatic agreement cannot be guessed here; for the allies in Tokyo has as much chance of discerning the purposes of the Japanese government as if he were down in a diving-bell at the bottom of the sea. Two things appear to be fairly certain: 1. Japanese cheap labor will be excluded from the United States. 2. The exclusion will rest upon a friendly basis.

The present restriction of emigration from Japan to America doesn't seem to restrict quite perfectly. Under the terms of the Imperial edict no more than one thousand laborers are allowed to leave Japan each month for the Hawaiian Islands. No Japanese subject is allowed to leave home without a passport, and each one of the one thousand coolies who leaves Yokohama in the month bears a passport permitting him to go to Hawaii, and ordering him to return to Japan at the end of three years. But there is nothing in the passport that binds the emigrant to remain in Hawaii. He is a matter of fact, very free of them to remain there, and at least one thousand Japanese leave Honolulu every month for the United States, the land of golden opportunity. Whether or not this system is the fruit of a private agreement between the two nations is not generally known; but that it will soon be remedied appears certain.

What Cared She?

MISTRESS. "I am very nervous about burglars. Be sure to lock up carefully at night."

Rules One Should Follow Nowadays

AFTER the repeated shocks which have been dealt to the nerves of the public at large, the following few simple hygienic maxims have been carefully prepared for the public and domestic guidance.

ON SMOKING IN THE HOUSE

Rule first. Don't smoke or take a bath unless you are sure the water has been properly distilled; treated with barium chloride and permanganate of potassium, and redistilled over K. H. S. oil, to fix any ammonia. If the housekeeper does not possess this elementary chemical knowledge, decline to wash at all, and take an air-bath.

Second. Use a new tooth-brush, or else have a fresh set of false teeth each day—whichever you think less dangerous.

Third. Do your hair with your fingers; brushes and combs are deadly bacillus traps.

Fourth. Keep your soap, sponge, and shaving material under an air-tight, to choke off the microbes.

Fifth. If impossible to follow above rules stay in bed.

AT THE BREAKFAST-TABLE

Rule first. Don't read the morning paper or open letters until they have been baked, saturated with a disinfectant, and put through the mangle. The postal officials are most careless with mail.

Second. All bills should be promptly sent into unlimited quarantine.

Third. Refrain from eating any bacon, fish, kidneys, etc., over which an inquest has not been held, or eggs that have not been set upon by a coroner's jury.

Fourth. Keep your mouth closed throughout the meal.

ON GOING TO BUSINESS

Rule first. Refuse all change that may be offered you by street-car conductors, etc. If you do not care to lose such sum, insist on having newly minted coins handed you, wrapped up in sterilized cotton.

Second. If you are compelled to go to a refreshment-stand, take your own filter, glassware, and crockery with you, also assorted repartees to any comments made by the barkeeper.

Third. Stay, if possible, at home.

BEFORE LEAVING A CAFE

Rule first. Demand an interview with the proprietor, and inquire if he has a clean bill of health.

Second. Request to be shown over the kitchen (using, of course, an aseptic respirator), and satisfy yourself that nothing not fresh is to be found in the establishment.

Third. Having thus filled up the luncheon hour, if necessary at various restaurants, postpone your report until you return to your aseptic dinner-table, by which time you will have lost such appetite as you may have had.

ON TAKING A HOLIDAY

Rule first. See that the district you select is thoroughly disinherited, dethroned, and de-aud of germs before your arrival.

Second. Travel lightly by balloon, having previously sent your ordinary attire to the papers and town officials.

Third. Drop into the sea or the nearest body of water.

Fourth. If, after following the above rules, you should contract any germ disease, consider yourself an unlucky dog.

Yes, Sir

A BARBER who recently established himself in New Mexico has learned that it is not considered good form in that Territory to ask a stranger what his name or calling may have been "back East" or "up North."

One day a gentleman of the plains entered his shop and called for a shave.

The inevitable conversational en-

quiry "By the way, Smith," asked the inquisitive barber, finally, as he made a few deft finishing touches, "what was your name back in York State?"

"Mr. Smith," was the reply.

FOR THOSE THAT WALK IN DARKNESS

IT will be hard for any man with good eyes to imagine the peculiar joy with which thousands of sightless ones will welcome the arrival and greet with gladness of all the periodicals—the *Matilda Ziegler Magazine for the Blind*. The first number is now being distributed among 7000 blind men and women in America, and the publisher is eager to find more readers.

The most impressive thing about the new monthly is the tone of cheerfulness that pervades every one of its fifty deep, broad pages as which the letters stand forth in shapes which at first glance resemble Sanscrit characters done in bas-relief. Every line breathes the spirit of optimism. Here is the periodical that appeals peculiarly to the pathetic army of those that walk in endless darkness, yet, there is in it no sign of gloom, but every indication of that serenity of spirit which is far more valuable than riches.

"The blind are not specialists interested only in blindness," Miss Helen Keller writes to the founder of the magazine; and a glance through the contents shows not only that this is true, but that the tastes and interests of the blind run through every department of human activity. The casual observer cannot imagine any influence better calculated to spread good cheer and ambition among the sightless. Here is part of the publisher's announcement.

"We will have short stories, a continued story, the news of the month condensed, a department of poetry and one of letters from successful blind people, telling of the line of work in which they are engaged. This will stimulate others to take up similar lines of work. There may be a page devoted to games in which the blind can engage, and suggestions of such games will be gladly received from our readers. A page will be devoted to short humorous paragraphs, and a prize will be given each month for the one who sends in the best joke; but as space must be economized, it will be required that the jokes be sent on a postal card, for brevity you know is the soul of wit. A musical column will be added later, and prizes be given for the best musical composition furnished by a blind reader. If a sufficient number of our readers can read music, a piece of music may be published each month, and to find out how many can read music in Point or Braille, it is requested that all such notify us on a postal card."

No magazine was ever begun with more good wishes or from more illustrious sources. Witness these letters from President Roosevelt and ex-President Cleveland:

THE WHITE HOUSE, WASHINGTON, D. C.

December 17, 1906.

MY DEAR MR. HOLMES.—I thank you for calling to my attention the fine work that Mrs. Ziegler has undertaken in behalf of

the blind. I have been interested in and am pleased with what you tell me about it. Wishing you good luck, I am,

Sincerely yours,

THEODORE ROOSEVELT.

PRINCETON, NEW JERSEY, December 12, 1906.

MY DEAR SIR.—You are quite right in supposing that I am interested in all that pertains to the welfare and advancement of the blind; and it seems to me that the project in which you are engaged, to furnish them with a magazine which they can read and which is adjusted to their tastes and desires, is in every way a most praiseworthy work. I believe that the plan which you outline as to the contents of the forthcoming magazine is on the right line.

Yours very truly,

GROVER CLEVELAND.

Every edition of the magazine is to be printed both in New York Point and in Braille type, so that the reader may have his choice. Blind persons—not those in schools, however—who wish to subscribe are invited to send their names and addresses and the kind of type they read to the manager, Walter G. Holmes, at No. 1031 Broadway, New York. In order to mail the magazine more cheaply a nominal charge of ten cents a year is made, though it costs more than \$3 a year for each volume sent out.

The managers ask as a special favor that persons receiving copies of the periodical which they do not need shall notify them, also that those who know blind persons not receiving the monthly shall forward their addresses.

One of the most interesting features in the magazine is a full-page map showing Florida, the Bahamas, Cuba, Jamaica, Panama, and the adjacent land and sea. This map, more vividly perhaps than any other item, exemplifies the sentiments written by Helen Keller:

"I know many a blind man who has sat for weary hours in the dark, feeling the drag of time weigh on his life hands, until his brain throbs, and I can fancy the joy on the face of such a man when he is told that there is to be a periodical which shall command his liveliest attention, and be worthy of his intelligence, that instead of listening to what others read aloud, at their discretion, he can choose from a good variety of articles what interests him. He will be borne back again out of his isolation into the stream of life. As his capacity for usefulness increases, his interest in things outside his experience will gain keener edge. A stimulated interest means courage against hardship."

The magazine is the gift to the blind of Mrs. Matilda Ziegler, widow of the late William Ziegler, of New York.

Two Specimen Pages from the new "Matilda Ziegler Magazine for the Blind"

ON THE LEFT-HAND PAGE IS A TRANSLATION INTO ORDINARY PRINT OF LETTERS FROM PRESIDENT ROOSEVELT, GROVER CLEVELAND, AND HELEN KELLER, WHICH APPEAR IN BRAILLE TYPE ON THE OPPOSITE PAGE. THE FIRST EDITION OF THIS MAGAZINE, WHICH IS ISSUED MONTHLY, WAS 7000 COPIES. THE PRICE CHARGED IS TEN CENTS A YEAR

International Danger Signals

The Imperial Automobile Club, of Berlin, has introduced throughout Germany seven international danger signals for the benefit of automobilists. The signals are made of the plates and are forty-seven by fifty-seven centimeters in size, and are erected five hundred meters from the dangerous points in question, and run as follows: 1, dangerous turn to left; 2, dangerous turn to right; 3, water channel, gutter or gully, hollow; 4, hooll or elevation; 5, cross-roads; 6, railway crossing; and 7, double curve.

Similar danger signals are already in use in France, Belgium, and Italy, and the action of the Imperial Automobile Club will contribute greatly to the comfort and safety of automobilists who visit Germany. This signal work is under the direct supervision of Count Adalbert Sierstorff, chairman of the Technical Commission of the club.

It is expected that the patron of the automobile sport in the United States will follow the example of patrons of the sport in other countries, thereby lessening the danger to themselves and the public in general. Such action would tend to greatly reduce the well-founded prejudice which exists in America against the use of the automobile on the public highways.

Tale of a Name

Not long ago, says a member of the bar in Mobile, Alabama, a man named Richard L. Delmandinger, a native of Germany, applied to a court in the State named for permission to change his name to Richard L. Delmand.

It so happened that not long thereafter a gentleman of the name of Smith—plain John J.—made like petition to the court. After reciting a catalogue of the ills to which he was subject, owing to his unfortunately common name, Mr. Smith said, in conclusion:

"And whereas I have noted that the honorable court has curtailed the name of Richard L. Delmandinger, and has not disposed of the 'inger,' which seems to be lying around loose, I respectfully request that the name may be added to my name."

Mr. Smith got the "inger."

North Carolina Wit

Some years ago, while the writer was returning from Raleigh, North Carolina, on an excursion train over the Seaboard Air Line, he was accosted by the conductor of the train, one who had evidently spent his youth in keeping away from anything that pertained to education, and who proceeded to unfold the following example of "Down-home" wit:

"I declare some people can ask the most foolishest questions I ever see. What do you suppose some woman asked me just now?"

I replied that I was unable to guess, and requested him to enlighten me. He then proceeded to tell his story, which ran as follows:

"While I was passing through a crotch just now some women stopped me and asked me how far we were from Weldon. I replied that we were about fifty-five miles from Weldon. She then asked, 'This side or the other side?'"

Playwrights and Presidents

It is said that when George Ade attended Purdue College in Indiana the height of his ambition was to become a League baseball pitcher, because he understood that baseball pitchers received more salary than a bush president. Three years ago Mr. Ade condensed the story of his life in college into a three-act play and called it "The College Wagon." That year Henry W. Savage paid him in royalties three times as much as any baseball pitcher ever received in one year, and the past two years Mr. Ade's royalties have exceeded the salary of President Roosevelt.

1907 Pope-Hartford Model L

Here is an unusually efficient 25-30 H. P. car, remarkable for its hill-climbing and smooth-running qualities, and fully demonstrated by actual use on thousands of miles of our country roads. In its construction have been successfully solved all the problems that are essential to the production of a modern gasoline engine of the greatest efficiency.

The four-cylinder, vertical, water-cooled 25-30 H. P. MOTOR is equipped with mechanical valves and pump-spark ignition, with provision for magneto. Sliding GEAR transmission, three speeds forward and reverse. Thorough LUBRICATION system. Especially efficient BRAKES operated by foot pedals and side lever. Perfection of CONTROL by levers on steering wheel, but not revolving with it. All parts easily ACCESSIBLE. EVERY DETAIL of construction and equipment up to date.

Price, Fully Equipped, \$2750.00

Side-Lights on Astronomy

By
SIMON NEWCOMB

General readers who are interested in astronomy but not in its technicalities will find in Professor Newcomb's volume interesting chapters on the problems that astronomers are facing to-day: How large is the universe? Has it definite bounds? How long will it endure? These and kindred questions are discussed in the light of the most recent knowledge.

HARPER & BROTHERS, PUBLISHERS, N. Y.

The newest Parsian experiment—one of the women cab-drivers who are enlivening the boulevards. They will soon adopt masculine attire, "with a view," says the official notice, "to the possibility of falls."

The new Shah of Persia, Mohammed Ali Mirza, and his son. This potentate is the sixth of the dynasty of the Kajars who have reigned in Persia since 1794.

Educating the British Palate

By M. L. Andrews

THE fact that all fruits and vegetables (with the exception of the contemptible gooseberry, cauliflower, and cabbage) are less abundant and more expensive in England than in America is not of great consequence to the tourist; but towards the end of a summer's sojourn the visitor begins to think longingly of sweet-potatoes, green corn, and unlimited peaches.

Peaches are abundant enough for the price. Once, for a special occasion, we paid eightpence (sixteen cents) each, but that was an extravagance of which we were never again guilty. Our usual price was sixpence each, small ones not being bought for fourpence, but ordinarily are quite flavorless. One peach eaten slowly with Devonshire cream is a very satisfactory dessert, and while they were in the market at this price we included them in our daily menu. In September, however, the London peaches were one shilling each, while really fine ones were two shillings or more, so we disinterestedly left them to those who must have unnecessary luxuries.

Outside of London, green corn and sweet-potatoes are practically unknown, and their London acquaintances may be fairly judged from our experience.

We had come up to London in early September and taken lodgings. Our landlady in a previous condition of servitude had been cook to Lord B.—for twenty years, and assured us in her own words, "His hundredweight London cooking from the beginning, and Hampshire cooking is no secret to me!"

Exploring the Hanover Square neighborhood one day, the commissary nearly fainted with delight at the sight of real green corn displayed in the fruiterer's window. Regardless of consequence she demanded two cobs to be wrapped up, paid her righteously, and bore them away to surprise our Sunday dinner.

Our Sunday dinner-hour came, and Sunday dinner-cloth was spread, the small maid

arranged and rearranged the serving-dishes and flower-jars, but no dinner came. Fortunately before our patience reached the vanishing-point, our landlady herself appeared, flushed and perspiring, a steaming platter in her hand, despite upon her countenance. On the platter lay our two cobs of corn in full dress of husks and silk, accompanied by an experimental fork. With a gesture indicating this tell-tale implement, the cook to Lord B.—for twenty years said: "Indeed, miss, I have boiled them this half-hour and more, but I can't get them done; they are very hard yet!"

I never met any sweet-potatoes in England, but I was told by an English lady that a friend of hers once lunched at a London hotel on a day when "American" potatoes were served as a compliment to the American guests of the house. Especially was the sympathy of our friend from the South aroused at the thought that our good friends must live and die in ignorance of the delectable sweet-potato, and plans were then and there laid to do some missionary work upon our next visit, even if we had to carry our potatoes off the steamer in our arms, as a compatriot did his specimen watermelon some years ago. Nor did we forget. Soon after our return to America a favorable opportunity presenting itself, we had packed a basket of the finest sweet-potatoes procurable and forwarded them to some English friends, then resident in Wales. The basket reached them in good time, but, alas! the explanatory letter was delayed.

Our friends immediately acknowledged the receipt of the basket and its contents with a charming graciousness which almost covered their very natural misgivings.

"We received on Saturday," so ran the letter, "a very pretty surprise—basket of the best. The wrappings show that it was forwarded from London, but had crossed the ocean to make that point. We should be so very glad to know that you and Miss R.—arrived with it, but suppose from your last letter that that is hardly possible. We are greatly pleased to be so remembered, and the yams have been placed in a proper place

to be kept safely until it is time for the gardener to plant them."

We despatched a second letter of explanation at once, but I fear that before it reached Wales those potatoes were past hope of redemption.

But a most amazingly tragic story is that of two dear old ladies down in Surrey, who lived in the house of their ancestors and fed their imagination upon the London Times. Shocking tales had come to them of rioting, of bombs and infernal machines, and of mysterious assassinations.

At a time when such horrors were receiving unusual prominence in the daily press, the sisters received, by parcel post, a bulky package well wrapped in coarse paper and securely tied with stout cord. The unusual weight of the parcel caused them to view it with uneasiness, which grew into fear as they discussed its unexpected arrival with the ancient housekeeper and her maids.

Finally it was a matter demanding the experience of a man. The gardener was called in.

With a few shows of bravery he removed the wrappings and gently pried off the cover of the tin can thus revealed. One look at the contents was sufficient; the tin was full to the brim of a gritty dark substance, the like of which they had never seen. Not one doubted but that a deadly engine was hidden in its depths. Horror and dismay filled their souls, but the faithful gardeners did not shrink from a hazardous attempt to secure their safety. Grasping the iniquitous can firmly in his hands, yet withal bearing it with the gentleness possibly bestowed upon eggs, he carried it to the furthestmost corner of the garden and buried it deep. When a week or more had passed and the earth remained undisturbed, the household began to breathe more freely, although that garden plot still cast its shadow over its serenity. So harrowing indeed was the experience to these gentle ladies that when, a few weeks later, a letter from America explained the mystery, they could not bring themselves to touch the maple sugar which the young maids had sent with such good intention and such understanding of consequences.

AUTOMOBILES ARE A COMMON SIGHT IN GOLCONDA, NEVADA, WHERE THEY FORM PART OF THE REGULAR EQUIPMENT OF THOSE WHO ARE SEEKING RICHES IN THEIR NEWEST OF AMERICAN EL DORADOS

New Post-card Regulations

The Universal Postal Congress which met in the city of Rome last year provided for universal admission to the mails on and after October 1, 1908, of post-cards bearing written messages upon the left half of the front of the cards—the right half of the face of the card being reserved for the address under the postage-stamp.

The post-card came struck Europe and spread all over the Old World before it reached America, and, being a little backward in postal affairs, the American postal authorities did not so readily as other countries see the inevitable result of greatly increased postal revenues by entering to the fact and granting the privilege of writing on one-half of the face of the card. The privilege enabled the manufacturers of cards to print a picture all over the reverse, and at the same time gave users space for a message on the face. Under the Universal Postal Convention's agreement many millions of cards which otherwise would not have been used found their way into the mails and proportionately increased the postal revenues of such countries as admitted them.

In publishing the action of the Rome convention the Postmaster-General also issued an order which provided that "On and after March 1, 1907, such cards bearing a written message upon the left half of the front, the right half being reserved for the address and postmark, when fully prepaid by postage-stamps at the rate applicable to post-cards, shall be admitted both to the domestic and international mails of this country and treated as post-cards."

In view of the fact that the postal revenues show a deficit of many millions the wisdom of the action of the Post-office Department is seriously questioned, especially as since the order was promulgated in October, 1906, the United States has transmitted without extra cost all cards which came in from foreign countries with messages written on the left half of the face.

But the printed words on post-cards—

"This side for the address only"—has been inoperative since twelve o'clock on the night of February 28; from now on the converse post-card industry will be on the increase.

What Chance Had He?

A BUFFALO physician tells of two young friends in that city who entered simultaneously upon their respective careers of physician and lawyer.

Late one afternoon the newly made surgeon dashed into the room of his legal friend, exclaiming:

"Great luck, old man! Congratulate me! Got a patient at last! On my way to see him now!"

Whereupon the legal light-to-be clapped his friend on the back, saying, "Delighted, old chap!" Then, after a slight pause, he added, with a sly grin:

"Say, let me go with you. Perhaps he hasn't made his will!"

Nearly Stung

RAYMOND HITCHCOCK, the comedian, while in New Orleans a few months ago, took the opportunity of going to the races. During the afternoon he cashed several tickets, the result of good guesses. He was feeling happy after the last race, and started for the automobile which was to convey him back to his hotel. As he was about to climb into the machine he felt a hand on his arm, and a man shouted in his ear:

"Hello, Hitchcock, how are you? Hear you put a crimp in the bookies to-day?"

Hitchcock blinked and shook his head sheepishly, not recognizing the man and not wishing to show it.

"Say, I want to speak to you confidentially," said the stranger.

"All right; what is it?" asked the comedian.

"Well, I am up against some hard luck

to-day. They cleaned me and I want to get home. Now, don't let any one of these people see you, but 'slip me' enough for car fare, will you?"

"Sure," said Hitchcock, placing his hand in his pocket. Then he paused and queried: "Where do you live?"

"Vanover," was the answer.

Hitchcock took a flying leap for his machine, and unless the visitors at New Orleans are more glibbie, the inquisitive one is still looking for car fare.

Dewey's "Olympia" a Training-ship

THE *Olympia*, the flagship of Admiral Dewey during the memorable battle of Manila Bay, on the morning of May 1, 1898, is now at the Norfolk Navy-yard being fitted out for use as a training-ship for midshipmen at the Naval Academy. In naval vernacular the *Olympia* is termed an "old fish" in the navy, and it has been deemed advisable to convert her into a training-ship, and she will be turned over to the Naval Academy in time for this summer's annual cruise. The ship is being fitted with quarters for 250 midshipmen, at a total cost to the government of \$50,000. One of the small boats formerly carried by the Spanish cruiser *Cristobal Colon* has been brought to this country, and will be permanently placed on the *Olympia* as a constant reminder to the midshipmen of the gallant fight of the American navy in the historical action off Santiago.

By

EDWIN LEFÈVRE

Author of "Wall Street Stories," "The Golden Flood," etc.

IN Wall Street Mr. Lefèvre has found all that goes to the making of the most exciting kind of a story of love and adventure. There are an American girl and American millions to be won, and the young man makes a daring fight for them.

The feverish life of Wall Street and the "wheels within wheels" of the stock-market operations have never been so graphically and intimately revealed. The reader watches the fascinating game from the inside view-point of one of the great captains of finance. The story is packed with incident, and culminates in a tremendous climax such as only Wall Street could produce.

Illustrated. Price, \$1.50.

By the Author of "The Garden of Allah"

The Call of the Blood

By ROBERT HICHENS

A wonderful new novel by the author of *The Garden of Allah*—a story thrilling with the exultant joy of physical life. The scenes are laid in the most beautiful of the Mediterranean islands—Sicily. Here the hero and heroine come from England to spend their honeymoon. In the man's veins runs a strain of Southern blood which is roused by the environment of his fathers' land and by the beauty of an alluring young Sicilian girl.

The story runs through a series of breathlessly intense and passionate climaxes. Every scene breathes the same wonderful mystic charm that made his former novel a marvel of romance.

Illustrated. Price, \$1.50.

COMMENT

Woodrow Wilson on Class Legislation

MR. WOODROW WILSON'S speech at the dinner of the South Carolina Society in New York has attracted wide attention. It seems that the country is in the mood to listen to sane and statesmanlike utterances, and of late we have heard few such wise and thoughtful speeches as that of Mr. Wilson. His poise and balance, his calmness and its judicial quality, commend it; it is, in fact, a commanding word carrying such conviction that it is clearly heard notwithstanding the noisy confusion of tongues by which the country has been bewildered and thought excluded. Mr. Wilson's appeal to the thoughts of men reveals the day of a better statesmanship. He points out to us that the men who are now so vigorously assailed that we are unwilling to listen to any defense or to take into consideration any mitigating circumstance have simply done what the country, through its laws and its government, have invited them to do. "We have stimulated material progress," says Mr. Wilson, "in every way we can think of." By the tariff, which he calls the "chief instrument of stimulation," and by other legislation and unopposed legislation, we have created favored classes which we have aided to acquire a wealth of the effects of which we now complain. Our own laws have granted to their own favorites the opportunities of which they have availed themselves. If the country has been oppressed by these favorites, the people must blame themselves even more than they blame those who have taken advantage of the legislation by which they have been invited to grow rich at the expense of the taxpayers and consumers. The people, through the laws of Congress and by the efforts of sympathetic administrators of the laws, have built up favored classes, and now when they are face to face with the evils that have naturally followed their own conduct, and logically flowed out of their own policy, a cry is raised and a movement is started which would not only punish past wrongdoing and prevent future evils, but would impair or destroy the usefulness of public services that are essential to the prosperity of the country and of every one of its citizens who is dependent upon its business.

No Deal, Square or Otherwise

It is difficult to believe that any one who will carefully read and consider Mr. Wilson's speech can fail to recognize not only its soundness and soundness, but its essential Americanism. The proposition that there should be no class, or classes, in this country favored by our laws is fundamental democratic truth; and Mr. Wilson clearly points out that we have departed from this general principle; that we have built up whatever law-sustained special privileges we possess; and that a strong sentiment, perhaps a prevailing sentiment, among us favors the punishment of our erstwhile favorites while we retain the vicious principle that has created and fostered them. Mr. ROOSEVELT'S own refusal to consider

tariff reduction, his belief that it is comparatively immaterial, are evidences of the prevalence of this sentiment. His loyal advocacy of the evils of trade-unionism, of its monopolistic features, of its demands for the recognition in law of unionists as composing a favored class, although they are a minority of labor, is another evidence. Mr. Wilson is opposed to all class legislation, and it is this view which we have in mind when we say that his statesmanship is not only sound, but is essentially American because it is essentially democratic. The difference between this statesmanship and another which has captivated some minds by its seeming fairness is illustrated by the following extract from Mr. Wilson's speech:

If we are to restore the purity of our law and the freedom of our life we must see to it—in all moderation and all fairness—that no class whatever is given artificial privileges or advantages, and that our life moves free again of fear or favor from whatever quarter or whatever class. What we need is not a square deal, but no deal at all—old-fashioned equity and harmony of condition, a purged business and a purged law.

How much nobler and higher than the other is the ideal of Mr. Wilson will be seen at once by all who have not forgotten or rejected this republic's own ideals of individual liberty and equality. It is one of the hopeful signs of a doubtful time that Mr. Wilson's speech is greeted sympathetically and cordially by the independent and Democratic press throughout the country.

Cleveland on Current Delirium

A notable endorsement of Mr. WILSON'S contention is found in an interview with GROVER CLEVELAND, published in the *New York Times*. No one can question Mr. CLEVELAND'S hostility to whatever evils and wrongs have resulted from the partnership between government and wealth; but he, too, utters a word of caution, and his tone is familiar to all of us who recall the fact that calm judgment and perfect fairness have always been the characteristics of our great statesmen. This is part of what Mr. CLEVELAND said:

"There is much of the nature of delirium in the popular outcry against railroad corporations, for instance. We shall all be ashamed of it by and by. I dare say I have some reason to know of the real iniquities of corporations, and do know them, but there is much that is not only groundless, but wrong, in the off-hand attacks made on the railroads by the thoughtless people on all hands. What is well founded in them will be cured, but the error of denunciation will soon pass. We shall reflect that railroads are vitally related to our prosperity, and that to attack them needlessly is to attack ourselves. It is not the stock of soulless millionaires, but the property of citizens, of widows, and orphans, whose savings are invested in railroads, that is being damaged. We shall recall what railroads have been and are still to be in the development of our country, and this cry will pass. "Of course there must be some form of governmental supervision, but it should be planned in a quiet hour, not in one of angry excitement."

Mr. CLEVELAND, too, believes that the tariff is the root of our evils, for by it classes have been built up—classes whose profit has been found in controlling the government, while the class legislation which favored these beneficiaries has bred a desire for more of the same kind, to the end of enabling other classes to enrich themselves by law. Like Mr. Wilson, Mr. CLEVELAND thinks that the evil principle should be destroyed. He sees no great principle in the measures for reducing railroad fares to two or three cents a mile. There are broader and deeper questions, and especially the question, "Shall we maintain our 'barbarous superintention of industrial isolation'; shall we continue to fatten favorites by legislation only to turn upon and destroy them after they have prospered on our own gifts, and because of evils the seeds of which we ourselves have sown?" It is important to note among the chief endorses of the doctrine of the two *New Jersey* statements is the *Louisville Courier-Journal*.

Important Truths About the Railroads

A good deal of evidence is being offered to us of several very important truths. The first is that the railroads are essential to the proper transaction of the business of the country; the second is that some of the railroads, especially those that were operated for a long time at a loss on account of the character of the country through which they were started, have themselves built up much of the business which our demands their service; the third is that charges have been fair, and that, as President HAMLIN predicts, any fair

valuation of the roads by the Interstate Commerce Commission or by any other authority will show this; the fourth is that the present business of the country is so great that enormous railroad expansion is absolutely necessary. Given all these factors of the problem, it is evident that the railroads cannot be put out of business, or limited, or crippled, without great material injury to the whole country. It is gratifying to learn, therefore, that the President has taken counsel of men who are in the business of railroading, but it is greatly to be feared that he is thinking out some way of giving the roads a "square deal," when he ought to be seriously pondering upon WOODROW WILSON's wise observation that what we need is no deal. There should be the proper enforcement in the courts, on the initiative and motion of the administrative authorities, of laws which provide punishment for evil practices, but the effort to place experts who know railroading under the supervision of laymen who know politics is precisely wrong, while it has had most to do with bringing about such injurious conditions that the President is now resorting to consultation and to thoughtfulness. The country and the railroads are not so much in need of new restrictions and paternal laws as of reasonable freedom, and of this reasonable freedom the untroubled and waiting parts of the country are chiefly in need.

Secretary Taft's Boom

In almost every issue of the daily newspapers we read something about Mr. Taft's "boom," one day being informed that the President is supporting it, and on another day that he is not. Whether or not would be interesting if we could only know which, but of this we may be certain: that if Mr. ROOSEVELT should name a successor as ANDREW JACKSON did, and that successor should be elected, his experiences would be as unhappy as VAN BUREN'S. It may be added that Mr. Taft would prefer to be Chief Justice of the Supreme Court for life, rather than for four years to be the MARTIN VAN BUREN of the twentieth century. It is also true that no one who is opposed to a severely paternal government, and no one who is opposed to increasing Federal powers or to the usurpation of State powers, contrary to the fundamental law, by constructions of the Constitution, ought to want Mr. Taft to be President. By the same token, Chief-Justice FLETCHER owes it to the country and to his own convictions to remain in his present office to the last moment.

The People's Mind

It is primarily the President and the Supreme Court who speak the people's inmost mind and who express, in spoken and written word, in administrative act and in judicial decision the highest will of the whole people.—President Butler of Columbia College.

Whose mind do the lawmakers speak—the President's or the Supreme Court's? Is the "mastered" law an edict or a construction?

Senator Lodge on State Rights

Senator LODGE recently addressed the Massachusetts Legislature. A Senator who does this sort of thing, and it is very often done in Massachusetts, ought to, and sometimes does, have something of moment to impart to these immediate constituents of his. Mr. LODGE desired to allay fears that have been somewhat forcibly expressed as to the "usurpations" of the Federal government upon the powers of the State which, in these very words, have been approved by Governor THURMOND of Iowa. Notwithstanding this endorsement of the Federal anti-State movement, it has been felt that the representatives of the States in the Senate would feel impelled to resist it. If any Senator could be expected to side against the States, it would naturally be Mr. LODGE, but Massachusetts has again had influence with its Senator. He told the Legislature that he believed in the "dual form of government," and assured them that the "men who represent the States in Washington have no desire in themselves to encroach on the power of the State." Once more there is reason to be grateful that the Senate, as now organized, has not been destroyed in answer to hasty criticism.

Mr. Bryce and Canada

Mr. BRYCE has come to this country with some very interesting instructions. He hopes to be able to make a treaty with the United States which will put a peaceful end to

all the fifteen questions which mutually worry us and our neighbor on the north. It is said that he is practically in agreement with Secretary ROOSEVELT, and this means, if it means anything, that the British Foreign Office and our own State Department are in agreement. The more important of the questions which require settlement are these: (1) tariff reciprocity, the difficulty here being that Mr. ROOSEVELT desires Canada to adopt our tariff laws against Great Britain and free trade with us; (2) the preservation of Niagara Falls, it being hoped to take the subject from State jurisdiction by treaty; (3) preservation of the seal herd in Bering Sea; (4) fisheries in the Great Lakes and off the Atlantic and Pacific coasts; (5) naval vessels on the lakes. It may well be that the British government and the State Department will arrive at an agreement; but that is not all. The Senate must ratify on the part of this government, while we know by experience that the British government will not definitively conclude any treaty affecting Canada to which the Dominion government objects. It is necessary for Mr. ROOSEVELT and Mr. BRYCE to agree before we have a draft; but the consent of the Senate and of Canada is necessary before we have a treaty.

Forbidden stuff

Bad men at times raise considerable hob and do serious harm, but they are hardly in the competition as mischief-makers with good men who for one reason or another take the wrong side. Good men are expected to be right, and people are prone to judge of the soundness of their judgment by their walk and conversation. Character procures influence and ill repute promotes distrust, but sagacity and wisdom sometimes go with vulnerable morals, and sometimes—sad to say—the upright man has marvelously bad judgment. Governor PENNAPACKER of Pennsylvania is universally credited with personal integrity, yet because he was a simple-minded old fogg he was easily made the tool of the unconscionable rascals who got upwards of nine million dollars out of the State of Pennsylvania for furnishing a three-and-a-half-million-dollar court-house. So the late CONVENTANT PENNAPACKER DUMFRIESSTAFF, who had a fair title during a good part of his long life to be considered the most mischievous man in Europe, was a man of austere morals and deep piety, learned, sincere in his convictions and fearless in living up to them. He was a good man with his head turned the wrong way. He saw backwards, but could not see forwards. He believed in the absolute authority and divine right of the Czar, and of the Russian Church of which he was himself the lay dictator. He disbelieved profoundly and from deep conviction in free speech, publicity, and individual liberty, and opposed all three with every weapon he could wield as long as he had power. He lived to be eighty years old, and died in his bed at least two centuries later than he should have died.

The Wonderful Deal at Harrisburg

After all, there are some pretty greedy bad men in the country besides those who are trying to manage the railroads. A very interesting group of such persons are under scrutiny in San Francisco, where there is good hope of bringing them off justice and possibly to contrition. Another group is under investigation by a commission sitting at Harrisburg. This latter squad is composed of the individuals who got the contract for furnishing the Pennsylvania State Capitol. As mentioned above, the Capitol building cost less than four millions, but the expense of decorating and furnishing it ran the bill up to a total of \$13,154,422 18. The story of the expenditure of the nine millions that went for "furnishings" is one of the most unseemly tales of rascality that ever has come to the attention of the American people. Pennsylvania is a big and rich State, and can stand being robbed of four or five million dollars at any time without any great distress. In this matter of the Capitol it is not the loss of the money that need hurt so much as the humiliation of having such a gang go through the State's pockets in such a way. All the details of the story have not yet come out, but enough of them are known to make the story of TWIDEN's court-house and of the Albany Capitol seem like commonplace pilfering. The public has heard how, apparently by collusion with the architect, J. M. HENRY, and others, an ambitious contractor, JOHN H. SAWYER, of Philadelphia, got the contract for

providing the new Capitol with preposterous embellishments at incredible prices. We have heard about the bronze chandeliers and standards, charged and paid for at \$4 85 a pound, costing altogether \$2,225,955 98, made of solid bronze so as to weigh more, and of such enormous size and weight that those that hang from the ceilings are unsafe. We have heard, too, of the gigantic mahogany furniture paid for by the cubic foot. We know about the "mahogany" rostrum that cost to make \$2000, and for which the State paid the contractor \$10,748 90. For painting and decorating certain walls Saxenon received \$79,473 16. A first-class firm of decorators had offered to do the work at \$161,473 58, and first-class decorators do not work cheap. These figures give some idea of the methods by which the taxpayers of Pennsylvania, in return for their good money, have been provided with an unrivalled monument to their own impotence, the corruption of their late State government, and the ambition of contractor SAXENON. A great State has been made ridiculous. That ought to hurt it more than being robbed.

The Brownsville Raid Again

Major PENROSE, tried by court martial at Fort Sam Houston in Texas for neglect of duty in connection with the shooting up of Brownsville, has been acquitted. It appears that the written findings in the case, not yet published, will go into the question whether the negro troops of the Twenty-fifth Infantry were guilty of the Brownsville raid. The opinion of the court on this point will be received with lively interest. When the President dismissed the negro companies for concealing the identity of the men who raided Brownsville, the prevailing opinion was that his action was unjust, because it had not been proved that the soldiers were guilty of conspiring to protect their guilty comrades. But few persons doubted that some members of the company had done the shooting, and that others must have known about it. Major PENROSE and other officers were blamed for not knowing what was going on and taking measures to discover who was guilty. Now a court martial finds Major PENROSE not to blame, and the testimony given before the Senate's investigating committee, while deepening the mystery that clouds the whole affair, has made it seem reasonably probable that the great majority of the discharged soldiers knew nothing at all about the shooting, and had nothing to tell. It is not even clear as yet that any of the colored soldiers took part in the shooting, and it has been made less incredible than at first that some of them had a hand in it.

Good Results of the Atlanta Riots

In the April number of the *American Magazine* there is an informing and encouraging review of the Atlanta riots by RAY STANFORD BAKER, which students of race problems will do well to read. He tells what started the riots, what negroes suffer from the propensity to pronounce snap judgments on them when accused or suspected of crime, what class of men did the rioting at Atlanta, what kind of negroes were killed, what was the effect on the credit and prosperity of the city, and what has been done to prevent such happenings in future and to promote better and safer relations between whites and blacks. Our recollection is that TILLYMAN and other disturbers of peace hastened to say on getting news of the Atlanta outbreak that it was only the first of many similar race clashes that were sure to come in other Southern cities. Mr. HAYES's piece goes a good way to upset that opinion. He shows that the Atlanta riot, far from being a necessary and inevitable clash of outraged whites and threatening blacks, was an utterly scandalous and unwarranted performance, growing out of conditions that should have been remedied, and conducted by a scoundrel white mob, egged on by newspaper agitation. It did Atlanta no great a material injury as to be a warning to other cities not to let such things happen. What is encouraging is that it woke Atlanta up, scandalized all the sane people in the town, impelled them to find out and publish the truth about the riots, and to consult, formally, for the first time, with representative and leading negroes as to what measures were needed to secure due protection for all citizens. This public conference of white citizens with black as to measures necessary for the good of both was an exceedingly important and encouraging step, and worth, probably, all, and more than all, the Atlanta riots cost.

How Women Get Things Done

It is interesting to note the public activities of women in government, and to compare the trouble they take and the sacrifices they make with the conduct of those who have the monopoly (or almost) of voting and of filling offices. When we wasted clean streets in New York we had attained a point of such civic usefulness that even the men voters were contemplating the necessity of "doing something." But the women actually did something, and enormously expedited the establishment of better conditions. They formed an active association, and so woke up the voting fathers, husbands, and sons that these took intelligent action. The other day in London, when the city found itself loaded with a debt approaching \$100,000,000 for municipal trailing enterprises, the women voters rose and drove to the polls the men who, by abstaining from voting, had permitted the continuance of a municipal government which, at the expense of the overburdened taxpayers, had embarked in all sorts of expensive experiments in city socialism. And now it is a woman who, for the moment at least, has prevented the further pollution of the Hudson River and New York Harbor by securing an injunction which prohibits the building of the obnoxious Bronx sewer. Mrs. HUGHES—this is the name of the engineer—has performed the duty of a taxpayer, and no voting man apparently has thought it worth his while to vindicate his right to the suffrage by taking so much trouble for the city of which he is one of the rulers. The task has been left to one of the ruled. The *New York Times* hopes that there is some woman in New Jersey who will follow Mrs. HUGHES's example and enjoy the scenery of the Passaic Valley.

Personal and Pertinent

Does anybody like that portrait of President ROOSEVELT (late) exhibited in the window of a Fifth Avenue picture-shop) that is destined to hang in the hall of the Peace Congress at the Hague? To our mind it falls by a great space to do our NOBEL prize winner justice.

The twenty-five-hundredth performance of "Ben-Hur" was given on April 2 at the Academy of Music in New York. The dramatized version of General WALLACE's story was first produced at the Broadway Theatre in New York on November 26, 1899. Since then it is estimated 6,000,000 people have seen it played in various theatres in the United States, including about a million people who have seen it in New York, where it has been played about 450 times. This is a remarkable record of vitality, comparable with that of "Uncle Tom's Cabin" and "The Old Homestead." No doubt the secret of the lasting popularity of all three of these very dissimilar plays is that they all appeal to associations or traditions that are inherent in the American consciousness. A generation of city-dwelling and largely city-born people likes to be reminded that their fathers were farmers and farmers' boys, and were red swollen sufferers and cowards in winter; a generation that was born after slavery died likes to get a more vivid notion than history books give of what slavery was and why it made trouble; a generation that may or may not be readers of the Bible realizes that the Bible is a force and influence of unrivalled power in our civilization, and flocks curiously to see a remarkable dramatic show that has the Bible for its background.

JOSEPH BERRY HAYES, the first Senator to serve a term in prison, is greatly to be pitied, or he would be if he did not talk so much, and thus constantly advertise his moral impotence. It may be that Mr. ROOSEVELT is as ambitious as the released convict Senator says that he is, and it is true that better men than Mr. BRYAN believe that Mr. Roosevelt will accept a nomination for a third term, but Mr. HAYES will not convince any sane-minded person, whether that person likes or dislikes Mr. ROOSEVELT, that the President is coldly and cunningly playing a game, the object of which is to create a demand that he shall be the Republican candidate in 1908, especially a game that involves the slaughter of some of his best and most loyal friends. The antagonist of Mr. ROOSEVELT as a President who will go farthest is a man for whom the President has the deepest respect. He says that President ROOSEVELT has foreseen a panic, and is willing that a Democratic President shall bear the odium of it, just as the Republicans unloaded their 1893 panic on Mr. CLEVELAND; and then, he further says, Mr. ROOSEVELT expects that the country will turn to him to save it. This would be a funny provision of facts, and if they could happen would not be very creditable to the perspicacity of the country. BRYAN goes farther than this, but he will not make much impression either on Mr. ROOSEVELT or on any one else.

THOMAS BAILEY ALDRICH

1836—1907

By HENRY MILLS ALDEN

It seems impossible for us to associate death with the Singer. As Aldrich himself sang of Longfellow, in the last poem he wrote, which was read first Friday at his funeral, and seemed a fitting as well as the most essential part of the simple service:

"Above his grave the grass and snow
Their soft antiphonal strokes write;
Moonrise and daybreak come and go;
Summer by summer on the height
The thrushes find melodious breath,
Here let no vagrant winds that blow
Whisper of death.
They do not die who leave their thought
Imprinted on some deathless page."

His old-time friends who listened to the reading vividly recalled how always his spirit reacted against the visible insignia of mortality and of mortal weakness, and against any expression of sorrow for loved ones gone that should seem, as he phrased it, "black with grief." It was not death he shunned but what Sir Thomas Browne called "the funeral glass we put upon it." The oldest of his comrades whispered to me: "He did not like to be seventy. He dreaded to grow old." So the stiffness materially embodied in his form lying before us, under the colors of the commonwealth, only accentuated our sense of the eternal mobility of the spirit.

The youth which Aldrich cherished for himself became the buoyancy and charm, the joyance and suppleness of his work. More than any other of our writers he is our Adonis. He never crowded the market, never even seemed to belong to it, but rather to the gymnasium in its Hellenic sense. We would gladly have had more of his poems and romances, but during the greater part of his career he was never driven by necessity, and he never sought by frequent appeal to keep an audience already won.

Other writers have seemed apprehensive of obduracy if even for a little while they should relax their hold, or they have had some ulterior purpose and have feared to lose their influence by lack of persistence; while still others have cultivated the familiar regard of readers from the love of it, showing it their richest reward, and, whatever the distinction of their art, some of their most delightful traits are inseparably associated with the charms of this sedulous courtship. But Aldrich was always fearful of his fate with the reader, fearful that his deserts would really be small if he did not hold himself well in hand; and this cautious circumspection grew with the years, until he came almost to Mr. Olney's view of the limitations of any individual career. It was not from indifference that his ventures during the last twenty years have been so few and so far between, but from the fear that he might not respect the limit and, without himself being aware of it, betray unwarlike weakness.

His silence was the more easily forgiven because of the distinction of each rare venture. The intervals, however long, were haunted by the melodies we had heard, by the romances we averted sight of reading. A story like "A Sea-Turn" would last for years—no would a somewhat like "Invention is Sleep." There was no impatience in our waiting, and, now that waiting is useless, we have no sense of lack but rather the grateful sense of enduring artistic fortitude.

Time alone can sift the gems of literature. Certainly nothing can be more futile than the attempt to forecast any master's place in literature by comparison with his contemporaries. Who shall say how far along the vista of the future a writer's theme shall carry

his memory? Judging by the past, the better vehicle for the long way should be the excellence of the writer's art. Art is not merely the form of expression; the soul and essence of it is beauty, harmony, or whatever quality of the human spirit has a flaming excellence, transcending in its eternal interest all that is vicarious and transitory—wherever, it is said, "Art is long and life is fleeting." In the enthusiasms of human imagination, it is this everlasting passion or ideal interest which determines the form. The finish the poet gives to the form is only that consummate and which burns away what is extraneous, accidental, or imperfect.

These considerations are essential to our estimate of Aldrich's work in verse or prose, for, whenever that work is discussed, the question arises as to the relative importance of form and theme, and the transition is easy to a comparison of this writer with contemporaries like Lowell, Whitman, Whittier, and Longfellow, for whom the theme did so much in the enhancement of the general esthetic.

Whitman, in those New York days when Aldrich sometimes met him at Pfaff's, may have spoken of some of the daintier poet's verse as his "little trinket," and perhaps some of his most enthusiastic admirers would have esteemed it as such lightly, in comparison with "Leaves of Grass"; but simply as poetry it had an æsthetic excellence which Whitman would not even have cared to match.

Aldrich so diligently and ardently wooed the muse, that it would have seemed to him just cause for her stern jealousy if he had given more thought to the poet's mission than to his art. His musings did not blend with the familiar thoughts of his readers as Longfellow's did. If he had served the reader with half the zeal he gave to the service of the muse he might have always won a homelier welcome. But he was not a mere craftsman, an artificer of words. If he had the defects of Homer he had also the grace of Virgil. And while his verse occurred to us fire from that fane in which Whittier was a worshipper, while it was Parnassian in its reserve rather than Delphic in prophetic ecstasy, it never lacked some and natural feeling.

Much of this feeling was due to his simple love of Nature, which frequently found unaffected expression in his poetry. He was readily attached to the soil of his native "Rivermouth," which looked seaward.

"Only keen, salt-sea odors filled the air,
Sea-sonds, sea-odors—these were all my world.
Hence is it that life languishes with me
Inland: the valleys stifle me with gloom
And pent-up prospect; in their narrow bound
Imagination suffers futile wages."

We can understand why, in his later and most prosperous years, his leisure was given to frequent sea voyaging. The "sea-languishings" were deepened by the vision of mystery naturally awakened and stimulated by the open Atlantic prospect. Perhaps, too, in the blending of the remote with the familiar in his free fantasies, was developed that peculiar order of wit which distinguished Aldrich from all other American humorists. The habit of co-referencing far with near things prompted in conversation a brilliant suggestion or the quick repartee, and, in such poems as "Identity," the sudden surprise. This gave his sketches of travel the charm of unusual freshness, and all his work the value of originality. His interest in the extremely foreign was not that which one feels in what is exotic. To him it was a provincial curiosity, which found in the surprisingly strange at once the strangely familiar—

Thomas Bailey Aldrich

JACKSON AND ROOSEVELT A PARALLEL

COMMENTS OF THE PRESS UPON AN ANALYSIS OF PRESENT CONDITIONS

We venture to tax the patience of our readers by printing the following extract from a speech made by the editor of this journal in Christian on St. Patrick's day, and published in full in the current number of *The North American Review*, together with certain comments thereon:

"The President whom WASHINGTON refused to constitute the guardian of liberty was a ruler such as JACKSON, whom he had in mind, and of whom, in SUMNER'S admirable biography, we find words well worthy of pious consideration at this time.

"JACKSON," says his biographer, "held that his reelection was a triumphant vindication of him in all the points in which he had been engaged in controversy with anybody, and a kind of charter to him, as representative, or, rather, tribune, of the people, to go on and govern on his own judgment over and against everybody, including Congress. His attitude towards the Supreme Court, his discontent with the Senate, his construction of his duties under the Constitution, all things, great and small, were held to be correct and passed upon by the voice of the people in his reelection. . . . The Jeffersonian non-interference theories were now all left far behind. Jacksonian democracy was appearing already the Napoleonic type of the democratic empire, in which the chief of the nation is charged to protect the state against everybody, chiefly, however, against any constitutional organs. . . . Up to that time the Supreme Court had not failed to pursue the organic development of the Constitution, and it had, on every occasion on which it was put to the test, proved the bulwark of constitutional liberty, by the steadiness with which it had established the interpretation of the Constitution, and effected every partial and interested effort to wrest the instrument from its true character. . . . JACKSON'S appointments introduced the mode of action by the Executive, through the selection of the judges, on the interpretation of the Constitution of the Supreme Court. . . . During JACKSON'S second term the growth of the nation in wealth and prosperity was very great. It was just because there was an immeasurable source of national life in the physical circumstances, and in the energy of the people, that the political follies and abuses could be endured."

"So we perceive that there is no novelty in our present situation. In JACKSON'S time, as to-day, despite the overest general conditions, there were constant manifestations of dissatisfaction and unrest, and the dispassionate historian does not hesitate to attribute them to JACKSON'S character and example.

"What will the harvest be? Let us turn for a parallel to the pages of history recording the immediate sequence of the JACKSON administration and read as follows:

"A few days after VAN BUREN'S inauguration the country was in the throes of the worst and most wide-spread financial panic it has ever seen. The distress was fairly appalling, both in its intensity and in its universal distribution. All the banks stopped payment, and bankruptcy was universal. . . . The efforts made by BUREN and other Jacksonians to stem the tide of public feeling and direct it through the well-worn channel of suspicious fear of, and anger at, the banks, as the true authors of general wretchedness, were unavailing; the stream swelled into a torrent, and ran like a mill-race in the opposite way. . . . But a few years before the Jacksonians had appealed to a senseless public dislike of the so-called 'money power,' in order to help themselves to victory, and now they had the chagrin of seeing an only less irrational outcry raised against themselves in turn, and used to cast them from their places. The people were more than ready to listen to any one who could point out, or pretend to point out, the authors of, and the reasons for, the calamities that had befallen them. Their condition was pitiable. . . . Trade was at a complete standstill; laborers were thrown out of employment and left almost starving; farmers, merchants, mechanics, craftsmen of every sort—all alike were in the direst distress."

"Such is the veracious chronicle of THEODORE ROOSEVELT, historian, of the aftermath of an administration in all respects strikingly similar to that under which we now live—similar, in methodical attack upon property, in appeals to envy and megalomania, in wanton extravagance, in the demoralizing characterisation of the Chief Executive, in his abhorrence from the conservative branch of his own party, in his determination to obtain new restrictions of

the Constitution from justices appointed by himself, in faith in his own ability to make the people happy, in his assumption that he was equaled by them not their mere executive officer, but their tribune, in his personal popularity and power.

"The harm," adds the historian, "was largely due to causes existing throughout the civilized world, and especially to the speculative folly rife among the whole American people; but, he significantly concludes, 'It is always an easy and a comfortable thing to hold others responsible for what is primarily our own fault.'"

"Thus spoke the historian. Pray! that a like evasion of responsibility may not be forced upon an historian become President!

"I have drawn upon the bitter experience of the past for a parallel designed to indicate the menace of living tendencies because it is necessary to make the portrayal distinct and clear. The line I would draw lies between impulse and reason, between hasty action and sober judgment, between practice of politics and aim at statesmanship, between too great heed of expediency and too little observance of principle, between attempts to regulate human destiny, from before the cradle to after the grave, and reliance upon natural remedies and the patriotic spirit of American citizens."

SOME PRESS COMMENTS

(From the *Charleston "News and Courier"*)

Shall the American people rule themselves or shall they be ruled? Shall the government established by them be maintained, or shall government of the people, for the people, by the people, perish from the earth? This was the theme of Colonel HANNEY'S wonderfully effective address at the anniversary dinner of the Hibernian Society last night.

The subject is one that appeals to the patriotic sense of all our people. The powers of the government are derived from the people, and all the powers not expressly conferred upon the government at Washington are reserved to the States. That is the theory upon which our system of government was founded; that is the principle upon which it has been developed, and that is its only safeguard for the future.

We have fallen upon evil times. The hand of usurpation has been laid upon the liberties of the people, and in the warnings as eloquently uttered by Colonel HANNEY last night there is a clear call of duty to all who value the integrity of the American republic. He drew this very striking picture of what might happen to this country:

"In the ordinary course of human events, especially in the demoralization and excitement and misapprehension of a national political contest, an error might be made, and one might be chosen by the nation as Chief Magistrate who should combine in himself qualities of professional inconsistency with his practices as to create general distrust, and constitute a real menace to the stability and permanence of our national institutions; one, for instance, who, while demanding vehemently that all should be doers and builders, himself should be the most striking exemplar of constant undoing and persistent tearing down; one who should sternly denounce all crimes, though himself the most remorseful of persons; one who should smear at opponents for antagonizing radicalism instead of proposing actual reforms, while himself forced to appropriate the notions of political antagonists; one who should hold aloft the banner of idealism and simultaneously trade with those notoriously corrupt; one who while urging the necessity of individual achievement should encourage socialism while inviting attack upon accumulations of wealth which are the natural results of the very individual endeavors thus advocated; one whose sense of personal righteousness should so far overpower his sense of personal charityableness as to induce frequent denunciation of those disagreeing with him as wicked, malicious, and unqualified provocations; one who should while constantly railing at trusts, yet shield with the utmost care the sacred trust, however of them all; one who should deplore political contributions from corporations, yet raise to the most powerful position in his government one who had sought and obtained them; one quicker than any other in demanding restitution of diverted funds, yet painfully silent respecting the disposition of large sums of money taken from policy-holders

and used to insure, not the lives of the insured, but the election of a President.

There is no mistaking who sat for this picture. It is not necessary to tack the name on the frame or print it in the catalogue. There has been no President of this country when the description would fit but THEODORE ROOSEVELT. Yet the people have applauded him just as they have always applauded revolutionists and usurpers. In "days like these," when the very foundation stones of our government are being destroyed and the country is filled with discontent, it is well that some strong, true voice should ring out the alarm, undisturbed by the threat of power. Colonel HARVEY has performed a patriotic service in stripping the President of the rags of authority in which he would array himself, and in calling upon the people, and particularly upon the people of the South, to stand by the faith of the fathers.

Colonel HARVEY has picked up the President of the United States on the end of his thrusting, heaving, and lacerating logic, and the Rough Rider is exposed. He presents no engaging spectacle to the judicious and perceiving. The shallowness, the noisy aggressiveness, the charging and countercharging, the overblowing dining of self-achievement by the President, have all along with him been indicated by thinking men, but at no time in the past have they been displayed with the contrast of the country's history, its facts savagely condensed, and the whole picture arranged with inexorable logic shining upon them, so that the unperceptive as well as the discerning must ponder them.

Colonel HARVEY's speech, unhappily for the President, was one of those which will be read. It holds to the gaze of the people of the republic this blot of theirs in such a light that they cannot save themselves from looking him through and through. WASHINGTON, JEFFERSON, WEBSTER, LINCOLN, and CALHOUN have been summoned and have borne witness against him with living voices, and their minds have met in concord of accusation that this young man of the glib tongue, the galloping pen, all-around temperance acrobatic in at heart the enemy of the Constitution, the upreter of American institutions, the implacable foe of the sovereign States, and powerful and menacing, at least so long as bluster shall achieve.

(From the Boston "Herald.")

The speech of Colonel GEORGE HARVEY, editor of *The North American Review* and of HARVEY'S WEEKLY, to the Sons of St. Patrick at Charleston, South Carolina, last night, was one of the most notable utterances on the anniversary then celebrated.

In the speaker's view, "One overpowering question now confronts the American people: Shall they rule themselves, or shall they be ruled? Shall their sovereignty continue to be popular, however incomplete, or become virtual, however limited?" In these questions Colonel HARVEY embodies his conception of the old issue between Federalism and States' rights—a centralized national government or "popular sovereignty," exercised through local authorities. He makes perhaps the most pointed and effective array that has been presented during the current discussion of the theoretical dangers of a "strong" national government, and of the arguments and warnings of our earlier statesmen and jurists against it. The shafts which he lets fly at President ROOSEVELT, Secretary ROOT, and other promoters or defenders of the doctrine of expanded and advanced nationalism are sharply pointed and well aimed.

Yet, after all, do not the eminently practical American people take a practical view of this question? Do not the American people "rule themselves" just as truly and as much in electing a Congress to make laws for them and a President to execute those laws, in matters pertaining directly to their welfare, as they do when they elect State Legislatures and Governors?

There has, beyond question, been an extension of the Federal power and authority beyond the limits specifically assigned to it by the framers of the Constitution. Was any defender of the Union ever able to point to the precise words in the organic law forbidding a State to secede, or authorizing the employment of armed force to prevent it? Where was the precise warrant for the government notes issued during the war, for the proclamation of emancipation, and the measures adopted for "reconstruction"? Were not these assumed powers based upon the "interpretation" of the "construction" of the Constitution which the new champions of States' rights denounced so violently when the rule is invoked to protect the people from poisoned food, and for the regulation in other ways of corporations that are above and beyond separate State control?

Is President ROOSEVELT, for example, a "ruler," in the sense of wielding autocratic power? Has he personally or in conjunction with Congress deprived the States of any of their reserved rights? Can he do it without their consent? Has any citizen been deprived by the President or by the Federal government of his constitutional liberty? Has any law-abiding corporation, even, been oppressed or wronged by the Federal Department of Justice? What is the specific complaint? What is the tangible injury?

The *Herald* is content to stand with WINDHAM WALKER, Colonel HARVEY'S Democratic candidate for President, when he says: "We

can't confine a political system in the strait-jacket of a theory," in his candid admission that "it is a fortunate fact that the violation of the theories of our political system has led to no practical inconveniences." He sees no subjection of States nor oppression of individuals—not even any "inconveniences."

We admire Colonel HARVEY'S ability, and enjoy the concussions in his speech. But we have no fear that "our liberties" are menaced, nor that anybody will rule this glorious republic except the American people themselves.

(From the Hartford "Times.")

The country is indebted to GEORGE HARVEY, who conducts the great publishing business still known as Harper & Brothers, and who personally edits HARVEY'S WEEKLY and *The North American Review*, for a new portrayal of the Honorable THEODORE ROOSEVELT, President of the United States.

Colonel HARVEY was the principal speaker at the banquet of the Sons of St. Patrick in Charleston, South Carolina, on Monday night, and he used the occasion to make the most striking political address of the year that has attained general publicity. He quoted DAVID WINDHAM'S powerful denunciation of "persons who constantly clamor," who "carry on a mad hostility against all established institutions"; who "would choke up the fountains of industry and dry all its streams"; who, "in a country where property is more equally divided than anywhere else, read the air with the shouting of agrarian doctrines." The comments of Colonel HARVEY were these:

"Here we have a perfect picture of our present situation. Prosperity, aided by a President, has produced a discontentment of feeling and action, a desire to enjoy the fruits of other men's labor and the promulgation of agrarian doctrines; complaints of oppression and of the pernicious influence of accumulated wealth have provoked hostility to established institutions, and enterprises against the combining of small capitals to produce beneficial results bid fair to choke up the fountains of industry and dry all its streams. Already, as an immediate effect of a whirlwind of hostile legislation leveled throughout the country by the declarations of the President and the 'warnings' of the Secretary of State, capital has withdrawn its essential support, money cannot be had to provide adequate means of transportation, railway companies are called upon to make bricks without straw, and all enterprise is at a standstill in the face of the official boast of so much 'already done,' and the latest threat of a further 'girdling up of loins to do more.' Because a few have done wrong all must suffer; just discrimination has been thrown to the winds, and the end is not in sight. The President reiterates the assertion that he is still unconvinced of the necessity of serving a third term, but authorizes the positive announcement that no 'reactionary' need apply for the Republican nomination."

Colonel HARVEY admits that President ROOSEVELT, like ANDREW JACKSON, will probably be able to name his own successor, and he raises the interesting question whether the aftermath of the ROOSEVELT administration will be a tremendous financial convulsion like that of 1857, when VAN BUREN had taken the Presidential chair, and when hard times, largely the result of world conditions, were attributed to Jacksonian policy. In this connection Mr. ROOSEVELT'S description in his book about the Jackson régime is quoted to show how the popular fury stirred against the United States Bank was finally turned against the Jacksonians, when the whole country was in the dire distress, and Colonel HARVEY suggests the possibility that during the four years succeeding March 4, 1909, the ROOSEVELT dynasty may have a very similar experience.

It was a very illuminating speech which the keen-minded Vermontier gave to the Charlestonians on Monday evening.

(From the BARNESBURG "News.")

The Charleston News and Courier is of the opinion that the President cannot answer the attack made upon him by Colonel HARVEY, the editor of *The North American Review*, in a speech delivered at the banquet of the Sons of St. Patrick in Charleston on Monday night last, but says that he cannot escape making a reply to it. There is no doubt that the attack was a severe one. It put the President in a very unpleasant light before the country. In the course of his speech he drew a picture of a Chief Magistrate that might be a measure to the institutions of the republic.

The President is quick to reply to attacks on himself, as a rule, but it isn't clear what he can say in reply to the foregoing. That Colonel HARVEY had him in mind there can be no doubt. There isn't an intelligent person in the country that wouldn't recognize the picture the moment he read Colonel HARVEY'S description.

It is doubtful, however, if what Colonel HARVEY said will cause the President any loss of popularity. The great majority of the people don't seem to be in the mind to revive with approval attacks on the President. They appear to be satisfied with him and his work. They look upon him as a man who has a mission that is for the public good, and that it is their duty to stand by him until his mission is performed. If the President were to do any-

thing that touched their pockets there would flame up at once a bitter opposition to him, and there would be a thousand voices in every community proclaiming everything that Colonel HARVEY said against him, as long as the President appears to be working in the interest of the masses he need not reply to such speeches as that of Colonel HARVEY in order to retain their good-will.

(From the Knoxville "Tribune")

The great commission given to the intimate twelve was to go into all the world and preach the gospel of salvation to every creature, beginning at Jerusalem. One of the apostles who is preaching the gospel of political salvation to the American republic is GEORGE HARVEY, the able editor of HARPER'S WEEKLY and of *The North American Review*. He has started out to preach this gospel, before the sons of St. Patrick, in the historic old town of Charleston in the State of South Carolina.

He has made up his mind that the country is leaning over a dangerous precipice, and unless some one undertakes the job of holding it back there is imminent danger of a catastrophe. He has undertaken the job. His utter warnings against those two ambitious and dangerous men, THEODORE ROOSEVELT and ELIHU ROOT.

He told the Sons of St. Patrick in the city of Charleston how ANDREW JACKSON's administration was variously like that of THEODORE ROOSEVELT, how ROOSEVELT, like JACKSON, seems determined to dictate his own successor in office, and points out how the people suffered after JACKSON had succeeded in forcing VAN BUREN upon the country as its President.

Colonel HARVEY introduced ELIHU ROOT as a witness to prove that it is the purpose of those now in power at the national capital to manipulate the personnel of the Supreme Court in the course of time so as to have a majority of that body made up of men who would make the laws of the land and supersede the Constitution through the process of judicial construction. In his speech at Charleston he had not borrowed the pitchfork of Senator TILMAN for use on the occasion; but he evidently meant to impress those who heard him with the belief that he could use a pitchfork if he should want to.

He is evidently in a state of mind, believing that unless something is done and done quickly by somebody, the republic is tottering on its last legs, and that history will show that ROOSEVELT and ROOT have been its slayers.

(From the Atlanta "Journal")

It would hardly be overstating the case to say that the most notable speech made on the celebration of St. Patrick's day in the South was that of Colonel GEORGE HARVEY, editor of HARPER'S WEEKLY and *The North American Review*, before the Sons of St. Patrick at Charleston.

The occasion presented a special opportunity for the appropriate discussion of States' rights and the recent tendency towards centralization. It is well within the truth to say that Colonel HARVEY acquitted fully up to the opportunity and delivered an address which is bound to attract attention.

We can well imagine that the Secretary of State is heartily tired of hearing of that unfortunate break he made at the dinner of the Pennsylvania Society of New York, in which he spoke of "fading constructions of the Constitution," which would vest additional powers in the national government. He rose up to plague him before the words were cold on his lips, and he hastened to qualify and explain within twenty-four hours.

But if his speech on that occasion, voicing, as it did, confidently, the sentiment of the administration, was susceptible of a modified construction, there could be no doubt as to the repeated expressions in the same vein made by the President himself, and in these Colonel HARVEY called attention very effectively.

In his disarranging and President ROOSEVELT said, "We need, through executive action, through legislation, and through judicial interpretation and construction of the law, to increase the power of the general government," and he flouted the idea of holding back on mere considerations of "abstract theory."

In his more recent speech at Cambridge he alluded to the "curious revival of the doctrine of States' rights," and impugned the motives of those who had revived it.

Colonel HARVEY took occasion to say that some of the men who had this "curiously revived" doctrine were JUSTICE BREWER and HARLAN, of the Supreme Court; JUSTICE BROWN, of Pennsylvania; Senator FORAKER, of Ohio; and Congressman McCALL, of Massachusetts.

These are strong names among the men of light and leading, and certainly the majority of them cannot be accused of leaning to States' rights because of any part that doctrine had in bringing on the Civil War. It must be that strictly on its merits they believe in the wisdom and traditional necessity of States' rights.

The speaker asked, in applying the facts brought out, if "we must anticipate a repetition of history in the designation by a second JACKSON of a successor, pledged to a continuance of arbitrary regulation and legislation by executive commissions, or

shall an earnest effort at least be made to turn back our government into the safer path shown by the fathers of the republic?"

It remained, said the distinguished speaker, for the South to answer. This action alone had been true in the Democracy, and none other had the right to name the candidates and write the platform.

Where the South would look for allegiance he could not answer, but we could at least remain true to the patriots who have died and in those living who still insist that popular government "shall not perish from the earth."

This is not the first time that Colonel HARVEY has shown his friendship for the South. That he is a strong and able man is undoubted.

(From the Union "Overseer")

In Charleston, South Carolina, last evening, Colonel GEORGE HARVEY, editor of *The North American Review* and HARPER'S WEEKLY, spoke to the Sons of St. Patrick in that city, and inadvertently to the country, for what he said was of enough importance for the use of the greatest of our press organizations and of such deep import as to deserve a wide reading.

"The theme is not new—the rights of the States which form the Federal Union. This nation was formed by representatives of the States who granted the general government certain rights, duties, and privileges, and reserved from it every other right and duty and privilege. In no other way, upon any other condition, could this Union have been formed."

But Colonel HARVEY, who is attracting wider and wider consideration as a courageous thinker, sees the rights of the States held in light regard by the present Executive of the nation. In forcible print, and now on the platform, he has discussed the changing conditions and altered meanings. In part what he said last night, not only to the Sons of St. Patrick in South Carolina, but to his fellow countrymen, is printed in the *Overseer* to-day. There is enough of it to invite, to spur, deep thought. Colonel HARVEY does not exaggerate the peril.

(From the Dayton, Ohio, "Herald")

Upon our first page yesterday was found an attack upon President ROOSEVELT, unswollen in bitterness, unequalled in vicious invective, unapproached in vituperative misstatement, by the ugliest utterances of TILMAN, VARDAMAN, HENRY, or any other of the most reckless ROOSEVELT haters.

This amazing tirade proceeded from the lips of GEORGE HARVEY, editor of HARPER'S WEEKLY, at a St. Patrick's day banquet at Charleston, South Carolina, Monday night. We advise our readers to turn back and read every word of it; and then to compare, or contrast, their own conception of THEODORE ROOSEVELT, his character, his aims, his purposes, with the dreadful picture drawn by Colonel HARVEY.

Is it possible that this great nation has been so long and so grossly deceived in the personality of its Chief Magistrate? Can it be that he is the dangerous conspirator, the traitorous public servant, the wicked assassin of industry, the debaucher of the courts, the hypocrite, the general all-around scoundrel whom Colonel HARVEY's lurid words depict? Did ROOSEVELT insult Cuba? Is he a menace to the stability of our national institutions? Has he made "methodical attacks upon property"? Does he "appeal to envy and avariciousness?"

In short, does HARVEY voice the judgment of the American nation in this astounding assault upon the motives, the methods, the patriotism, the statesmanship, the very personal honesty of the Chief Executive?

We say No! An overwhelming majority of the people will say No! However strongly men both within and outside of the Republican party may differ with the President upon this or that phase of his general policy, however much individual opinions may vary as to the apparent wisdom of some particular utterance or act, if it were possible to-day to take a referendum vote of all the voters in the United States upon the question of THEODORE ROOSEVELT's absolutely patriotic spirit and motive, his sincerity of purpose, his devotion to the general good, and the inherent equity of his attitude toward the predatory and conscienceless corporations for whom Mr. HARVEY seems to hold a brief, the verdict would be one of practically unanimous endorsement and confidence.

The HARVEY explosion will excite more discussion than its importance merits, simply because of its apparently dignified and authoritative origin. HARPER'S WEEKLY has for so many years taken its own solemnly pronounced opinions seriously, that it has induced a great many persons with short memories to swallow its inconsistencies and contradictions as gospel truth. There have been times and seasons when HARVEY's could scarcely express its admiration of ROOSEVELT in lower-tone terms. It has been, as have all thoughtful observers, mildly critical at times of certain executive attitudes; but its prevailing tone has been one of lofty, condescending commendation. Only when Mr. ROOSEVELT began to "take the vested rights of unscrupulous and defiant corporate misdoers; only when he evinced the determination to put an end to corporate tyranny and aggression;

only when it became evident that the lines of the real foes of the nation were in imminent peril—only then did HARVEY and HARVEY discover the incendiary and menacing character of his performance.

(From the New York "Mail")

Colonel GEORGE HARVEY paid his respects to the President at a dinner in South Carolina the other day in a sentence as long—it contained 360 words—as a hypothetical question. Somehow it otherwise reminded us of a hypothetical question. It combined a number of things that had been charged rather than proved, and, assuming their correctness, asked the world at large in effect, "Now, what are you going to do about it?"

Well, the world is not going to do anything except admire Colonel HARVEY's breath-control, his credulity, and his largeness as an advocate. The counts he arrays against THEODORE ROOSEVELT come under the head of things that are not "as." That he is "a real menace to the stability of our national institutions"; that he trades "with those notoriously corrupt"; that he is "the most conspicuous of persons," etc., etc.—these things you may tell to the marines, not to the American people. They are mere parodies of the facts. They sound like a warmed-over campaign argument in behalf of the Democratic gentleman—we forget his name—who thought he was running for President in 1904.

South Carolina has an old-fashioned way of looking at certain things, and Colonel HARVEY was advocating a return to the old-fashioned ideals. Maybe that was why he delivered such an old-fashioned stump speech.

(From the Altoona, Pennsylvania, "Tribune")

Colonel GEORGE HARVEY, of HARPER'S WEEKLY, travelled all the way to Charleston, South Carolina, to tell the Sons of St. Patrick the same old story about THEODORE ROOSEVELT that he has been trying to tell the country through the pages of the WEEKLY and *The North American Review* for the last few months. Colonel HARVEY is a very able and energetic editor and a patriotic citizen, but he seems to have got off the main road, so far as President ROOSEVELT is concerned, and to have imbibed notions which have made him very unhappy because they convince him that our institutions are threatened by the high-handed policy of the President.

Colonel HARVEY told Charleston's Sons of St. Patrick last night that the President is endeavoring to place his will above the Constitution; that he is contemptuously indifferent to the rights of the States, and more and more intent upon making the national power the supreme thing in our political life. He compares the present administration with JACKSON's, intimating that neither regarded law if it stood in the way of its cherished designs, and he recalls the panic of 1837, immediately following the retirement of JACKSON to private life, indirectly suggesting that history repeats itself, and that the sad scenes witnessed in the homes of working-men in 1837 may return in intensified form in 1909.

Others have told the country the same story in different form during the last few weeks. HARPER'S WEEKLY and *The North American Review* have both raised the alarm. And still the American people are strangely indifferent to their impending fate—more than that, they are actually enthusiastic over the policy of the President. They still admire and trust him. They admit that he is capable of committing errors, but they feel sure that he is a devoted patriot and that his supreme aim is to bring under subjection to law every individual and every corporation within the bounds of the republic, while at the same time throwing the protection of that law around every individual and every association of individuals who are doing business in a legitimate way.

The people trust the President, and believe in him because he seeks an increase of national authority solely for their benefit. He would insure the continued obedience of the great corporations to the law of the land. He fears the States will never be able to unite in the enforcement of a uniform law. On behalf of equal rights, therefore, he would have the Federal government assume certain functions that will prevent the repetition of wrongs under which the people still smart. A man who stands for the impartial enforcement of law and for the abolition of injustices is a servant of the people, not a tyrant, Colonel HARVEY. You are on the wrong track, young man.

(From the Washington "Herald")

That eminent defender of the Constitution, Colonel GEORGE HARVEY, has been roused to righteous wrath by what he conceives to be an endeavor on the part of the administration to enlarge the boundaries of Federal power through constructive interpretation of our fundamental law. He perceives in President ROOSEVELT the sinister agent of a terrible conspiracy to wrench from the States the last shred of their sovereignty and to erect in Washington a government swayed by the will and purpose of a single man, whose commands shall be law to the uttermost parts of the Union, and whose jurisdiction shall range the entire gamut of governmental regulation.

Mr. ROOSEVELT, to Colonel HARVEY's mind, is the inspiring genius of the impending revolution; but the game of constructive interpretation is one that other presidents may play at. The most notable Federalists of the day are to be found outside the White House and the State Department. They are the presidents of our great railway systems, the gentlemen who are ready and willing to submit their properties to Federal regulation of a character almost undreamed of two decades ago, if only the States may be stripped of their concurrent power of regulation. Constructive interpretation is the ready weapon our railway statesmen find to their hand. One of the ablest of them, President FISK, of the Chicago Great Western, to quote an illustration, has begun suit in the United States Court at St. Paul to enjoin the Minnesota Railroad Commission from enforcing freight rates established by it in pursuance of State law. Mr. STRUCKER holds that the freight rates fixed by the commission, though applying to commerce within the State solely, constitute an interference with interstate commerce, inasmuch as they tend to reduce the revenues of the railroads and destroy their efficiency as carriers of interstate commerce. The control of the railroads, Mr. STRUCKER maintains, should be left to the Federal government, and should be exercised without any interference, directly or indirectly, from the States.

Should the Supreme Court of the United States uphold the contention of Mr. STRUCKER and nullify the power of a State railroad commission to fix interstate rates on an interstate railway system, the decision would immensely increase the scope of Federal power to regulate commerce among the States, in effect extending it so as to include State regulation affecting common carriers under the jurisdiction of the Interstate Commerce Commission. That our railway statesmen are desirous of some such constructive interpretation of an already overburdened clause of the Constitution is sufficiently obvious from the tenor of their statements to the press. The reserved rights of the States are no longer to their liking.

Would Colonel HARVEY impute the conversion of our railway presidents to Federalism to the alleged Rooseveltian conspiracy for the overthrow of the Constitution? Whatever its cause, it is one of the most striking events in our political annals, and may contribute some remarkable chapters to our constitutional history.

SOME LETTERS

(From the former President of the Chicago, Burlington, and Quincy Railroad)

"BURLINGTON, Iowa, March 19, 1907.

"MY DEAR SIR,—If you will allow me to do so, I want to congratulate you on your speech at Charleston the other night. For years I have felt that ROOSEVELT was a very serious menace to this country's welfare, and it is a great satisfaction to me to find able men, and especially those who have the public ear, taking that view and pointing him in his true colors. There are large numbers of people, I find, who feel as I do about ROOSEVELT, but, like me, they have no way of getting the public ear, and the great unthinking mass, influenced by the newspapers and terrorized political office-holders, have thought, and still do think, that he is both honest and able, while, as a matter of fact, he is neither.

"He is an able actor, has the actor's instinct, and catches people's imagination, but he is not an able man.

"Nevertheless, through this talent as an actor, and his unscrupulous use of public patronage, he has so far been able to carry the people with him, and he has done an enormous amount of harm by inspiring disrespect for the courts and belief in labor-law tyranny.

"One of the surprising phases of the situation is that so few men who have the public ear have had the courage to say what they really think about him. I believe that what you have said will have a wide currency, and that it must have a good effect.

"I am, yours truly,
C. E. PERKINS."

FROM TWO COLLEGE PRESIDENTS

"DEAR SIR,—I read with intense interest the sketch of your great address at Charleston in the *Star*.

"My enthusiasm is too great to permit me to write calmly, but I am certain of the soundness of my judgment when I claim this address among those of the mighty men you quote, and say that it is one of the greatest I ever have read or heard.

"I have waited for it to come from Congress for more than a year, but no man is left there big enough nor courageous enough to make it. I have seen rapier gleam in editorial columns, but this is the first whole broadside of rifled guns fired with certain aim and deadly execution.

"Permit me to thank you as a lifetime Republican, who is without a party and will-ship without hope until your great address appears."

"DEAR SIR,—I wish to express my hearty admiration for the admirable speech you made in Charleston. My warmest congratulations and my share of the thanks the country owes you.

THE PROBLEM OF A MILLION FARES

SUGGESTIONS FOR THE IMMEDIATE IMPROVEMENT OF NEW YORK'S TRANSIT SYSTEM

By THEODORE P. SHONTS
President of the Interborough-Metropolitan Company

THE problem that I have been asked by the Interborough-Metropolitan Company to solve, loosely stated, is the carrying of approximately one and a half million New Yorkers from their homes to their places of business and back again in twelve hours. I am fully aware that the task is a difficult one, and that I shall not be able to accomplish in a few days or weeks or months what the ablest transit experts have not been able to do in years, particularly as the problem increases in complexity with the increase of the population. One-twentieth of all the people in the United States live in New York city, and its growth in population is at a ratio five times greater than the rest of the country. When the fact is taken into consideration that on the Third Avenue Elevated line alone we are compelled to carry—owing to the increase of population in the Bronx—one million more passengers every month than the preceding one, it is apparent that the transit problem is not one that will solve itself.

Since coming to New York to take charge of this work I have spent little time in studying my subject from the inside of the office. I have put in four or five hours each day riding uptown and down town, and cross town, and to and fro in all directions, in the Subway, on the elevated road, and by the surface lines. I have been in the crowds at the rush hours, and have seen everything that is to be seen at its best and at its worst, and I am compelled to admit that there is reason for the present transit system.

At the outset I wish to make it plain that I do not take, and have no sympathy with, any thing of a "public-be-damned" attitude. Earnestly and honestly we are endeavoring to transport the people who travel in this town with safety, comfort, and speed. I place safety first, because it is better to take a little more time in getting to one's home or place of business than to run the risk of not getting there at all.

Preliminary study of the situation leads me to the opinion—I cannot call it, in all phases, a conclusion—that the quickest means of relieving the congestion of traffic lies in the reasonable restriction of street traffic so as to give more leeway in the surface cars, (no additional tracks on the Second Avenue "L" to relieve the Bronx congestion, and side-docks in the Subway cars, if some of the stations near midtown cars be so adjusted that there will be no danger in

Copyright, 1914, by Horace Bushart

Theodore P. Shonts

WHO REALIZES THAT SOMETHING MUST BE DONE AT ONCE TO SIMPLIFY NEW YORK'S TRANSIT PROBLEM

the dissatisfaction of the people
it plain that I do not take, and

At present the Second Avenue
that is not being worked to its fullest capacity, because the people,
for some reason or other—possibly

unloading. And, finally, the construction of additional ambways as fast as the traffic demands. It should be understood, however, that the Interborough-Metropolitan Company is not asking any extraordinary privileges. We want to make use only of those to which we are rightfully entitled, and with the proper application of these we expect to bring about many reforms in the transit system.

Take the case of the surface cars. There is overcrowding on many lines, however they are overloaded as the result of the rapid growth of the population, and there will be endless difficulty in meeting this condition. There are bound to be troublesome delays, too, and this is a feature of surface car travel that can never be eradicated without the cooperation of the city authorities. If, however, the police can manage to give the lines where congestion is the greatest a reasonable use of the tracks we can effect a big change in the surface lines and give the public much better service. And by "reasonable use" I do not imply the exclusive use of the tracks. With the proper regulation of street traffic in the rush hours many vexatious delays may be entirely avoided, though traffic congestion in the streets makes it extremely difficult to handle the crowds in cars and get them to their destination in reasonable time. The surface cars must come to be used more and more for short-haul passengers, leaving the long hauls to the Subway and the elevated lines.

Elevated road is the only one in New York that is not being worked to its fullest capacity, because the people, in saving a walk of a couple of blocks—do not use this line as they might, and ought to do. Express trains would bring the people to the Second Avenue road, diverting a great deal of traffic from the Subway and the Third Avenue "L," and relieving the pressure of passengers to the Bronx that is now overwhelming us. These additional tracks, I am informed by our engineers, could be completed and trains started in eighteen months to two years, while it will take from three to four years to construct the proposed new East and West side Subways. In less than that time the conditions of travel to the Bronx will become intolerable unless these tracks are erected on Second Avenue.

A circumstance that struck me during my journeyings on the various Subway lines was the obvious necessity for greater speed in filling and

MR. SHONTS'S SUGGESTIONS FOR THE SOLUTION OF NEW YORK'S UNPARALLELED TRANSIT PROBLEM

A seat for every passenger.

An effort to enforce a car-full-no-more-passengers rule.

A trial of the pay-as-you-get-on plan.

Two more tracks on the Second Avenue Elevated road.

The addition of side entrances to the Subway cars.

Wider car platforms with doors for the exclusive use of boarding passengers, and others for those alighting.

Such restrictions of street traffic where congestion is greatest as will allow the surface lines a reasonable, although not exclusive, use of the tracks.

Any Car on any Metropolitan Surface Line during the Morning and Evening Rush Hours

SUPPLY AND DEMAND

emptying trains where congestion is greatest, much delay being attributable to the loss of time at these points. Side-doors in the cars at first blush appear to offer at least a partial solution of this difficulty. Experts have informed me that the underground lines in London abandoned the side-doors because they were a failure, but I am far from convinced that they would not do much to relieve congestion and minimize delays here. To be sure side-doors would not be of much assistance at stations such as Times Square, that impinge on a curve, but we may experiment with them at stations where they can be used, and we will try, experimentally

When the Harlemite goes Forth to Work
REHEARSING A BROWN BROWN KATHOSIN TRAIN AT THE ONE BE NEEDED
AND FOURTH STREET STATION OF THE FIFTH AVENUE ELEVATED

at least, perhaps on the surface cars, under platforms, doors for the exclusive use of passengers getting on and others for passengers getting off. We will try the plan of pay-as-you-go on, also, on some part of the system to see how it will work, and we will try the car full-to-maximum-passengers plan as well.

Something must be done to simplify the transit problem at once. The subway and the present elevated lines are worked to their full capacity and the margin of safety at present is not over effort that is made to increase and improve the facilities of the Elevated system is not with improvement as though our attempt to solve existing conditions were due to sinister motives. The day is past for underground dealings on the part of our corporations, and personally I am for "the square deal" but, unless the people, the city leaders elected by the people, and the Rapid Transit Commission work together for the common good with the transportation company, the congestion of traffic will increase until we are cramped.

Complaints are being heard in New York, have been paralleled on the globe. The subway was constructed as a relief for the Elevated and street cars but the pressure that came to it is already far beyond expectations, while the strict limitations of the system are carrying more people than ever before. The efforts we make to accommodate our patrons by transferring to and from local and express trains in the subway add to the delay and discomfort of passengers. Take the Fourteenth Street station as an example. It was estimated when the plans were first drawn up that the platform space allotted at the station would be ample for all time, which demonstrates how impossible it was to foresee that New York's intramural traffic would be so tremendously augmented. The subway would and could make "Harlem in Fifteen Minutes" were it battling only the number of people it was built to accommodate. As a matter of fact it is handling twice as many as it was intended to carry (and running to its full capacity). Hence when a delay is occasioned at one of the express stations by the crowds who are trying to get on while other crowds are endeavoring to get off, the delay is communicated to all the trains coming behind on two minutes' headway, and there is little chance of making up lost time, for the rules are that the

speed must be regular and within the margin of safety. The Subway will carry every person who gets down to the platform, but we are going to carry them safely.

The transportation situation in New York, in the way of difficulties that have to be overcome, cannot be compared with that of any other city in the world. Imagine conditions in London or Paris with the great mass of passengers by omnibus, tram, and underground road travelling only north and south, and with only two bridges across the Thames or the Seine, instead of a dock, an outlet for the flow across these rivers, and then compare matters further in either city by an increase of passengers in one line of travel alone of a million each month!

One of the insistent demands of the New York public, with which we intend to comply, if possible, is a seat for every passenger travelling in public conveyances. How many New Yorkers, however, would wait with patience on a Subway or Elevated road station, or in the street, each for his turn, as the seats in train after train and car after car filled up, leaving the aisles and platforms empty, and see these vehicles go on with plenty of room for him to stand up in?—which he would far rather do than be delayed in getting home, or to his place of business. When we reintroduce the car-full-no-more-passengers rule I am afraid that we shall have difficulty in enforcing it.

The Continental transit lines have the advantage of those in England and America in that the passenger is not in such a hurry. In Paris, for instance, the working people homeward-bound during the busy hours of travel step into the tiny stations at the omnibus and tram terminals and receive each a ticket with a number on it, the numbers running consecutively and entitling the holder to a seat in succession to the person holding the preceding number. When the conveyance arrives the conductor calls out the numbers on the tickets in order until the seats are filled. Then the vehicle goes on, and the other number-holders wait for the next one. Often at the busiest centres of travel there will be a thousand or more men and women waiting at the stations for their turns, the last comers aware that it will be an hour at least before they can secure seats. The number system works to a charm in Paris, but

The Nightly Struggle of the Homeward-bound
THE SIX-O'CLOCK CRUSH OF HOME-GOING WORKERS ON
THE STAIRWAY OF AN EAST-RIME ELEVATED STATION

I imagine that it would take a long time to make it popular in New York.

However, many of the evils of the present transit system in New York are bound to be wiped out. All of the many sources of popular complaint will be taken up in regular order, and every possible remedy will be applied with the best possible loss of time. I hope soon to have prepared a comprehensive plan for the laying out of new routes which will afford relief in transportation for at least the next fifty years, a plan that will deteriorate with present conditions and meet those of the future.

MAUNA LOA'S FLOOD OF GOLDEN FIRE

WHEN THE BOILING LAVA CRASHED THROUGH THE MOUNTAINSIDE AND ROLLED TO THE SEA, HAWAIIANS QUICKLY FLOCKED TO ITS DEADLY SIDE IN JOYOUS PICNIC PARTIES

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

Honolulu, February 16, 1907

THE people of these happy islands have been entertained during the last fortnight by the most tremendous display of volcanic energy seen here in many years. Probably in sympathy with the submarine hearings that wrought such havoc at San Francisco, Valparaiso, and Jamaica, the great volcanoes of Kilaua and Mauna Loa have become so active that men thirty miles away can see to read by their light. A great river of molten lava has burst through the side of Mauna Loa, 8000 feet in air, and has swept away roads and forests in its reckless plunge for miles downward to the sea; while the crater of Halemauana, which sits within the giant bowl of Kilaua, thirty miles away, is rapidly filling with a mass of boiling, bubbling lava, one-quarter of a mile across, whose red glow irradiates the sky for many miles.

Perhaps some Americans at home, sitting at ease by the fire, may picture to themselves the inhabitants of this summer land fleeing from these awful phenomena, hurrying as fast as steam and sail can carry them from the destructive forces which within times not distant have slaughtered hundreds of persons. One imagines the sturdy Hawaiian spiriting away for life. Not so. Instead of running away from a raging red river he will go in it, delighted to watch the fireworks, and never giving a thought to the fiery death which at any time may leap from the molten mass and in a moment char him to a black shroud of ash.

Parties gather in lawns and set off for the shore on foot or mounted; some go in automobiles; and a few days ago a

whole family went cantering toward the fascinating flames in an ancient and high-wheeled brake, drawn by two horses tandem, with the clever boy of the family playing postilion on the leader.

Steamers are running from Honolulu to the island of Hawaii, on which the volcanoes stand, their staterooms jammed full and their moonlit decks crowded with sleeping passengers who can hardly find room for their mattresses. Above a dozen edifices in this exquisitely beautiful capital you will see big red-lettered signs: "Volcanoes now in action. Don't miss them. Tickets and full information within." No the volcanoes are not only pleasant but profitable.

The great fire revel was ushered in with proper formalities. How long a time the millions of tons of rock and earth had spent in

burning from gray to glowing red, and from red to a liquid lake of stone fire in the cauldron far below the mountains, no man may guess. But at nine o'clock on the night of January 10 all the country around Mauna Loa trembled and trembled as the fire-monster babbled and writhed in his efforts to be free. That which seeps most strange to the foreign visitor is that this series of earthquakes caused no alarm in the households at the town of Hilo, scattered below the flank of this ancient volcano which raises its crest two and a half miles above the Pacific. On the contrary, families sat up to wait for the show as if they expected to see a mere Haroun parade, with elephants, lions, tigers, and brass bands.

By midnight the mountain was thrilling and rumbling continuously and the air was vibrant as if all the pipe-organs

The Caldron of Halemau-man, Boiling in the Ancient Crater of Kilauea.
BLACKENED CRUST WHICH CRACKS AND CREMELS AS A NEW JET OF LIQUID ROCK BREWES UP

in the world were rolling forth a grand diapason. Suddenly there was a mighty crash at Kahuku, some feet above the town of Hilo, and through the shattered mountain wall there burst two streams of bubbling, glowing, rippling, molten lava. They rushed high in air as the waters of a fountain leap and play, then dashed down the rugged side of Mauna Loa as torrents plunge in the spring. Side by side but one hundred yards apart the streams of fire ran for half a mile or so; then slowly drew together and, joining forces, swept on toward the sea. They were traveling over the course of the old Kahuku lava flow of twenty years ago, but this outflow was even greater in volume and in intensity of heat.

All night the people of Hilo and the neighboring country sat up and admired the glorious and awful spectacle, comparing it with previous outbreaks, criticizing some of its features, praising others. They saw the two streams that had issued like fiery serpents from their lair in the high rock now joined in one great molten mass a quarter of a mile in width and twenty-five feet high, and lighting up all the country on that side of Mauna Loa until it was brighter than Longacre Square when the crowds are coming out of the theatres. By this brilliant light could be seen falling in front of the fire-front a huge mound of cinders and clinkers, all ways driven ahead like the furrow before the plough. Now and then a jet of the burning lava darted forward through the clinking, crackling mass—thrust out and vanishing as swiftly as the play of a serpent's tongue.

At times great sheets of flame shot high in air, flared a few moments, wavered, then flickered away to nothing, leaving only the golden red stream of viscid, liquid rock to illuminate the sky. Two expert observers guessed that these spurts of fire were jets of lava, but the veterans said no. They were clumps and groves of alders and giant koa trees licked up by the lava flow and devoured as quickly as a match fallen into a grate of blazing coal.

Before dawn the speed at the flow had greatly abated, and by the time the people of Hilo had breakfasted and journeyed to the scene the lava was moving no faster than the walk of a woman in the shopping district. By day one could not see the flames. It was impossible to go near the lava from the lee side, for the smoke, gas, and fine ash, in any nothing of the intolerable heat that made life impossible; but on the windward side one could approach within a few rods in comparative comfort. Even there it was difficult to breathe.

The best place to stand is directly in advance of the lava flow. In the daylight it looks like a slag heap, such as you will find outside any blast-furnace. But such a slag heap! It is five miles long, one-quarter of a mile wide, and from fifteen to twenty-five feet high. It is now moving toward the sea at the rate of sixty feet an hour.

The river of fire still pushes before it the mound of gray-to-purple, rugged clinkers, their sharp edges cracking and scraping against one another as they are relentlessly pressed forward. They sluggishly tumble over and over, never ceasing their clatter of dry bones, while now and then a jet of red lava spurts through, only to turn gray in a moment and cool into jagged clinkers. Often from the top of the bank large red hot stones come rolling down, and as they land the crimson lava splashes almost at one's feet.

The Hawaiian word for the lava clinkers is "a-a" (pronounced "ah-ah"). They are the spongy, knotty, bristling fragments of rock, baked off from the viscid, liquid lava that creeps them along on its flood. Often the "a-a"

roll over and over, constantly gathering fresh fragments, until one finds a sort of bomb perhaps three or four feet in diameter, all molten rock within and coated without by the spongy clinkers. These bombs always burst, though without doing harm, and as they fall apart the lava within, now only red hot, itself is broken into "a-a."

Kilauea crater is thirty miles from the new fire-river of Mauna Loa. After thirteen years of slumber the lava in the pit at the crater of Halemau-man began to boil at the same time the eruption at Kahuku began. Far apart as the two are, there is evidently an underground communication between them. The main crater of Kilauea is three miles across and filled up to within a quarter mile of the top with hard lava, ages old. In the midst of this lava flow there is a pit one-quarter of a mile in diameter, and in this pit the "petioche" or molten lava is boiling like melted gold. Very slowly but never ceasing its movement, the petioche is rising toward the top of the pit. When the present activity began the pit was eight hundred feet deep, and now the liquid fire has risen up to within one hundred feet of the top.

To stand on the edge of this pit and look down upon the boiling, writhing mass of viscid rock bubbling like a pot of porridge, to see the ceaseless vertiginous outflow of the fire, is enough to make one

(Continued on page 513.)

THE NEEDS OF THE NAVY

By REAR-ADMIRAL J. B. COGHLAN, U.S.N.

I HAVE been asked on the eve of my retirement "What is the one great need of the American navy of the future." My answer is that there are two—substitution of modern high-power battle-ships for older vessels, and the passage of a naval personnel bill or a measure which will bring men to the higher commands at a much earlier age than of present.

Large "single-caliber-heavy-gun" battle-ships are absolutely necessary unless we are to have only a toy navy, and I am most happy to know that Congress has seen this necessity, and has this year given us two. These ships are not only of the greatest value tactically, but although more expensive at first cost, are an economy, as they require fewer men to man them, thus saving vastly in expense of maintenance at all times, with proportionately less danger of loss of life in battle. This part of the subject has been so perfectly proven, so far as intelligent argument and comparison can prove anything, that it is not necessary to go further into that phase of our needs.

Regarding the second and equally great need, too much cannot be said. Our present navy is one of fleets and squadrons. The old-time single-ship policy has been replaced by the fleet policy. There is no harder task known than commanding squadrons and fleets. It requires decision, the habit of such command and quick action which can only be gained by long experience. And unfortunately for us, many officers, I fear, have their vision clouded by a personal factor. I do not think in any way to cast reflection on my officers, but from the very nature of our navy, up to very late times, few of them have been able to gain the experience necessary for fleet work, and under our present system of promotion officers reach flag rank too late in life to gain the necessary experience in that rank. There are but very few instances recorded of men born with the genius of fleet control—almost all men gain the ability for such command by long, hard, and constant study, experience, and practice. We can never expect to have our forces or fleets as units equal to those of other powers until our men in the high commands are, beyond a doubt, equal in every respect to those whom we may possibly have to contend with.

[Until we can see further into the workings of the human brain than we can now, we cannot pick out with certainty the man with the necessary genius, therefore we must give each officer who may be called upon to take command of a fleet, or command all the experience possible; graded up from command of a single ship in a division to divisional, squadron, and finally fleet control. At present this cannot be done, and it can never be done until our flag officers have the chance to work through these several steps. To do this properly a flag officer should be continually employed in flag command about at least four years before assuming the command in chief of a fleet.

Many of our flag officers now have but a few years, say, some ten or a few months, to serve between promotion and retirement. Therefore, for practical purposes, we should provide so that a man who is not promoted to flag rank in time to have at least six years left to serve in that grade should not be promoted to it at all. And this same principle should be carried out in the next lower grades.

This can only be done at the expense of much heart-burning, but "the benefit to the country must take precedence of the benefit or feelings of the individual wherever he may be."

It is comparatively easy for officers to learn how to follow along in squadrons, to turn when ordered, to make nice display at naval maneuvers, but something more is needed to be properly prepared for war. Not only should the captains be thoroughly up in the habits of command in their individual vessels, but they should have an intimate acquaintance with each other's habits of thought and with their own ships' ideas, policies, and modes of action, which will enable each officer in any command, either ship or squadron, to fairly divine in advance, to foresee, the necessary order, and be prepared to execute almost before it is given.

Keep a man too long in a subordinate position, let him run along in a rut, doing the same things in the same way after day, and you take away his power of initiative. When the crucial moment comes in action that obliges him to think for himself, he feels at a loss what to do, he hesitates, and is lost. It is in the worst of times that the importance that men should be placed in commanding positions before this power of initiative has been destroyed, or even impaired. And while discussing the personnel of the navy, there is one point which may be cleared up, no conditions are generally misunderstood by the public.

There is a charge for the enlisted man to win commissioned rank in the navy, if he will work. The existing law permits of twelve men being promoted in this way every year, and I happen to recall one instance at the moment, that of O. de P. Johnston, who was gunner on the *Raleigh* at the battle of Manila Bay, and who won his commission as ensign not long after. The trouble with the enlisted man is that his ambition falls short of his opportunities, and he is generally content with a warrant-officer's rank, which many obtain. Navigation is the stumbling-block to many of them. It isn't easy, but it is necessary. Yet I am afraid that the average enlisted man looks with envy upon the

officer because he thinks the officer doesn't have to work. He sees the officer working up and down the deck, apparently doing nothing, and takes it for granted that the officer is loafing. True, his hands may be unemployed, but possibly just at that moment his mind is at work upon the most abstruse question which has ever day following the management of the ship. If fewer enlisted men win commissions in the navy than in the army, I think it is not because of difficulties placed in their way, but either because their ambition is satisfied with something lower, or they cannot master the necessary studies.

When the *Connetquot* left the hands of her builders, the New York Navy-yard, she was ready to go into battle, if need be; while her sister ship, the *Louisiana*, built for the government by contractors, was incomplete, much of the work remaining to be done afterwards. On the face of the figures presented, it would appear that the *Connetquot* cost more than \$200,000 in excess of the sum expended upon the *Louisiana*. It is reasonable to suppose that she did cost more, because the government pays the men employed at the yard a letter wage, and enforces the eight-hour day, but I am puzzled to know what the actual difference in cost was even after the figures here have been published. The following estimates were given in the House of Representatives in the course of debate on February 14: cost of *Connetquot*, \$6340, 241 \$3; cost of *Louisiana*, \$1,960,822 40.

We of the navy accept the figures of an Act of Congress, July, 1902. The *Connetquot* was finished December 12, 1900. The *Louisiana* was put in commission in June, 1900, but when the President visited Panama on board the *Louisiana* last fall the vessel was still far from ready for active service.

It is not clear to us what the various items stand for in the case of the *Louisiana*. We know that the *Connetquot*, the finest ship of her class in the world, was completely equipped in every respect, guns mounted, and ready for action at the cost stated. What was the actual cost of bringing the *Louisiana* to the same degree of perfection, after she was launched? That we do not know, so an authoritative comparison cannot as yet be made.

Aside from the relative cost of construction there is another point which must be considered. Forty-two and a half months before the actual work on the *Connetquot* was begun, the *Meriville*, a time which could have been shortened had all the material been available when needed. But during the period of construction we had assembled here a highly efficient body of skilled workmen, and when it was necessary to undertake repairs of other ships, the work was taken over by the contractors, and used to great advantage. So in such case there was none of the delay and expense of breaking green men into the work. They knew what to do and how to do it. If there could be a plan by which a vessel would always be in course of construction here, if, when our ships are completed, we could be sent on another, the government would always have this force of specially trained men for emergency work. Such a state of preparedness would be worth, it seems to me, quite a large sum of money, possibly enough to make up the difference in the cost as between that undertaken by the government and that turned over to contractors.

Facilities in the New York Navy-yard are unsurpassed anywhere. A battle-ship of the *Breadbasket* type can be constructed here as well as in any other part of the world. No matter how great or how small the work, the work can be done here perfectly and quickly.

It is not the general opinion in naval circles that the government should build its own vessels to the exclusion of private contractors for the work. I believe, and I think it is generally believed, that some of the work of construction should be let out, so that others should know how to build ships if there should be a sudden demand for an increased output, but the bulk of the work can best be done in the navy yards.

It must be borne in mind that there is a constant need of additions to the fighting-ships already in existence. The United States navy at the present time is hardly half as strong as it should be. It looks much more formidable on paper than it really is, as many of the vessels which make a good showing on paper are already obsolete for the modern fighting line. The fighting-line of the future will be of great size and strength. The necessities of smaller size will be maintained in about the same proportion as at present. The latest type of battle-ship is able to go a much greater distance, and at higher speed, than the old. The *Oregon* is nearly out of date on that account. Not only do the new vessels have greater gun capacity, they actually have less weight in proportion to their size. The new twelve-inch rifle, which has superseded the heavier thirteen-inch gun, has a greater penetration with less weight, and the armor plates have kept pace with the improvements in guns. The armor belt calculated to defend a ship from the new rifle is about one-third the less in weight than the cumbersome, old-fashioned armor plate. Of course, the older vessels can be modernized after a fashion, just as the old guns are being equipped with the new sighting apparatus, but if the navy is to retain its efficiency there must be a long period of active construction of newest model ships.

WHEN NO MAN PURSUETH

By HENRY SMITH WILLIAMS

WHEN NO MAN
PURSUETH
BY
HENRY SMITH WILLIAMS

"If you think this is cowardice—try it yourself." The words were inscribed neatly, without a trace of tremor, on a clean sheet of letter-paper. The writer mechanically replaced his fountain-pen in his pocket, and as mechanically waved the mouse back and forth to dry it. Then, as he realized what he was doing, a grim smile crossed his features.

"A pretty time to be particular about mice," he observed, aloud. But the force of habit was strong on him, and he waited until the ink was dry before he pinned the paper, carefully, against the swinging shelf in the centre of the cellar where he stood. Then he stepped back to the entrance door, to make sure that the message must be visible to any one who entered. "I guess they'll see that, all right," he commented. "Cowardice, eh? Well, just let 'em try it."

With sudden resolution he stepped forward, seized the revolver that lay on the hanging shelf, and raised it to his head. He closed his eyes and half clinched as the barrel touched his temple. His finger rested a moment irresolutely on the trigger. But instead of firing, as he had intended, he lowered the weapon slowly, and finally held it again on the shelf. He took out his watch and scrutinized it in the dim light.

"Only three o'clock!" he exclaimed. "My God! I thought it must be nearer six. I don't need to do it quite yet. There's plenty of time. Why the Board didn't meet till half past two!" he complained, as if arguing a case; "and it will take them at least an hour to go through the books. Then when they find it out they'll still have to get the sheriff, or whoever it is that does such things, before they can arrest me; and then—I'll spare them the trouble."

He laughed grimly. His courage was rising with his speech. "Yes," he continued, still arguing, "I'm prepared for half an hour, anyway; it will be time enough when I see them coming."

He looked from the little cellar window, as he had done a dozen times before, to make sure that his view commanded all approaches to the house. "Yes, it will be time enough when I see them coming," he repeated; "time enough, time enough." Then he strode slowly back and forth within the confines of the cellar, soliloquizing. His whole frame was under tension; his hands clasped together spasmodically; his heart seemed like a weight of stone in his breast; yet he was vaguely conscious of a sense of wonderment at his own composure. He would not have believed that the thoughts of a man about to die could wander to such irrelevant inconsequential as kept bobbing into his mind. All thoughts led him back presently to one subject, however—the recollection of the petty crime that had brought him to this plight. Criminal? It was hardly that; it was no more than perjury at worst—an error of judgment, a trifling misstep taken long ago and long since retrieved. Thousands of other men had done as much, without ever suffering for it. After all, the sum was only a few hundreds; the tip on which he had acted had proved a valid one; the venture had repaid the outlay many fold, and every dollar of the parlayed—the borrowed—money had been paid back in full. What harm, then? Had any one suffered from his act? Had any one been injured? And had not he, as cashier of the bank, the right—yes, the right; that is, the moral right, knowing his own intentions as he did; the moral right, if

not the legal—and should not the law take cognizance of intentions, of morals, rather than mere technicality? Why, no jury, no jury in the world—or, at any rate, if a jury, interpreting the strict letter of the law—

He checked himself and tried to change the tenor of his thoughts. He had gone over the same thing a thousand times before, and he knew that his logic failed pitifully to convince himself. Now on a sudden impulse he turned on himself, as it were, and arraigned himself fiercely. "Liar!" he hissed. "Liar! You know that you lie. You know that you stole that money. You are a thief; the brand of infamy is on your brow forever. Your life is founded on a crime; and now your sin has found you out. What if you did give back the money? What if you have been straight ever since? What if you are respected and honored in the community? Can you wipe out that stain? Never; except in one way—and this is it."

Again he stepped forward and seized the pistol, this time with a determined air, as if to give some condemned wretch his deserts. But again he put it down, as a new train of thought came to him. "How did they ever find it out?" he pondered. "How could they find it out? I was sure I had the books fixed so that they could never tell. And for five years they kept their secret. For five full years! And I was coming to be so happy, until I saw that they were beginning to suspect. But what right had I to expect happiness? My very house was founded on a crime. When I asked the little woman to marry me I was asking her to share the lot of a criminal. And she thought me—she still thinks me—a saint. My God! It will kill her when she finds it out! But it is better this way than to see me—in stripes. Yes, this way is better—this way is best."

One more he took up the revolver, set angrily and vehemently this time, but steadily and calmly; and as he regarded it an impulse of self-pity took possession of him. "Why need they have found it out?" he murmured. "Oh, why need they? I had atoned; I had suffered; all that a man could do to make amends I had done. Which one of them is quite without sin that he dare cast the first stone? Why should they have looked at me so suspiciously, when for five years I had not stepped one foot aside from the straight and narrow way? Why must they examine the old books? Had they no sympathy, no mercy? Could they not think that I have a wife, a child, that I live? Could they not know that my only thought has been to make them happy and to live down my one mistake?"

"But no; they do not care for all that; they demand simple justice, untouched by pity. I could see it in their faces when first they began to suspect. And today, when they told me to take a holiday, that I was not well, that I needed a rest, I knew far better than they thought the nature of their plan. They are holding a board meeting there at the bank—I know that well enough. Before this they have shown me up; they have laid their plans; nay, maybe now they will send for me; and they think to see me behind the bars before night. But I will fool them there; I will fool them there."

A sound without interrupted the scurrying thoughts, and in an instant the soliloquist was on the alert. He glided cautiously to the window and peered out. His worst fears were confirmed.

The footsteps were those of a messenger boy whom he recognized instantly as a clerk in the bank. The youth came forward in true boy fashion, leaning from side to side of the walk, and whistling loudly a discordant strain far off the key. In his hand he held a letter.

The unseen watcher in the cellar saw through the rose instantly. "Ah, that's their game!" he muttered. "They want to get me to the bank and ask me there. Well, we shall see; we shall!"

The clang of the door-bell caused him to start nervously. He clutched tightly at the pistol and rushed it to his temple. "It is time," he said. "God help me! Good-by, Margaret, Good-by, sweet Catherine. This is better than the other; I am doing it for your sakes, Good-by!"

As the door-bell clanged again there was the small, spiteful crack of a pistol in the air, and the man there sank to the floor, still clutching the weapon in his hand. His eyes slowly opened and stared out unseeing into the gloom. A little stream of blood coming from his temple told that he had done his ill task only too well.

The messenger boy half heard the snap of the smokeless powder, and interrupted his hughenous whistling to listen. But he heard nothing further, and he was not certain that the other sound had come from the house. There seemed, indeed, to be no one at home. The boy clanged the bell again, and yet again. Finally he thrust the letter into his pocket, and resuming his doleful music, he strolled carelessly down the street again.

II

Toward evening a small, frail woman, accompanied by a little girl, came through the gate. She moved without hurry, her mind obviously on other things than the externals. She tried the front door, but did not seem surprised to find it locked.

"Can't we get in, mamma?" sighed little Catherine.

"We must go around to the back door. Papa has not returned yet from his fishing trip, and this door is locked."

Entering by the woodshed door, Mrs. Lovejoy went forward to "open up" the house. As she came into the front hall she saw on the floor a letter that had evidently been thrust under the door. She took it up languidly. "Who can have sent in a note?" she thought vaguely, not conscious of any particular desire to solve the mystery. But as she came to the light her eye caught the legend, "Return in five days to the Starva City National Bank," and she was all attention in an instant.

From the bank? What could that mean? Why had they written him, when he was away only for the afternoon, and would be back at his post as usual in the morning? Was it true, then, that the management was dissatisfied with him, as he had so often told her of late? Had they taken this means to inform him of his discharge? The thought came as the dead weight on her over-laden heart. She sank into a chair and stared vacantly into space, too agonized for weeping.

Slowly her thoughts collected themselves, and her heart was full of bitterness. Could they not see, then, that he had been ill? Did not they know that he was ill himself—that he was dispirited, worried, overworked, in need of rest? He had worn himself out in their service, and now they repaid him in this way. He had said they were dissatisfied with him, but she had scorned this idea to his morbid condition; she had not for a moment believed such a thing possible. So, after all, he was right. But how cruel, how unjust, how utterly crushing the blow! What should they, what could they do? No money, no chance to get other employment while he was out of health; no hope of being restored to health while under the stress of such conditions.

The little woman's tears whirled at the very edge of the abyss of despair. But only for a moment; then that resilient courage that is the matchless

heritage of her sex came to her aid. She set her jaws firmly together and clenched her little hands. "No," she said, "it shall not be. I will see the directors; I will tell them of their injustice; they shall see it; they shall take him back. They shall know how unjust and cruel they have been. I will go at once."

Then she reflected that at this hour her quest would be vain. But she might go to see the doctor. He had told her over and over that her husband was not well; that he must have rest or he would break down altogether. Yes; she would go to the doctor at once. He would advise her, and in answer he would help her in the interview with the bank officials.

She rose determinately and reached her hat from the hook where she had just hung it as she entered. But what about the letter? Should she conceal it? Surely he must not see it. He must not feel this cruel blow—in his present condition, it might kill her. She must conceal the letter. Or rather, might she not better open it, and thus learn its exact contents, so that she could answer wisely—knowing precisely what was charged? The letter was not addressed to her, to be sure; but that did not greatly matter. He would have shown it to her at once had he received it—either of them had ever had a letter since their marriage that had not been read in the other. Surely she must have the clearest vision to guide her. Clearly, she must know the exact contents of the letter.

Yet how she dreaded to open it. Even though she knew in cruel message, she shrank from seeing the fearful words. But she resolutely broke the seal.

As her eyes scanned the page she could not at first believe what she saw. If she had been dazed a moment ago, she was now stunned, stupefied—so closely akin are great sorrow and unexpected joy in their momentary effect on the soul.

"My dear Lovejoy," the letter ran, "as president of the board of directors of the bank which you have served so long and so faithfully, it gives me great pleasure to inform you, in the name of the board, that you have been voted a year's leave of absence, on full pay, to recuperate your health; and that, in addition recognition of your highly valued services, the bank extends you its check for two thousand dollars (\$2000) as a present, hoping that you will expend it in a tour of recreation and health-seeking. Dr. Goodrich assures us that there is every prospect of your complete restoration to health, under proper conditions, in half that time; but we desire that you should remain long enough to enjoy yourself after your complete convalescence.

"Please don't think we do this unselfishly. We appreciate the services of a man who has made himself so richly disposable to the bank. We know you need the rest you have so fully earned, and we want you to take it in such a way as to bring you back to us next year ready for another long term of usefulness.

"Accept, please, the assurances of esteem of the entire board. Individually and collectively, who are not one with all who know you in hoping for a speedy return of your accustomed health."

"Below his signature the writer added: 'Of course we shall see you at the bank before you go, for a personal 're-voir' and Good-bye!'

Mrs. Lovejoy's eyes wandered over the letter again and again. Gradually its meaning bore in on her consciousness. A great crushing weight seemed to lift from her and leave her light as air. One great all-pervading sense of thankfulness welled up in her heart. She sank slowly in her knees and bowed her head, and the words that so sweetly thrilled in consciousness came to her lips.

"O God," she murmured, "I thank You. Oh, I know You would be good to me in the end. I have suffered long, but I have tried to be brave—indeed I have tried. If ever I doubted You, if I misjudged these good men, I am sorry. But, oh, You know what I feel—I cannot find the words."

She buried her face in her

"Ah, that's their game!" he muttered

hands, and great comforting tears rested from her eyes. Her entire body was convulsed with sobs.

Little Catherine, disturbed in her play, came and stood by her mother, her lips quivering. "What is it, mamma," she cried; "is you sick?"

The mother arms went about the child, and the mother voice sobbed out through lips that tried to smile:—
"No, my sweet, I am not sick; I am well—oh, so well; and so happy. Come, you must help me. We will celebrate this beautiful night. Let us hurry and put on our best dresses before papa returns; and we will light the lamp in the parlor; and you must run and pick some flowers in the garden for the supper-table. We will have cake and jam for supper, and, and—oh, anything that you like; anything that papa likes."
"But papa doesn't like to eat anything now, you know, mamma."

"He will not to-night, my sweet; we will all be happy to-night—you will scarcely know him, he will be so happy. He will sit at the table there and tell us stories as he used to do. Oh, you will see; you will see. But come, we must hurry; it is almost supper-time."

III

Half an hour later the mother and child tripped down the stairs from their chamber in gala attire—simple enough, modest the dresses were, but their very most festive-looking. The mother wore about her neck a little basket that had been her husband's first gift to her. The excitement had brought roses to her cheeks, where they had long been banished.

As the little woman bustled about, completing arrangements for the festive supper, her heart swelled with joy, with thanksgiving for herself, with love of humanity,

with pity for the afflicted. As always when in her highest moods, she half-consciously recalled a hymn.

"Jesus, lover of my soul,"—

she sang the opening words over and over, as the joy in her heart welled up and demanded expression, even as her thoughts went

"O God," she murmured, "I thank You"

out to her husband. Once she interrupted the song and exclaimed, almost impatiently: "Oh, if he only would come!" But she checked herself instantly and rebuked herself for giving way to the impulse. "It is wicked of you to have even a trace of dissatisfaction in the midst of this great blessing," she told herself. "In due time he will come; he is often much later than this. And perhaps he will be delayed to-night, just to keep you from being too forgetfully—too wickedly—happy. He is enjoying himself or he would not stay so long."

No very patient she tried to be; and she added this touch and that to the preparations, trying to remember everything that her husband had ever liked or prized. How it would surprise him! How his eyes would stare when he entered! How the old back would come back into his face! The thought of it all brought the little woman's cup of joy to the very brim. She felt that speak she must. So she ran over to where the little girl was playing, and taking her in her arms, hugged her till she almost feared the little bones would break.

"God is good to us, dearie," she murmured over and over; and as she kissed the flaxen head tears came again to her eyes.

"God is good to us," hopped back the little headlike voice. Then an inspiration came to the mother. "Oh, sweetest," she said, "living to-morrow, God has been good to us—to daddy and to you and to me. He has sent us a beautiful letter full of money. We are to go for a long playtime—all of us together."

She paused, trying to find words to bring it all to the child's comprehension. "Yes," she continued, "we are going for a long, happy playtime. We are going a long way, to a place where it is summer, and there are birds and flowers. And papa will be with us all the time, and he will not have to work, and he will get well; and you shall have—oh, everything that you like—toys and dolls—great big dolls that talk—and candy—oh, every-

(Continued on page 511.)

As the doorbell clanged again there was the small, spiteful crack of a pistol in the cellar

THE EVER-YOUTHFUL CIRCUS

YOU can tell that spring is here by the carolling of the bluebirds in the morning, or by the piping evening of the nesting robins, or by the tender hints of new green that are peeping in furtive patches among the lawns of Central Park; but the surest sign of all is the opening of the circus in Madison Square Garden. It is there now. It is good.

Every man that ever was a real, human boy is circus-mad. Most of us are diffident about admitting it, but the fact is there just the same; and if you happen to catch us roving at the antics of Silvers and his foolish gang; or clucking the back of the next seat when Howells, the champion of Scandinavia, goes flying through space on the long skin; or shuddering at the perfectly beautiful lady dives down the Dip of Death; or frantically applauding the Absolutely Unrivaled Bareback Riding Act by the Only Somersault Equestrienne in the World, Josie Demott—why, then, you can see for yourself that we are nothing but boys, old and gray and bald enough to know better, but still circus-mad.

Possibly that is why the Barnum & Bailey show seems to this ancient boy to be better this year than ever. Really, we ought to sigh for the good old days, for the glories of Bill Showies's riding and the grandeur that was O'Brien's. But there isn't one moment for regrets. He who would sigh finds himself always so breathless from hurried contemplation of such a host of acrobats, leapers, tumblers, twisters, trapeze performers in the sky, elephants drilling like soldiers, eloquent sea lion actors and molesters, Russian hounds and daring dogs that jump the hoop, the ski-man rushing and swishing cometwise through space, and the fierce crash of galloping chariots, that he can only gasp: "It is too much—my neck is twisted—my eyes are crossed—I must go again to get the tangles out."

And don't overlook the Novello. There is a whole blessed family of them, and the blessed dog, Fleece, scolding Sikks precede them, squalling on shrill flageolets and booming the tom-toms. Papa Novello rides a wise pony, the Novello boys ride big ponies and little elephants with great impartiality, and the charming Novello girl is drawn into the arena in a rikishia by a smirking cooie.

The cleverest elephant walks a sawsaw, which comes down smack! and sends a smiling Novello boy somersaulting through the air over the elephant's body. It has all happened so quickly that you can't see how it was done; so the obliging elephant and the smiling boy do it all over again.

It must grieve the sensitive soul of a big elephant when she is

commanded to sit up and beg like a cute little dog asking for a piece of cake. Yet the largest Novello beast sits up most doggiely and waves her forepaws up and down as one who pleads for choice food. And to add to the big animal's discomfiture, they perch little dogs on her pleading jaws and they sit up and beg, too. The crowd snickers. Look closely and you will observe the blush of shame mantling the elephant's dusky shock and spreading along her delicate trunk clear down to the dainty little snaillike tip.

Then the boy stands on his hands on the elephant's neck (they really have necks, you know), and Papa Novello, because he is the tallest, hoists a weeny little white dog on a small wooden dink atop of a long pole, and the little white dog steps over on the up-turned feet of the Novello boy, who is still smiling and standing on his hands on top of the elephant's neck. What d'ye think of that? After a while the dog leaps for life, and all the Novello family who remain on earth catch him as he flies. As for the pony and the gray Great Dane dog leaping over the smaller elephant, and the smaller elephant in turn pinnetting his pulpy ponderosity over the pony and the dog, that is all too complicated to be told here.

And pray listen to these sober words, which tell with great restraint of the doings of the Siegfried-Silken troupe.

"Unapproachable and Unapproachable Displays of Desperately Dangerous Aerialism. Ten of the Greatest Mid-air Gymnasts in the World. Exhibit all the perilsous feats accomplished by other famous aerial vaunters, with scores of others as startlingly sensational, so defiantly antagonistic to all preconceived ideas of high air projection, as to create an entirely new departure in aerial displays. Single, double, and triple flying somersaults, jangling each other in mid-air, catching one another by hands or feet, playfully tooting one performer to the waiting arms of another, across a yawning chasm, and numerous other astonishing and audacious feats of finished flight and reckless rarity."

But the prettiest thing on the programme happens when Louise Nickney comes out with her brown Shetland pony and her bright-eyed, romping collier with the broad white patch on his chest and the big blue ribbon bow at his neck.

Louise is a very dainty child, and she puts the pony and the dog through the most complicated performance you ever saw. She looks like a nice little girl playing with her pets on her father's lawn. Do you believe in fairies? Are you fond of Peter Pan? Yes? Then you'll go up and see Louise and her pony and her wonderful dog.

PARIS BY CANDLE LIGHT

EARLY IN MARCH THE EMPLOYEES OF THE ELECTRIC LIGHT AND POWER COMPANIES IN PARIS WENT ON STRIKE, AND PARIS EXPERIENCED THE ROYAL SENSATION OF TRANSMUTING ITS BUSINESS AND ITS PLEASURES BY CANDLE LIGHT. STORES, RESTAURANTS, AND THEATRES WERE SHUT DOWN, AND NEWSPAPERS FAILED TO APPEAR. NORMAL CONDITIONS WERE NOT RESTORED FOR TWO DAYS

MUSIC AND THE OPERA

NEW MUSIC AND CURRENT CRITICISM

By LAWRENCE GILMAN

THOSE who have seen the score of Sir Edward Elgar's oratorio, "The Apostles," may recall that the composer, in a prefatory note, thus set forth his purposes: "It has long been my wish to compose an oratorio which should embody the Calling of the Apostles, their Teaching (aching!), and their Mission, culminating in the establishment of the Church among the Gentiles. The present work carries out the first portion of the scheme; the second portion remains for production on some future occasion." This "second portion," it is to be assumed, is comprised in "The Kingdom," which was performed by the Oratorio Society, for the first time in America, on March 26 at Carnegie Hall, under the baton of the composer, who is now visiting America. Incidentally, it may be remarked that there is a certain lack of intelligibility in these divisions; for the score of "The Apostles" is marked "Parts I. and II.," and there is to be, according to Elgar's official exponent, yet another section of this choral trilogy or tetralogy—whichever it is. However this may be, "The Kingdom" is put forward by the composer as a continuation of the subject begun in "The Apostles." The never weary, according to an authorized announcement, takes up the story of the Christian disciples in Jerusalem, their reviving of the Holy Spirit, of their preaching to the people, and of their preparation for the wider mission to the Gentiles. Four characters carry on what may, for convenience' sake, be called the action: the Virgin Mary Magdalene, St. Peter, and St. John; while the Disciples, the People, and the Holy Women are represented at different times by the chorus. The oratorio is in five sections, thus entitled: I.—"In the Upper Room"; II.—"At the Beautiful Gate"; III.—"The Pentecost"; IV.—"The Sign of Blood"; V.—"The Upper Room." The text, as in the case of "The Apostles," is an ingenious complex of passages culled from the Scriptures and so assembled as to form a consistent and homogeneous whole—a work, in itself, that gives evidence of a singular degree of literary tact and addressness on the part of the composer.

Upon several occasions in the past we have considered in this place, at some length, what seemed to be the characteristics of Elgar's art, at its best and at its worst, and there seems to be no immediate reason for renewing the discussion. Admittedly, Sir Edward is a composer of admirable technique, of incontestable alacrity; a superb master of orchestration, a musician who handles large and intricate tone-masses with extraordinary skill and assurance. He commands, at times, an order of musical beauty, of musical eloquence, which is personal, distinguished, commanding. He is, in short, a musician whom it is impossible not to admire; for he is never vulgar or cheaply appealing, and his art is rich in dignity, in a certain intellectual elevation which at once persuades and convinces. But that in addition to these admirable traits and possessions, he is also, at times, platitudinous, banal, sentimental, formidably dull, seems equally evident and indisputable. He is at his least felicitous in "The Kingdom." There are affecting and noble moments in the brief orchestral prelude; but thereafter the music adorns with distressing tenacity to a level of dullness—dullness that is swelling, portentous, inescapable—which is seldom attained by even the best gifted men than Sir Edward Elgar. That is one's final impression of the work—an impression that is so obscuring, so overwhelming, that one has not the heart to enlarge upon the matter, either in

deprecation or exposition. Is it possible that Sir Edward is becoming so much the preacher, the admirable aviator, that an inferior order of music is beginning to satisfy him, so long as it serves as a some sort of vehicle for his spiritual convictions?

It is sincerely to be hoped that Dr. Karl Muck, if he remains for another season with the Boston Symphony Orchestra, will not be estopped from presenting new and significant works by the discreditable manner in which his performance of Debussy's "La Mer" was received by an influential portion of those in New York who enjoy the privilege of public comment upon musical events. It is grievous enough when a work of subtle and distinguished imagination, of original invention, of novel and independent form, is offered to ears that are deaf to its quality and appeal; but when it is not alone unperceived, but is set upon by all the forces of a fatuous and myopic "conservatism," then must there be lamentation and disheartenment among those who believe that there is no more heinous offense in the kingdom of the arts than the discouragement of new beauty and liberating forms. For certain these intelligences, Debussy's fans and fantastic patterns were it seems, but "dabs" and "apologies"; his ocean was "a frog pond." For another, this music contained "more of barn-yard cackle" than of the moods and values of the sea. Yet another intelligence detected the curious quality of "morbidly"—this sea was "full of decay," of "unkindly" surges, and yet another who should have been the last to say it, this music was "stiff"—"chaotic, meaningless, cecephous." This was "rubbish" of "the dreariest kind."

The late Vernon Blackburn, one of the most sensitive and valuable of writers upon music, once advanced the theory that every critic in any art—but more especially in music—was capable of absorbing a certain amount of what he called "moderality"; the quality of feeling and utterance which, in its particular day, has the precise character of nervousness; but there was, he held, a point of saturation which was reached by every man in his turn, and that thereafter it was impossible for him to absorb any further expression of this particular and progressive quality. It is a persuasive suggestion, and it explains much. One wishes fantastically, at times, that there might be the discovery, the opportunity, of critics of music, a test of condition to determine, in each instance, whether or not this point of saturation "had been reached"; and, in such an event, the privilege of public comment might be withdrawn. For those who believe that there is no worthier or more vital function for the critic than the discovery and exploitation of those new forms and novel beauties in which genius declares itself, the mere obstructionist, the mere unenlightened and unresponsive conservative, in an active and positive menace. It is a difficult, an inaccessible ideal which Mr. Henry James proposes for the attainment of the wholly admirable critic; yet one would have every writer charged with the immeasurable responsibility of public comment seek prayerfully to achieve it. He had himself, to project and steep himself, to lead and lead that he understands, and to understand so well that he can say: to have perception at the pitch of sensation is to be inferior. It is not in the realm of the possible, but in the realm of the actual, that the critic must stand.

Mme. Brester-Gustoff

WHOSE REMARKABLE "CARNER" HAS BEEN THE STRIKING SUCCESS OF THE SEASONS AT THE MANHATTAN

THE SEASON'S PLAYS

? AND NOVELLI

By "I"

THE most succinct comment upon Miss Ethel Barrymore in her newest play, "The Silver Box," is an interrogation point. The "I" is comprehensive, and there is no answer. Elaborated into words, it might be set forth in this humble form: Why in the world did she select the play? Miss Barrymore is one of the few actresses to whom dangerously fickle New York is sincerely attached. She should know this now better than ever before, because New York has gone to see her in "The Silver Box." That is taken, indeed. But "I" will venture to say that every one who has seen the play has left the Empire Theatre in one or more of the varied phases of amusement.

The play itself is such a loose-jointed affair its story were best related in skeleton form. A silver cigarette-box is stolen. An innocent charwoman (none other than Miss Barrymore), with a drunken husband, is accused. Both are arrested and taken to court. The husband admits taking the box, and is dragged away, fighting, to prison. The final curtain falls with the charwoman alone in the courtroom, every one else having gone off to luncheon. The spirit of the play is the unflinching devotion of the charwoman to her worthless husband.

In groping for an answer to the "I" one may suppose that it was the spirit of the play which attracted Miss Barrymore to it, but it is, nevertheless, true that, save during the brief last act, the mother of the drama is not made strong enough to produce an appreciable impression. The courtroom scene did have its good moments, but they were flashes and not fire.

It is difficult not to say pleasant things always about Miss Barrymore, because she has played a number of her parts admirably but it must seem even to her sturdiest champions that in "The Silver Box" she has just now ventured too far afield. "I" would much prefer to blame the play; that is, to lay the greater part of the blame upon it, because the play is unconvincing, but one cannot avoid noting that Miss Barrymore is not suited to it in any way. Never once is she the charwoman. There is even a noticeable effort in her cultured voice and in her repression of movement. It is as if she were constantly reminding herself to be the charwoman. But in the courtroom scene, far and away the best part of the play, her acting does appeal to the sympathies of her audience. Here she is a very earnest, very pathetic figure of distress.

Bruce McFae is unquestionably a gainer by the play. He is *Jones*, the charwoman's disolute, dishonest husband, and as such he gives us fine a piece of character acting as he has ever done in his life. The other members of the cast, many of them, at least, are wasted in windy-waddy roles. One evening of "The Silver Box" is sufficient to prompt the advice to Miss Barrymore to seek another play, and to Mr. McFae to write another—or not, as you please.

One is inclined to judge somewhat severely an actor

who comes to us heralded as already famous, and undertaking to play all the great roles in tragedy, from *Oedipus Rex* to *Othello*. Yet Ernesto Novelli, in spite of this heavy handiwork, has convinced us that he possesses genuine force and sincerity. As *Hamlet* or *Luigi XI.* or *Leopoldo*, he, of course, measures himself against great actors who are vied in our memories, and we are hardly able to judge of his work as an original creation. So it is fairer to speak of his acting in Paolo Giacometti's modern Italian drama, *La Morto Civile*, where he has no rival except our possible memories of Salvini. *La Morto Civile* is extremely simple in plot and construction. A man of passionate, elemental nature stabs his brother-in-law in a family quarrel, and is condemned to penal servitude in the sulphur-mines. After thirteen years he escapes and returns to his home, to seek his wife and daughter, now a girl of sixteen. That is the entire plot, and the setting is almost classical in its simplicity; the greater part of the story is carried on by monologue, the poor convict Corrado telling of his impetuous hate, his sorrow, his suffering, his love for his wife and child, the nightmares that haunted him during the years of his servitude, the joy of his escape, the dread of finding his wife and child dead, his boundless longing for their love. The other characters in the story are simply on many occasions for Corrado to break

forth in passionate, pitiful self-revelation, and the dramatic interest is wholly absorbed in his rugged, elemental nature, full of desires, wrath, fear, longing, seeing all things through the clouds of his own stormy heart, and only dimly realising the souls of others, with their aspirations and hopes widely different from his.

The climax of the story lies in the gradual revelation to Corrado of the truth that those around him have really lived and hearts and hopes of their own, not dependent on his longings and desires, and often opposing themselves to what he has hoped and planned for them, with a very real and ardent love. Already braced in vigor and will by his long imprisonment, he has not the rallying power to stand up against this new revelation.

To speak thus seriously of this elemental story is to imply that Ernesto Novelli's work was strong, sincere, and convincing. It was all this, and something more. For every shade of change in the turbulent soul of Corrado was not merely referred to us in the words and tones of the actor; it was further made visible in his face, his body, the gestures of his hands, his whole outward physical being. Perhaps this power of visualizing strong, conflicting, painful emotions is the dominating gift of the Italian actor; and he seems to recognize this by choosing such roles as *Medea*, *Luigi XI.*, *Leopoldo*, *Hamlet*, where the suffering soul is turned inside out, so to speak, and exhibited in its quivering nakedness to the beholders. Nevertheless, Ernesto Novelli has made an equal reputation as a comedian, and here his work, if not so impressive and harrowing, is not less effective artistically.

Miss Ethel Barrymore as "Mrs. Jones," the Charwoman

Mauna Loa's Flood of Golden Fire

(Continued from page 561.)

wonder whether the "higher critics" are quite right in saying that there is no hell.

The picture is constantly changing. A yawning gulf gapes suddenly at one side of the troubled mass, and up gushes a stream of molten rock, running like water. This spreads over the entire surface of the mass in a quilt of golden fire; then it turns the stuff hard as in a blackened crust, which cracks and crumbles again as a new jet of liquid rock bubbles up from below.

But most wonderful of all the phenomena about the volcano is the cheerful optimism of the Hawaiians, who walk down to aw full death, chatting about it, and clicking their cameras at it as if the river and caldron of destructive fire were nothing but toys for their amusement.

King Edward's Gift to the United States Naval Academy

REV. E. W. MATTHEWS, Secretary of the British and Foreign Sailors' Society, presented to the Naval Academy, at Annapolis, on the evening of March 17, in behalf of King Edward, of England, an interesting memento of Lord Nelson's flag-ship, the Victory.

Rear-Admiral Sands, Superintendent of the Academy, on the part of the institution, accepted the gift with appreciation.

The memento consists of a loaf of Nelson, who died facing triumph on his ship in the famous battle of Trafalgar. The image is of solid copper, moulded from one of the guns of the Victory, and stands about eleven inches high on a six-inch base of oak from the woodwork of the old ship. The wood shows the screw-holes and battle-scars on three sides, but the front of the base is highly polished, to which is fastened a copper plate bearing the following inscription: "This loaf of Nelson, standing in victory, in oak and copper, taken from his historic ship, is presented by the British and Foreign Sailors' Society's patron, Admiral, H. R. H. the Prince of Wales, K.R., to the United States Naval Academy."

Another inscription reads: "The above, made from the material given by the Lord Commissioners of the British Admiralty, was handed to Rear-Admiral James H. Sands, Superintendent of the Naval Academy in Annapolis, on the evening of March 17, 1907, by Rev. E. W. Matthews, Secretary of the British and Foreign Sailors' Society, by His Majesty's command, and with the appreciation of Hon. Theodore Roosevelt, President of the United States, and, linked with the honored name of the Society's first President, Admiral Lord Gambier, who signed the treaty of peace with the United States in 1814, Glory to God in the Highest, on earth, peace."

Silk American and British flags will be made by Mrs. Roosevelt and Queen Alexandra, and presented to the Naval Academy, to be used in draping the loaf. Mrs. Roosevelt has not only promised to make the flag with her own hands, but will personally present it to the Academy, and drape it over the loaf of the great British admiral.

The Rev. Mr. Matthews is now returning to England, and upon his arrival there he will at once seek an audience with the Queen, and ask that she likewise make a British flag with her own hands, and let it be presented to the Academy by Mrs. James Hervey, wife of the British Ambassador to the United States, on the same day designated for Mrs. Roosevelt's presentation.

Intended to Pay

The kindly old lady from the country had purchased a pair of gloves in a department store.

"Cash!" shouted the saleslady.

"My land," exclaimed the old lady, fumbling in her valise. "I'll give it to you just as soon as I find my pocketbook."

JAP-A-LAC

THE KIDNAPPING OF LITTLE HORACE MARVIN

The Child who was Stolen in Delaware

NOT for many years have the hearts of the American people been so wrung by a tragedy as they are by the mysterious kidnapping of little Horace Marvin. From the President, who has written from the White House expressing his sympathy and offering to help in the search, to the humblest and most remote citizen, every man in the country is on the alert for some trace of the stolen child.

Thus far the history of the search is an unbroken record of grievous disappointments. The little boy was playing near a large straw stack on his father's farm on the morning of Monday, March 4. At ten o'clock his brothers left him alone for a few minutes, and when they came back he was gone. The boys had not seen any one lurking about the place, and there was no well or other excavation near by into which the child could have fallen. There was no trace of him. Nevertheless there was little apprehension that anything serious had happened.

But when the long day passed without any news of Horace, although all the neighborhood had been searched, and the next day was still without tidings, Dr. Marvin was forced to believe that his son had been stolen by microvants who held him for ransom. This belief was confirmed by what Mrs. Charles Woodell, a neighbor, had to tell. During Sunday evening, she saw two strange-looking men in the vicinity of the Marvin farm and going in and out of a hunting-lodge on the bay shore not far away. She could give no further description of the men than that one was tall and the other quite short and she did not like their actions because they seemed furtive.

Other neighbors remembered the strange conduct of a man in a black-hulled catboat about eleven o'clock on the morning Horace vanished. Although half a gale was blowing and there was a great deal of ice floating about, the boat went up Delaware Bay in spite of all the difficulties, as if the man was eager to escape being seen. Presently the catboat was caught in a great ice-floe and carried up into Salem Creek. It was believed that the kidnapers took the boy away in the catboat, for there was no trace of them on any road.

The Legislature of Delaware three days after the child's disappearance offered a reward of \$2000 for his recovery. At least forty persons wrote to Dr. Marvin urging him to search the straw stack, because the child might have been thrown into it and found it impossible to get out. With the aid of a dozen farmers Dr. Marvin pulled the stack to pieces, but they found nothing to suggest that the boy had ever been there.

From that time there have been daily rumors of the presence of little Horace Marvin in many parts of the United States. A news cablegram from Portsmouth, England, declared that a little boy whose description tallied exactly with that of Horace Marvin was seen there on March 19. Two men had him in charge, and he

KIDNAPPED!

HORACE N. MARVIN, Jr.

The photo was taken about twelve months ago at the age of two years and six months.

A liberal reward will be paid for any information that will prove valuable in locating, rescuing or returning my four-year old child, stolen from his home, "Bay Meadows," seven miles east from Dover, Delaware, Monday morning, March 4th, 1907, at ten o'clock.

REPORT—Three feet

AGE—Three years and ten months on the day stolen.

HAIR—Very fine, light in growth, straight, brushed straight down over forehead. Rugged in front where he had cut it himself with scissors.

EYES—Light blue, large and wide open as in baby state. This feature prominent. Slight scar on one eyelid. Perceptible but not prominent.

TEETH—Regular, small, sharp and very white.

FACE—Round and completely oval.

CLOTHING—Wore two-year old Star Button Down woolen suit, brown in color. Over this a pair of blue overalls and over all a blue overcoat with double row of large brass buttons. Knit cap, red, with brown band and sweat of many colors. Leather, buttoned shoes.

While at hotel in Dover cut and fast finger of right hand in cigar cutter. Cut has healed, but nail is cut square off. To trace it would necessitate cutting into the flesh.

H. N. MARVIN, M. D.

Dover, Delaware.

Descriptive Poster sent throughout the Country for Identification Purposes

kept asking them, "When are you going to take me to my father?" Mr. Swalm, the American consul at Southampton, learned that these men and the boy arrived at that port on March 19 aboard the Atlantic transport liner *Miscapulia*, which left New York on March 18. But though Scotland Yard detectives and private detectives have searched diligently ever since, they have not discovered any further news of the child.

A POSTGRADUATE COURSE FOR SEA-CAPTAINS

THE stranding of another great steamship on the southern coast of England makes prominent an imperative need, that of a better and surer knowledge of that coast on the part of captains.

Every man who is to be captain of a transatlantic liner, every man who is to guide a passenger-steamer along that shore which has been so fatal to ship after ship of the wealthiest and strongest, should, after qualifying in every other respect for a captaincy, spend six months at a year as a sort of postgraduate course getting into close acquaintanceship with every detail, every peculiarity, of that coast-line. He should go out with the fishermen, and in pilot-boats and coastwise sailing craft, in every variety

of weather. He should spend long hours in intimate talk with men who, lacking though they are in technical knowledge, know just the things which he needs to learn.

He would learn, from a new viewpoint, the reefs and the rocks and the shoals. He would learn every peculiarity of the currents. He would round every headland and would come to know every light.

Out there on the Scillys, those islands of terrific rocks, the men watch the great passenger steamers and note which are going most safely and which have acquired the habit of going too close to a perilous reef. Why, the Scillonians know these things so well that they have even picked out, from their observation of courses and their

knowledge of the reefs, upon which ledge the next ship which comes to grief upon the Scillys will strike!

The desperate rocks of the Scillys, the currents and bluffs of the Lizard, the cliffs of Devon and Cornwall, so fascinating to the tourist, so full of potential drama when seen white in a glow of sunshine from the deck of a passing steamer across a short expanse of glittering sea—all this is full of danger when the great gray fogs creep down or when storms come on.

And the greater part of this danger could be avoided, the greater part could be rendered innocuous, by the simple expedient of sending potential captains here for a practical postgraduate course.

The Biter Bitten

One of Eugene Field's later poems, published long before his death, related some adventures imaginary and otherwise during his last visit to England, the refrain of each verse running:

"When I was broke in London
In the fall of '89."

There was, however, an incident of his sojourn in the British metropolis that he did not celebrate in verse. One of the characters in the American colony at that time was a man named George Herrick, whose death occurred not long after that of Field. Herrick was a Vermontian who had lived in England for twenty years, and knew his London better than most Londoners. He was a man of leisure, and there was nothing that he enjoyed more than to show the big town to an appreciative visitor. He found one in Field, and the two spent hours together visiting places of historical and literary interest.

One of Field's favorite diversions in London was to go into a bookshop and ask solemnly for an expurgated edition of Mrs. Hemans's poems, and in this amusement Herrick was wont to aid and abet him. It was after they had been going about together for a week or ten days that Herrick one day stopped before a bookshop in Southampton Row, and said to Field:

"Gene, this is a place where I have bought books occasionally, and the proprietor is a good fellow, but one of the finest Englishmen that ever happened. He never saw a joke in his life, and if you were to go in and ask him for an expurgated Mrs. Hemans, it would give him a shock from which he would never recover."

"Come in," suggested Field. "We'll have some fun with him."

"He might think that I put you up to it, if I went in with you," responded Herrick. "You tackle him, and I'll go in after-ward and hear what he has to say about it."

Field promptly entered the shop and preferred his usual request. To his surprise the bookseller replied in the most matter-of-fact way:

"That is a very rare book. Are you willing to pay a fair price for it?"

The humorist was taken aback, but he said, "Why—why, certainly. I—I know that it is rare."

The bookseller produced a cheaply bound volume from a case, and handed it to Field.

"The price is a guinea," he remarked.

Field opened it at the title page and read in correct print: "The Poems of Mrs. Felicia Hemans. Selected and Arranged with All Objectionable Passages Expurgated by George Herrick, Editor of *Isaac Watts for the House, The Pious and Humane, etc.*," with a publisher's name and address at the bottom.

The bookseller was a picture of solemnity when Field glanced at him.

"I'll take it," said the humorist, faintly, and produced the money.

There was no one waiting for him when Field came out of the bookshop, but he received a letter from Herrick the next morning, saying that he had gone to Lambeth Palace to confer with the Bishop of London in getting out an edition of *Pilgrim's Progress* that would give the youth of England an idea of the strength and literary style of John Bunyan, without bringing the blush of shame to the cheek of innocents.

Kept in Alcohol

"Say, old man, wasn't that case of whiskey I sent you glorious stuff?"

"You bet it was! I didn't get a drop myself, but our cook never left us until it was all gone."

Heard in Cambridge

"SHE. You can always tell a Harvard man."

"HE (from New Haven). Yes; but you can't tell him much."

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

THE LUXURY OF THE WHITE STEAMER

THE above illustration conveys an idea of the unusual roominess of our new 30 steam horse-power car with Pullman body. The two revolving seats are as comfortable as the average library chair. The entire upholstery, the painting and the finish are not equaled in any car that sells for anywhere near its price.

As regards easy riding quality, no other car ever built has been able to approach the White. As tersely expressed in an official United States Government report, the White is superior to all other cars "on account of its free and smooth running, freedom from violent vibration and ease of controlling the speed between maximum and minimum, without jerks or jolts." The White won the London Town Carriage Competition held last October, competing against all the other leading makes of the World. This clean-cut victory furnished convincing evidence of the superiority of the White as the gentleman's car.

Did He Get Them?

THE records in the War Department in Washington are, as a rule, very dry, but occasionally an entry is found that is humorous.

An officer of engineers, in charge of the construction of a road that was to be built through a swamp, being energetic himself and used to surmounting mere obstacles, was surprised when one of his young lieutenants whom he had ordered to take twenty men and enter the swamp said that he "could not get it—swamp was too deep." The colonel ordered him to try. He did so, and returned with his men covered with mud, and said:

"Colonel, the mud is over my men's heads. I can't do it."

The colonel insisted, and told him to make a requisition for anything that was necessary for the safe passage. The lieutenant made his requisition in writing and on the spot. It was as follows:

"I want twenty men eighteen feet long to cross a swamp fifteen feet deep."

With April on the Hills

FORTH would I fare with April on the hills,
Partaking of the silver sacrament

Of song, forgetful of the grim intent
Of winter,—its interminable ill!

Fain would I join in joy with all the rills
Voicing their vernal rapture,—catch the swell.

Of the loved loam returned, the orient
Perfume the first white violet distill!

Forth would I fare with April! You may bide
By the all-litton ledge if you will,

Brooding on memories of some vanished tide,
Nursing some olden ecstasy grown chill:

For me the fresh free glory, and the wide
Wonder of earth from some sky-mount-

ing hill!

CLINTON SCOLLARD.

TEACHER. "Have you any position in view for me?"

AGENT. "I know one man who wants a tutor for his empty-headed son."

TEACHER. "Well, I think I could fill the vacancy."

Three-and-Twenty

A DAY or two after the election of Mr. Cleveland to the Presidency in 1884, a dignified gentleman hurriedly entered the eastern terminal of one of the great trunk lines and hastily alighted a silver bill across the counter of the ticket-window. "I want," he observed to the agent, "to go as far as that will take me."

"I wonder who that is?" remarked a bystander to his companion.

"Why, don't you know?" answered his friend; "that's the Rev. Dr. Burdard."

Conscientious Hens

THERE is a German dairymaid and farmer, whose place is not far from Philadelphia, who greatly plumes himself upon the absolute superiority of his products above all others in the vicinity.

On one occasion he personally applied to a Germantown housekeeper for a transfer of her custom to himself. "I heard dot you haf a lot of drouble with dot dairymaid of yours," he said. "Must you gif me your gauden and dore drev will no drouble?"

"Are your eggs always fresh?" asked the woman.

"Fresh!" repeated the German, in an indignant tone. "Let me doli you, madam, dot my hens reder, reder by anything but fresh eggs!"

What Prominent Men are Saying of this New Book—

The Future in America

By H. G. WELLS

BOOKER T. WASHINGTON—"I have read with cordial interest Mr. H. G. Wells's *Future in America*. He has written with an alert, open mind, and has discriminatingly set forth in his admirable study the trend of American institutions. I find myself with him especially in his deep sympathy with those parts of our American citizenship that most deserve and need at this time the helpful sympathy of all good citizens."

A. CONAN DOYLE—"I think there is as much wisdom and political insight in Wells's *Future in America* as in any book I have ever read."

FRANKLIN H. GIDDINGS—"Mr. Wells's observations are so keen, his style is so vivacious, *Professor of Sociology, Columbia University* and his humor so kindly that his study of the future in America appeals to a multitude of readers merely by its interest and charm. But to the thoughtful it is far more than so much good reading. It is safe to say that Mr. Wells is one of the ten or twelve most up-to-date men just now alive, and in his 'search after realities' he has found and described some realities here in the United States that we shall do well to face and examine. Impressionistic as it is, Mr. Wells's volume is quite as serious a challenge to sober thought as Mr. Bryce's more detailed and conventional account of our institutions."

ROBERT C. OGDEN—"The sympathetic spirit of Mr. Wells's study of American conditions stamps his work with a winning note of sincerity. The book is stimulating, instructive, interesting. It should be carefully read by every American with a weary head and an anxious heart concerning present-day problems in this country. The chapter on the 'Tragedy of Color' is impressive and masterful."

Illustrated. Price \$2.00 net.

HARPER & BROTHERS, PUBLISHERS, NEW YORK

Sophy of Kravonia

By ANTHONY HOPE

Author of "The Prisoner of Zenda"

SOPHY OF KRAVONIA

IN his new novel Anthony Hope returns to romance, and in the absorbing vein of *The Prisoner of Zenda* writes of another mapless little kingdom—Kravonia. Here an English girl is the centre of an exciting story. The crown-prince, whose life Sophy has the good-fortune to save, falls in love with her, and at once the story of her career becomes a galling romance, in which reckless adventures, court intrigues and conspiracies, dangers and hairbreadth escapes follow one another in quick succession.

With Frontispiece. Dornemented Cloth, \$1.50

HARPER & BROTHERS, PUBLISHERS

The Awakening of Helena Richie

By MARGARET DELAND

Author of
"Old Chester Tales," "Dr. Lavender's People," etc.

"A PERFECT book," declares the *New York Times*. "Everybody is reading 'The Awakening of Helena Richie' now. It is the novel of the summer."

"As an achievement in letters this story of passion and folly, repentance and renunciation, deserves to be ranked among the chiefest samples of American imaginative writing."—*Philadelphia North American*.

"Such work as this is bound to endure, must endure," says the *Providence Journal*. It shows how good American fiction can be. The story charms insistently from the first page, but presently it flashes out into a tremendous drama, catching the reader in its onward sweep and holding him enthralled to the end.

Illustrations by Walter Appleton Clark. Frontispiece in four colors.
Fust Bro. Cloth. Price, \$1.50.

COMMENT

The Financial Situation

The financial situation continues to be the topic of the most serious and pressing importance, chiefly in this country, but also in the money-centres of Europe, notably in London and Berlin. The exciting centre of it is the relations between our American railroads and government, both Federal and State. The subject is a good one to argue about, assuming that the argument is conducted with reason; it is eminently not a subject which can be settled in a frenzy, or in a turmoil, or by mutually distrusting parties to the controversy. It is clear that the situation, so far as the railroads are concerned, is a state of mind. A state of mind is the basis of many a hard panic. This was true of the panic of 1903, which was brought on not by what had actually followed the silver legislation of 1890, but by the fears of the commercial and financial world of our future money legislation. The world doubted the advocacy of the ideas of our politicians. Then as now the agitation was not economic, or industrial, or scientific in any sense; it was, and is, purely political. The free coinage of silver was an issue in 1903, and railroads are an issue now. Treating both issues as serious and honest, the question is not scientific, but one of state policy. The public excitement, too, naturally and inevitably aroused in each instance, has been not at all affected by economic considerations; in the one case, men were for free coinage whatever might be its effect on economic conditions; in the other, men are rushing toward state domination over the roads, if not toward state ownership of them, without regard to cost. In both instances a state of mind has been created which has resulted in a loss of confidence that has greatly shaken the financial world.

Efforts to Avert Trouble

It is worse than idle to say, as has been said, that the railroads have created an artificial excitement in Wall Street in order to prevent further hostile legislation, or to take revenge for what has been enacted. Whoever believes this could fancy demonstrates his own inability to deal with a serious situation. Railroad managers are not fools, and would be the last to enter upon a course of conduct that would hasten if not compel their own ruin. It would be idle, too, to attempt to formulate Mr. CLEVELAND's opinions of Wall Street in a state. Mr. CLEVELAND's moralizing is sound, but stock-gambling cannot be stopped by statute. It is true that a man who owns a railroad for gambling purposes is a bad man, a bad railroad man, and a bad citizen; but it is also true that our most successful railroad presidents and managers are not stock-gamblers, and that some of the leaders of them have never dealt in stocks and bonds except as investments, have never manipulated the market, but have

confined themselves to managing their roads as business properties for the purpose of earning dividends by rendering service. It is true, too, that instead of promoting financial disturbances for their own purposes, the strong men who are concerned in railroads have done their utmost to prevent a panic. The decline in the prices of stocks began several months ago, and then but for strong efforts to prevent it we might easily have suffered from a grave financial disaster. Mr. CLEVELAND, in his recent efforts to aid the market, has assisted private fortune. The money that Mr. CLEVELAND has poured into the market naturally belonged there, and the mere fact that he was able and obliged to interfere is not creditable to our public fiscal system. However that may be, there has been a united effort by the government and the great private financial powers to avert a panic. It will be a great pity if the two cannot contrive to remove the confusion for the state of mind which has troubled investors as well as the railroads.

The Cause of Alarm

The real difficulty is that the world—not only this country, but the world, for we are the cynosure of fiscal eyes now as we were in 1903—is in doubt about the future of our railroads. When the Federal administration started out on a policy which had for its purpose the fixing by public officials of freight rates, a war was begun against railroads. Whether the war was intended or not does not matter; it has come. Moreover, it has been encouraged and widened and deepened by the recent hint to the States to do something in that direction under pain of losing their constitutional rights by judicial constructions. The imaginations of the politicians in control of State governments have been stirred. They have tumbled over one another in their eagerness to devise destructive assaults upon railroad property partly that they might please a popular administration and thus obtain a share of the popularity. This war upon the roads has not only affected the imaginations of people to such an extent that the roads cannot secure the money necessary for extensions that are almost clamorously demanded, but actual damage appears to have been threatened. This is illustrated by a recent decision of Judge JONES of the United States Circuit Court, enjoining the enforcement of recent Alabama anti-railroad legislation. The contention was that the enforcement of the State's laws would make it impossible for the roads to do business except at a loss. Judge JONES did not decide the case on its merits, but issued an injunction in order to hold off the State until it could be determined what was fair and right.

An Appeal to the President

It makes little difference whether there has been real cause for alarm or not; there is alarm; railroads do not know what they are to suffer and investors fear their securities. This alarm ought to be set at rest, and efforts have been made to that end. Whether such efforts can be successful or not has been questioned, but nevertheless the attempt is made. It may be that the railroad managers are very bad, and that they continue to be bad; but it has not been the American custom to destroy or to punish without giving a hearing; nor has it been our way to kill in order to remove a sore spot. The railroads are now asking for fair play. Mr. MORGAN, Mr. MELLER, Mr. HUGHES, President FINLEY, of the Southern Road, and others have asked for a calm discussion of the matter. The presidents of some of the roads thought that President ROOSEVELT had expressed a desire to see them. Unfortunately, they were told that this was a mistake. The Illinois Manufacturing Association asked Mr. ROOSEVELT to address a convention at Springfield, Illinois, in order that the "feeling of timidity and apprehension" might be allayed. In a letter declining this invitation the President sent to Mr. SMITH, the president of the association, marked copies of two speeches he delivered in 1905 about railroads, and copies of his messages to Congress in 1905 and 1906. His views about railroads, he wrote to Mr. SMITH, are set forth in these documents and have not changed. In one of the speeches (made at Raleigh, North Carolina, on October 19, 1905) the President marked passages in which he had set forth his strenuous objection to government ownership of railroads, and his equally strenuous conviction that the government must exercise a supervisory and regulatory right over the railroads, so that

they may be managed in a spirit of fairness and justice toward all the public. In this speech he said:

It must be understood, as a matter of course, that if this power is granted it is to be exercised with wisdom and caution and self-restraint. The Interstate Commerce Commissioner or other government official who failed to protect a railroad that was in the right against any clamor, no matter how violent, on the part of the public, would be guilty of as gross a wrong as if he corruptly rendered an improper service to the railroad at the expense of the public.

To the same effect are marked passages in the other speech delivered to railroad employees November 14, 1907. He also called attention to a passage in his message of December 2 to Congress, as follows:

It cannot too often be repeated that experience has conclusively shown the impossibility of securing by the actions of nearly half a hundred different State legislatures anything but ineffective chaos in the way of dealing with the great corporations which do not operate exclusively within the limits of any State. In some method, whether by national license, law, or in other fashion, we must exercise, and at an early date, a far more complete control than at present over these great corporations—a control that will among other things prevent the evils of excessive overcapitalization, and that will compel the disclosure by each big corporation of its stockholders and of its properties and liabilities, whether owned directly or through subsidiary or affiliated corporations. This will tend to put a stop to the securing of inordinate profits by favored individuals at the expense, whether of the general public, the stockholders, or the wage-workers. Our effort should be not so much to prevent consolidation as such, but so to supervise and control it as to see that it results in no harm to the people.

The gist of these citations is that the President, in thinking as he has thought heretofore about the railroads, does not consider himself as enlisted on the hard side of the stock-market. There may be some solace in that.

Cleveland on Patriotic Duty

The address which GROVER CLEVELAND delivered on WASHINGTON'S birthday before the Union League Club of Chicago ought to be more widely read than it was likely to have been if its publication had been confined to the newspapers of the city where it was uttered. It is therefore well that it was determined to print it in full in the *North American Review*. The subject of the address is "Patriotism and Holiday Observance," but the ex-President's emphasis was, as is customary with him, upon the duty of performing service to the country. He considered especially what obligations and responsibilities rest upon those who in this country of ours are entitled to be called "good citizens." To his mind, WASHINGTON is the great exemplar of the patriotic virtue of sacrifice and service for the country. Truly the chief blessing of the patriot is not that he has won and worn the laurels of the republic, but that he has served it, has borne its burdens, has sacrificed himself, if need were, for the country's welfare. To be willing to perform the citizen's duty and actually to perform all of it is what Mr. CLEVELAND means by the "land that lives in us." The address is one more calm word from the balanced mind of a distinguished patriot against party hate, against forgetfulness of the homely civic virtues which WASHINGTONS inspired, and which Mr. CLEVELAND has illustrated throughout his unselfish political career. He modestly said, in the conclusion of his address, "The things I have pointed out may be trite." It is true that the words in which he pointed them out ought to have been trite, but they are not so, for, as he remarked earlier in his speech, we are living in a time when these homely virtues are too much and too often forgotten. Mr. CLEVELAND'S speeches are always good to ponder on. The familiar truths which he has uttered here are those which should be always in our minds and in our lives. We cannot indulge too infrequently in hate, in jealousy; and as patriots we can make no greater blunder than to rage over differences of opinion or to settle public controversies and questions by stirring up strife and discontent. The homely virtues can only be practised under the sway of calm reason, which was both the mistress and the servant of the men whom Mr. CLEVELAND fitly honored, and of our other great Presidents.

A Recent Decision

A stimulating and interesting comment on a certain alleged reason for extending Federal jurisdiction and for increasing the Federal political power is to be found in a recent decision of United States Judge SEYMOUR at Macon, Georgia, on the

constitutionality of the Federal "Employers' Liability Act." This act, to the annoyance of the President, was found to be unconstitutional by United States Judges EVANS and McCALL, on the ground that an act fixing an employer's liability to his employees is not an act regulating interstate commerce within the meaning of the Constitution. In finding otherwise, Judge SEYMOUR shows in the first place that there is quite as likely to be a conflict of laws made by decisions of the Federal courts as there is through decisions of the State courts. In the second place, the Louisville *Courier-Journal* points out that Judge SEYMOUR does not decide as a lawyer, but as a publicist. He believes that the Federal government ought to have the right to enact such a statute as the "Employers' Liability Act," and he therefore finds that it has that right. It is probable that Judge SEYMOUR'S method of exercising his judicial power will be approved by all who hold that it is the duty of the judge to declare as law that of which the head of the political power approves, and that the habit of the judicial mind, illustrated by EVANS and McCALL, to search for what is actually the law is old-fashioned and ought to be obsolete.

Secretary Taft and Mr. Foraker

What is familiarly known as the TAFT boom seems to be taking on ascertainable proportions; but it is too early. Doubtless Mr. ROOSEVELT would like Mr. TAFT for a successor; that is, he is one of several with whom he would be satisfied. It is not to be understood that we include the Vice-President among these several. Mr. TAFT is committed to the principal Rooseveltian policies, which marks him as an unusually agreeable successor. The outbreak of Senator FORAKER was doubtless stimulated, consciously or unconsciously, by Mr. ROOSEVELT himself, who made some anti-FORAKER appointments to Federal offices in Ohio, but its immediate cause was the desertion of CHARLES P. TAFT, the Secretary's brother, who, with his newspaper, has heretofore been an admiring friend of Senator FORAKER and of the organization. Mr. CHARLES P. TAFT thinks that the Ohio Republicans are fonder than is the FORAKER and DICK organization of Secretary TAFT, and he says so. Whereupon Mr. FORAKER responds that a trial will be made at the primaries to ascertain the preferences of the Republican voters for candidates for President and for United States Senator. Secretary TAFT makes no reply, but his brother accepts Senator FORAKER'S proposition. Mr. FORAKER also suggests a joint debate between himself and Secretary TAFT, but this proposal, we understand, the Secretary has declined. Men did not use to go running for the Presidency, and Secretary TAFT will hardly do so.

The President and General Wood

Some of the newspapers have connected the action of the President in making General LEONARD WOOD the commanding officer of the Department of the East with the KORNBLAU case. Briefly, Captain KORNBLAU had a quarrel with General WOOD, and was court-martialed. The issue was as to which of the two was wrong. The court-martial acquitted KORNBLAU and, inferentially, condemned WOOD. The President disapproved of the finding. This was a judgment in favor of WOOD and in condemnation of the court. But WOOD is not coming to command at Governors Island in further vindication. This is part of a programme determined on long ago. It is the intention of the President to make General WOOD chief of staff, if he can, and it is impossible for the army to prevent the carrying out of the programme by manifesting dislike or distrust of General WOOD. Unless something now unforeseen happens, he will arrive.

Governor Hughes, the Politicians, and the People

Governor HUGHES has been enjoying a very difficult time. The politicians have all been against him. He wants a good many reforms, and they love old abuses. It is not yet the time to speak of the Public Utilities bill. That is opposed by some good men, and will demand discussion in due time. But the Governor wanted a reform of the ballot law which would make voting simpler, and would liberate the voter so that he might not be so bound, as he is, to the party machine organizations; the politicians tried to make the law against independent candidates and voting even more drastic than it is by prohibiting the printing of any one name in more than one column. The Governor desired to support Commissioner

BINGHAM's efforts to bring the police under such discipline that he might break up the partnership between the supposed protectors of life and property and the criminals who threaten and assail both. What the Governor may accomplish for the State of New York depends upon the virtue and force of the people. If they want badly enough what the Governor wants, they can compel the politicians to give it to them and him. In the mean time Governor HUGHES does well to "speak for himself."

The Bingham Bill Passed

The excessively difficult work of inducing the police of great cities to do what they are paid for doing is likely to be considerably assisted, so far as the city of New York is concerned, by the passage of the BINGHAM bill. This bill, which passed the State Senate, 49 to 9, on April 2, abolishes the office of inspector, and gives power to the Commissioner of Police to appoint setting inspectors from the captains, and to reduce them again at will to the rank of captain if he is not satisfied with their performance of duty. In short, the bill, which is now said to become a law, gives the Commissioner authority over the inspectors and enables him to substitute an inspector who will do his duty for one who won't. At present there are nineteen inspectors in New York. Under the new law each one of them can be held responsible by the commissioner for his inspection district. The new law also empowers the Commissioner to make detective sergeants from members of the force, and to reduce them to patrolmen again if their work is not satisfactory. The intention of the law is to achieve proper and necessary subordination in the New York police force. There is good promise that it will be of great value to that end.

Modern Street Railroads for Chicago

In the Chicago election on April 2, FREDERICK A. BASS, the Republican candidate for Mayor, beat E. F. DUNNE, the present Mayor, by about 15,000 majority. But party politics seem to have had little to do with this election. The issue was the street-railroad service. Mayor DUNNE has not been able to carry out the municipal-ownership plan on which he ran and was elected. Experts, like Mr. DALRYMPLE of Glasgow, were unable to endorse his policies. Consequently a committee of the City Council negotiated an agreement with the traction companies, by the terms of which the whole transportation system should be modernized and made efficient, and the companies should pay to the city fifty-five per cent. of their annual net income. It was provided too that the city may take the lines at any time within twenty years, on six months' notice, at a valuation of \$50,000,000 plus the cost of rehabilitation. This latter item would be large, as it is expected to spend \$40,000,000 on the system in the course of the next three years. This agreement was embodied in ordinances which were passed by the Council, vetoed by Mayor DUNNE, passed over his veto, submitted to the referendum at the late election, and carried by 40,000 majority. So Chicago is going to have a modern street-railroad system as soon as it can be furnished.

Six Per Cent. for Railroads

Mr. HENRY M. WHITNEY, possible Democratic candidate for Governor of Massachusetts, is quoted as finding himself able to concur with Mr. BAYNE in thinking that a law permitting the railroads to conduct their business on a basis of earning six per cent. net profits would be about right. Six per cent. on what? On the money spent to build the railroad? Six per cent. is a good return on a safe investment, but railroad-builders who risk their money will want much more than that. A successful manufacturer expects fifteen or twenty per cent. on money in active use in his business. Persons who have money will be ready enough to buy railroad securities that pay six per cent. on the purchase price if they are safe, but will men plan, organize, and build railroads for the sake of an expected six per cent. on the money they put in? The American railroads were not built on any such modest basis of expectation. To eliminate the gamble from the railroad-building industry would be to eliminate most of the enterprise that has made that industry what it is. Private enterprise will never lose sleep in railroad-building if all the net profit in excess of six per cent. is to go to somebody else.

More Disparity of Recollection

It is matter for regret that there should be any increase in the number of gentlemen whose memory of conversations with the President does not correspond with his memory of the same conversations. To be sure, the larger the number is, the better for the tranquillity of the gentlemen included. Nevertheless, we are sorry that it should have become necessary to compare Mr. HARRISMAN's impression of what the President said to him in the fall of 1904 with the President's impression about it. Mr. HARRISMAN is sorry too, and has said so. Little else than mischief seems likely to result from this compulsory matching up of memories, and it was doubtless for purposes of pure mischief that the World brought it on. Nevertheless, it illustrates once more how bad was the old secret system of raising money for campaign expenses, and how vague and embarrassing were the obligations that grew out of it.

Dangers of Sunlight at Panama

There is food for sober thought in Major WOOLFEY's lecture, on page 537 of this issue, on the danger of excessive sunlight at Panama. In particulars of immense importance Panama has been made a healthy place. Yellow fever, malaria, and dysentery are no longer serious perils there. But still we see able-bodied and able-minded men go there full of energy and ambition, work enormously for a time, and then lose their spirits and courage, become despondent, and quit their job. So it was with WALLACE, so more recently with STEVENS. It begins to be understood that something happened to those men that changed their feelings about their work and affected their judgment. According to all accounts, Mr. STEVENS, at least, did admirable work at Panama, and had every reason to be proud of it and enthusiastic about its continuance. As it was, he absolutely, and, to the lay observer, unaccountably, lost interest in it. But Major WOOLFEY finds an explanation of the change in Mr. STEVENS's feelings, and of similar transformations, in the effect of tropical sunlight upon energetic men who do not know its dangers nor take the necessary precautions against them. The idea that excessive light is dangerous is novel to most of us, who have been taught to consider only the beneficial qualities of sunshine and to suppose that the mischiefs it does result from heat.

Respecting Respect

Captain KOEHLER of the Fourth Cavalry was tried by court martial for using disrespectful language about General LEONARD WOOD, and was acquitted. Now there comes word that General WOOD complains of F. S. CABANA, a civil employee of the government in the Philippines, as also using disrespectful language. Somehow, General WOOD has hard work to get respectful treatment. Can it be that he is not respected?

Documentary Evidences of Paranoia

The newspapers brought to notice last week a number of literary compositions by H. K. THUR, which were offered in evidence in the examination as to his sanity. About the same time there appeared "a report on the examinations in English for admission to Harvard College," issued by Harvard University. In both cases the examples of English composition were of curious interest, but they left a mind which happened to notice both of them in a state of uncertainty whether certain of the candidates quoted showed documentary symptoms of paranoia, or THUR had merely the usual symptoms of defective ability to write lucid English. The Harvard publication is chiefly a collection of the commonest errors in written English, made by candidates for admission to college. They were gathered and set forth as a guide for teachers, to help them learn to what distortions of language the young mind is most prone.

The Speaker's Language

Speaker CANNON is not so old as he may think he is. He has his years, but he bears them lightly. His youthfulness is visible. There is no need for him, then, to break forth in the language of infancy. When he says that we will "build the canal or bust," he is guilty of thoughtless and unconvincing words. He meant that we will build the canal, no matter what may be the cost. This is true, and when a grown man says it we know he means it and all that it implies.

President Roosevelt

(From the New York Times, April 3, 1907.)

THE President does not deny the statements of Mr. HARRIMAN's letter to SIDNEY WEINSTEIN save in respect to the agreement that Mr. DEWEY should be appointed Ambassador to France. In other respects his letter to Mr. HARRIMAN, which he now puts forward as a denial and defense, is a very complete confirmation of Mr. HARRIMAN's statements. Yet he accuses Mr. HARRIMAN of untruth, "a deliberate and wilful untruth—by rights it should be characterized by an even shorter and more ugly word." Mr. ROOSEVELT did not deny the charge that the corporations were putting up money for his campaign, made by Judge PARKER in 1904. He denied something else, something Judge PARKER had not said.

To charge his accusers with falsehood is recognized as the President's first line of defense. In the present controversy, a controversy as gravely involving his reputation before the country, his friends should advise him that he needs a second line, if not a third. Judge PARKER's charge of 1904 has been fully proved. It was true when he made it, and proof subsequently adduced, corroborated, and reinforced by Mr. HARRIMAN's letter and the President's admissions, puts altogether beyond dispute the fact that, as charged, the great corporations did contribute heavily to the President's campaign fund in 1904.

The President's unqualified assertion that Mr. HARRIMAN has uttered "a deliberate and wilful untruth" might give the hasty reader of the correspondence the erroneous impression that he has joined issue with Mr. HARRIMAN. In his letter to Mr. HARRIMAN he says: "I understood you to say that he (HARRIMAN) alleged that I made this promise (that is, the promise to send Mr. DEWEY to Paris) at a time when he had come down to see me in Washington, when I requested him to raise \$250,000 for the Republican Presidential campaign which was then on." After branding this statement as a wilful untruth, which by rights ought to be characterized by "an even shorter and more ugly word," the President says: "I never requested Mr. HARRIMAN to raise a dollar for the Presidential campaign of 1904. On the contrary, our communications as regards the campaign related exclusively to the fight being made against Mr. HARRIMAN for Governor of New York."

Let the candid reader determine for himself whether these words constitute a denial of the statements made in this passage of the HARRIMAN letter to Mr. WEINSTEIN:

About a week before the election in the autumn of 1904, when it looked certain that the State ticket would go Democratic, and was doubtful as to ROOSEVELT himself, he, with the President, sent me a request to go to Washington to confer upon the political conditions in New York State. I complied, and he told me he understood the campaign could not be successfully carried on without sufficient money, and asked if I would help them in raising the necessary funds, as the national committee, under control of Chairman CORTYLLON, had utterly failed of obtaining them, and there was a large amount due from them to the New York State Committee.

By its terms this statement refers to "political conditions in New York State," to the work of the national committee to the "New York State Committee." The alleged arrangement concerning Mr. DEWEY was wholly a matter of New York State politics. The Senator was to be got out of the way in order to place "up-State leaders," manifestly meaning ORELL. But when Mr. HARRIMAN returned to New York he "sent for Treasurer BLISS." Mr. BLISS was Treasurer of the National Republican Committee. Mr. HARRIMAN subscribed \$50,000, and procured other subscriptions, with the result that the "whole amount" of \$250,000 was raised. "The checks were given to Treasurer BLISS, who took them to Chairman CORTYLLON." Then follows this illuminating statement:

There were between 2200 and 2300 districts in Greater New York, and in a campaign such as that the expenditure of, say, \$50 in each district for campaign purposes, not including the watchers, on election day would take more than \$100,000.

The President quite avoids denying that he did ask Mr. HARRIMAN to raise campaign funds. His denial applies only to "Presidential" campaign funds. He does not deny that Mr. HARRIMAN did raise \$250,000, and that this money was paid to Treasurer BLISS of the National Campaign Committee. From the point of view of public morality and even politics it is quite immaterial whether this sum was paid over to the State committee, to which, according to Mr. HARRIMAN's report of the President's statement to him, a large amount was due from the National Committee, or whether it was directly expended by the National Committee, of which Mr. CORTYLLON was chairman and Mr. BLISS treasurer. Nobody is so ignorant of politics as not to know that any expenditure that would help HARRIMAN would also promote the success of Mr. ROOSEVELT in the State of New York. There was a common cause, the success of the Republican candidates.

Mr. ROOSEVELT has denied a charge that Mr. HARRIMAN did not make, and he has failed to deny the real charge made. The minor

charge of the Dewey agreement he does deny. Whether this evasion of the real issue is due to oversight or to adroitness may be left to the friends of the President to explain. (Obviously we think he should take counsel with them, for the moral attitude in which he has been placed by the publication of this correspondence is deplorable.)

It is idle to him that one thing should be said in his favor and defense, and it may be emphatically said, if the corporations who furnished the money for his campaign expenses thought they were purchasing his sentence they have been deceived. Toward them he has been inflexible, treating them without fear or favor, as though they were avowed enemies, not contributing friends. It has been held that ingratitude is one of the shining political virtues. That virtue the President has conspicuously exhibited in his relation to Mr. HARRIMAN and the other great corporation men who paid his campaign bills. No sense of personal obligation has in the slightest degree altered his sense of public duty.

Self-development and Duty

THERE was a time when duty was thought to be the sublimest word in the language, the stern daughter of the Vow, of kind whose supremacy none questioned. But we are now in an age of reactions, and there is a good deal of murmuring against what was once held to be inflexible. BERNARD SHAW tells us somewhere that each step in self-development means a duty repudiated; MATTHEW JAMES warns us, however little be our lamp, to give only the flame and never our oil; and KENNEDY asserts that to be generous to the future we are obliged to be selfish in the present. MATTHEW JAMES, again, who goes into this subject very thoroughly, says that we have been told to love our neighbor as ourselves; let it be our love ourselves in merge wise and faintly; heartily our love for our neighbors will be of little worth. So we see there is a new doctrine in the air, contravening the old simple way of feeling that life offered us but little choice; that there was always something to hand to be done, and that the higher law demanded that we set our hand in the most immediate task.

"I wonder," said an Oxford professor one day, "if American women are happier, in the end, than Englishwomen." And when he was questioned as to why he should expect it, he said that wherever he went he met American women intent upon self-fulfillment, self-development; they were studying philosophy in Germany, cathedrals in France, painting in Italy; they were journeying over the world, seeking enlargement of the self; whereas the Englishwoman accepted her given place in life, did the task that came to hand, and talked mainly of duty. He was uncertain whether, in the end, the sum of the new experiment was greater happiness. That, however, is hardly the question to ask. The real question is whether the aim is fuller consciousness or not. The stuff of our sorrow, of our studies, of our experience, must be translated into consciousness before it becomes power. Which material translated becomes the best consciousness is again the matter to decide. BERNARD SHAW is particularly severe upon self-sacrificers. He says MARIE BARKHARTSHOFF was a source of delight to every one around her "by the mere exuberance and hope-giving atmosphere of her willingness." The self-sacrificer, he says, "is always a drag, a responsibility, a reproach, an everlasting and unnatural trouble with whom no really strong soul can live." Mr. SHAW is always giving cold plunges by way of tonic, and what he says, witty and crystalline and striking as it is, needs a good deal of shaking down and looking over before we finally swallow it.

The type of duty-driven, self-sacrificing person to whom Mr. SHAW refers is well known. There are plenty of them in the world, and they are usually—not always—the feminine gender. They leave away their lives, doing little things for other people, encouraging those about them in small self-indulgences and lazy pettiness. But is it self-sacrifice, or is it a kind of timidity and shirking that makes them adopt these tactics? The mother who waits upon her child, who, as we Americans say, "spoils" her child, does so because it is infinitely easier to give than to receive. Little things, to exert oneself for small services, and to accept small sacrifices than it is to demand the highest ideal from those around us. It requires more strength of purpose to demand attentions, civilities, and service from our subordinates than to forgo them. There is nothing so easy to be, seeking that requires less moral stamina and purpose, than a household drudge or a person used by others, instead of a person with objects, interests, pursuits, and definite intentions. On the whole, when we look around and see the helpless and useless people, they are nearly all folk who, at some time or other, had the excuse of self-sacrifice. They are the women who did not go to college because mother would have been lonely; or the wives who have no resources or interests because they waited on their children all day and entertained their husbands every evening. In the end, it is true that it is the self-helper who can help

others: those who would not give of their oil, but industriously burned their lights.

However, there is a danger in self-development. It is the danger of forgetting that one is, after all, but a little screw in a big machine, and that whatever purpose the big machine serves, at any rate it was not created for the self-furtherance. It is not only good to give in self-development, it must always be with an end in view, and that end must be helping others. There is nothing after all, the world needs quite so much as kindness; and if in the cause of self-development we choose to forgo the minor services and unalloyed kindnesses, it must really be with the larger service and the greater help in view. Intellectual development may be taken in the same spirit as sanctification: "For their sakes I sanctified myself."

A modern essayist, in a recent very interesting book upon death, tells us that when he thought himself dying and tried to go over his life, the thing that distressed him most, was remembering that once when he was writing he turned away his sister who came to him with some papers for criticism. It reminds one of Trilby, who, when she was dying, could not forget the little brother whom she refused to take with her to the Bois, and she kept seeing him again as he stood in the doorway crying after her.

The moral to be drawn seems to be that we must rest with a certain degree of caution. We must pursue self-development with some alert not to miss the central services, the vital kindnesses, the beauty of the way. And when we are too busy to command our children, or too weak to demand the best of strength and of service in others, we ought not to call our qualities "self-sacrifices." In the end we know how true is the little prayer of our æsthetic poets:

"Help me to need no aid of men,
That I may help such more as need."

Personal and Pertinent

A WRITER in the *Fiber* wants the brown portrait of WASHINGTON at PRATT removed from the front of the Submarine in Wall Street. It is very objectionable where now placed, and the Federal authorities ought to get rid of it.

MR. T. R. O'MEARA, principal of Wyckoff College, Toronto, has taken exception to certain statements in HARPER'S WEEKLY for November 24, 1906, in an article "The Hidden Tragedies of the Arctic Whaling Fleet," by ROBERT DUNN. The statements are denied by Mr. O'MEARA to reflect unfairly upon a Mr. WHITTAKER, a missionary in the Arctic. We desire to make this acknowledgment of the receipt of Mr. O'MEARA's letter pending an investigation of all the facts in dispute.

GALATHEA AARON GROW, who died in his eighty-fourth year on March 31, was elected to Congress from Pennsylvania in 1830, when he was twenty-seven years old. He held his seat until his district was reappointed in 1862, and was Speaker during his last term. He was again sent to Congress to fill a vacancy there then thirty years later, in 1864, and was several times re-elected. There is a theory that our public men do not last as well as the English statesmen do. Mr. GROW's record is available to the contrary, and with it may be filed among others those of ex-Senator WILLIAM PENNINGTON WHITE, of Maryland, and Senators MORRIS and PETERS, of Alabama, all three of whom are still in active pursuit of business.

The Boston people are telling a new story about MARK TWAIN, and it is this, and a good one it is for some people to recall on occasion. MARK was telling stories, strangely enough, and some young gentleman—PERKINS, let us call him—after the manner of the very young, was trying to cap them, but he always began with that mock-modest preface: "You must have heard this before. Mr. FLEMING," repeating the phrase at intervals through his so-called story. Finally MARK is said to have said this:

"PERKINS, that's no way to tell a story. The night I was at supper with HENRY LAYN, and he had the same old trick that you have, PERKINS—'You must have heard this before'—or, 'You certainly have heard this.' He began a story this way, and I said, politely, 'No, HENRY, I haven't,' though I didn't know, of course, what his story was about. After he had used this miserable phrase three times, I said to him, 'LAYN, I was born and raised in Missouri, where truth is at a discount and courtesy is above par. When a friend begins a story as you do with 'You must have heard this story,' courtesy prevails, and we say no, no matter what the truth may be; and a second time we say no; but when it comes, like now, to the third time, then truth asserts herself. Yes, HENRY, I've heard your old old-story many, many times; I invented it.'"

We do not know much about the intellectual condition of Chittenden, in the State of Vermont, nor did we know much about the breaking capacity of Governor PRATT of that State before

he made a captivating confession at a recent banquet of the Schoolmaster's Club in Burlington, Vermont. Governor PRATT is an Amherst man, and like a good many other college men, he seemed to think, after graduation, that he could teach the young. He found a position in Chittenden after a strenuous examination and a liberal decision. The examiner, who was a clergyman, stopped writing his sermon and asked young PRATT the names of the States bordering Canada, and their capitals. PRATT knew a few of them. Then the examiner gave him a question in arithmetic, which he could not do. Then he asked him a question in grammar, on which he flunked. Then he asked him where he was going to teach, and PRATT answered, "In Chittenden." Then the minister said, "Well, I guess you'll do." Chittenden was worthy of the examination. That was not in the Governor's confession; this is: At the end of the term of twelve weeks the town owed PRATT forty-eight dollars; but the town didn't have the money, and the treasurer told him that he would have to wait, or take a waiver. When PRATT's father heard this, he said to his son: "Well, FLEWCHER, I guess you had better take the bribe; she's probably worth more than your services, anyway." Thus stimulated by the faith of men in him, PRATT became Governor of Vermont as he had become teacher in Chittenden.

While some of our most constantly employed thinkers are considering the question of municipal ownership of public utilities, it may be well to contemplate the spirit by which some private owners are moved. Mr. ABRAHAM ISKELI, of whom mention has been made before, was a culprit who owned the water-works of his town. He spent on them a good deal more money than he took in for the use of the water. But he had a foolish pride in his sinful conduct, and vainly imagined that he was entitled to the right to benefit his fellow-men even by owning a flagrant public utility. Another kind of private owner dwelt in a neighboring town. This man did not care whether he was righteous or not. He had a franchise but no water, and he granted to furnish several towns, in consideration of fat sums, with what he did not possess. In the language of the poetic plains, he now had to hustle for water, and, in his hustling, he offered Mr. ISKELI two or three times more money than that gentleman's water-supply, reservoir, and pipes had cost him. The unpractical dreamer, who died within several millions, said no to the practical man who is still hustling for a living.

"What a foolish man of business you are!" exclaimed this seeker after water. "You are losing money, and I offer you more than the cost of the works by which you are losing it."

"Yes," replied Mr. ISKELI, "you are right. But I have a fond. Some people call yachts, some people call black tulips; I have water-works." And so, for his beneficent fraud, the bad man kept right on in the teeth of all the holy principles of municipal ownership.

Governor HUGHES of Rhode Island has an admirable job and he ought to devote himself to it. This is especially a time when Governors who attend to business are not only making a good example, and laying up notes for themselves which bosses may not corrupt, but are rendering service to their respective States of which they stand in some need. But Governor HUGHES inappropriately seized upon the occasion of WASHINGTON's birthday to intrude into the field of military criticism, and whatever else he may show if he takes, for instance, Governor HUGHES as an example, he demonstrated that he was ill-prepared to discuss strategy. He said, in effect, that WASHINGTON was not much of a general. Almost any man who has read the history of our Revolution, and is modest enough to adopt the opinions of experts, can tell Governor HUGHES that he was guilty of error. The first ghost to contradict him would be FREDERICK, who surrendered to WASHINGTON at Yorktown, and compared military gifts with him in New Jersey. Other ghosts would support him, and among the most recent is that of the great von MOLTKE. Professor WILLIAM M. STANAGE, of Columbia, tells a pleasant story and gives the Prussian field-marshal's views. When Professor STANAGE was younger than he is, and slenderer, he was one of the band of embassy scholars who secretaried for GEORGE HANCOCK. Professor STANAGE, as secretary, once attending a distinguished gathering in Berlin, and trying to be more inconspicuous than his merits deserved, was approached by an unknown little man who asked him what he thought of his country's generals. Young Mr. STANAGE knew some American boys, especially STANAGE's, and was ruffled because his questioner doubted his judgment about our civil war precisely as we are now doubting Governor HUGHES's. Seeing this temperamental disturbance, the stranger kindly asserted his authority by telling STANAGE that he was von MOLTKE, and thereupon added that the United States had possessed one great strategist, and that man was GEORGE WASHINGTON. Then followed the discriminating eulogy on WASHINGTON's military genius which von MOLTKE pronounced, and which STANAGE published. Governor HUGHES should have read it before he made his unhappy attempt. He would like it much more than he could have liked the criticism which was made at the time and on the spot by Speaker CUMMINGS of the Rhode Island House of Representatives.

Correspondence

SUPPRESS THE OVER-ROLLED "R"

New York, April 1, 1907.

To the Editor of *Harper's Weekly*:

SIR,—In the name of humanity, can anything be done to rescue us from the assaults made daily and hourly by the sensitive typhann by the charming young creatures at the telephone switchboard?

A while ago I called for 1928 Thirty-eight Street. Immediately a gentle voice inquired:

"One—nine—thirtythree—eight—thirty-eight?"

The deadly rattle of the harsh and rolling r so paralyzed me that I could barely gasp "yes."

"I'm calling one—nine—thirtythree—eight—thirty-eight," the lovely girl rasped into my ear with a crackling series of explosions in the word "thirtythree" then almost rattled away the side of my head. Knowing that the hand that turns the switchboard is the hand that rules the world, I was, of course, afraid to protest.

But to you as a champion of oppressed humanity I appeal for release from the awful assaults of the over-rolled r. On what alleged principle of memorials or aid to sensitive is this variation insisted upon? Is there any possible excuse for this damnable iteration which consumes at least four-fifths of a second of valuable time whenever it is perpetrated upon us? Stop this time-wasting torture, and to you and the Telephone Company I shall ever remain a

GRATEFUL SUBSCRIBER.

THE OLIVER BID ON CANAL WORK

COLUMBIA, TENN., March 28, 1907.

To the Editor of *Harper's Weekly*:

DEAR SIR,—Very few people, giving the matter any thought, ever believed that Contractor Oliver, from Tennessee, would really be given the work of building the Panama Canal; simply because President Roosevelt, while honest in intention, has not so far seemed able to rise superior to section, and has not been a real President of the entire United States. When it became known that Oliver had made the lowest bid, immediately his ability to do the work was savagely attacked from certain interests in the East. The cry went up that he was irresponsible, financially and otherwise, and after ill-considered search it was pointed out that the record of one of his partners had a blot on it, and immediately those same interests clamored to have his entire bid thrown out and the next bid, nearly double in price, but from the East, accepted. However, the President refused to have the country thus swindled, and asked Oliver to get another and more satisfactory associate, which he soon did to the President's satisfaction; but no, this monument to a great engineer's genius must not be allowed to go to a man from the South, and we now see the gross degradation filled with reports of Engineer Stevens's resignation, it being reported that he would refuse to work if the contract was given out as it had been planned.

Does it not seem a little peculiar that Stevens did not make known such intentions weeks before the President originally announced the policy of letting the work to the lowest and best bidder?

I am, sir,

W. A. DALE.

We do not know why the Oliver bid was rejected, but our correspondent's notion that it was thrown out because it came from the South seems preposterous.

We guess the basic reason for Mr. Stevens's resignation was that he had worked harder for the Panama climate permits, and was tired out.—EDITOR.

THE CASE OF SETTLERS IN THE WEST

MARIETTA, IOWA, February 5, 1907.

To the Editor of *Harper's Weekly*:

SIR,—I have been waiting in vain for some one with an abler pen than mine to speak up in behalf of the actual settlers in the West. In your issue of January 19, 1907, you say, "The wholesale speculation of the national domain has gone on long enough, and the determination to stop it is one of the things for which his fellow citizens will be grateful to Mr. Roosevelt."

If the President means to stop the speculation he seems to be going at it in a queer way from the settler's point of view. First, he sends special agents, so I read, east West to find out the sentiment of the stockmen about the range (never it did not occur to any one to inquire of the sentiment of the settlers), and the stockmen—that is, the cattle-barons and sheep-keepers, the rich men who live in the cities and belong to the cattle associations and wool-growers' associations—are reported to favor leaving the public domain.

Of course they do! First the big cattlemen had it free, then the big sheepmen crowded them, and now the rich settlers are crowding them both, it is a very natural that they should favor leaving.

They offer a clause "to allow an actual settler first right to lease the land adjoining his claim," to bootlick the President and the Eastern friends of the settlers, well knowing that, practically, such a clause would be of very little value to a settler and that few would be able to take advantage of it; sometimes the adjoining land is not worth leasing, and often there is little or no government land adjoining a claim.

I am conversant with the conditions only in northern Montana, but they must be nearly the same in all of the arid West. Here the settlers are all stockmen in a small way—it depends on how long

they have been here; they have, as a rule, fifty to two hundred and fifty cattle; or sheep, generally nearly two thousand; very often several settlers are partners in these stock.

Near the towns and railroads, as a rule, they don't keep so much stock, but sell hay and other farm produce, while out away from the towns and railroads they have to depend entirely on their stock to market their produce and convert it into cash. Now these settlers can't keep these stock right at their doors the year round, but in summer they are allowed to go or are sent many miles away in search of feed; these settlers came here and made homes and schools because the government had always allowed free use of the public domain, and if it is now leased it will give the big stock interests, the combined interests, a leverage that they have long wanted, and it will crowd out many settlers and cause them to hunt new homes, and it will be a great loss for North-West Canada.

Seems to me that public domain should be held for the benefit of the actual settlers, and limit each settler in the number of stock that he grazes; he is now limited in the number of acres of land that he can acquire from the government.

It is true that the public range is now overstocked, much to its detriment; not by the stock of the settlers (who own a great number in the aggregate), but by that of those large owners who live in the towns and other States, and own cattle and sheep by the thousands.

This subject will bear investigation, and I hope that the truth will come out before Congress acts, so that whatever is done will be fair and just to the actual settler and not in the interest of the cattle-barons and sheep-keepers.

I am, sir,

THOMAS J. A. SETTLER.

WHAT'S THE MATTER?

ATLANTA UNIVERSITY, ATLANTA, GA., March 22, 1907.

To the Editor of *Harper's Weekly*:

SIR,—The statement sent out by the Immigration Expedition management, that I am preparing an exhibit for the coming year or instead to be an impudent lie, and quite in keeping with this whole shameful and discredited enterprise.

I am, sir,

W. E. R. DEFOUS.

ARKANSAS OBJECTS TO R. G. WELLS

BATTELVILLE, ARK., March 2, 1907.

To the Editor of *Harper's Weekly*:

DEAR SIR,—I notice in your issue of March 2 that some of the Bostonians are disposed to quarrel with Mr. R. G. Wells about his remarks in regard to their city. In this connection, will you permit me to say that the Bostonians do not see the only one who has a right to object to some of the statements of Mr. Wells.

His article which you published in regard to Southern conditions was such an absurdity that it would readily pass for one of his "Wrecker Stories."

In common honesty, do you think it fair for you to publish such an article?

If you wanted a paper on the Philippines, you would hardly secure it from some one who had sailed into Manila Bay and, without disembarking, sailed out again; if you wanted to give your readers some information in regard to Cuban conditions, would you have a contributor whose knowledge was gained from a day's stay in Havana and an hour's talk with some member of the Cuban Junta? If you want to know something about the Southern situation, and are unwilling to trust the prejudice of a native Southerner, why don't you secure a contribution from some of the many Northern men who have moved to the South and become acquainted with its people and ways?

Is it because you do not want the kind of article which such a man would write? Is it that you are afraid of the truth?

I have never seen a man who has associated with the Southern negro for any length of time who was an advocate of negro equality.

There are quite a number of Northern immigrants in our State, and I do not know of a single one who regards the negro as an equal or treats him with as much kindness and consideration as we do.

Have you a right to ask us to do a thing which you will not do yourselves?

Finally, if any well-bred, intelligent man will bring his family to Batteville and, for a year or two, allow his sons to receive as negroes as friends and as guests, and his daughters to accept them as companions and escorts, and will continue to be an advocate of negro equality for his own sons and daughters as well as for us, we will be willing to give a little more heed to some of the Northern articles, but will not have an opportunity of seeing a little practice one you blame us for smiling at the preaching?

I am, sir,

R. W. PABNEY.

Bless you, too! We are not afraid of the Truth. Mr. Wells's pieces were interesting as a record of the impressions of a very intelligent Englishman travelling in America. They were not intended to express the views of the WRECKER, but only the first sight impressions of Mr. Wells. We disagreed with very many of his opinions and impressions, but found them very interesting none the less, as coming from Mr. Wells.—EDITOR.

HOW CONGRESS SPENDS \$1,000,000,000

By FREDERIC AUSTIN OGD

THE biggest business of our national legislature has always been, and continues to be, the raising and spending of money (not money because the sums involved are so stupendous, but because the money is the people's, and everything that is done with it touches directly the general welfare. One not infrequently hears the biennial short session of Congress referred to slightly as a money squabble over appropriations, necessary perhaps and certainly inevitable, but apt to be barren of constructive legislation and therefore of small moment. As a matter of fact, short sessions may very well be productive of considerable legislative achievement, as the one recently ended undoubtedly was; but if no measures whatever were enacted in them, or even debated, save those of a purely fiscal character, they would still be enormously worth while. The financial operations of the government are so vast and varied that prolonged deliberation by all who have the power of the purse is the country's only safeguard against misjudgment, extravagance, and perhaps even bankruptcy.

Great as the burden of administering our national finances has always been, it is growing at a fearful rate, both because the sum total of income and expenditure is mounting to hitherto unapproached figures and because the activities of the government which involve the outlay of money are ramifying in directions undreamed of a generation, or even a decade, ago. It is not so very long since the country was amazed to find that it had on its hands for the first time a billion-dollar Congress. That was in 1891, and was due to circumstances of a special sort which did not repeat themselves until seven or eight years later. The five Congresses since 1898, however, have all been of the billion-dollar type, and have made appropriations averaging \$1,300,407,016 82, whereas the preceding one, by the method of an average, expends that of only \$926,612,084 21. The appropriations of the Fifty-ninth Congress are just about double those of the Fifty-fourth, ten years ago. In a series of very rapid and easy steps we have arrived at the point where not a billion-dollar Congress but a billion-dollar session is the measure of the nation's fiscal operations, and we are convinced that it may be some time before we see another Congress which shall be able to keep under the two-billion mark.

There are some four or five sets of figures which may be employed to designate the appropriations voted during the session recently closed. They range all the way from \$919,948,670 93 to \$964,778,928 63, according as the term "appropriation" is interpreted to include or exclude sums which will have to be voted by a later Congress to fulfil contracts entered into under legislation of the past winter. Chief of these sums, according to the statement made in the House by Mr. Livingston, of Georgia, senior Democrat of the Appropriations Committee, are twenty-five millions for the navy, and upwards of fifty millions for river and harbor improvements. Usage in such matters, however, dictates that the appropriations actually voted for the fiscal year 1906 be quoted, and that means that the figure for this session was \$919,948,670 93. Even this exceeds by forty millions the appropriation of the preceding session, which in turn was seventeen millions larger than any of earlier date in our history. As the session was merely one working-day in length, it appears that the rate at which expenditure was voted was not far from thirteen millions a day. Taking the present population of the United States at the conservative estimate of eighty-five millions, the total outlay authorized amounts to about \$10 82 for every man, woman, and child in the country, as compared with a per capita appropriation of \$8 21 in 1891, and of \$0 93 in 1900.

How was this enormous sum expended? In the first place it is important to observe that a not inconsiderable portion of it had to be applied to objects over which the recent Congress had little or no control. Upwards of one hundred and fifty millions were consumed by the permanent annual appropriation to meet the interest charge on the national debt, the requirements of the national sinking-fund, the cost of collecting the customs revenue, the redemption of national banknotes, and certain other regular and predetermined obligations of the kind. That was a lump appropriation which Congress was in no way case obliged to make. Another twelve and a half millions were swallowed up in providing for emergencies and deficiencies handed down from the current fiscal year and from earlier years, regarding which there was again no honorable option. Still another appropriation of the sort was the million devoted to inscapable "miscellaneous" demands—chiefly private claims of one sort or another recognized and ordered to be paid by special enactment. These sums together amounted to something like one hundred and sixty-three millions, or upwards of sixteen per cent. of the total appropriation, leaving

\$756,622,674 27 as the sum set apart for the special needs of the government during the twelvemonth beginning July 1.

Upon analysis the appropriations fall into four fairly distinct groups: (1) those connected with the military side of our national life, i. e., those for the army, the navy, ordnance, and fortification, the Military Academy, and pensions, with a total of \$332,234,004 67, or nearly forty-four per cent.; (2) those which are in the nature of administrative expenditures, i. e., those for legislative, executive, and judicial expenses, for the diplomatic and consular service, for the District of Columbia, for the postal department, and for Indian affairs, with a total of \$268,097,735 20, or some what more than thirty-five per cent.; (3) those which look to the bettering of certain economic conditions, i. e., those for agriculture and for the improvement of rivers and harbors, with a total of \$46,620,342, or about six per cent.; and (4) that for "sanitary civil" purposes, which was \$110,736,531 30, or about fifteen per cent.

From the relative weight of the first group one might conclude that militarism is rampant indeed, were it not for the consideration that upwards of forty-one per cent. of its sum total is representative for the appropriation for the payment of invalid and other pensions, which of course is a charge entailed by past rather than prospective military necessities. It is perfectly possible to maintain that the government is too liberal in the matter of pensions, but the number of pensioners has been steadily diminishing since reaching the maximum (1,001,191) two and a half years ago, and the appropriations on this score are likely to be considerably reduced within a decade. The next most considerable appropriation in this group was for the support and enlargement of the navy. The bill brought forward by the Naval Committee of the House carries \$26,332 54—a reduction of more than twenty millions from the estimate, and the smallest amount called for by the annual naval appropriation bill in many years. Five and a half millions were asked for the maintenance of the Marine Corps, leaving \$80,804,000 for the navy proper. Of this amount, \$23,400,000 was intended for the increase of the navy, \$101,000 for the construction of public works in navy yards and stations, and the remaining \$61,644,000 for the current expenses of the navy itself. The Board of Construction recommended the building of two new battle-ships and many smaller craft, at a total cost of \$31,000,000, but the Naval Committee reported the recommendation that but one battle-ship be provided for, in addition to the one authorized last year, together with two torpedo-boat destroyers and an increase in the authorization for submarine boats. After prolonged debate in both Houses and the intervention of a joint conference committee the appropriation was increased by three and a half millions, and the building of two ships was decided upon instead of one. The provision made for the support of the navy was shaped on economical lines, at least as judged by the standards of recent years. As it passed the House the army bill carried only \$12,291,574 89, though the Senate made additions to it amounting to \$9,474,878 80, with the eventual result of a compromise on \$78,535,282 75. The major part of this money goes to pay officers and men, purchase rations and ammunition, build and maintain barracks, hospitals, gunnery, provide transportation, and maintain signal, medical, and hospital services.

In the second group of appropriations by far the most important item is that for the maintenance and extension of the postal system. Indeed the post-office appropriation is regularly such the largest item in Congress in called upon its scale. It differs from all of the rest, however, in the very important particular that it makes provision for a service which fills not far short of reimbursing the government directly for all its outlay, and may be better described as entirely. In a sense, therefore, the postal appropriation represents only the apparent expenditure, and may be omitted from our estimate of the net expenses of the government. The enormous figure to which the appropriation is mounting in these latter years is due in part to the enlargement of postal demands consequent upon growth of population and expansion of business, but in a still greater degree to the rapid extension of free-delivery service in rural districts.

To keep the national expenditure within the bounds of the national income is a much graver task than most people imagine. At the beginning of each session of Congress the Secretary of the Treasury presents to the Speaker of the House a document known as the "Estimate," containing a detailed statement of the appropriations required for the various branches of the government during the ensuing fiscal year. These estimates are based on the asserted needs of the departments and are usually drawn on lines con-

(Continued on page 147.)

THE SHATTERED STEEL COFFIN OF A HUNDRED SOULS

A REMARKABLE CLOSE RANGE VIEW OF THE WRECK OF THE STEAMSHIP "BERLIN," WHICH BROKE IN HALF DURING A STORM OFF THE NORTH PIER OF THE DOCK OF ROTTERDAM, WITH A LOSS OF MORE THAN ONE HUNDRED OF HER PASSENGERS AND CREW. ONE OF THE SHIP'S BOLLERS WAS EXPOSED TO VIEW WHEN THE SACKED HULL SPLIT APART.

THE DUMA'S LUCKY ESCAPE

A FEW HOURS BEFORE THE RUSSIAN DUMA WAS TO HAVE MET ON MARCH 14, THE HEAVY CEILING OF ITS ASSEMBLY HALL IN THE FAUBOURG PALACE, ST. PETERSBURG, CRASHED TO THE FLOOR, WHIRLING THE CHANDLERS AND SCORES OF MEN. HAD THE BOLT BEEN IN POSITION MANY OF THE DEPUTIES WOULD UNQUESTIONABLY HAVE BEEN KILLED. NOTWITHSTANDING THE OPENLY VOICED SUSPICION OF NUMEROUS MEMBERS, THE MISAP IS BELIEVED TO HAVE BEEN ACCIDENTAL.

FEDERAL LICENSE FOR AUTOMOBILES

By CHARLES THADDEUS TERRY

Chairman of the Legislative Board of the American Automobile Association

EVERYBODY who tows in a motor-car will be glad to know that the national government may soon take charge of interstate travel in automobiles. A bill providing for Federal control has been introduced in the Lower House by Representative Coker, of Long Island, and it is now in the hands of the Committee on the Judiciary.

As soon as Congress reconvenes the measure will be pressed as rapidly as possible toward enactment, and motorists may reasonably hope to see an end of the petty and vexatious annoyances due to the varying laws among the States through which they journey. Meanwhile the Judiciary Committee has had the bill printed, and the authors, although they believe its provisions are as reasonable and effective as human experience can dictate, would be very glad to receive suggestions as to their betterment.

As to the urgent need of Federal regulation of interstate automobile traffic there cannot be two opinions. Devoted as we all are to the rights of our sovereign States, inalienable and never to be abridged, yet we cannot avoid the conclusion that nothing less than control by the Federal government will rid us of the incumbrances that obstruct us on every extended trip.

For example, suppose you start some fine morning on a run from New York to Washington—a most delightful trip in this early spring weather, when your car is properly placed and only man is vile—to the motorist. Your car is properly registered in New York, and you have your eyes fixed on the law direct. You roll comfortably off the ferryboat in Jersey City, but you have not gone half a mile from the landing when a keen-eyed policeman halts you.

"You're shy there on the number," he explains, politely.

"But there is my number," you tell him with a feeling of triumph.

"No," says he, "Nobin's doli" on a New York number in Jersey.

Now it is exceedingly likely that you have promised yourself a pleasant luncheon in Philadelphia, the true habit of the cordon bleu; but if you are wise you will immediately say good-by to that luncheon. Indeed, you will be very lucky if you get to Philadelphia in time for dinner. For it will be necessary to send to a distant local office to obtain a license to operate your automobile in the State of New Jersey, together with a registration number to hang on your machine. It is barely possible that you will receive it the same day.

But even then your troubles have just begun. For when you cross the line from New Jersey into Pennsylvania you will be similarly held up until you procure a Pennsylvania license and registration and number board. And the same sort of delay will be waiting for you in Delaware and in Maryland and in the District of Columbia. The return trip to New York will be made in less than one-third of the time that you need go south, because your various State numbers will pass you instantly by the guardians of the law—unless they happen to be confused by the great number of signs and tags hanging on your car, and stop you for examination.

One experience like this is enough to convince any man of the great advantage of Federal control and registration of automobiles. He need not abate in one degree his loyalty to the doctrine of States' rights in order to understand how very much better it is to have all his away-from-home licensing and numbering done in one place that will serve for every journey in any direction. It is a fact that the delays and annoyances due to various differences in State laws governing automobiles constitute one of the gravest obstacles to the growth of motoring in this country. And the fact is so axiomatic that I need hardly refer to it here, that the spread of motoring is the greatest aid to the making and maintenance of good roads throughout the country. Surely, then, every farmer, every manufacturer, with loads to haul, can see at a glance that his interest will be served by Federal control of automobiles.

Some one may object that I have used an extreme illustration of the difficulties to be met on the tour from New York to Washington; that a motorist about to make such a journey would provide himself in advance the necessary proofs of license and registration. True, perhaps, in some cases; but how often does it happen that a projected trip from one State through another has to be abandoned because the motorist has neither a license for the adjoining State nor the time to get one? Every automobilist of experience can remember many such instances. We cannot always tell long in advance just when we may have a day or two to spare for a trip.

And it is only to avoid these irritating obstacles that the American Automobile Association has introduced the proposed Federal Automobile bill. Nothing in its provisions would interfere with the State control of all automobiles in any State. Indeed, proof of State registration is the basis upon which the seeker for a Federal license must base his application. It is only when traveling anywhere in the United States outside of his own State that the motorist shall, by displaying the number issued to him by the Federal Bureau, be exempt from the necessity of complying with the registration provisions of the laws of the State or Territory

he is passing through. In one word, the Federal Bureau of Automobiles will grant in a single license the privileges of interstate travel now conferred by each State piecemeal and with latent vexatious delay to the traveler.

The machinery for national control will be simple and easily arranged.

A Federal motor-vehicle bureau, consisting of two commissioners, is contemplated, with a secretary and clerical assistants, to receive and pass upon applications for Federal registration, keep records of the motor vehicles registered, indorse upon the distinctive numbers issued as provided in the list, and for ready reference and for the supplying of information relating to any vehicle registered, upon proper requisition for the same. Salaries are provided for the two commissioners, secretary, and clerical force, payable out of the fund created by the registration fee, which are \$5 in the case of the individual, and \$10 in the case of the manufacturer. Each commissioner shall receive \$5000 a year, and the secretary \$2000 a year.

The act provides for the lodging of complaints with the Federal Bureau by any person, firm, corporation or association, or any mercantile, agricultural, or manufacturing society, or any body politic or municipal organization, against any one driving motor vehicles, and for the investigation of the complaint, and the infliction of the punishment provided in the act, if the complaint be sustained and be well founded.

In view of the great advantages that would accrue to the users of motor vehicles under Federal registration, the punishment for reckless driving would consist chiefly of suspension or forfeiture of the Federal license. The prospect of losing the privilege of quick and uninterrupted progress from State to State and of being compelled to go through the time-wasting delays now in existence would be enough to tame the wildest rover and make him careful of his speed. Indeed, the benefits of national registration to the public at large in the important matter of curbing dangerous motorists would be very considerable.

One of the great difficulties in the way of punishing persistent violators of the speed and safety laws is the redundancy of the number signs on automobiles. Naturally enough, if a car going sixty miles an hour is carrying half a dozen signs on which are displayed the initials of various States, each followed by a row of figures, it is practically impossible for any peace officer to identify the registration number of the particular State in which the offense is being committed.

Under the proposed Federal registration law the detection of the lawbreaker can be more readily accomplished. For under the new law every automobile in the country would carry but one number at one time. That number would be displayed on one signboard across the front end of the vehicle, and on another signboard at the rear on a black letter on a white background in such style and size as to be easily distinguished at a distance of two hundred feet. Moreover, these numbers should be easily read at night while quite as far from the observer, for the law provides that they must be clearly illuminated with lamps.

Special signs have been taken to insure the legibility of the number signs. The act provides:

"That such distinctive number, as an identification mark, shall consist of a white placard as a background, upon the face of which shall appear the distinctive number assigned to such vehicle by the commissioner or his authorized substitute, in black Arabic numerals, such numerals to be not less than three inches long, nor each stroke less than one-half inch in width, such number to be preceded on the placard by the initial or abbreviation of the State under the laws of which such motor vehicle has previously been registered, in black letter, each letter to be at least one inch and a half in height, and such number to be followed on the placard by the letters 'U. S.', each letter to be of the same size and character as the letters of the initial or abbreviation of the State as hereinbefore provided."

Every one familiar with automobiles will see at a glance what a great gain in the matter of identifying a car will be effected by reducing the number of signs to the minimum. Only one placard will be needed at each end of the car. On one side of each placard, for example, will be the owner's State registration number, thus:

N. Y. 5,315

On the reverse will appear the Federal registration number, thus:

N. Y. 236,523 U. S.

In New York State the New Yorker need display only his State number, in all other States only the Federal number. Could anything be simpler, briefer, less calculated to make the road pleasant for the same motorist, a path of thorns for the reckless?

THE NEW MOTOR SPEEDWAY WHICH IS BEING BUILT NEAR LONDON

REVOLUTIONARY FIGURES IN AMERICAN ART

By SAMUEL SWIFT

THE new spirit afloat in American life for a dozen years just has been taking concrete form of late in American art. New men have arisen, saying and doing things in paint and clay and with the tools of the craftsman that are more direct and more democratic than much of the art work of even a decade ago. In painting, especially, changes of considerable import have come about. The dominance of the great landscape-painter has passed. Wyand, Inness, and Homer Martin marked out paths that have both guided and baffled their successors. Winslow Homer's best matters, those by which he will be remembered, date back ten years or more. John La Farge has not lately been a vital factor in the painting of easel pictures, so called, though splendid mural decorations have continued to flow from his brain and brush. Abbott Thayer has done little new work lately, and George de Forest Brush's maximum of power and beauty seems also to have been reached—both these men are figure-painters. Twaitsman, an isolated and earnest artist, has left many disciples, but no school. Most of his colleagues among the Ten American Painters seem to care more for proficiency than for creative expression. Tryon has added little, in recent years, to the code of delicate perceptions and nice adjustments that gave him recognition in the late eighties. Albert P. Ryder, an artist of rare poetry and imagination, sends forth a canvas only at long intervals.

The landscape school, then, which enlisted most of the foregoing painters, has presented little that is new or vital since, let us say, the war with Spain, which remains a spiritual as well as a political landmark in American history. The prophet's mantle has fallen indubitably upon a group of artists chiefly concerned, not with the figure as such, but with actual human beings, their emotional life, and the material environment that helps to determine their character. What other school is there, in American art to-day, that has new themes, or new views of familiar ones, to give us? What other coherent group exists here, of men with something affirmative and stimulating to communicate? The school of Robert Henri, George Luks, William Glackens, Jerome Myers, John Sisco—to name only some of its strongest members—presents phases of life extending from eminent bishops

to half-stripped prize-fighters, from men and women of prestige to the latest batch of cowed headed immigrants, from the work and the play of rich and poor, young and old, down to the work and human aspect of decrepit houses on New York's crumbling East Side, or the inherent dignity of maternity in a barren cat with her kittens. Here is variety enough, certainly. But there are qualities common to all. These painters convince us of their democratic outlook. They seek what is significant, what is real, no matter whether the quest may lead them. They give no hint of "slumming" among either rich or poor—they are at home and at ease no matter what or whom they paint. This is an attitude healthily American, and so is the optimism that all of them disclose in their pictures. A sturdy strain runs through this body of artists. There is virility in what they have done, but virility without loss of tenderness; a manly strength that worships beauty, as art that is conceivably a true echo of the significant American life about them.

Naturally there is wide diversity of externals in this new school. Mr. Henri and Mr. Glackens fill their palettes with sharply dissimilar colors; Mr. Luks and Mr. Myers and Mr. Sisco could not easily be mistaken for one another. Because they are not afraid of sober hues, when painted with richness or luminosity, some have dubbed these men and their associates the "black school." To others, they are "the gang." Neither term is deserved.

In nearly every country opposition to important new art developments has centered in official bodies dedicated to the pursuit and encouragement of the arts. A few weeks ago, the National Academy of Design, the oldest and most conspicuous body of artists in America, opened in the Fine Arts Building, New York, its eighty-second annual exhibition. The jury of selection rejected, as usual, a picture sent by George Luks. It admitted one by Mr. Glackens, but not one another ranked by some among his best. It gave Mr. Myers and Mr. Sisco each one place. It administered snubs to Mr. Henri, himself a juror, until he asked and received permission to withdraw two of his own canvases, "A Mutador" and "Spanish Tilipoy and Child," leaving to represent him only the portrait of a general, which is not one of his best works. The jury admitted several canvases by new and

ONE OF THE MANY DISCOURSED PAINTINGS WITHDRAWN BY MR. HENRI FROM THE ACADEMY EXHIBITION

promising painters, but Mr. Henri, as leader of a minute minority, had to watch in many other cases what seems to have been the penalization of originality or self-expression in art.

Of course there is something to be said for the Academy. About half the wall space in these small and inadequate galleries has been given, in this exhibition, to painters outside the membership. Of the total of 375 pictures crowded into the current show, there are canvases by no fewer than forty men and women wholly new to the Academy's lists, some of them quite unknown to the jurors. This denotes generosity, not meanness, as to wall space. No one could fairly ask for a larger numerical representation of newcomers. But the charge is brought that this spring, as always, the jurors might have chosen, from the 1500 submitted, more new canvases, that showed promise and creative soul, fewer that were merely imitative of nature or of accepted convention. To this writer ten or a dozen members of this freshman class of forty seemed to have enough individuality in point of view and enough technical skill to deserve admittance to an Academy of Design exhibition. But there is too much of what has aptly been called "dead thought" in this and every Academy exhibition, among work by the new and by the older painters. One can imagine an annual show so pregnant, so closely in touch with vital tendencies, that even the dull followers of formula in paint might try to throw off their self-made shackles and to look at life and nature with fresh eyes, for the sake of becoming once more a part of this living, growing organism. It would be needlessly discourteous to inquire how low of the Academicians themselves, including members of the jury, show in their own paintings the proceeds of constantly widening outlook, or a mind receptive to new impressions. There are men who long ago adopted a formula and have clung to it, men whose canvases from year to year are no similar that they indicate no renewal of inspiration, no invention, nothing but a working over of the same "dead thought."

Happily, there are also artists whose long experience has but whetted their appetite for varied and untried things. But most

men's capacity to understand and to enjoy the changing art of their time may be likened to a rubber band, which cannot stretch beyond a certain definite span. Significant newcomers in painting, sculpture, music, literature, are rarely appreciated by the generation that has preceded them. Need one cite Rodin, Ibsen, Richard Strauss, men of yesterday and to-morrow, as well as the familiar earlier cases of Rousseau, Millet, Richard Wagner, Edmond Maet, and Claude Monet? Nature seems to decree that every generation, roughly speaking, shall set up its own standards, framed mainly from the ideals laid down by the leaders of the generation next ahead.

Perhaps one of the best known and most sincere members of the Academy will permit himself to be taken as an illustration of the truth that the radicals of yesterday may become the conservatives of to-day. There is an example of Mr. Keaton Cox's early work, painted with zest and freedom, which has a slight but distinct bearing upon the current controversy over the Academy of Design's attitude. This breezy little picture was painted in 1879, when Mr. Cox was then a gifted student in his early twenties, although he is now one of the influential conservatives in the Academy. It was a fisherman, evidently an American, that Mr. Cox took as theme. The fisherman was fat, and he wore a corpulent flannel shirt and a broad-brimmed hat. The point is that Mr. Cox, whose homely of purpose and whose ability as a speaker have made him almost a dominating force in the Academy's jury-room, was then an viracious painter as any young and healthy American need be. The handling of this bulky figure is loose, and the work has a light but knowing touch that leaves one comfortably assured both of the artist's skill and of his spontaneity. Probably this phase of Mr. Cox's art and personality would surprise some of the newer men whose work he has since helped to keep out of Academy exhibitions. Mr. Cox's maturer painting has a gravity that at times approaches the ponderous; he cannot now be accused of easiness of utterance. Yet he was looked upon, when he returned from Paris twenty-five years ago, as almost a radical, or at least as an advanced man. Even now Mr. Cox avers that certain elders in the Academy feel none too sure of his invariable orthodoxy. On the other hand, he is charged by younger folk with being the man who chiefly bars frank, individual expression from the exhibitions.

Doubtless Mr. Cox's case is not exceptional. And it enforces the conclusion that the tone of the Academy is set by men no longer in the first freshness of their receptive and creative powers. Its injustices whether chosen by the old alphabetical system or by the newer one of election, have simply tended to perpetuate existing conditions. There has been, if not a government of old men, at least a régime of middle age in the Academy. Take, for instance, the jury of thirty men that officiated for the coming exhibition. Twenty-three of these painters and sculptors were born before 1850, and of these twenty-three eight were born before 1830. Of course not all of the jurors born in 1830, or earlier, are conservatives, in the narrow sense. Some of them extend valuable aid toward what is promising and personal. But why not, as a hopeful experiment, introduce an age-limit clause applying to jurors? Out of the thirty to be elected by vote of the Academicians and as-

"Spanish Gipsy and Child"

THIS IS ANOTHER TYPICAL CANVAS OF MR. HENRI'S WHICH HE WITHDREW FROM THE CURRENT EXHIBITION OF THE ACADEMY

associates, why not decree that ten or twelve be not more than forty years old? Of course this would be equivalent to an amiable request that the ruling element in the organization cut off its own head, or, at least, its nose and ears. But it would give new and genuinely self-expressive art a better chance to reach the public, which means that artists doing such work would thus be spurred to further efforts, instead of being rebuffed.

Upholders of the Academy's present course cite the fact that most of America's best painters have been or are members. But have the exhibitions at any time within a dozen years been truly representative of the fresh art thought of the day? It is one thing to admit an artist at a time when it would help and encourage him, another to wait until he has struggled up in recognition without the Academy's aid. Yet it would be unfair to overlook the Academy's progress since the days of its Twenty-third Street bondage to very old members who insisted on sending three pictures apiece to exhibitions. After President Frederick Diefman took command the membership was quietly strengthened, until last year's merger of the Society of American Artists with the Academy, from which the Society had broken away in 1877, was merely the formal union of two bodies already all but identical. Further, some of the newer men gradually found their way into the Academy and Society shows. Arthur R. Davies, whom the collectors and a few professional art critics were quicker to appreciate than were the rank and file of his artist colleagues, exhibited a few times, but wearied of the struggle against an officialdom that did not then want him, and gave up sending his finely imaginative and colorful pictures to either Society. After the French government had bought a picture by Robert Henri for the Luxembourg Gallery, the two New York organizations began to discover some merit in him—again the collectors and a few critics were in advance of the men who paint—and as Mr. Henri's unassuming gifts as a teacher of art also became known, he was made first a Society member, and in 1906 a National Academician. Jerome Myers's tender and sympathetic transcripts of East Side street scenes and people were accepted almost from the first; his good fortune was also the Academy's. William Glackens, now an associate member of the National Academy, became such in exchange for his Society membership at the merger. Glackens, Sloan, Ernest Lawson, Jonas Lie, Van Derzee, Paul Dougherty, Gifford Beal, and other new figures and landscape men have appeared in some exhibitions and been shut out from others.

Only once in many years, if memory serves, has the Academy or Society accepted a picture by George Luks—one of the most original and accomplished painters in America, but still, at forty, absolutely unknown to the general art public. Once or twice he has figured in club loan exhibitions, but the man's own studio is the only place, at present, where one may see much of what he has done. Portraits, character studies, disolute folk of the night, wise old Russian Jews sipping their coffee in dingy restaurants, children, rascals, dock rats, children again, children of the very poor or of comfortable East Side shopkeepers—these are some of Luks's subjects.

Of such is "The Pawnbroker's Daughter," worthy of a place beside the dearest and most eloquent of American figure-paintings, beyond doubt a masterpiece. Who else joins so closely the observation of his themes with their realization in note-book and on canvas? Mr. Luks gets his material at first-hand. In the crooked and dark streets, in the bright sunlight of a windswept Hudson River dock, in drawing rooms, in theaters, everywhere he goes, this artist never tires of studying living creatures and their surroundings. His powers as a draughtsman are something more than remarkable, as his sketch-books and his paintings testify. His pictures are the permeation of creative energy, tempered to the mood of the subject. His saucy and delightful ambur-haired "Dutcher Boy," with raw beefsteak on a platter, red sweater, and eyes that are, as Luks says, simply holes with lenses in them, will stare you out of countenance if you let him. Humor, keen analysis, fearless good nature, and a genuine tenderness on occasion help to make George Luks's painting about as vital an art as one can imagine. And there are few such colorists here, few men whose brushwork is at once so bold and so delicate. Again the little brown-haired Jewess called "The Pawnbroker's Daughter" comes to mind, with her luminous hair and hands, the warm yellow-white of her dress, the glint of light that makes produce the white platter, the distinguished green of the Oriental jar. Surely no jury that ever met could reject a work of this rare beauty! As yet no jury has had the chance.

What, then, will be the Academy's future attitude toward Luks and Henri and the ever-growing throng of new painters with inventive powers which they are not afraid to trust? Will the Academy help to shape and publish these most hopeful new elements in American art? Or will it continue hostile, and thus force this uncomprovable new expression to seek or make some quicker channel?

THE UNRECOGNIZED ENEMY OF THE PANAMA CANAL—EXCESSIVE SUNLIGHT

By MAJOR CHARLES E. WOODRUFF

Surgeon United States Army

THE French failed to dig the Panama Canal because they did not know how to prevent the infectious tropical diseases. Recent events show that the Americans are seriously hampered by more insidious yet preventable diseases which are not due to germs. After the French failed, the discovery was made of the manner of transmission of malaria, yellow fever, and the dysenteries. It came at a most opportune time, and we have taken full advantage of the knowledge. As a result of modern sanitation, unknown to the French, these diseases no longer menace the work, and yet there are disquieting reports of more or less destruction of health, loss of energy or vitality, nervous breakdown, and the long catalogue of conditions vaguely described as effects of the climate. Men noted for wonderful stability and aggressive nerve power become unstable and dependent, their judgments are defective, and they are inclined to give up at the very time their labors begin to tell. All their experience is lost, and the work is seriously delayed while new men acquaint themselves with the problems.

These tropical nervous conditions have long been known, and they are undoubtedly due to the climate. It is high time that the causative factors be hunted down and avoided in the future. The disease in tropical neurasthenia, or nervous exhaustion, and so well recognized, that it is foolish to deny its existence, as a few unprogressive physicians have been inclined to do. Army surgeons have known of it by this name for some years in the Philippines, and the British have noted it in India for a century or more, but they fight shy of the name neurasthenia as too American. It is now a matter of national concern, for if it can be prevented, as it surely can, to a great extent at least, the period of construction of the canal may be shortened perhaps by several years, and the nation be saved expenses amounting well into the millions. Climatology is at last a very practical matter, and not the academic affair we have heretofore been inclined to regard it.

What is there about a tropical climate which causes this remarkable damage to the nervous system? It cannot be wholly the heat nor the humidity, for we have those factors in equal degree much farther north. Within the last dozen years we have suddenly awakened to the fact that light is a very deadly agent. If it is in excessive amount it kills every living thing. Most animals hide in darkness, and if they must be exposed in the sun they are shaded by pigments, hair, or feathers. Even plants which utilize it are so arranged that the living cells are protected. Bacteria are plants, and they are promptly killed by light—sunshine is our best disinfectant. We cannot see it kill bacteria in the skin, and thus cure ourselves of numerous infectious diseases, but if we use it too strongly it kills the tissues as well as the germs. Man himself is pigmented in direct proportion to the light of his ancestral home. The negro really lives in dense shade under his black skin, and the Eskimo needs much protection from the cold sunlight.

We need fresh air and lots of it, but we can get it without light. Indeed, there is much evidence that sanatoria in dark cloudy places are far more successful than those in lands of perpetual sunshine. Men who work in comparative darkness do not seem to suffer from it if other conditions are wholesome. Miners are notoriously healthy and long-lived, and the employees of the New York Subway are not reported to be more sickly than those on the surface. These facts have been known long enough to be put to practical use, yet we have been so accustomed to scientific baseless talk about the necessity for God's sunshine, that it is impossible for most men to realize that the truth is the exact opposite. No persistent is the effect of early teaching, that we deliberately expose ourselves to a harmful degree of sunlight, and the inevitable collapse ensues, we petulently blame the climate instead of our own inability to learn of its newly discovered dangers and to avoid them.

Light is a stimulant if it is of less intensity than the latent degree—a fact known to every one who enjoys the exhilaration of a bright sunny day which is a spell of cloudy weather. In the tropics this stimulation is quite marked on the newcomers for a few weeks or months or even a year or more. They are more active physically and mentally. They rush things, and are quite sure that tropical climates are magical. Indeed, they feel so well under the stimulation of light that they expose themselves unnecessarily to the dangerous rays which so subtly but surely work mischief to the nerve roots. The chief of the Philippine civil service wrote an article actually praising that climate, and within two years was compelled to leave it to recover his wrecked health.

We were so sure in the Philippines that we could not get too much light that we built our houses to admit it in floods, and contemptuously disregarded the English and Dutch experience of two centuries. We called people lazy if they hid themselves at midday, and we heavenly went abroad in the full glare of the light. Even the heavily pigmented Filipinos darkened their houses, and

were astounded at our foolishness in doing what they did not dare to do. Collapse always came in time, if not a real collapse, at least a degree of destruction of nervous vigor which demanded a return to darker climates to escape chronic invalidism or even death.

All this is nothing new. The history of the world is full of instances of northern races of men who thought they could defy nature's laws by migrating to light climates—Goths, Vandals, Franks, and many others—but in time they all paid the penalty of extinction. The process is slow if the new climates are not much different from the old, and therefore it is never noticed while it is going on. We do not notice it in America, but it is evident already in our tropical parts, where the only survivors are the very dark types who are protected by their pigment. Thousands of light types have migrated to tropical America but have left no trace. Even further north the blonder types are being replaced.

In the mean time our constant condition of light-stimulation is causing that stressfulness which is making us famous at the expense of a fatal wear and tear. The slow easy going men of northern Europe are normal—they last. The American hustler is gauged beyond his power, and as a rule does not accomplish as much in his lifetime as the more sluggish European. Work of itself never harms any one—it is only when we work under the pressure of a stimulant that irreparable exhaustion follows.

In the tropics these tendencies are magnified, and even the heads of those distressing health reports sent out. In no place on earth is it more evident that the race is to the slow. Men who are guided by the experience of centuries and take care of themselves are known to remain in fair health for thirty or forty years, but the hustler is a wreck in three. There are some remarkable exceptions, to be sure—men who think they have successfully proved the law to be false—but their cases do not bear inspection.

So long as men continue to deny that tropical light is harmful, just as long as we fall in with the policy of civilization at Panama. We will not guard the white employees as we should. They and they will ignorantly expose themselves to needless dangers. After the first year or two of strenuous labor they will grow stale, lose interest, and become "quitters" through actual nervous disease. Every experienced engineer who is thus compelled to give up is a distinct loss. Many more cases will be confused. If they do not "quit the job," their nervous irritability is likely to lead to defective judgments which may cause most expensive blunders. The irresponsible pessimistic gossip which pours out of Panama is derived from such sources—we had lots of it from the Philippines at one time.

The solution of the matter is self-evident. The white man at Panama must avoid that which he cannot endure. We have proved that he cannot allow mosquitoes to bite him, and now it must be acknowledged that he cannot allow the sunlight to strike his unprotected body. We eliminated the mosquitoes, but we cannot eliminate the sun. The soldier who deliberately and unnecessarily exposes himself to bullets when he could take cover is not only a fool, but he is not a true soldier. His fatal recklessness only weakens the army. The engineer who can work all day in the open in Michigan or New York should not do it in Panama, and if he attempts it he is injuring the work instead of helping it along.

The new discoveries as to light should be put to practical use. The old rules of tropical living must be revised. Less work, less sleep, and more rest. The day should be divided into ten hours, and none in the midday will give more progress in ten years. The houses should be darkened, the clothing should be opaque, the umbrellas and big helmets should be more in evidence, and vacations in the north should be frequent. Then we will hear of fewer men who have sunk into an "irritable weakness," or have become actual nervous wrecks after two or three years. Tropical light is the real enemy at Panama, and has caused the last sensational upset. There may not be another if these modern discoveries are acted upon.

In the long run—that is, in some years—it will be found in Panama, as in India, that the survivors are not the big blond men who do such grand work in the cold darker north, but they will be men who more nearly approach the physique and complexion of the natives who are adjusted to the climate. Famous tropical explorers like Livingstone were all small dark types, and the men who survive a quarter century of campaigns in India are undersized like Wolsey and Roberts. There is something about the big blond physique which makes it especially susceptible to damage in the tropics, and such men break down quite soon. Perhaps there should be a more critical selection of types which are known to survive the conditions. In time there will be a survival of the fittest, but it is too expensive a process now that we know that the light destroys the health of a white man in the tropics. We can select the fittest beforehand and keep them the fittest. We must deign nature's laws, not defy them.

TO ME, HE SAYS—"

MONTGOMERY FLAGG

THE GOLD LURE

BY BARTON W. CURRIE

DRAWINGS BY GEORGE GIBBS

THE Tenderfoot heard only the cymbals and brass, the crashing high notes of triumphal marches, thunderous, reverberating acclaim of victory. There was a stupefying monotony of halloo-jah about it all which, coming from the lips of those irreverent and irresponsible gold-seekers, satirized out of harmony with the proper solemnity of things. Surely, pondered the unsophisticated wanderer from the cozy corners of the East, there must be some grist in this splendid golden harvest.

"In all the processes of human endeavor," he ventured to the mixed assemblage of Nevadans he had fortuitously with at the Montana Club—the gossip centre of Goldfield—"there are sacrifices. Show me some who have failed, who have fallen, whose hopes have been crushed utterly, whose souls have been seared with the bitter iron of experience. I marvel how well you smother your tragedies, and drive into the shadowed corners those who have gone down. Only your hawthorns and gaily habited heralds are allowed on parade. Does some silent shaft that has gone vainly into the flinty depths of your treasure hills shoot your skeletons? High Finance does not hide its dark and doleful secrets of the men who would be kings one whit more securely than these bubbling, effervescent, showily frosted gold camps."

There was silence for a moment . . . a surprised, sullen silence. Chances almost black and menacing turned upon the doubter. A bankrupt who had long nourished body and mind on dreams of a man who one time had looked in on himself as a tower of moral strength, facing all men with a steadfast eye which radiated the glow of a clean inner consciousness, but who had been metamorphosed by the gold lure into a creature capable of any mean chicanery—the languid and unconsidered instrument of a master fraud fairly glowered upon him. This rudely intruding and unpleasantly inquisitive Tenderfoot had dragged up before him the bogy he hated, that with modicum of tolerance he had long refused to give eye to . . . a horrible spectre that made him look backwards into brighter days and revealed the black depths of the future.

There rose from his throat a cry that was almost a snarl. Choking, he said fiercely: "I tell you the gold is here, and that any man who has the grit to hang on is sure to win, to get it . . . a mine . . . become rich . . . be a millionaire, I know it." (He was becoming incoherent; saliva foamed on his lips.) "They are here in this room . . . a dozen of them . . . all

millionaires . . . yes . . . Crocodones . . . Look at them!" (He paused and rulled his eyes; then continued hoarsely.) "They are here in the flesh . . . and they got it as I will get it . . . as we all will get it . . . out of the desert . . . from these bald mountains."

He fell back exhausted, panting, but triumphant. He saw that the others believed—some who had got it; some who, like him, would get it. They looked approval upon him and shook their heads sagely. This revived him, roused him to look like a man who had done things—this hapless little visionary, withered by misadventure years. Encouraged he ran on like a trance medium, only to collapse in a heap when the Tenderfoot asked:

"How long have you been trying to get it?"

The question seemed to knock all of the forced youthfulness out of him. His cheeks went hollow and the lines deepened about his mouth and eyes. The glow to his little eyes dimmed and was gone. The Tenderfoot regarded him with a start of dismay. He felt accusing glance, and experienced the sensation he imagined must come to those who have killed something. There was a flavor of the tragic in this pitiful spectacle of overwhelmed dream triumph that he had not counted on. The uncomfortable sense of guilt was oppressing him as a heavy burden, when a bulky figure burst through the door of the club-room and announced itself with a war-whoop. He was young and big and blond and handsome; yes, undeniably handsome, even through the alkali grit that cumbered his countenance.

Whirling down the room in a waltz step, scattering chairs and tables, and filling the air with magazines and books, he finally came to the chair of the huddled little heap whose golden hopes had been murdered for the moment. He smote this little limp rag of humanity on the back with the palm of a great foot and shouted:

"Strike on the Little Monkey, boys! Only eighty foot down, and she always one thousand to the ton. Whoooo! Whoooo! Let's revel!"

The ephemeral crushed failure scrambled out from under the table where he had rolled, beaming, abject, repentant, and began a enervating dance with the tow-haired young giant. The announcement of the "strike" had had the effect on him of a potent stimulant. He had no interest whatever in the Little Monkey, and would profit only to the extent of a revel-wild, saturnalian southern Nevada revel that would leave him limp and pained and

"I tell you the gold is here, and that any man who has the grit to hang on is sure to win!"

Drawn by George Gibbs

He scrambled out from under the table, and began a crazy dance with the tow-haired young giant

harvested by the nightmares of reality. But it was the spirit of the thing that remade him; dispelled the weight of years, and wiped clear the slate of memory. Something had just happened that some day would occur to him. Then he would shed his crinkled mask of age, and burst, waiting and war-whopping, into the club-house of the great Nevada mining camp. What matter his sixty years, the thin thatch of gray upon his little round head, the deepening wrinkles? Success would find him as young as any of them; as wild and reckless a good fellow as that overgrown lay who for a few hundred dollars had leased the Little Monkey and become rich in a day. This was an occurrence not common, but common enough to tingle jaded nerves and supply alimentary food-stuff in anemic despair.

The Tenderfoot seeking for the reverse of this golden shield of Fortune knew that he would have to look elsewhere than in this gathering. The idea suggested itself to him that somewhere in that arid country, probably out along the old mule trails (almost forgotten now since the making of motor-car speedways), there would be some wanderer on the face of the desert, carrying the blight of bitter disappointment and bowing humbly beneath it. So he rode up the desert next day on the morning train to a desolate water-station, whence he had noticed, on the down journey from Reno, a little-travelled trail led off in uncertain twistings to disappear through a deep fork in the mountain range. It was a typical water-station of the alkali wilderness, with a half-propped tank, one little hut where the tender lived with a half-breed wife, two emaciated brown children, a half-dozen dogs, bean and cucumber as caryotes, and a pair of sturdy burros.

The Pullman porter blinked wonderingly when the Tenderfoot asked to be put down at this dismal halt in the long desert run. His fellow passengers, ever cackling and crowing of gold and strikes, fell into suspicious silence, and one and all moved by the same thought—"there's some prospect going forward in this dis-

carded range." Not that there was anything in the appearance or bearing of the little Easterner to suggest the prospector or mining expert. A mere detail of indistinctly resembling never-fuses a gold-buster; just a suggestion of mystery, of something overlooked in the barren mountain waste, ruins crags, sunken in its desolations—desolations for the most part purely by the grip of the gold lure. So they all peered eagerly, almost wolfishly, out of the dust-railed windows as the Tenderfoot descended into the glare of a scorching August sun.

The tank-tender, lounging in the doorway of his shack while his more energetic spouse shaken the thimble of the two oil-burning engines that hauled the long train, regarded his unexpected visitor with bloodshot eyes that seemed to roll in uncertain orbits. The Tenderfoot waited until, with a series of rattling and explosive noises, the train got under way again, before he saluted the doleful figure in the doorway of the hut. Then he said, pointing to the faded gray line that snaked its way through the sparse, drab cover of the sage-brush, "Does that trail lead to any particular diggings?" "Yes with the a. p." retorted the tank-tender, with heavy deliberation, squinting at the newcomer with his red eyes. His him now, followed by the full pack of many eyes.

"Who in hell is he?" asked the woman, in menacing tone, rolling up the lathered sleeves of her blouse over arms in which coiled sunburnt muscles. There was very little of the feminine about this housewife of the desert. Only her long loose, neckless hair and the short little skirt worn over a wonderfully patched pair of men's overalls bore testimony to her sex. She was girdled with a heavy corset belt in which stuck two long knives, unscathed; a ponderous monkey wrench used in connection with the mechanism of the water tank, and a diamond-like portion of a crowbar.

"Yes; who the devil are you?" loudly demanded the man, instantly becoming fierce, and throwing back the tails of his coat so as to reveal about twelve pounds of short-barreled artillery. A ponderous monkey wrench used in connection with the mechanism of the water tank, and a diamond-like portion of a crowbar. "Yes; who the devil are you?" loudly demanded the man, instantly becoming fierce, and throwing back the tails of his coat so as to reveal about twelve pounds of short-barreled artillery. A ponderous monkey wrench used in connection with the mechanism of the water tank, and a diamond-like portion of a crowbar.

"None of your confounded business who I am. I am here, am I not? I got down off that train, didn't I? I asked you to tell me to what diggings that trail led, didn't I? You knew where it leads. I know you know it. No more of the a. p. d. g. about it, or by the shade of Hernies there will be fifty-seven varieties of trouble at this one-housed Haden way-station!"

None of your spade-legged, paddel-chested heroes of melodrama ever mounted his lines with more than a few feet of lead than did this five-foot-six Tenderfoot in the next gray flannels, patent-leather ties, flowing crimson tie, and broad-brimmed Stetson. The tank-tender collapsed at the sidewalk as if impaled by a thirty-penny shot; the little half-breed woman with the mighty-sussex arms and belated of knives and bludgeons vanished within the door of the shack in two bounds with her featherweight offspring gripped in the vacuum of her going. As for the dogs, they scattered away with the kinetoscope agility of fleeing jack-rabbits. The Tenderfoot, by the might of his voice, had even terrified himself, and began to quake a little at the knives, for the great adze he had made was followed by a palpable, overwhelming stillness.

The tank-tender had fallen supine into the depths of an empty parking-arena, from which the now terrible Tenderfoot, with a return of courage and front, helped him to extricate himself, when he made a feebly signal of appeal. As he plucked mechanically at the splinters that had crowded into him he said:

"I beg your pardon, air, but my wife and I thought it might be you had dropped off here to jump our claim."

"What?" gasped the Tenderfoot faintly. "Claim? You don't mean to say that you're in this mining business, too, here, where they have all passed by, turning their noses up at the meagre possibilities?"

"Yes," returned the tank-tender, pausing in his splinter investigation. "I've got mine back here in the mountains that this

trail leads to. And it is going to be a great mine, too, when we strike the vein, even if I can't get any of the sharps in the big camps to take hold with me. They all give it the laugh, and say the vein is somewhere in China or Siberia. But I know what I am doing. I have panned gold on the surface eighteen years ago, and I've shot several little pockets since that gave up a tifty bit of yellow. It is only a question of time when I reach the big vein. I know it will be one of the greatest bonanzas to Nevada.

"I came down the desert from Hawthorne with a pair of mules first, back in the '50's, and staked her out. I like to have died then, as my mules did, but a bunch of Pintos camping back at Walker Lake got me before I could cash. I was pretty near the Big Divide, though, raving with thirst and blistered and peckily inside from eating grasswood and chimpap. The Indians took care of me: gave me pine nuts to eat and some water. I can taste that water yet. Chalky with arsenic it was, but sweeter than the water of Truckee Spring. I had staked her out. . . . The Dead Mule, I call her. . . . dying, but the Pintos pulled me out and helped me get back to her. That's eighteen years ago, and I've been picking and drilling away ever since."

"What—for eighteen years?" exclaimed the Tenderfoot.

"Yes, for eighteen years," echoed the tank-tender in a tone that was half sigh, half boast.

"And have you got any gold out of it yet?" inquired the little Easterner, studying closely for the first time the gaunt figure in the dilapidated overalls and frayed jumper, whose clear brown skin, covered in stomach, and scarlet eyes told eloquently of the arsenic he had absorbed in water and food for two decades. He pulled his battered straw hat down over his forehead and answered sulkily.

"Of course I haven't got down to the real stuff yet. I've only sunk six shafts and made them all myself. Dynamite is mighty expensive down here, and I have to go slow, long as these sharks and wild-cat highwaymen won't help me with machinery. But I know ore that's ore, I do." (He drew himself up in a pathetic attempt at dignity, his crimson eyes blaring with fanatic fire.) "Just wait until I get down to it. Then they will come crawling to me on their bellies like so many snake-walkers. They'll beg me to let them in. But I won't, curse 'em! I'll shoot 'em where they grovel before I let 'em touch a grain of my shiny dust."

He dragged a rough bench beneath the shade of the water-tank and invited the Tenderfoot to hear all of his story—the tragic story of his failure. Of course he did not put it that way. There is no such word in the Nevada vernacular, and he spoke with an enthusiasm the self-made man does not know the art of putting into his tale of success; for even at the end of his tarnished and faded rainbow he still could see the fabled treasure that those whose eyes light with the gold lust never lost sight of.

In essence the story of the tank-tender is:

Eighteen years before, from a vagrant little outcropping of ore he had panned gold. He was young then; had been a miner in Virginia City, Gold Hill, and other famous bonanza camps, tolling for a wage: digging tons of gold for others. Now and then he saved a little and fared forth on the desert, prospecting. But

the desert he sampled never turned yellow, until he climbed into the southern altitudes.

Half starved and exasperated by thirst he had found this little treasure lump of mineral. Scarcely able to crawl he had dragged himself about the hillside and staked out his claim. The sun beat above him; the alkali choked him; a hand took on the form of a monster to his fever-glazed eyes. Yet he toiled on his belly like a crawling thing until his last stake was driven. When he rolled over with his senses swooning there were three black spots circling in the whitish blue above him.

A small band of Pintos noted the whistling buzzards from a neighboring hilltop. They found him, and brought him back to life in their shabby little wigwags on Walker Lake. They had brought the little pile of shining slugs and tucked them away under his pillow. They were his medicines, his tonic. When he could walk again he journeyed to the nearest camp and bought tools, drills, and a keg of dynamite. He returned to his good friends, the Pintos, who had nursed him, and took into wife one in their village, half Indian, half white. Her father had been such another gold-seeker as he is the first sight to northern Nevada half a century ago. With her as helpmate and sole companion he set up a tiny cabin on his solitary gold hill and drove his drills and peck with desperate energy. He tunneled and blasted, sampled and panned, through months and years—the seasons of bitter cold and blighting heat. Now and then he would strike a little pocket—always, it seemed, when his dynamite was low and his tools worn away. His Indian friends dragged fragments of lumber to him. With the parings of each little pocket he bought more tools, more dynamite. He borrowed on while his wife fed him on granite hard biscuits, coffee and pine cuts she got from her people who camped in a hill-locked oasis of their reservation.

Then came the railroad at a time when there were no yielding pockets: when the dynamite was exhausted and the drills splintered. Men who would tend the water-tanks in that parched wilderness were utterly few. To him the post was a life-giver. It paid well and bought him more tools and more powder. His wife could do most of the work in tending the tank while he pierced deeper in the excruciating search for the elusive vein. His hope had never died for an instant. It had become instinct with him. He nourished heart and body with it. It made his lifeblood, bleak and uninviting as Nyctin, an emerald garden of delights. It clothed and camped his flinty graces that were some day to dazzle him with treasure. He would go on to the end with this hope ever warming him and filling his dreams with delights. Perforce to all who looked upon him, poisoned to the core with arsenic, he would drill and dig so long as his pulse beat and his nerves palpitated—a heroic embodiment of hope.

"And then," thought the Tenderfoot, when all the story was told and he bade the tank-tender a silent farewell to clamber aboard the caboose of a south-bound freight (there was no passenger train until late that night), "he may strike it. Who can tell?"

The little Easterner had failed in his quest of a failure. Cynical, scolding, vaingloriously parading his dis-*de-bet*, the sardonic grin of the gold lure was entering his flesh.

"I know ore that's ore, I do!"

THE GUARDIAN AT THE CROSSWAYS

DRAWN BY G. H. SHOREY

THE PERIL OF GOOD GOVERNMENT

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

London, March 2, 1905.

THE *Spectator*, which is still the most thoughtful and authoritative of all English weekly journals and on the whole the one that most consistently expresses the best thought of the nation, published in its issue of March 9 a very remarkable article. It discussed—let rather went out of its way to discuss, for the matter is not one of any great urgency—the question of a Parliament for Egypt. The demand for Parliament has been made by the Egyptian General Assembly, and as the demand is one that cannot in the nature of things be gratified immediately, it is suggested that a beginning should be made by conferring upon the existing Legislative Council and the General Assembly the control of Egyptian finances and administration. Against this proposal or anything of the kind, the editor of the *Spectator* seeks to warn his countrymen. He enlarges, with an understatement rather than exaggeration of the truth, upon the benefits and achievements of British rule. "When we went to Egypt," he says, "the population was not only taxed so heavily that the tax-collector left the village nothing but the barest subsistence allowance, but by means of a system of forced labor he was reduced to a condition bordering on servitude. Now, after some twenty years of British control, there is no other Mohammedan cultivator of the soil or inhabitant of a town who is in so good a position. The taxes are collected easily, and the poor man is now able to rise through his own efforts to a level, not merely of comfort, but of affluence. He is no longer afraid to show his wealth lest the demands of the tax-collector should be increased, and he is able to rely upon the government to protect him from the arbitrary oppression of those who are richer than himself or who hold an official position." All this advances, argues the *Spectator*, would be nullified if the Egyptians were allowed to govern themselves. The writer even disputes that the Egyptians, though they may ask for it, really desire autonomy. They like good government, but not self-government; an enlightened despotism is their instinctive ideal; no Mohammedan community has ever developed a system of representative rule; if it ever did, it would quickly die of it; the Egyptians are only asking for a Parliament because a rumour has spread in England that the British will hold on to Egypt and because they believe that in making the demand they are fulfilling the will of the Khedive; but they do not really want it; they are like the Irishman who "has no objection to walking down a road which leads to the place he does not want to go to, if he has any opinion and immediate reason for making a shire." Only Western control and Western sovereignty can secure to the Oriental the government he most desires—a sane and beneficent autocracy, tempered by public opinion; such is the government which England has established in Egypt; it is a government solely in the interests of the Egyptian people, and it allows them a large share of administration to native Egyptians, but not compatible with giving them any sort of Parliamentary control; and the Egyptians ought to be made to understand at once that "the British people will not consent to share the ultimate responsibility for the government of Egypt with them or anybody else."

There are many points in this article which might be made matters of debate. When we see the Shah of Persia attempting to keep insolvency and rebellion at bay by promulgating a constitution; China promising herself a Parliament in twelve years' time; the Indian National Congress pressing for representative rule on the Viceroy's Council; the Siamese and the young Turks agitating the same problem at Bangkok and Constantinople; the Filipino clamor for democratic institutions, the Japanese in full possession of them; and Russia, with her enormous empire, even to the Oriental type of state, struggling to obtain and extend them—when we see all this, it is a little difficult to accept the *Spectator's* explanation of the Egyptian demand for a Parliament, and to conclude without further inquiry that it is all moonshine and insecurity. I am not going to consult the learned or the silly in generalizing about Asia. It is surely a remarkable phenomenon that wherever East and West are in contact, wherever the Oriental is suffering from the aggression of Occidental civilization, wherever he is bethinking himself of how to get rid of this uncomfortable and disquieting supremacy he should be turning with one accord to the device of representative government. What is the reason of it? The Oriental, remember, is profoundly convinced that his civilization is superior to that of the West. He does not, therefore, admit for one moment that successful encroachments of the white men are due to his natural or inherited inferiority in himself. The more thoughtful Oriental may ascribe the growing preeminence of the Occident to a preponderance in the material arts and sciences and may urge his countrymen, if they will to resist the domination of the alien, to get burning and fight the West with its own weapons. But the vast majority of Asia, in which this advice, it would seem, is being acted upon, Japan, for instance, has adopted it with marvellous dexterity and success, and China appears to be following in her footsteps. But human nature, it has been justly pointed out, "always inclines to believe that an inferiority is not due to intrinsic qualities, but to some dodge, some device which might be appropriated if the secret were but known." Is it quite certain that Asia is not coming to believe that representative government is precisely the contrivance it is

in search of, the root-cause of Occidental victories in peace and war? None such idea, greatly encouraged, no doubt, by the example of Japan, appears, at any rate, to be working in the Oriental mind. To us of the West who have had our fill of democratic institutions and are, if anything, tired of them, such a notion seems absurd enough. But its absurdity is veiled from the Oriental because he has never yet, except in Japan, where it has led to triumphant results, had a chance of translating it into practice. It is therefore quite possible that before very long many Asiatic peoples, with the idea that they are strengthening themselves against the pressure of the Occident, will be experimenting with Parliamentary government. How the experiment will work, considering that, again with the exception of Japan, which differs from all other Oriental lands in being a compact island kingdom, patriotism, national sentiment, and consciousness of national cohesiveness, as we understand these things, are unknown throughout Asia, is a question which, in spite of its seductive challenge to speculation, I must leave alone. My present point is merely to show that the Egyptian demand for a Parliament is not, as the *Spectator* seems to think it, an isolated phenomenon, but corresponds with a movement of thought which is stirring the Oriental mind from Constantinople to Peking, and which may conceivably be something more serious than the mere whims and fustian inspirations of people who do not know what it is they really want.

But there is another standpoint from which the Egyptian agitation may be looked at, a standpoint prominently interesting to Englishmen as well as to Americans, and not less to Americans as compared to the service in the work of Empire-building. Fewer seem to say that free peoples cannot govern subject races. The dictum, I take it, may be variously interpreted. Mr. Bryan, for instance, seems to think it means that the Americans cannot govern the Filipinos without themselves becoming less "free." But it is possible to read into it a wider and less dubious significance than that. A democracy finds it very difficult to be liberal at home and autocratic abroad. It has an inclination, which is one of sentiment rather than of thought, toward treating all politics and peoples as so many transactions in algebra, to be solved by fixed formulas. The formula it brings to their solution are the principles, the institutions, the political instincts to which it is used and on which it has thrived at home. Thus the House of Commons, if it were not restrained by a happy mixture of ignorance and indifference, would govern India and the great powers of the world by making a shire. Thus Americans are ruling the Philippines in full and almost fanatical accordance with "Jeffersonian doctrines." Thus the French base their colonial policy on "the principles of 1789." The Holy Alliance marked the last gasp of prescientifying about nations, but not less of the same error, as it was concerned as bent upon forcing all with whom they came in contact to see things through their own spectacles as were ever the old autocracies. You will never be able to persuade a democracy that its most may be another people's poison or that all nations would not prosper equally well on the regimen that has claimed to suit itself, England in India, Egypt, and the Malay States, just like America in the Philippines, looks forward to three dependencies one day taking their place as self-governing units in a great Imperial confederation; and with this idea in view, it would be very well worth inquiring how far our democratic innovations are of a kind to encourage among the Indians, Malaysians, Egyptians, and Filipinos a consciousness, if not of nationality, at least of some underlying unity that may develop hereafter into the beginnings of an eventual autonomy.

There is yet a further aspect of the matter that deserves consideration. England has admittedly brought the mechanics of Empire-making and Empire-ruling to a pitch of unrivalled perfection. She has devised a system admirably designed and dispassionately applied. But with a certain psychological obtuseness she overestimates the effects of her system and her material results upon the native mind. Wherever she goes she imposes peace, establishes order, deals out even-handed justice among the peoples under her rule, increases their material prosperity, educates them, fosters with insouciant security their persons and property, and preserves to them, with as little interference as possible, their distinctive social and religious customs. And for these benefits she looks for their eternal gratitude, if not for their eternal affection. That is a profound error. She does not realize, though some day she will have to, that her very success increases her detestation. In that good government, the longer it is maintained, becomes more and more an established and normal condition and less and less a special ground of thankfulness. It is as true to-day as ever that when men wax fat they kick against the pricks. All that England has done in the Egyptian case is to avoid nothing. If the dormant hope of domination that is inbred in Islam were to be roused and turned against her, it is lamentable, but hardly, I think, deniable, that the government of Orientals is easier, and produces, if not locally, at any rate more passively, when they are poor, abject and disheartened than when prosperity has been imposed upon them by an Occidental administration. The secret of the success of British Imperialism hitherto may prove the secret of its failure hereafter.

A BRIDGE ON LAND AND A SUBWAY ABOVE GROUND

THE GAUNT AND IMPRESSIVE STRUCTURE OF THE NEW BLACKWELL'S ISLAND BRIDGE, WHICH IS SLOWLY SPANNING THE EAST RIVER FROM THE FOOT OF EAST SIXTY-FIFTH STREET TO THE LONG ISLAND SHORE. THE PORTION OF THE STRUCTURE SHOWN IN THE PHOTOGRAPH IS THAT WHICH CENTRES ON BLACKWELL'S ISLAND.

ONE OF THE MOST FORMIDABLE AND INTERESTING ENGINEERING PROJECTS NOW UNDER WAY IN THE CONSTRUCTION OF THE TUNNEL OF THE METROPOLITAN ELEVATED RAILWAY IN PARIS. A PORTION OF WHICH IS BEING BUILT, PARADOXICALLY, ABOVE GROUND. THE STEEL FRAMEWORK OF TWO SECTIONS, RESPECTIVELY 1300 AND 1800 FEET LONG, IS BEING BUILT IN THE STREET ON THE SITE OF THE FLOWER MARKET. WHEN THIS PORTION OF THE WORK IS FINISHED, EXCAVATIONS WILL BE MADE BENEATH IT, AND THE STRUCTURE WILL BE ALLOWED TO SETTLE TO ITS PERMANENT DEPTH.

MR. CARNEGIE'S NOTEWORTHY ENDOWMENT FOR ENGINEERING

By THOMAS COMMERFORD MARTIN

President of the Engineers' Club

THE fourth quarter of the last century witnessed a remarkable development in this country in the creation of engineering societies. More than is yet realized, the epoch-making Centennial Exposition at Philadelphia gave a tremendous stimulus to the arts and sciences in America, whose practitioners, measuring thus against their foreign brethren, realized at once their essential advantage and their insignificant limitations. Education took on a new direction, students young men found training and a career outside the beaten paths of law, medicine, and theology, and avacuity the new America, born of invention and engineering, came into existence, giving to the world many of the bases of its present civilization, and competing with all the rest of mankind for the supply of necessities, comforts, and conveniences.

A civilization whose breath is steam, whose nerves are steel, whose vital force is electricity, whose wants are almost infinitely supplied by machinery, summoned into being engineers of all kinds, and these drew together rapidly into societies and organizations where professional fellowship was the primary bond of union, where technical papers and questions could be discussed, and where distinction in achievement could be recognized by office or by other honors.

The early eighties saw New York the home of many of these vigorous new societies and institutes, constituting in a sense postgraduate universities, but retaining in many cases without equipment, property, or permanent home. Much of the wealth that engineering and invention had created went, in fact, to build up units of learning like Cornell University or the Stevens Institute of Technology; and little was left for the impatient bodies with which their technical graduates affiliated as they began professional life.

The new Engineering Societies Building in West Thirty-ninth Street, the Gift of Mr. Carnegie

Between 1860 and 1883 the idea was often suggested of a common home for these growing societies, but there were difficulties and even jealousies, and the process of society formation was still active. Hence nothing came of the agitation then or later, although with rapid increase in membership the want intensified, for the societies began to receive relics, libraries, endowments, foundations for medals, etc., and got tired of living in "holes in the wall." Thus things drifted until in February, 1903, the writer, as toast-master at the library dinner of the American Institute of Electrical Engineers, had the honor of introducing Mr. Andrew Carnegie, a donor to the library, who spoke eloquently that night upon cooperation among engineers. Ever a man of deeds, Mr. Carnegie next day invited the president of the Institute, Mr. C. F. Nott, and the chairman of its building committee, Mr. C. W. Rice, to a conference with him, and upon February 14 he presented the engineering societies of America domiciles in New York with a welcome Valentine in the shape of one million dollars "to erect a suitable building for you all." And one year later he increased this amount to \$1,500,000.

The only limitation on this gift was that the money should go in building, and that the beneficiaries should provide the land. At that time the Engineers' Club, a purely social organization, had already secured land for its new home on West Fortieth Street opposite Bryant Park and the Public Library, a site that appealed strongly to Mr. Carnegie, who, therefore, having as a member made the club participant in the endowment, offered to finance the American Institute of Electrical Engineers, the American Society of Mechanical Engineers, and the American Institute of Mining Engineers in obtaining the land they needed on West Thirty-ninth Street, at a cost of \$500,000. Thus provision was made at the outset for two separate buildings, each one devoted to the technical and professional side of engineering and the other to the human and social side. As the land for the civil building cost about \$250,000, it will be seen that not less than \$250,000 was thus set aside for the creation of a new engineering center, the like of which had certainly never been seen before. This sum is, however, far from representing the total lay-out. To the Engineering Societies Building, \$1,000,000 was appropriated out of the gift, and \$150,000 went to the club, which has added

\$150,000 of its own for equipment, etc. The movable property and expenditures of the three former engineering bodies represent at least \$100,000, so that the two structures as they stand have taken \$2,500,000 in all.

To administer and operate the joint enterprise of the three national technical bodies named above, a holding corporation was formed known as the United Engineering Society, under a New York charter, in May, 1904. Dr. Ware, of Columbia University, was selected as professional adviser on the building plans, and after a mixed competition Mr. Herbert D. Hale, of Boston, son of Edward Everett Hale, was selected as architect, his associates in the work being Messrs. H. G. Morse and J. G. Rogers. The building shown on this page was ready January, 1907, having been built within the appropriated sum and the specified time. It is occupied not only by the three "founder societies," but by numerous allied bodies, to whom all the facilities are available, so that already it is the headquarters of over 15,000 professional men engaged in civil, mechanical, mining, electrical, naval, ventilating, lighting, chemical, and other branches of engineering. Each founder society occupies a whole floor by itself, and two others are set aside for the other societies, which are not tenants, but pay a pro rata of the operating and maintenance expenses. There are many other distinctive and unique features about the building. It is completely encircled by a wide driveway, partly covered, giving access to carriages, drays, etc. It has a superb entrance-hall, or foyer, with writing, smoking, lounging, administration rooms, etc., where men can linger and chat when conventions are being held. It has seven fine halls for meeting, the largest accommodating 1000 people and the smallest 100, with water, air, gas, electricity, etc., laid on to each for experimental and demonstration uses. At the top of the fourteen-story building is a superb library, with wide windows dominating all New York, and with its stack rooms, providing for over 50,000 volumes. Here the three founder societies have housed their libraries and are even now bringing into actual service the largest and finest engineering library in the world. It is rich in rarities of every kind, containing, for example, the unassailed Latimer Clark collection of early electrical literature, dating back to the fifteenth century, from England, bought and presented by Dr. S. S. Wheeler.

The general appreciation of the value of this centre for the diffusion of knowledge is best shown by the gift in aid of payment for the land from prominent men and great corporations. Mr. George Westinghouse and his companies have given \$50,000; the General Electric Company \$75,000, and its officials nearly as much more; the Bell Telephone Companies, \$25,000; Mr. T. A. Edison, \$5000; the Allis-Chalmers Company, \$35,000; Mr. Charles H. Mackay, \$5000. The youngest body, the Electricians, has had to do most in the way of getting money, but over 700 of its members have already contributed.

The Engineers' Club in its membership of 1750 has few men who are not also active in one or more of the big engineering societies, whence the fundamental elements of the relationship, now made more intimate and mutually helpful.

For ten years past it has occupied the spacious Coleman Bryson mansion, 100 Fifth Avenue. Ever a Philistine, the Wahler-Asteria; but driven out by the roar of trade and the new marts of millinery, it has found a delightful abiding place on Bryant Park facing northward. The new Engineers' Club has already as near neighbors the New York Club and the Republican Club, and still others will join them. It is a handsome twelve-story building of simple design, constructed of white marble and red brick.

Beyond question these two buildings, with their diverse but harmonious purposes, their distinct but related functions, their separate but common endowment, their different but intertwined personalities, will be quite new in the social economy of New York or any other city.

The Building which will house the Engineers' Club. It will adjoin the Engineering Societies Building in the Rear

A NEW PROJECT FOR THE CROSSING OF THE ENGLISH CHANNEL

How Congress Spends \$1,000,000,000

(Continued from page 530.)

siderably more liberal than the available resources of the nation are able to meet. The leading House committees take these estimates, and with these as a basis draw up appropriation bills, which are usually presented to the House by the chairman of the committee. They follow a conflict of forces—first in the House, then in the Senate, and often between the House and Senate. So far-reaching are the appropriation measures collectively that hardly a national issue of importance is not dragged into the debates. Aside from questions of general national policy, as military preparedness, for example, the main point of interest after the smoke has cleared away is the prospect of the balance-sheet, or, in other words, whether the authorized outlay has been kept within the limits of the assured income. In the session recently closed, by the exercise of much ingenuity, the balance was made to come out on the right side. According to the best information available, the total revenues of the United States for the fiscal year 1908 are expected to be substantially as follows:

Ordinary revenues from customs, internal revenue, etc.	\$654,000,000
Postal receipts, with eight per cent. estimated increase over 1907	196,000,000
	\$850,000,000

Similar estimates put the amount which will probably have to be actually paid out by the government during the same period at \$829,508,994.27, which means a margin of somewhat over twenty millions—a particularly gratifying showing when it is considered that until within two or three weeks of the close of the session there was every prospect that the volume of appropriations would far outrun even the most sanguine estimate of income.

It is interesting to observe that the House of Representatives, true to the trust re-

posed in it by the Constitution, continues to be the great guardian of the national purse. The estimates for the thirteen regular annual appropriations were reduced by House committees and by the House itself by more than \$25,000,000, while the bills as passed by the House were increased on the recommendation of the committees of the Senate and by the Senate in their passage by more than \$30,000,000. The total of the thirteen bills as finally passed showed a reduction of \$16,404,873.40 from their aggregate as passed by the Senate; but even then the Senate was directly responsible for the adding of not less than twenty millions to the final appropriation.

Riches

ALBY. "I long to be rich enough to retire, old man."

REGGIE. "Deah boy! I long to be rich enough to sit up all night."

Too Too

WHILE, with bullets made of lead,

The neighbors' twins was filling—
His mother fondly smiled, and said,
"Well, ain't he just too killing!"

Dressed Up—and Down

A SOUTHERN man tells of the sad case of a ducky in his employ much addicted to gaudy and costly raiment. This negro, it appears, had been jilted by the ducky belle of the town, she advising him in no uncertain terms that she was "through with him for good." To this she added some observations concerning the colored gentleman's predilection for expensive apparel.

"I don't understand yo', Sarah," moaned the disconsolate suitor. "Yo' shorely don't object to me fo' de reason dat I dresses handsome?"

"Dat's one of my reasons," promptly replied the lady in the case. "I likes good

close ryme's all right. I likes to see good close in odder folks; but, Mistah Botta, I don't care to take no chance of havin' to help yo' buy dem de rest of my life!"

MUSIC AND THE OPERA

CALVÉ ENCORE

By LAWRENCE GILMAN

EMMA CALVÉ, one of the few authentic geniuses of the contemporary lyric stage, is again exhibiting her art before the New York public after a three years' absence, this time at Mr. Hammerstein's Manhattan Opera House. Instead of at that older temple of the Muse presided over by his colleague, Mr. Cosulich. Madame Calvé, it seems superfluous to say, effected her reentry upon the local stage in the rôle of Carmen. This is a fact which it is possible to regret. There is not the slightest doubt that Madame Calvé's *Carmen* is a product of genius, and of a very extraordinary quality of genius; it is equally obvious that, viewed strictly as an interpretation of Bizet's character, it is at more than one point defective; for it is not conceived by Madame Calvé wholly with reference to its environment; in a phrase which has been somewhat overused, it emerges "out of the picture," is obtrusive where it should be necessary, and is sometimes extravagantly accented. It makes a potent and ennobling effect, for it is full of fascination, and is, throughout, suffused with the magic of a personality which is, in many ways, the most wonderful on the lyric stage of our day. One almost inevitably assumes that Carmen is Calvé's supreme achievement—the one which most fully discloses her extraordinary powers. It would not be difficult, if the thought of space were negligible, to demonstrate the falsity of this view—to chant at length the praises of two other characterizations in which this incomparable singing-actress is, indisputably, far finer and truer. But let it be affirmed simply that as *Suzanne* in "Cavalleria Rusticana" she is far more convincing, eloquent, and moving than as *Carmen*; and that as *Messalina*, in *fallade de Lara's* well-nigh forgotten opera, she imposed upon the modern operatic stage, and in the memories of those who were fortunate enough to witness it, an interpretation simply incomparable in its vitality and genius, no less than in its superb and unerring art. Would that it might be seen again, and if that were possible, in a worthy musical and dramatic setting than was afforded by de Lara's much-heralded though not unadmirable opera. Who that observed it sympathetically will forget that passage in her scene with *Henri* where, as Calvé enacted her, she rose from her silver couch to curse her still timorous lover, her robe of cloth-of-gold trailing gorgeously after her and a wreath of poppies crowning her extraordinary and noble loveliness, while her characteristic and haunting motif broadened with insinuating tenderness in the orchestra!—But these are things of the very dead past, whereas *Carmen* and *Suzanne* still live; and the *Suzanne* of Calvé is, of the two, the greater attainment. Thus, we say, it is regrettable that, for many, Calvé merely spells "l'armen."

Her *Carmen*—for it is this which we are here, particularly, considering—is naturally, to-day, a somewhat different one from the *Carmen* of ten years ago, or even of three years ago. It is not so lithe, so spontaneous, so completely unconscious. This *Carmen* exerts a shadow which is measurably more ample than of old; she utters her passions and her raptures with less simplicity and instant effect; there is less freedom, and there is less intensity. It is a creation that is still full of genius, full of a kind of enchantment which is not to be paralleled; if the genius flames somewhat less ardently than of old. If the enchantment is a little dimmer, shall we not charge it against the inexorable progress of the years, against that eerie

flight of time which, sooner or later, must dim the glory of us all, even the most captivating and superb?

If it were possible to imagine the Kneisel Quartet a less perfect body of exponents than they actually are, one would still be compelled to acknowledge—a few bright-eyed ones would acknowledge without compulsion—the extraordinary and memorable service which Mr. Kneisel and his associates have done to the cause of musical art by their persistent and undaunted exploitation of what ever seemed at once creatively new and important in their particular field. It is not too much to say that no one has been more zealous and untiring in his search after new music of significance or importance, and in his prompt and generous exposition of it, than has Mr. Kneisel. Moreover, he has done this service to the larger interests of art in the face of petulance and intolerance on the part of many among his public who should have been quick to recognize the value, no less than the musicfulness, of the work performed for their enlightenment. The matter is full of dis-

couragement for those to whom music still speaks with a living and changeful side; yet there is much consolation in the fact that Mr. Kneisel continues to behave as if he were really convinced that musical art did not come to an abrupt and tragic close a decade ago, since novelties still appear on the programmes of the Quartet.

One is moved to these reflections by the performance last week, by Mr. Kneisel and his associates, of a new quintet for piano and strings by Gabriel Fauré, which had not hitherto been played in America. This quintet (in D minor, opus 89) was performed in Paris for the first time a year ago, at a concert given jointly by Raoul Pugno, the French pianist, and Eugène Ysaÿe, the Belgian violinist.

Music by Fauré is not very familiar to American audiences. He is best known here by his songs and by the incidental music which he wrote for Maeterlinck's "Pelléas et Mélisande"—music, by the way, which is far from showing him at his best. This quintet is in a different class. In three movements, it is prevailingly meditative in tone. The movement which, in form and spirit, makes the nearest approach to a scherzo, is the third—an *allegretto moderato* which, although its opening measures voice a certain gaiety and exhilaration, does not greatly alter the mood of contemplation recently which is declared at the beginning of the work. Fauré is reckoned, somewhat mistakenly, among those younger French music-makers who are conventionally summed up as "advised." Actually, he is in his music infinitely less radical, less adventurous, in his methods of musical expression than are those younger men with whom he has been indiscriminately grouped. Yet in this new quintet there is much that is genuinely and in the best sense, "modern." In its method of utterance, there are harmonic effects that are delicious in their subtlety and their iridescent hue; there are melodic lines which captivate the imagination by their freedom and their delicacy of contour. More noteworthy, however, than the surface quality of this music, is the emotional atmosphere in which it is steeped. From the start one is aware of music that is unflinchingly severe and noble, and that has moments of deep and exquisite beauty. In the second movement, particularly, there are pages where one is reminded that there is such a thing as "inspiration" even—shall one extravagantly say—in contemporary music.

EMMA CALVÉ, WHO IS APPEARING AT
THE MANHATTAN OPERA HOUSE, AFTER
A THREE YEARS' ABSENCE FROM THE
LYRIC STAGE OF NEW YORK

THE SEASON'S PLAYS

A "PATRICIAN" PLAY, AND OTHERS

By "I"

TWO new amiable extravaganzas have come to gladden the heart of the town—"The Grand Mogul" at the New Amsterdam Theatre, and "The Land of Nod" at the New York. To play the prophet is always perilous, and never more so than when one speaks of such enterprises as these; yet it seems safe to predict that both entertainments will remain popular during the summer.

At the risk of being trite, one cannot avoid the impulse to characterize "The Land of Nod" as a theatrical Jekyll and Hyde, for never since the primitive days of the menial miracle-plays have such excellent humor and charm been united with such deadly dull recitativism. And, by way of warning to those who would enjoy the Jekyll part of the extravaganza, let it be remembered that the good ball comes later, about ten or eleven o'clock and you will be safe. Those who attend earlier go at their own risk.

To begin at the beginning and have done with the unpleasant moments as soon as possible—the story of the play is based on the experience of *Boswell*, a pretty, dainty and fox-faced little girl who falls asleep at home and wakes up in the land of Nod. *Boswell* is impersonated by Mabel Harrison, who appears exactly as she was in "Hobbes in Toyland"—some beauty, some round pink stockings, some "cute" little ways, some shrill and piercing voice in its painful simulation of childishness.

In the land of Nod she meets the Director *Men*, who is far more dismal than his bitterest foes have painted him; the fact of *Beauty*, the April Fool, the Wink Rabbit, and other weird and dreamy persons. The action and dialogue are nightmarish and of the Tenderloin brotherhood. For example, the *Thorus* girl in her last twenty moments says to the *Wink* Men: "Love is the sensation you feel when the second cocktail meets the first and says, 'Move on! here comes another.' . . . Did you ever drink a bottle of wine? No? I see I've got to give you a lesson in high society. Let's open a bottle of wine."

But oh! what a relief when the curtain rises on Act II, which is a musical burlesque called "The Song Birds" and is a satire on the cruel war between Dr. Herr Director Cursed and Dr. Illustrious Imperator Hammerstein. The encounter of these worthies is as delightful as *Wider and Wicker* at their best. William Hammerstein represents the great terror to the life, from the topmost glass of the Sacred Bath through every trick of feature, voice, posture, down to the flicking of the ashes of his cigar.

Possibly the dark background of "The Land of Nod" makes this skit stand out the more attractively, but it is nevertheless interesting to see the jaded audience galvanised into life and laughter by the humor of the opera campaign. "The Song Birds" was composed and written by Victor Herbert and George V. Hobart, and given at a *London* Club, and this was its first public presentation. It is cheerful and laughable from beginning to end. And even the poor old "Land of Nod" has two tuneful catchy songs which probably will be much sung and whistled this summer—"You Look Good to Father" and "The Same Old Moon."

"The Grand Mogul" is indeed a long journey down the road to yesterday. It takes one back to the days when comic opera was the wildest form of theatrical amusement. It partakes of practically all the elements of the recognized fifteen-act variety. It has a certain number of bright spots, tuneful songs, and one very amusing character in the person of Frank Moulton, the comedian. There is just about enough plot to link one act to another and to introduce a scene of songs. Patrons of musical comedy will be able to compare the three acts before their vision when it is said that the story of "The Grand Mogul" is that of a circus side-showman who, becoming entangled in the anchor rope of a balloon rising from the grounds of the Royal Palace at Hanoi, is dropped through the roof of the Palace of The Grand Mogul on the Island of India. The Mogul is out at the time, indulging in the even sport of tiger-hunting. His profound abuse arouses the belief that he has suffered the fate of the historic Young Lady of Nyer, and that some tiger off in the jungle is already smiling. Since he is supposed to have devoured from the sea, a petition has been made to those higher up to send another son of the sun. It is at this psychological moment that Barker, the circus man, comes in through the roof. He is held as the Mogul and in a moment or two his ballooning companions are brought in before him as prisoners. After putting them through the expected stunts, the Mogul himself returns and everything is topsyturvy still within five minutes of the fall of the final curtain.

There is no doubt that the burden of making the piece go rests upon the shoulders of Mr. Moulton, and he really achieves a great deal, although he has not been provided with a part to which his fascinating ability entitles him. Miss Maud Lillian Herri, a large young lady of the sort Lillian Russell type, sang the soprano songs, and was made over to by Mr. Moulton and the Simon-pure Mogul. Mr. John Donouane, Miss Herri was evidently so delighted with the way the opera was going the night "I" saw it that when she wasn't singing, she was smiling at the audience. It seemed to tickle her almost to death to come on the stage. Incidentally, she sang several of her songs very well. Mr. George Moore, although inclined toward the "Caruso" side, earned much applause by his singing of the rôle of an American naval officer.

By way of comment upon Mr. J. Hartley Manners' drama, "A Marriage of Reason," which was produced last week at Wallack's Theatre, with Mr. Kyrle Bellew in the leading part, for the first time in New York, "I" can do no better than to quote in its compelling entirety the preliminary announcement helpfully issued by the producers of the play. It will be evident to every reader of discernment that this chaotic yet vital presentation possesses the priceless virtue of enthusiasm, admirably allied with a modest yet dignified reverence. It is as distinguished as it is unapproachable. To allow its exposure to any manner what a certain genius would have called "its heavenly lengths," would be a crime against art.

"Mr. Bellew," reads the announcement, "is New York's favorite romantic hero, and in diplomatic, army and navy and society sets throughout the nation his highest example by any contemporary player, either English or American. He has been a sailor and soldier himself, an officer of Her Majesty's Navy and a lion in the West End of London."

"His new play, 'A Marriage of Reason,' is frankly fashionable. It deals with nobility and noblesse. The action is intensely dramatic, crowded with incident and replete with original situations, but it is always perfectly hard in thorough good form and redolent of aristocracy. Throughout it moves on the very highest plane of life."

Naturally such a patrician play demands the polished artistry and delicious genius of Kyrle Bellew for its chief exponent. He has the rôle of *Lord Delmore*, an impoverished British peer who makes a marriage of reason, that is to say of convenience, with *Edith Forrester*, a Chicago heiress, who brings him an abundance of dollars, glorious beauty, and the splendid unspoiled nature of a true American gentleman. *Lord Delmore* grows to love his American conquest and in loathe the matrimonial bargain by which he had bound himself in cold blood to such a beautiful woman. But the Earl is lovable himself, and after many moving and dramatic incidents it develops that his countess loves him also, and the 'marriage of reason' that begins in a bargain, becomes a marriage of true love and happiness.

"Miss Fannie Ward comes fresh from London triumphs to play the rôle of the glorious American girl. Having made a great success herself, and having achieved fame upon the British and American stage, Miss Ward is eminently suited for the exacting rôle which requires, in addition to everything else, stunning beauty and wonderful genius. The cast is the clearest imaginable. A patrician play requires players who have moved in that atmosphere and to whom the club, the boardroom, the opera-box, and the country house are part of their everyday life. Such have been found in Mr. Frederic de Belleville, Mr. Conway Tearle, Mr. J. K. Adams, Mr. C. Russell Sage, Mr. R. L. Smith, Miss Richard Storer, Miss Julia Dean, Miss Margaret Fuller, and Miss Maud Bruns Meyer."

"Four acts are laid in and around DeLacoste Abbey, which will be recognized by the travelled as the country place of an American woman of title, who also has found happiness in an international marriage. The stage settings are exquisite, and the costumes of the ladies are the superlative creations of the *Revue de la Paix*. They are exactly the sort of frocks that one sees when the wealth and nobility of England gather at Goodwood, at the dual house parties and great balls. The entire atmosphere is one of extreme elegance and refinement without the slightest trace of ostentation. These men and these women are thoroughbred. They have their existence in the high altitudes of life, but they are intensely human. . . ."

"Mr. Bellew is suited to the glowy bits by the rôle of *Lord Delmore*. He is a nobleman and a superb gentleman who never gets outside the picture."

Miller HIGH LIFE

The Champagne of Bottle BEER

The main point of beer, like everything else, is **SUPERIORITY** of **QUALITY**. Try a bottle of **HIGH LIFE** Beer and compare it with any other brand, and the question of Superiority and Quality will be settled for all time.

We use only the best materials money can buy.

We have spent fortunes to obtain, and are still spending large sums annually to maintain "PERFECT PURITY."

You will find **MILLER HIGH LIFE BEER** for sale at all first-class hotels and clubs and on dining cars and steamships.

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

MODEL "H" WHITE STEAMER

Above is shown our Model "H," the smaller of the two models which we are offering this season. In commendation of this car, we would say that it follows quite closely in its general construction our Model "F" which we built last season.

The Model "H" has a somewhat shorter wheel-base than our last year's car and is proportionately lighter. It is rated at 20 steam horsepower, and its price is \$2,500 f. o. b. Cleveland. Only a limited number of our entire season's output of this car remains unsold.

As regards the new features, the Model "H" is provided with the new system of regulation and with a number of minor improvements which are found also in our high-powered Model "G."

CARELESS MOTORIST. "Why in thunder do they put their blankety mile-stones so far apart?"

A Valuable Historical Discovery in Wyoming

A RECENT accident has led to the discovery of what is probably one of the most ancient burial-grounds in Wyoming, dating back as early as 1811. It is in the form of a cave, long since covered over, in which were found seven complete skeletons, as well as blankets, beads, tomahawks, and other Indian relics that competent authorities declare were the property of the Arcturians, who founded a village of that name in 1800 near where Pierre, South Dakota, now stands.

The discovery seems to substantiate an old Indian legend long held in doubt by Wyoming historians, but which has been handed down with surprising accuracy among the Crow and Sioux. The legend deals with the expedition of Wilson P. Hunt, who, in 1805, headed the Astor expedition, starting from Omaha in April to follow in the footsteps of Lewis and Clark.

On July 18, 1811, Hunt and a party of sixty men, seven Arcturian Indians and one Sioux interpreter, left the Arcturian village for the Northwest. The Indian legend is that near the crossing of Little Powder River the whites became suspicious of the actions of the seven Arcturians, fearing they meant to betray the land into the hands of the Blackfoot. According to the Indian story, the Arcturians were detained with a party of twenty whites to scout to the north of the Little Powder camp, and that later on the whites returned, declaring that the Indians had deserted. The Indians have always claimed that the whites murdered the entire band, but not until the discovery of the seven skeletons has the story received any evidence.

A Tree That Gives Milk

In South America is a remarkable tree growing in the valley of the Amazon. Its sap is a milk singularly like the finest cow's milk. It is highly nutritious, and will mix with water, hot or cold, and never curdles in hot climates. It keeps good for a week, even in the hottest weather, and has much the taste of cow's milk in which cinnamon has been steeped. It is a little thicker than ordinary milk, and has the feeling in the mouth of liquid jelly. If left standing for a few hours a thick, oily cream arises. When dry it has the consistency of soft wax. A recent traveller in South America says he has drunk large quantities of it, both as it came from the tree and also mixed with tea or coffee, with which it combines better than animal milk. He declares that it is extremely nourishing, and that when he could get this sap he always preferred it to cow's milk. The milk is obtained either by bruising the bark of the trunk of the tree or by breaking the smaller branches, when it flows very freely, so much so that several quarts may be obtained from a single tree within a few hours' time.

Either Way

A TRAVELLER lately returned from Ireland has a story illustrating the ready wit of the Irishman. An old gardener, meeting his employer, touched his finger to the tip of his rap and said:

"Good morning, yer honor, or had a fine dream of ye last night."

"Indeed, Michael!" remarked the employer. "What was the dream?"

"Oh dreamt that ye gave me a fine box o' tobacco, an' that yer ladyship, yer honor's wife, gave me a beautiful wife a case o' the best tea."

"Ah, Michael, but you know dreams always go by contraries."

"That," said Michael, "maybe ye'll be after giving me wife th' tobacco an' yer ladyship 'll give me th' tea."

Fellow Travellers

A GREENWICH man tells of a Connecticut farmer who, after having driven a lot of bags to Greenwich, asked them for precisely what had been offered him before he left home.

"You don't seem to have made much by bringing your bags down here," remarked the man who tells the story.

"Well, an'," replied the agriculturist, dejectedly, "I ain't made no money, but then, you know," he added, his face brightening, "I had the company of the bags on the way down."

A Problem

"Dan," began Bubby, "the world is round, isn't it?"

"No, I believe, my son," replied dad.

"Well, dad," continued Bubby, "how can it come to an end?"

Not So You'd Notice It

"RAY, old man, do you think your illness is serious?"

"Serious? Well, there's nothing very funny about it."

In New York

Mrs. A. "What a pretty waitress you have! Lately hired, is she not?"

Mrs. A. "Why do you think that?"

Mrs. A. "Because she has never lived with me."

The Ruling Passion

"I HOPELY borrowed money from me this morning," said Little. "He told me he wanted to buy a pocketbook."

"Oh, I see," exclaimed Lugg. "He was getting something for nothing."

Letter

From
Missouri:

"Five years ago I took out two policies of \$10,000 each in your company. At the time I made a memorandum on my list of life insurance: 'Due 1916, with possibly an additional two thousand as a dividend.'"

"When notified a few days ago that a dividend on my two policies, of \$1,208.60, was due, and that it was mine for the taking, I was surprised and greatly pleased to discover that the prospects were so good for the two thousand dollar dividend being paid."

"I now regret that at the time I took out this loan, save in your company I had not made the amount double."

This Policyholder thought that possibly \$2,000 would be paid as a dividend in 1916, but in 1906—when his policies had been in force only five years—he receives \$1,208.60, and, mark you, this is only one dividend. If the policyholder lives until the policy matures he will have received two other dividends, and if he should die at any time the policy will be paid in full.

COMMENT

A Dignified Country

This episode between the President and Mr. HUBBMAN has, on the whole, been treated by the country with dignity. It is unnecessary to repeat that it was "unfortunate" or "deplorable," for it was marked by taste of a quality so obvious that it needs no descriptive adjective. It is, of course, sadly true that the President has lost something by the part which he played, and also by the revelation—it will be so to many—that the best-intentioned man cannot escape smirching if he wades too far into the mire of politics. It will do no good to any one—least of all the country—to add much to what has already been said about Mr. ROOSEVELT's quick proneness to give the lie to every one who differs from him, and who may be mistaken. To some minds this haste and unrestraint of the President have been amusing; but it can be so no longer. It is very hard on the country. It puts us in the wrong light. Our people are not habitually doing that sort of thing. As a rule, Americans are conscious that mistakes are not lies, while our Presidents have usually ignored assaults upon them, have left their conduct to speak for itself, and have declined personal encounters. It is not necessary to inquire into the merits of this particular issue; a regard for the country commands silence; the issue should not have been raised. The comment which might properly be made upon the act of a newspaper that will buy stolen letters is obvious; but it cannot now be indulged in, because, in this instance, the question is brought before the courts by the arrest of the clerk who is charged with stealing Mr. HUBBMAN's letters to Mr. SHERIDAN WEBSTER.

Roosevelt and Politics

One revelation of the episode is open to public discussion. It is now known more clearly than it was before that Mr. ROOSEVELT has been taking that active part in political campaigns which requires constant and intimate association with party leaders and their machinery and other instrumentalities. It requires also acquaintance with and condensation of the ways and manners of the artisans of modern practical politics. Mr. ROOSEVELT's best friends have, for many years, regretted his love of the game, a love which he has asserted more than once. Some of his political opponents even have advised him to curb a propensity which, at times, has seemed to take possession of him like a passion. Once GAVIN CLEVELAND, when he was Governor of New York, warned him against putting too much faith in machine-workers, telling him that, some day, he would find himself sadly betrayed by some one of them in whom he had trusted. But Mr. ROOSEVELT, with that confidence in himself which is so often admirable, has persisted, insisting that he would succeed in compelling a better state of things through questionable instruments. At

last, as was bound to be the case, he is inextricably mixed up in the proceedings and acts of one of the worst machines—that of his own party in his own State—of the darkest chapter in American political history. He worked with the worst men, was conscious of some of their acts, discussed freely with them the raising of sums of money much larger than honest politics demanded, while his trusted friends and advisers laid themselves open to suspicions—possibly unjustified—which, in turn, have reflected upon him. So far as his connection with practical politics is concerned, Mr. ROOSEVELT has shut his eyes upon bad men and bad methods, or is too guileless for the work in which, directly or indirectly, he has been engaged. A good many of his well-wishers have long believed that, in undertaking to increase public virtue by the employment of bad men and their methods, he was making a mistake; now they are sure of it, and they thus understand why the President should be moved to intense anger by the publication of a letter which, without making any attempt to do justice to his motives, naively and frankly speaks of his familiarity with questionable campaign funds and their collectors and contributors.

The President's Conspiracy

Is there really a "rich man's conspiracy," or is Mr. ROOSEVELT suffering from undue suspicion? According to one of the newspapers, the mummeling of an inebriated statesman is the basis for his certainty that the President is the object of a plot which is medieval in its character and belittling in its folly. The story thus comes from a source that cannot command respect. But it is inherently suspicious. The muttered confession does not fit in with the facts of current history. Mr. ROOSEVELT is fighting windmills. The organization of the conspiracy, so it was stated, involved the choosing of delegates from various States who were to be pledged to support favorite sons until these had been exhausted, and then the convention was to take up some "reactionary," like Vice-President FARMANUS. To carry out this plot \$5,000,000 had been raised. While one paper ascribed this plot to a drunken man, another paper's Washington correspondent attributed it to Senator PENROSE. Senator PENROSE says that he didn't, while some of his friends say that he did it in order to make game of Secretary LOAN. One trouble is that no such movement for favorite sons as that described is in foot. Some Republican gentlemen have long been trying to induce their several States to regard them as favorite sons, but among these are quite as many friends as opponents of Mr. ROOSEVELT. In New York there may be two, both ROOSEVELT men, while the statesman who hopes for the maternal favors of Wisconsin is counted more radical than the President, if that be possible. There is to be a "try out" in Ohio between FORAKER and TAFT, but there is no conspiracy evident behind either of them. There is, indeed, a recognizable struggle going on in the Republican party, but it is also going on in the Democratic party, and this is so because the issue is dividing men without regard to party. The issue is between those who believe in government control of business and those who believe in individual freedom; between those, too, incidentally, who believe in national usurpation of the rights of the States, and those who believe that the States should not be divested of their constitutional authority by judicial constructions. There is no conspiracy and no concealment on the part of those who oppose the President, and some of these are likely to resent the accusation that seems to have been so eagerly embraced.

Why Take On About It, Anyway?

In the White House the story apparently was regarded as a malignant plot to flout the Lord's anointed. But why take on so about it even if it were true? Why should not any squad of citizens get together and contribute money, brains, or anything else they have got to make any man President who suits them? The race for the Presidency is a free-for-all event, and there is not, and should not be, anything to hinder any citizen, or group of citizens, from backing any candidate whose success they think will do them good. To expose their plans is a fair game, if there are really any plans to expose, but the intimidation of abominable, and even treasonable, naughtiness in the purpose of any group of citizens, rich or poor, to get a President to their liking is preposterous. It isn't a bit wiser to try to elect a conservative President who will try, between 1909 and 1913, to give the country

whatever the country seems to need, than to try to elect one committed to the development of the so-called "Roosevelt policies."

A Pointer for the Codes Committee

The Assembly Codes Committee is thinking deeply over Mr. HARRIMAN's statements concerning that \$200,000 contribution which was made by him and three others to the Republican campaign fund in New York in 1904. Under the State law as it exists this sum could have been disposed of, as is admitted, in fifty-dollar dribbles without any public accounting. There are a few more than four thousand election districts in the State, and by dividing up the whole \$200,000, giving a little to each, say on the basis of five dollars a vote, the whole fund might have been secretly disposed of. Let us assume, merely for the sake of argument, of course, that this money was actually used for buying votes. The use of any corrupt practices act is to prevent corruption, and one way to prevent it is to force, for the information of the State and its people, an accounting of all expenditures. The present law contains a \$200 limitation, and therefore, as a member of the Association to Prevent Corrupt Practices at Elections says, "The public eye would have seen that money descend underground in fifty-dollar drops, to rise again in votes, like the grass in April, but of the mysterious chemical and biological changes beneath the surface no account would be given." The public wants to know who gets the change. This teaches us, as the moralizers say, not only that

Little drops of water, little grains of sand, etc.,

but that if we are to prevent the formation of a mighty ocean of corruption we had better look after the little drops. The WAINWRIGHT amendment striking out the \$200 limitation ought to pass. The only safe thing is to know how goes every cent of our election fund.

Dr. White Fears Cuban Annexation

DR. ANDREW D. WHITE has come back from a visit to Cuba with the same convictions that are brought home from that island by almost all intelligent Americans who go there and look around. He is convinced that Cuba is incapable of self-government. It is not a new conviction in his case. Years ago, as commissioner to San Domingo, when General GRANT and others thought of annexing that island, he learned "the utter incompetency of the mixed races in the equatorial Spanish republic to govern themselves." Holding this opinion, Dr. WHITE considers Cuba a much greater danger to the United States than the Philippines, because no one seriously thinks of making the Philippines a Territory and finally a State in our Union, whereas there have long been many Americans who wish to annex Cuba. Dr. WHITE admits a great dread of seeing "what would be a great negro State, utterly incapable of self-government, under a part of our system, with at least two Senators and several Representatives at Washington. Everything he lately saw in Cuba strengthened him in the conviction that such a State would be a curse to us—a vast rotten borough, with a small number of wealthy capitalists in the midst of an expansive negro population." Better, he thinks, set up the Cuban government again and again—seventy times, if necessary—than make it a part of our system. As a separate nationality, with independence guaranteed by the United States, it may at last, he thinks, like Mexico, find some system under which it can evoke something like stable government.

Present Prospects in Cuba

As we have said, most other intelligent American visitors to Cuba bring back very much the same impression of the political crisis of the Cubans that Dr. WHITE discloses. It recalls Admiral Dewey's opinion, expressed seven or eight years ago, that the Filipinos were better qualified than the Cubans to take care of themselves. The objections to annexing Cuba are eminently clear; but so are the objections to letting her try to work out, by revolutionary processes, such a stable government as that of Mexico. The PLATT amendment secures to the government of the United States the right to intervene in Cuba "for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the Treaty of Paris on the United States." The PLATT

amendment does not give much encouragement to the revolutionary processes. It virtually says, "Learn to swim by all means, but don't go near the water." Meanwhile, Cuba is being governed under the Cuban flag by an American administrator. Governor MAJONES seems to be making good work of it. Secretary TAYLOR, at this writing, is visiting him and inspecting the situation, conferring with committees of bankers, insurgents, and others, and trying to determine when it will be profitable to hold an election. The bankers, it seems, want one or two years' notice of a coming election. What the insurgents want is not disclosed, but probably they would like to have the election held before the bankers have a chance to get away. But first, the Secretary says, a census must be taken, and after that, to test the machinery, some preliminary municipal elections should be held. It will be time enough, after that, to hold a national election.

The Sound Mr. Watterson

LINCOLN WATTERSON has been interviewed in Paris by the correspondent of the New York Times. The distinguished and entertaining editor made some exceedingly interesting and valuable remarks, the philosophy of which will gratify the sound-thinking people among his countrymen. His clearest view is that both parties are running to extremes, the Republicans party under the leadership of Mr. ROOSEVELT, while the Democratic party, he thinks, is still following Mr. BAYAN—government supervision and control on the one side being opposed by government ownership. Mr. WATTERSON believes, and we think justly, that the great mass of thinking people are standing between the two, exclaiming, "A plague on both your houses." Mr. WATTERSON grows, or continues (as he will be), conservative, and he has come to the conclusion not only that it is time to stop and think before going on with a war which will hurt every man's business and every one dependent upon it, but that a large part of the people agree with him; but also that they are "powerless to make an effective or even considerable diversion." Is Mr. WATTERSON correct in this? Are the politicians who happen, for the moment, to be in the saddle to have it their own way because the people who are thinking otherwise are not intelligent or courageous or virtuous enough to make a struggle for what they regard as sanity? Perhaps Mr. WATTERSON will reach a different conclusion on his return from Paris.

Suffering Railroad Men and the Rates Law

Acquiescence in the general idea of government supervision of railroad rates is now pretty general. The idea has been accepted, partly because it had to be, partly because it promises to cure some bad ills, partly because of the fear of some worse remedy. But how it will finally work out, and whether it is within the merely human capacity of the Interstate Commerce Commission so to administer the law that it will not do more harm than good, is still to be found out. We hear much of what a protecting and wrong-averting expedient the law is, but not much about the hardships and perplexities of its enforcement. The railroad men know what troubles it has brought upon them, but they are too busy to groan in public, and when they do groan their lamentations seldom reach the public ear. But their sufferings are so great that more should be known about them. At the dinner of the Traffic Club of New York, on February 16, most of the addresses had to do with the relations between the railroads and the public, and they were addresses that the public would be considerably the wiser for reading. One of the speakers was Mr. LOUIS G. McPHERSON, of Johns Hopkins University, who talked about the railroad as the silent partner in every business in the country. He said in his speech:

When standing at the desk, the other day, of the freight tariff clerk of a principal railroad, I asked what effect the multiplicity of legislation was having upon the immediate performance of his duties. He said: "The number of laws, both State laws and national laws, that we have to watch is such that we are in a continual state of bewilderment. There is some traffic that must move at once, but the rate not only has to be filed, but to filed thirty days in advance. What am I to do? The Interstate Commerce Commission has decreed that all tariffs be of a uniform size. I suppose for the convenience of its files, but of its numerous circulars of instructions and pamphlets of rules hardly two are of the same size. It decrees that every tariff be indexed, but here is one of its pamphlets that has no index. Yet it contains manifold instructions that should be indexed and cross-indexed. It is decreed that every through tariff be agreed to by every one of the roads

affected by it. This tariff in my hand contains rules that may be participated in by one hundred and twenty roads. Before filing this tariff we will have to send a copy to each of these one hundred and twenty roads, wait until we get their formal notice of acceptance, and attach these one hundred and twenty acceptances to the tariff; then we will send it to the Interstate Commerce Commission."

That gives some little idea of what the rates law means to the railroads, and in what meshes of red tape it necessarily involves the transportation business of the country. No doubt things will run easier in time, but it seems still uncertain whether the job the Interstate Commerce Commission has been set to do is within the capacity of any commission that can be obtained.

Chamberlain's Policy Dying

It is pretty clear that Mr. CHAMBERLAIN'S tariff-reform policy is about abandoned by the Conservative and Liberal Unionists. Mr. BALFOUR has announced to the Belfast Liberal Unionists that, so long as there is a party in control of the government threatening to revive the issue of home rule, he will consider any Unionist who attempts to introduce another subject, like tariff reform, for example, as "an enemy of the party." This certainly puts a definite end to Mr. CHAMBERLAIN'S effort so long as the Liberals are in power, for both Sir HENRY CAMPBELL-BANNERMAN and the Lord Chancellor have definitely committed themselves to home rule. At the same time Lord SALISBURY has written a letter to the *Times* in which he suggests other ways of preferring the colonies than by putting duties upon goods from foreign countries. The lowering grasp of the aged statesman is no more clearly shown than by the abandonment of his cause by his leader and his friend who once gave him a free hand with it to the defeat of their common party.

The Useful Duma

Various and opposing reports come from St. Petersburg. In the *Czar* really to abdicate in favor of the Grand-Duke MICHAEL! At this writing this seems a yellow tale. But what appears to be true from despatches to our own and to western European papers is that the Duma's existence is essential to Russia. Apparently it is either the Duma or a revolution. Assassination still goes on its horrid way. It is said by moderate Russians that we do not begin to know the number of *slava* officials. At the same time the Duma is a safety-valve. With it Russia may weather the storm; without it, no.

Foolish Young Alumni

The fathers and mothers of the country are properly deeply concerned about our universities and colleges, and about the kind of bringing-up their boys are likely to get when they are in what we are pleased to regard as the "higher institutions of learning." It is to be hoped that these anxious parents will seek their information from the faculties and not from the young undergraduates. Many of the latter have not been long enough out of college to appreciate the relative importance of the learning that was offered to them, some of which they were obliged to grasp, and the athletic achievements of other students whom they always admired and sometimes envied. Young alumni, especially those who sat on the bleachers when they were in college, are still young enough to shout for the athletes, and not yet old enough to be glad that they know something to think about, or of something to read, when they are tired out by their practical jobs. To them, the only college activities that are worth while are athletics. This is suggested by a recent pamphlet which, as it is printed, cost somebody some money. It is entitled "— Activities." The name of the college is omitted, because any body of young alumni would be about as foolish as the authors of this pamphlet. Judging from the pamphlet, there are no activities in this particular college except baseball, football, track athletics, and basket-ball. Debating is mentioned, but only to record defeats, while a dramatic association gives plays that are not regarded as classical in Thirty-fourth Street or Forty-second Street. If we are to believe this pamphlet, there are no scholarly activities at this college. And yet there are. The pamphlet, however, illustrates the pretensions of the athletic spirit in what should be our scholastic life. The sooner the body assumes its proper place in our "halls of learning" the better for the mature American mind. Professor OLIVER BRANN, of the University of Berlin, writes

kindly of our colleges, but says that they give too much time to sports.

Alcohol and Its Effects

Considering how long alcoholic beverages have been in use, and how very extensive the use of them has been, and how carefully the effects of such use have been observed and studied, it is extraordinary how much difference of opinion there is about the expediency of using such beverages. It is not alone that persons unqualified to form a sound opinion differ from persons who are qualified, but that the doctors—the expert investigators—differ considerably from one another about it. So indiscriminately is alcohol condemned by those who condemn it that sixteen distinguished British medical men thought proper, last month, to record it in the *London Lancet*, as their opinion and that of the great majority of medical practitioners, that, in disease, alcohol is a rapid and trustworthy restorative, and that as an article of diet the moderate use of alcoholic beverages is, for adults, usually beneficial. Their statement, embodying this opinion, being shown (by the *Evening Post*) to a dozen or more prominent doctors in New York, all of them agreed with it, but with reservations. The gist of their reservations was that alcohol, in limited quantities, is good for some people, but not for others. As much as that most intelligent observers have noticed abundantly for themselves. The doctors agree that very much less alcohol is prescribed in medical practice than formerly; not a quarter as much, one physician says, being so used to-day as was so used twenty-five years ago. Nowadays, both by the doctors and the observing laity, alcohol is intelligently feared and used with watchfulness and caution. The idea that, generally speaking, it is "good for you" is pretty well exploded among people of common sense; but the idea that it is invariably "bad for you," no matter who you are or how old, does not win its way, either in theory or practice, with the great majority of civilized mankind in spite of the great volume of organized effort that is pledged to the dissemination of that opinion. Whether it is good or bad, helpful or harmful, depends on who and what you are, what age, what temperament, how employed, how fed, and also on what you drink and when and how you drink it.

Discipline Rubbed In

Perhaps somebody at West Point knows what induced (or, as the verbiage has it, "what possessed") Commandant HOWSE, on April 7, to send a police sergeant to order the girls who were watching a dress parade to take off the cadet overcoats that had been furnished to protect them from a March wind that had tumbled into April. If the idea was to teach the corps of cadets to endure humiliation, the order was highly successful, for the corps was humiliated and had to bear it. If the intention was to demonstrate that it is no part of a soldier's duty to show consideration for women, it was realized. The girls were very mad. They had come for the Easter dance, on April 6, and stayed over Sunday; and watching the parade in a cold wind, they needed more wraps than they had brought. The cadets, of course, seeing the enforcement of Colonel HOWSE'S order, were moved by the emotions natural to men whose women friends are snubbed before their eyes. Maybe it did them good to have the cautions, and to be obliged to restrain them; but the lay observer is left wondering whether Colonel HOWSE'S order was really necessary to discipline. If the order represented official West Point manners, parents whose daughters are invited to West Point dances will be interested to know it. Gentlemen do not like to have their daughters exposed, without warning, to the attentions of the police.

Struther Law in Virginia

Virginia advices imply that it is now a capital offence, by the unwritten law in that State, to criticise the STRUTHER brothers. It will be recalled that two STRUTHERS were lately acquitted, with enthusiasm by judge and jury, of killing their new brother-in-law. The papers report that on April 6 a man who had the presumption to criticise the verdict, in talk with a friend, had his life promptly threatened by a third STRUTHER brother who happened, unknown to the speaker, to be within earshot. Prompt apology saved the speaker from the natural consequences of his temerity.

Mr. Roosevelt's Future

We ourselves should have said that President ROOSEVELT is quite as competent as any other American citizen to take care of himself and plan his own future, but some of our fellow editors think otherwise, and have made up their minds that he needs advice as to what he should do after he leaves the White House on March 4, 1909. They have, accordingly, taken measures to consult the many millions of persons who read the newspapers in fifty-five of the principal cities of the United States, and two of these journals, the *North American*, of Philadelphia, and the *Globe*, of New York, have already begun to publish the answers returned to their inquiry. Of some ten thousand replies, about half expressed the belief that Mr. ROOSEVELT ought not to leave the White House in 1909, but should accept a nomination for another term, which, if it taken for granted, would be equivalent to an election. Ten State Legislatures, those of Massachusetts and South Dakota, have concurred in the opinion, so far as overwhelming majorities of their Republican members are concerned, Mr. ROOSEVELT would be less than human if he failed to be pleased with such assurance of continued confidence. There is no reason to suppose, however, that he has any intention of departing from his reputedly proclaimed intention of quitting the Presidency at the close of his present term. It is, therefore, the suggestions of alternative occupations made by his fellow countrymen that we have inspected with curiosity, not to say amusement, which we dare say, will be shared by the President himself. The suggestions may be classified first as totally inadmissible and secondly as more or less reasonable, while there is one which some of those who know Mr. ROOSEVELT best regard as not only reasonable in itself but likely to be adopted.

Let us begin by marking the proposals that on one ground or another are entirely inadmissible. One of these is the foolish demand that Congress create for THEODORE ROOSEVELT the office of Prime Minister of the United States for life, to act as chief adviser to the President, whoever the latter may be. We scarcely need point out that Congress has no power to create such an office, and that a constitutional amendment would be needed for the purpose. It is doubtful whether even a constitutional amendment could suffice to carry out the suggestion offered by Mr. HENRY CLEWS, which is to make Mr. ROOSEVELT and, for that matter, every ex-President, a United States Senator at large for life. As every ex-President would probably be a citizen of some State, that State would practically have three spokesmen in the Senate, an unequal representation which even a constitutional amendment could not give it without the consent of every other State. Popular as Mr. ROOSEVELT is, we deem it inconceivable that all of the forty-five States—forty-six if Oklahoma be included—would agree to establish such a precedent for unequal representation. There is also a constitutional objection to the proposal that Congress create for Mr. ROOSEVELT the office of permanent president of our Insular acquisitions and the Panama zone, with plenary powers for life. Without a constitutional amendment Congress could not thus encroach upon the executive functions of Mr. ROOSEVELT's successor. For a like reason he could hardly be made permanent head of the Canal Commission, even if, being neither an engineer nor a contractor by profession, he possessed any special qualification for the post. Neither is he fitted by experience for the proposed appointment of administrator of a united system of American railways or of American life-insurance companies.

We pass to the second class of suggestions, which deserve more or less attention. There are those who think that after March 4, 1909, Mr. ROOSEVELT should accept the Presidency of the United States for the presidency of Harvard University. There is some thing in the nature of a precedent for such a move. EDWARD EVERETT having been a Representative in Congress, a Governor of Massachusetts, and a minister to the court of St. James's before he accepted the headship of Harvard College. EVERETT, however, had been for years a professor of Greek in that institution, and was deemed one of the most accomplished scholars that the United States had produced. We are not aware that Mr. ROOSEVELT makes any pretensions to scholarship of a high order, nor is he, like President ELDER, a recognized (though disputed) authority on the theory and practice of education.

More likely to meet with his approval is the suggestion that he should be invited to fill one of the seats in the United States Senate belonging to his native State, one of which, that, namely, now occupied by Mr. T. C. PLATT, will be vacant after March 4, 1909. For migration from the executive to the legislative department of the Federal government there are two well-known precedents, these, namely, furnished by ex-Presidents JOHN Q. ADAMS and ANDREW JOHNSON, the former of whom became a Representative in Congress from Massachusetts, and the latter a Senator from Tennessee. We imagine, however, that Mr. ROOSEVELT's limitations are better known to himself than to many of his countrymen, and he might hesitate to expose them by entering a body where as a reformer he might be outpaced by ex-Governor LA FOLLETTE on the Republican and ex-Governor TILMAN on the Demo-

cratic side, while as a practised debater he might be surpassed by a score of his colleagues, and as a constitutional lawyer would find himself no match for any of a dozen Senators that might be named. For all that it is not unlikely that he may wish to be Mr. PLATT's successor in the Senate.

We find it hard to take seriously the proposal that he should become the Mayor or the Police Commissioner of the city of New York. It is true that he was once for the Mayorship, and actually discharged the functions of Police Commissioner, and it is also true that Dr. WITT CUNNINGHAM resigned a United States Senatorship to become Mayor of New York. The descent, however, from the Presidency to a municipal office is not one that Mr. ROOSEVELT would be likely to find acceptable. The suggestion that in the event of the Republicans retaining their political ascendancy Mr. ROOSEVELT might be requested to take the place of Secretary of State seems, at the first glance, to have something in its favor, since he is familiar with our foreign affairs; but it is hardly the sort of man to brook playing second fiddle on a stage where for nearly eight years he had played first violin. Neither would it be pleasing to him as an ambassador to take orders from the State Department. As for the proposal that he should figure as a lecturer on political and moral questions in church pulpits and on public platforms, the role may at first sight seem congenial, but scarcely comports with the dignity of an ex-President. Some of those who have expressed their opinions through the *Globe* think that Mr. ROOSEVELT would make an admirable editor of a great newspaper. That, however, is a function for which prolonged and technical experience is peculiarly requisite. Mr. JOHN BOWEN, after being United States minister to France, became editor of the *New York Times*, but before the Civil War he had been for many years an assistant editor of the *New York Evening Post*. Still another suggestion, which appears to be made in good faith, is that Mr. ROOSEVELT, when he lays down the Presidency, should enter the Christian ministry, for the reason that he can preach, and that people love to hear him preach. Another adviser, also sincere, would have Mr. ROOSEVELT, after he leaves the White House, become a modest CINCINNATUS, cultivate a farm, lead a life of simplicity, and by his personal example prove that the "post of honor is a private station." Finally, Mr. McADAMS, formerly Assistant Secretary of the Navy and Police Commissioner, opines that it does not greatly matter what Mr. ROOSEVELT does, as whether in or out of office he will ever remain as important, if not a dominant, factor in political and social life.

This latter seems to be a hazardous one. Mr. ROOSEVELT's immediate future, drawn by sundry friends who think they know him best, and who most earnestly desire to subserve his interests, their idea is that he should follow successfully the examples set by JEFFERSON and GRANT. They would have him on March 4, 1909, leave Washington for Oyster Bay, and there for some ten months remain in dignified retirement, as JEFFERSON remained at Monticello. If his successor in the White House should be a Republican of his selection Mr. ROOSEVELT would beyond a doubt be consulted continually and differentially on affairs of state, as was JEFFERSON by MADISON and MONROE, and in any event he would be in the eyes of his countrymen the most impressive national figure until the proceedings of a new Congress should gradually divert attention from Oyster Bay to the Federal capital. Then, according to the programme devised for him by some of his far-seeing friends, he would enter, early in 1910, on a two years' tour of the world, in the course of which he would make a careful comparative study of the principal countries of Europe and Asia, not forgetting to visit England's self-governing colonies, the Australian commonwealth, New Zealand, Natal, Cape Colony, and the Transvaal, or to inspect the extraordinary work performed by Englishmen in Egypt. An incidental advantage of this plan is that not for a moment would his countrymen be suffered to forget the illustrious traveller, for the sayings and doings of THEODORE ROOSEVELT in the Old World would be reported by cable, and would be featured every morning on the front page of every American newspaper. Yes, about the beginning of 1912 he would return to his native land, and the interval before the meeting of the Republican national convention would be filled with a series of enthusiastic expectations. That is the project which, according to persons believed to be well informed, has already been formulated in detail, and which, they tell us, we are likely to see carried out.

There are two reasons to doubt this opinion. First, the plan was tried in the case of President GRANT and failed. Secondly, it cannot be reconciled to the letter or spirit of the statement issued by President ROOSEVELT on November 6, 1904, as follows:

I am deeply sensible of the honor done me by the American people in thus expressing their confidence in what I have done and have tried to do. I appreciate to the full the solemn responsibility this confidence imposes upon me and I shall do all that in my power lies not to forfeit it. On the 4th of March next I shall have served three and a half years, and this three and a half years constitutes my first term. The wise custom which limits the President to two terms regards not the person but the office. Under no circumstances will I be a candidate for or accept another nomination.

Our guess is that when he leaves the White House he will re-

vert to writing. He may also be a college president or a Senator or both; but he will be a writer, versatile, voluminous, diligent, and amply remunerated.

Behind the Mask

It is a depressing thing to watch the faces that hurry past one on the street. To jostle one's kind on the thoroughfares and in the shops is to see humanity at its lowest ebb. The faces are overwrought, strained, anxiety-ridden, or drab, futile, lack-lustre, and weary, and one involuntarily asks: "Why do they go on living? What object makes this dull driving worth while?" Outwardly, superficially, there is but little sign of the love of life, the joy of being, the exultation of existence. It is a dull panorama, this endless stream of tired people, miserably ugly and disfigured by the exigencies of their tasks. They seem all to have worn off the bloom of life by the unrelenting struggle. They bear the marks of living in yesterday or to-morrow, and this moment is but a dull third of time to be endured while they press on to another moment no better than this one. It is in the far away behind us or in the great to be that joy is hidden, and one by one the moments drip by unheeded, ungrasped, and unretrieved.

There would seem to be too many of us, too, in this great unaffectioned mass of people, all smiling, silent, giving out nothing, but each one hurrying along, eager to attain some goal, and pushing toward it as if harried by an invisible throng.

What an experience it would be, what an enlivening and enriching experience it would be, to peer behind the ugly mask, and see what lay back of the stupid faces and seemingly useless activity! If we were free to call a halt to any one and demand that he deliver up for our enlightenment the heart of his motive and his deep-blended desire, what significance would be added to the scene! If for a moment one might but play the part of the fairy in the old tales and grant each man a single wish, what a strange insight one would gain into the life beneath the dull appearance! "What one thing will you have to make you happy?" It would be money, doubtless, often, or wealth, or a jewel, or the power to stay the approach of death, or to annihilate space and overcome separation. How many would know those things that belong to peace!

And yet, behind the mask, one finds it, the spirit that makes for peace, or blooming, or honey, or idleness, or sly, or easy to overlook. One remembers *Rembrandt's* fascinating picture of the reconcile pleasure of wearing a hidden and ill-smelling lantern on a belt beneath a top-coat; but it is not this splashing over of a dingy fate with a glamour of adventure and romance, though that too plays its part, that makes life livable and keeps the panorama turning. It is that if it were sufficiently free of the throng for holiday jaunts and could pursue the victim, could mark our man—say, every tenth one in the crowd—and follow him home and inquire into the end and the aim of his being, we should find there included some one else than himself, some a deeper more helpless, surely, adrift on the spinning planet. And the reader one, too, would have found something trulier than himself to whom he could pass on the solaces of the way. If we looked behind the mask we should find this indubitably so, till it would be hard to find the mortal not bound to some one who was bound again to another. We actually get the sense, if we watch, that we are members of one body, and in some feeble way each member is trying to fall in line with the universe, trying to transmute this chaos into order.

Very often we wonder why humanity would have ordered growth instead of uttering the fiat which would have brought forth immediate perfection. The only answer that comes is that, things being as they are, our role joy is in the struggle, never in achievement. To strive hopefully, not to attain, is life. Stepping upward, not the place upon which we stand, gives elation.

Behind the mask the vision of life is not unshattering. However the outside of life be spattered with clay or powdered with dust, at the heart of things we find each man fanning some weaving flame of tenderness, cherishing some dim hope of a higher virtue yet to be, clinging to some unattainable ideal or performing pious rites before a glorified instant in the past. Following into the silent places, we find each seemingly dull atom of humanity has its own instants when it sees, perhaps afar off, the glory of existence, when it knows the bonds of self and steps out into the freedom of love and offers a zealous service to a soaring ideal.

Can it be all illusion, too, that, as the ages pass, more and more intelligence is applied to life. It seems at times as if the dark ages were shrinking slowly, and flowers were growing out of the ashes, and the machines were turning the notes of dust to brilliant jewels. More people today than ever before seem to have laid fetters on their destiny. More people to-day seem to understand that the best happiness is to have suffered beyond their deserts. For, surely, in some strange and unsearchable way it adds to the general glory of existence to see a man whom we know to be better than his fate. More people to-day understand that

with the withdrawal of the half gods the true gods come, and by the body's dying the spirit beats its way into consciousness, winning its life from the bursting clay.

In a recent novel of more than average power and interest the hero, beaten and thwarted at every step, sees in a vision, as he lies dying alone in the open, clutching still at his escaped desire, the vision of an iris-crowned child who bears to him the message, "There is something better."

The author does not tell what the "something better" is, in the book, and doubtless each must clothe his vision of it in the garb of his own habitual modes of thought, but to one eager to plumb the author's mind and bold enough to ask, the answer comes: "Myself within the heart, smaller than a mustard-seed; myself within the heart, greater than the earth, greater than the sky, greater than heaven. For who beholds all things in the self, and the self in all things, turns not away. And what sorrow, what trouble, man cause to him that has once beheld the unity, a well-enveloping all, bright, incorporeal, senseless, pure, unobscured, wise, omnipresent, self-existent!"

Personal and Pertinent

GROVER CLEVELAND has always possessed a sane habit of mind, and he has saved himself a great deal of worry and anxiety that most people do not know about by indifference to his enemies, and by a saving sense of humor that a few humans lack and with which he is not always credited. He has never taken the trouble to ask the country to participate in his personal grievances. When he was a candidate in 1884, the late WILLIAM DOVERIDGE thought that he had warrant to say that Mr. CLEVELAND, when Governor, had framed the McKinstry tariff bill—"the horizontal bill"—and he said so to a newspaper correspondent, who reported it in one of his letters. Now Mr. CLEVELAND believed that, as Governor of New York, he had nothing to do with Federal legislation, and he had given no authority for the statement. He therefore denied the impeachment in the editor of the *New York Sun* when he was asked. When this denial was published—it did not say that any one had lied—the young newspaper correspondent thought that he must be lost, that he was discredited with a man for whom he had acquired a deep reverence, and so he hastened to Albany to propitiate his offended deignity. He naturally expected a blast of indignation, but he met a cheerful large man, a cheerful frame of mind, who asked him to smoke a cigar with him and WILSON BUNNELL and the meritorious ALFORD.

"It's a pretty strong cigar," said the culprit.
"Well, I guess you can stand it," said CLEVELAND. "You're in good society; your surroundings are propitious; you'll like the smoke. Almost everything depends on your surroundings. I used to smoke a cigar in Buffalo, when I was young, that seemed to me to be excellent, and I had some made and sent to my room. But when they got there, I found them pretty poor stuff. I used to smoke them at one of the big beer-gardens, but when I got them home they were different; I missed the sand on the floor and the company. Be careful to get in the right company, too, when you ask questions. When you want to know what I think, ask me." That was all, and the youth was happy.

No man in public life ever annoyed Mr. CLEVELAND so much, when he was President, as Senator GORMAN. Senator GORMAN was very helpful to him in his first campaign, but for reasons, perhaps satisfactory to himself, he was not Mr. CLEVELAND's friend in the second administration. Indeed, he used to be a good many things that the President and those about him regarded as treacherous. GORMAN would say and do as much as he pleased to offend the President; as one outside of his intimate friends, and very few of them, knew how CLEVELAND felt about it. But THOMAS KNEW, for CLEVELAND sent for him, or GORMAN called on CLEVELAND, and the President said, "GORMAN, you're acting very badly. I think; about as badly as you can act."

"Why, Mr. President, I'm astonished."
"I don't see why you should be."

Then Mr. GORMAN explained how good and faithful he had been in the first campaign (this was the second administration), but CLEVELAND interrupted him.

"I'm not talking about then, but now—and you're acting badly for the party and the country."

Mr. GORMAN told LAMONT, afterwards, that the interview had been very painful to him.

Once GORMAN made a violent assault on CLEVELAND in a speech in the Senate, and some of the President's friends thought that there had been a breach of faith. But Mr. CLEVELAND never read the speech; he said he hadn't time to trouble himself about it. Now, indeed, did he cry out loud once during his two terms as President, nor has he ever cried out loud and complained of being hurt.

It was because the students of Princeton felt that they had encountered the genuine thing that they gave to CLEVELAND a livingcup on his seventieth birthday.

Correspondence

ROOSEVELT AND BRYAN

NEW ORLEANS, LA., April 1, 1907.

To the Editor of Harper's Weekly:

SIR—I am, I am glad to say, but not a "notable man," and therefore suppose it makes little or no difference to the world in general what I'm thinking about. But in my secluded life, down on the farm, I have much time for reading, and think a good deal about politics, having had an inclination that way when as a boy I used to read about Washington, Jefferson, Monroe, Adams, McKinley, Cleveland, etc. Bryanism made me a Republican, but the high-handed, empirical juggling and all-around disregard of the Constitution by Mr. Roosevelt have almost turned me back to Bryan again, and I am half inclined to think that if the next Presidential contest is between Roosevelt and Bryan, the latter may win. The socialist element to which Roosevelt is playing is unstable and unthinking, and cannot be relied on, provided somebody comes along with an idea that will out-Herod Herod. Bryan can be relied on to furnish that idea, and to go Roosevelt one better on anything the latter proposes. In that way Bryan would get the very vote to which Roosevelt is so earnestly catering.

Conservative men stand for principle, but the socialist wants an immediate delivery of the goods, and is ready to abandon his idol the very moment his hands are hungry. Now, if things go as they are now pointed, many of Roosevelt's gallery gods will be idle and hungry too long before the next election—as a result of business depression, itself the result of selfish grinding and uncertain political policies. If nominated, Bryan will carry the South. An additional advantage to him is that without the right-minded people want the right. It is extremely sickening to them to have business eternally ground between the millstones of radical politics and meanness and threatened, and with a delight-grin daily tossed before the galleries of the world from Washington. It is more revolting still to see the President meddling in the affairs of the States—talking about naming his own successor, and trying to punish United States Senators for doing, thinking, and speaking as they please under the law and their oath of office.

The Republicans have a two-thirds majority in the Senate, and even if Bryan were elected his hands would be effectively tied. He could make recommendations which the Senate could ignore. In this way the country could get a four years' respite. As between Roosevelt and Bryan, then, the election of the latter would not surprise me. One old hell is about as bad as another, and as between a hell in full bloom, with its operations upsetting business confidence, and another simply in position with its fire banked, I think conservatives would prefer the latter, and that they might stay at home in States like New York, Ohio, Indiana, and Illinois, and perhaps on the Pacific slope, and simply let Bryan go in by default.

Notwithstanding his pledges to the contrary, Roosevelt is no much of a gallery-player that I am forced to the conclusion that he really wants the nomination again—for the Republicans if possible, but from the Democrats if the Republicans should turn him down—and I am not so sure that the Democrats would nominate him if the Republicans did not, for with them these days the fundamental principle of politics seems to be any old thing to win.

But as much as I despise Bryan's policies, I cannot but regard him as safer, more approachable, more open, more American, and with less mean, low, selfish cunning than Roosevelt. Indeed, Roosevelt has shown a contempt for the Constitution of which I do not believe any other educated native-born American either desirous or capable, and if there is one thing in the latter's character more despicable than another, it is his contempt for the very law he is so drastically prescribing for everybody else. Under the guise of reform, he is stealing rights that are more precious to native Americans than all the corporations of the country put together. We can handle the corporations some way, but when our constitutional liberties are gone there may be more trouble getting them back than is now dreamed of in all our wild philosophy.

Another thing—Theodore Roosevelt has disgraced the Presidential chair with more petty acts than all the other Presidents of the United States combined. His self-righteous messages are sickening. He appears to have no respect for anything but himself. To him the House of Representatives, the Senate, the Supreme Court, the Constitution, are nothing. He is indeed waving by the wind, and if as a result of it our country does not reap the whirlwind I shall be very much surprised.

I am, sir,
SILAS GREEN.

MUSIC IN POETRY

ROCHESTER, N. Y., February 11, 1907.

To the Editor of Harper's Weekly:

SIR—Mr. Joseph Altshuler, in his letter to you, dated January 8, 1907, and which you published under the title of "Music in Poetry," says: "Mr. Kipling, in an address last year . . . said that there were only five passages of silver music in English poetry, and that four of them were found in Keats. But he did not quote any of these passages." In your issue-note to Mr. Altshuler's letter, you mention Kipling's story "Wireless," and say that he quotes there the last two lines of Mr. Altshuler's first quotation from Keats. I think the mistake originally arose from reading the word passages

instead of lines. In "Wireless," Kipling says, "Remember that in all the millions permitted there are no more than five—five little lines—of which one can say: 'These are the pure magic. These are the clear vision. The rest is only poetry.'—I vowed no unconscious thought of mine should influence the blindest soul, and planned myself desperately to repeating and re-repeating the other three:

"A savage spot as holy and enchanted
As yew beneath a waning moon, was haunted
By woman waiting for her dreamer lover."

These three lines are of course from Coleridge's "Kubla Khan." The two lines "Mr. Shaylor was playing hot and cold with" were, as you said,

"Charmed magic ensembles opening on the foam
Of perilous seas, in fussy lands forlorn."

I am somewhat of a collector of Kiplingiana, and as yet have found no address where Kipling speaks of "five passages of sheer magic in English poetry."

I am, sir,
BERTHA L. BOLTON.

BLAME IT ON THE SUN

BERKELEY, CAL., March 30, 1907.

To the Editor of Harper's Weekly:

SIR—I was pleased to see the letter from W. B. S., of Philadelphia, in your issue of last week, criticizing the pictures published in the *Illustrated Weekly*. When the President makes a speech, the pictures may have been clever, but were decidedly disrespectful.

I am, sir,
W. C. HORNES.

CALL FOR AN ORANGE DAY

ROCHESTER, CAL., January 20, 1907.

To the Press of the United States:

The orange-producers of California are desirous of having a day set aside to be called a "National Orange Day," when every man, woman, and child of the United States will eat one or more oranges in order to assist the greatest industry of the great State of California.

We believe you will give editorial and news space to promoting the plan, and we urge you to adopt the first day of March as "National Orange Day."

President Roosevelt planted one of the original navel orange trees in the path of the Glenwood Avenue line in this city, where, and every year the luscious oranges of this parent tree are sent to the President, who enjoys them immensely.

Your kind consideration will place us under lasting obligations. Yours, very truly,

RICHARD LAWRENCE OF COMMERCE,
For THOM. C. EVANS, *Act. Secy.*

YES! PRESIDENT ROOSEVELT IS VERY POPULAR

MASSACHUSETTS, March 21, 1907.

To the Editor of Harper's Weekly:

SIR—As one of your subscribers, I wish to state that, although I have been a subscriber for one year only, I have seen the *Weekly* often for a number of years, and have always been favorably impressed with it, especially as regards the editorials.

I have noticed, however, that during the past few months a violent change has come over your editorial column in relation to the more honest of us high-minded and thoroughly honest men, making a man as ever occupied the White House. I am at a loss to understand your sudden change of heart. . . .

I have been very much pleased to find that I am by no means alone in my estimation of President Roosevelt, and can say very positively that the people of the old Bay State do not agree with you by any means, and are perfectly contented to have the reins of the government in the hands of our esteemed fellow citizen Theodore Roosevelt.

Trusting that you will discover the error of your ways, and that you may find space to publish my note,

I am, sir,
C. C. COX, JR.

Our correspondent is quite right in thinking that he is not alone in his estimation of President Roosevelt. The President is by all odds the most popular citizen in sight; so popular, indeed, that even just and moderate criticisms of details of his policies or department excite resentment and reproaches from the great army of his admirers. Our correspondent should distinguish between personal character and political actions. "As high-minded and thoroughly honest and well-meaning a man as ever occupied the White House" may do great mischiefs by errors of judgment as to policies or methods, and when that happens, the more honest and well-meaning the man the greater will be mischief and the harder to stay it, because integrity of character begets such confidence in a man that folk are prone to think that everything he tries to do is wise, and that every one who tries to hold him back is wicked.—EDITOR.

THE CARNEGIE INSTITUTE

A \$20,000,000 BENEFACTION FOR ART, SCIENCE, AND EDUCATION

By ROBERT HAVEN SCHAUFFLER

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

John W. Beatty
DIRECTOR OF FINE ARTS
AT THE CARNEGIE INSTITUTE

Pittsburgh, April 11, 1905.
From a view of the celebrated Horseshoe Curve I chose the Day Express to Pittsburgh. Just as we reached that climax of the trip, a train loaded with pilgrims from Pittsburgh slid between us and one of the finest sights in America. The freight passed at length, and as we drew to opposite sides of the gigantic horseshoe, the smoke, blown black from its engine, wreathed itself beautifully about that train of pilgrims, veiling its ugliness and making it a lovely and mysterious background to the thrilling beauty of that curve.

It was a good sight, but it was better symbolism. For so the mills of Pittsburgh, after brutalizing the place, have won through at length to the task of beautifying it both physically and spiritually. And the pig of iron has, by a breathless swoop of evolution, become a ministering spirit.

The Carnegie Institute, which was dedicated to-day at Pittsburgh, represents in its cost of over twenty millions the largest recorded gift to a single community. It comprises five departments: the library, the art-galleries, the music-hall, the museum, and the technical schools. All of these, except the technical schools and the branch libraries, are lodged in our roomy building which covers four and a half acres at the entrance to Schenley Park. Across the central part of the facade an inscription reads:

"This building is devoted to Literature, Science, and Art, and is the gift of Andrew Carnegie to the people of Pittsburgh." The building was originally intended for a library alone, but, by a royal afterthought, was remodelled as a palace of general culture at a cost of six millions.

As I stood on the sidewalk immediately before the main entrance I noticed at once certain qualities and defects of qualities which seemed to me to be characteristic of the city itself. I was impressed, on the one hand, with the liberal scale of the building, the youthful vitality and lightness in the modelling of such a massive and dignified and organic structure. Its defects, on the other hand, like those of Pittsburgh, impressed me most vividly at a first glimpse of the exterior. Every one deploras the situation, packed in without vistas between an inglorious thoroughfare and an ignoble gully, and remembers that city politics dictated the isolated library entrance.

To the left of Mr. Carnegie's inscription the names of the world's great painters and sculptors adorned the frieze: but to the right only these musical names were visible: Saint-Saëns, Strauss, Theodore Thomas, Glucka, Bizet, and Weber. Far away on a wing I discovered the names of Bach, Beethoven, Mozart, and Wagner. Brahms looked near the outer corner, while Haydn, Dvorak, and Tchaikovsky were hidden by the angle, and Schubert and Schumann eluded my search altogether.

Strauss and Thomas in the foreground; Beethoven and Brahms on the far horizon! Was this arrangement, I wondered, characteristic of Pittsburgh?

A like absence of poise in local conceptions of art and artists seem to be typified by Rhind's bronzes. The allegorical groups

above the cornice loom far too large for their environment; the face of Shakespeare below seems utterly frivolous, as if the book in his hand were by one of his lesser Western commentators; while the features of Bach and Michelangelo are almost brutal in their materialism.

As I watched Bach looking cruelly at his rudimentary grindstone a child came along with a bit of tin.

"Tub!" he sniffed, jerking his thumb at the father of modern music, "he'd be a bad man to strike for a dollar!"

In the Hall of Architecture. A Reproduction of the Bronze Font of Siena

Eager to learn the attitude of the man in the Pittsburg street, I requested his views on Michelangelo.

"As we moved down together, 'I'm a great American,' he said, 'but I got an eye for the beautiful. And though I got enough looks as a picture of me own without takin' nothin' from Mr. Carnegie, this here place is goin' to be the real thing for all these young fellows about here what's growin' up wild without no advantages, and I'd just like to slap old Carnegie on the back for this an' tell him, 'Glad bless you!'"

He looked Michelangelo up and down.

"Now this feller's better'n the other," he declared. "Looks as if he could strip off that there old outfit an' stand right up to Jeffers any day."

He mused deeply, then burst forth:

"But there's one thing that sorter riles me. That there chap I can spot for an eye-talian. Now I'd just tell you, young feller, that it isn't right to stick him up here when there's thousands of good honest Americans what have his beat to a pulp in the matter of high art."

He shook his fist at the broken nose of the master.

"It's a little like importin' dago contract labor. America fer

"The Well of Moses" at Dijon, and the Tomb of Francis II. and Marguerite de Foix in the Cathedral of St.-Pierre at Nantes. The collection is remarkable for the purity and quality of the casting, and for beauty of arrangement and of setting. Mr. Beatty and his assistant, the sculptor Zeller, deserve high praise for their enterprise, skill, and taste in this department.

The hall of sculpture, though it also contains only casts, is notable for selection, grouping, and the tone of the plaster itself, which is often marvellous in its translucency. The Elgin marbles on one side provide the pyramidal theme which is subtly repeated in the entire arrangement of the hall. The effective cement bases and mortar backgrounds in these two departments are unique, and are the invention of Mr. Zeller.

The annual International Exhibition of Paintings has been for years one of the glories of Pittsburg, and the present exhibition is perhaps the richest ever known in America. Certainly the average of excellence is far higher than that of any Parisian Salon or Munich Ausstellung in the writer's experience. It is a good sight for patriots. For, though Europe is heavily represented, the supremacy here of American genius is not open to argument. It is impossible to estimate the inspirational value of such an exhibition;

The East Entrance and Stairway of the Institute, showing the Mural Decorations by Mr. John W. Alexander

the Americans, say I. Why, friend, they's enough geniuses here in the Smoky City to set up two inches apart right round this here edifice."

The querulous accents of this gift-horse dentist, however, were quickly muted for me by the harmony of the interior. The main entrance led directly to a noble stairway up which three chariots might drive abreast into the hall of architecture. In this lofty room Director Beatty has assembled within two years reproductions of the world's best architecture as representative as those collected by the Metropolitan in more than a quarter of a century—and has arranged them better.

On the opposite wall is the entire façade of the Romanesque Church of St. Gilles in France, which measures eighty-seven by thirty-eight feet, and is one of the largest casts in the world. This church was made of the most diverse materials, each sculptor and mason using marble or granite or even stone as it suited his individual fancy. The church was built without scaffolding. Instead the builders leaped dirt higher and higher about the building until the whole was completed. Then it was excavated.

On the right are two Athenian temples; on the left, a portal of Bordeaux Cathedral, one of Ghiberti's Baptistery doors, and Nicolo Pisano's great Pisan pulpit. Over the entrance the lions of Mycense ramp mildly, flanked with columns from Tivoli and from the Mausoleum of Halicarnassus, with fragments of their orders.

Besides the façade of St. Gilles there are two other unique casts:

and it is hoped that its success may inspire a cognate movement toward the quickening of our other arts—most of all, toward the Americanizing of American music.

The permanent gallery, though in its infancy, is well selected, and contains some excellent paintings such as Dagna-Bouveret's radiant "Disciples at Emmaus," the characteristic Whistler "Sarnate," Tschev's "Arcade at Aacourt," and Tryon's "May." There are no marbles in the collection, and few bronzes besides some Pompeian reproductions.

The notable hall decorations by John W. Alexander (who was born in Pittsburg) represent, in a series of panels, the characteristic local industries. Few American themes are more stimulating to the imagination of a painter than the spectacular life of the rolling mills, and here Alexander has risen to his task. The larger panels at the head of the stairway are more ambitious. On the left, Pittsburg, hovering in armor, is the goal of a cosmopolitan legion of spirits who are bringing him all the good things of earth, while smoke demons, opposite, settle away from his iron feet.

The library was the germ of the institute, and has always been the most important factor in its mission of culture. As might be expected of so young a collection, it is still weak in ancient literature, but in the modern field it is one of the best equipped in the world; and certainly the most convenient and delightful and stimulating of all cities of refuge for the scholar and the man of letters.

The librarians are thoroughly trained, and strike the balance ex-

quietly between the pedantic "book-jailer" and the brainless book-shoveller. They are a working force two hundred strong. Not only do they secure a high efficiency for their 550,000 volumes, but they create new ideas and then put them into practical operation.

The library manages twenty-nine "home-library groups" and fifty reading clubs for boys and girls in remote districts. It sends collections of books to sixty-seven schools, and has special reading-rooms for pupils and teachers in its own building. It established the original School for Children's Librarians—a sort of school for literary kindergarten, which attracts pupils from as distant regions as Norway, and supplies a growing number of libraries with these greatly needed specialists. Each student here must become familiar with all the standard books that a child should know. And the course is aimed tireless in its thoroughness. For incidentally, I saw a warning shelf containing horrible examples of what a child should not know. Some of these were: *The Sorrows of Seneca*; *Schopenhauer*; *The Seven Barlets of Blood*, and *Sher*.

The Carnegie Library is inventive not only in these ways, but is also a veritable fountain-head of creative suggestion. For Miss Welles, the superintendent of circulation, and Miss Willard, the reference librarian, have more than once prompted authors to write books that claimed to be written.

At the desk of Miss Willard, the scholar, the philanthropist, the club-woman, the schoolboy, the anarchist, the inventor, the plumber,

Looking West in the Hall of Architecture, to the Right a Gaze of the Choric Monument of Lysistrata at Athens

the infant, the financier, may find instant aid and illumination. The following is her record of inquiries for a single day: Luther Burbank; Copper industry in Montana; American mural decoration; Sculpture in Pittsburg; Emotional quality of Thomas Hardy's work; Games and songs for children; The new woman; Political map of England in 1882; Homer of the West; Drills for boys' brigades; Panama Canal; An anecdote or poem about Long-kelley; Manufactures of the United States; Attractive small edition of Pascal's thoughts; Myths and superstitions of Japan; Tunes and after-dinner speeches; What is the magnetic pole; Northwest passage; Road map of Allegheny County; International arbitration, etc.

The library has built up a very valuable collection of books and bound volumes of periodicals treating of the industries for which Pittsburg is famous.

The system includes a central library, six attractively housed branches, nine deposit stations, one call station in a large department store, and one children's room in a settlement. The main building is beautifully furnished and provided with pneumatic tubes, an automobile elevator in the elevator-stair, and a "book railway." A reading-office and library are in the basement. To Mr. Hopkins, the librarian, and his aide staff, belongs the glory of creating out of Mr. Carnegie's millions one of the brightest foci of literary culture in the Middle West.

In announcing his plans for the greater institute, Mr. Carnegie proposed to include in it a school of music. Of this there is as yet only a nucleus, the music-hall, where free organ recitals are given twice a week by noted organists, and where the concerts of the Pittsburg Orchestra are held.

This organization, though unsupported by Mr. Carnegie, is doing a work cogent to that of the institute, and is under the management of Mr. George H. Wilson, the manager of the music-hall. The orchestra, which Mr. Carnegie once called "one of Pittsburg's chief assets," ranks high among American orchestras, and is a credit to its public-spirited guarantors and to American music.

During my visits to the institute the thoughtfulness and courtesy of the heads of these various departments were thoroughly delightful. But the curator of the museum masked under a reserved and forbidding manner a subtle refinement of courtesy. For, while firmly denying access to his halls, he referred me instead to his elegant essay upon them.

"The Carnegie Museum," writes Dr. Holland in the brilliant brochure to which he referred me, "is one of the four great museums of America, holding high rank among the museums of the world."

It includes these subdivisions: useful arts, history, physics, chemistry, mineralogy, geology, paleontology, and the biologic sciences.

The museum is best known for its collection of mammals, fossils, insects, and birds (especially local varieties), its ethnological specimens, and its thirty paleontological expeditions sent out by its founder to meet with remarkable success in various parts of America.

The writer regrets his inability to deal with this subject at first hand, but consoles himself with extracts from Dr. Holland's spirited monograph:

"A collection of recent pottery and glassware is in process of formation. . . . Collections illustrating the art of typography are in process of formation. . . . A collection representing the methods and instruments employed in physical research is contemplated."

From these thinner notes of aspiration the monograph now swells to a triumphant harmony of actual achievement:

"An extensive collection of local historical relics has been acquired. . . . A splendid mass of material illustrating the truths of mineralogy has been acquired. . . . It contains the best collection of Pennsylvania minerals in existence."

The essay now descends to a more popular style:

"To the uninitiated one of the most striking objects in the hall of paleontology is the skeleton of the large Jurassic reptile known as *Diplodocus carolinensis*. It measures eighty-four feet from the tip of the nose to the end of the tail, and stands at the hips fully fourteen feet in height. . . . It is the real thing."

"The director of the museum," continues Dr. Holland, "has himself deposited under its roof his entire collection of insects, which is known to be one of the largest collections in the world."

"The ethnological content of the Museum is extensive and beautiful. . . . It contains the largest collection representing the archaeology of Costa Rica in the world."

The Curator concludes his treatise not without a touch of philosophy: "Among objects which attract attention is an ancient Egyptian boat. . . . This ancient boat, in the construction of which no metal was used, is probably the oldest structure of wood in the New World. Between it and such a boat as the S. S. Baltic lies a vast development in marine construction."

The Carnegie technical schools are situated near the institute proper, and are to spread over a site of thirty-two acres adjoining Schenley Park. Though 1350 students are already enrolled, the present buildings represent only a tenth of the entire building scheme.

There seems to be an insatiable hunger in our country for the sort of instruction offered by these schools, and in their two years of life they have received over 10,000 applications for admission. The schools embrace four departments. The School of Applied Science offers courses in architectural, civil, chemical, railroad motive power, furnace, electrical and mechanical engineering. The School of Apprentices and Journeymen offers supplementary evening instruction to those already working at a trade. The School of Applied Design instructs in technical design and in the mechanical processes of the various art industries. The Technical School for Women is complementary to the other three.

The popularity of these schools is a significant commentary on the prediction of H. G. Wells that society will ultimately be composed of three main classes: the shareholding class, the engineering class, and the artist of the earth.

Their founder has thus far given the schools a million and a half for buildings, and two millions for endowment.

The director, Dr. A. A. Henshaw, has under him a young and brilliant teaching staff of ninety.

The Carnegie institute might be called "The University of the People of Pittsburg," for it is so truly "universal" in scope that any institution devoted to the education of certain selected youths and maidens. And, if the high school is higher and broader than the school, this institute might even be called "The Carnegie High University."

The founder has conceived a project unique, beautiful, and inefficient; has executed it generously, swiftly, efficiently; has adapted it wisely to the demands of its environment and of its age; and best of all, has set an inviolable example to those who may hereafter seek to benefit mankind. He has found in Mr. Frew and Mr. Church, the president and the secretary of the institute, able assistants. And by this, his crowning achievement, has sealed the gratitude, the sympathy, and the admiration of the American people.

WHAT THE CIVIC FEDERATION IS DOING

By ROLAND PHILLIPS

At the "Industrial peace" meeting at the home of Andrew Carnegie, on the evening of April 3, the attention of the public was again directed to the splendid work now being accomplished by the National Civic Federation, under whose auspices the meeting took place. Some of the most important features of its present programme were adopted at the annual meeting of the Federation held recently in New York city.

At this meeting about fifty distinguished speakers took part in a conference on these four national questions: Child labor, the income and inheritance tax, Government by injunction, and the Sherman Antitrust Law as construed by the Supreme Court. The speakers included Andrew Carnegie, August Belmont, and others prominent in the world of capital and finance; Samuel Gompers, John Mitchell, and other leaders of the great movement of organized labor; commissioners and factory inspectors of various States; representatives of employers and other national organizations which are interested particularly in child labor; on taxation, the attorneys for and against the government at the time the income tax was declared unconstitutional by the Supreme Court, and such eminent authorities on the general subject of taxation as the Hon. George Foster, ex-Minister of Finance in Canada, Hon. Alfred Mowbray, of England, and Professor E. R. Seligman, of Columbia University, who is unquestionably the foremost tax expert in America.

The most conspicuous result of the conference, particularly in view of the President's recent recommendations to Congress, was the decision to appoint, under the direction of the Civic Federation, four national and representative commissions to make a thorough and impartial study of these questions with the purpose of recommending a basis for suitable legislation.

On Child Labor, the situation is, in a word, this: for the past two or three years statements have appeared in the press and in various publications throughout the country purporting to show the extent and menace of the employment of children. It has been stated, among other things, that there are about 2,000,000 children employed in painful occupations.

"Two million children in this country are at work while other children play or go to school. . . . two million children sacrificed to greed. . . . we are struggling to save millions of children from the stunted bodies and mangled minds caused by industrial slavery."

It is obvious that such a picture makes a strong appeal to the sympathy of every man and woman. But are the facts as stated? It is claimed by some that this 2,000,000 should be reduced at once to 1,750,000, according to the census of 1900, and that it should be specifically stated that this number represents children between the ages of ten and sixteen years. Of this number it is asserted that the census shows about a million employed in agricultural pursuits where, in most cases, the children are working with their parents or families, and to whose employment there is no serious objection; and some 500,000 more who are over fourteen years of age, leaving in round numbers about 200,000 whom it is sought to protect by legislation. The distinguished secretary of the National Child Labor Committee, Samuel McCune Lindsay, accepts these figures, stating that:

"The number of children under fourteen represents 186,000 of those in other occupations than agriculture."

While no one will dispute the necessity of enacting legislation to protect even one child illegally or harmfully employed, it must be obvious that there is a vast difference in legislating for the benefit of 2,000,000 as against less than 200,000.

Further, it appears to be a very reasonable demand that conditions of employment in certain parts of the country where it is claimed child labor is prevalent should be considered in the enactment of legislation. In the South the rapid growth of the cottonmill industry has led it to be necessary to make the use of employment the entire family rather than the individual member. The result seems to be that a large number of children are indirectly benefited by wages for which they actually do no work. Further, it is claimed that from what is being done in the way of compulsory education in schools built and maintained by employers certain obvious benefits are conferred which, under different conditions of employment, would not exist. In North Carolina, for example, there is to-day no compulsory education law, and the schools run only four months a year at State expense. In certain cottonmills of the State the contract with the family makes it compulsory for all children under twelve to attend school. It is claimed, on what seems to be reliable authority, that in this State nearly 6000 children are being sent to school for eight or nine months a year at a cost, in which the State bears no part, of between fifteen and eighteen a year.

On the other hand, objections are brought against the employers of permitting night-work, of evading the law by employing children under legal age, and so on. The whole subject bristles with difficulties and conflicting testimony. For one thing, it is a very grave question whether the regulation of child labor is a proper function of the Federal government as proposed in the recent Beveridge-Parsons bill.

As to the Sherman law and the effect of its operations on national business, it will be recalled that the President in a recent message stated that:

"The law as construed by the Supreme Court is such that the business of the country cannot be conducted without breaking it."

According to the law it is criminal to enter into any contract or combination "in restraint of trade or commerce among the States or with foreign nations." The difficulty is that there is hardly a contract or combination in any line of business, for or against the public interest, which is not in some respect, in restraint of trade, and therefore criminal. For example, it is a crime under the law for manufacturers to agree among themselves to sell pure instead of impure food. It would be difficult to reduce any proposition to a more obvious absurdity. Further, it is known that the distinguished author of the bill intended it to be applied only to the correction of certain industrial abuses. But in 1907, by a decision of the Supreme Court, railroads were brought under its jurisdiction. "The Joint Traffic Association," an agreement entered into in 1895 by certain prominent railroad managers to maintain the provisions of the interstate commerce law, and to prevent the cutthroat competition which was forcing the smaller roads out of business, was declared a conspiracy and a violation of the Sherman Law. A well-known railroad official recently summed up the effect of the Supreme Court decision on the business of the railroads as follows:

"The result was anarchy—no agreements could be made or enforced—tariffs were disregarded—secret understandings and relations were the order of the day. There was not enough business to go around, and it was a scramble to see who could get it. Wages were raised, and the railroads were run by the railroad employees, but of the coal-miner, the ore-handler, and laborer everywhere."

It is clear that some of the evil effects complained of would be obviated by an amendment exempting from the operation of the law agreements and combinations which, while technically "in restraint of trade," are nevertheless in the interest of the public and necessary to the successful conduct of national business. But what shall be the exact terms of such an amendment? To settle the matter fairly and equitably to all interests will obviously require a more searching inquiry than has yet been made into the many intricate questions of government control, public and private monopolies, rates, relations, etc., which are bound up in the great problem of interstate commerce. Such an inquiry will be undertaken by a national conference authorized by the Civic Federation and held in Washington, D. C.

On the proposition of levying a Federal tax on incomes and inheritances one consideration may be eliminated at the outset. It is that the Federal government does not need such taxes as a source of revenue. If, therefore, the government is to assess taxes on incomes and inheritances, it will be doing so as suggested by the President, of assisting in the more equitable distribution of wealth and in the regulation of "swollen" fortunes.

Of course the difficulty to be overcome in case it is considered desirable for the Federal government to assess a graduated tax on incomes will be the decision of the Supreme Court in 1905, which declared such a tax unconstitutional. A curious fact about this decision is that the case on which it was based was identical with that of William M. Springer, afterwards Speaker of the House, in which case the constitutionality of the tax was not questioned. It should also be borne in mind that the income proposition of 1904, which the Supreme Court declared unconstitutional, was under debate for a few days only. During that time one of the prominent members of the Ways and Means Committee who took part in the debate voted to a high authority on taxation asking if there were any income taxes abroad. The fact that a large, and in some cases the largest, part of the income of countries like England, Germany, Switzerland, France, and others is derived from the income tax alone or in connection with an inheritance tax, shortens the time for the legislative body of 1904 were to deal with the question. Moreover, the decision was handed down by a majority of one. Under these conditions it is conceivable that if a popular demand should arise a case might be prepared which would induce the court to view the proposition with favor. Unless this is done the only alternative is to amend the Constitution.

To a Federal tax on inheritances there is no constitutional objection. However, thirty-three of our States are at present deriving considerable revenue from State taxes on successions, and it also lies in the power of each State to tax incomes. The question arises whether, in case the Federal government should assess such taxes, the revenue of the States would not be seriously impaired. It is thought by some authorities that on this ground the objection to taxes on incomes and inheritances by the States would be extremely difficult to overcome. But granting that a satisfactory conclusion may be reached on this question, a great mass of mooted points must be decided. Shall the income tax be levied as a graduated tax or on all incomes alike? Shall the entire income be taxed, or, as in England, the "excess of income"? Shall income be exempted from taxation under a certain amount? Will the best results come from taxing inheritances as a whole or the recipients of the bequests? Shall such taxes apply to residents and non-residents? And shall there be large or small exemptions? There are only a few of the more obvious questions which surround this intricate and difficult

subject. Even on the ethical side of the question scientists and authorities are in apparently hopeless disagreement. On the Tax Commission now being appointed by the Federation from the most able experts on taxation from each State will devolve the duty of recommending a way out of what now seems an inextricable tangle.

In considering the subject of Government by Injunction, another committee now being appointed by the Federation will face what one authority has called the most important labor question of the day. It is clearly recognized that in certain cases a preliminary injunction may be issued at the time of a strike which, even though it may comply with the terms of the law, has the practical effect of settling the dispute. Organized labor believes that in this way the courts are being used by employers from a partisan standpoint to prevent or break strikes. The question is, can the abuses complained of by organized labor be remedied without destroying the beneficial principle underlying the injunction?

The fact that the National Civic Federation is undertaking the appointment and direction of the work of these commissions will perhaps come as a surprise to many who are familiar with its work only in connection with the settlement of industrial disputes. This is only one phase of its activity. At the present time it is about to conclude a most important investigation on the great question of Public Ownership. The report, which will be issued shortly, is based on more than a year's study of this question here and abroad by a representative commission of one hundred and fifty men, assisted by a large corps of engineers and expert economists. According to a recent statement by the chairman, Mr. M. E. Inghis, the report will be practically unanimous on the principles of municipal ownership, and will undoubtedly serve in the future as a standard for the guidance of the municipalities of the country.

In addition to this, the Federation, through its other lines of activity, is in constant touch with the leading representatives of the great interests which will be called upon to take part in the proposed investigations. At the present time this activity is comprised in the work of five general departments, including Public Ownership, These are Immigration, Conciliation, Welfare, Industrial Economics, and Political Reform.

The first of these departments was organized recently under the chairmanship of Franklin McVagh, of Chicago, and is devoting its efforts chiefly to the consideration of such topics as the administration of immigration laws, the distribution of aliens, the demand for immigrants, the influence of foreigners like the Chinese, Japanese, and Koreans on our labor conditions, and so on. When one considers the fact that 1,120,000 immigrants came to the United States last year, and that the South, in spite of this great increase, is in absolute need of a more adequate supply of labor, it is evident that at least one of the problems with which this department has to deal is of incalculable importance to the commercial development of a great section of the country. A large number of the leading employers of the South are members of the department, and are working in connection with it to bring about a change in these conditions.

In the Conciliation Department are represented not only the largest employers of labor in the United States, presidents of railroads, industrial corporations, and employers' organizations of various kinds, but the presidents and grand chiefs of all the large organizations of labor. More than five hundred cases of industrial disputes, involving thousands of employees and millions of capital, have been settled by this department. These have included settling or settling controversies between the great railroad systems and the brotherhoods of engineers, firemen, and trainmen which have affected industries depending upon transportation in practically every State of the Union; promoting agreements between the longshoremen and vessel-owners which are of vital importance to all industries engaged in shipping, such as the coal, iron, steel, lumber

and elevator interests; adjusting street-railway controversies in San Francisco, New Orleans, Chicago, Pittsburgh, New York, Boston, Albany, and other large cities; settling strikes in the textile garment, boot and shoe industries, and the metal trades; promoting agreements between coal-operators and mine-owners, and between the thirty-four crafts grouped as the building trades and the corresponding associations of employers.

The work of the Welfare Department is along entirely different lines. Its whole object is to interest employers in improving the conditions under which employees in all industries work and live. In the last two years more than two hundred employers at their request have been given specific information, recommendations, and architectural plans on the proper housing of employees, recreation grounds, education, provident funds, etc. The result is that thousands of employees all over the country have been benefited. In New York city alone there is a local branch of the department, whose work has been apporportioned to twenty subcommittees, each dealing with a specific trade. These committees have succeeded in getting better working conditions for stationary firemen, who work in overheated basements, poorly ventilated; moulins, metal-polishers, and employees in trades such as bakers, teamsters, structural ironworkers, traction employees, seamanship workers, etc.

In the Department of Industrial Economics, of which Dr. Nicholas Murray Butler, of Columbia, is chairman, the original idea was to study the subjects involved in the settlement of disputes by the Conciliation Department, such as "A Fair Wage," "Hours of Labor," "The Open and Closed Shop," "Restriction of Output," "Compulsory Arbitration," "Piece-work," and many similar subjects which involve vital industrial principles, but of which the general public knows little.

I think it will be evident even from this bare outline of what the Federation is doing that it has carried out with some degree of success the purpose held down at the time of its organization under the chairmanship of the late Senator Hanna:

"To organize the best brains of the nation in an educational movement toward the solution of some of the great problems related to social and industrial progress; to provide for study and discussion of questions of national import; to aid thus in the crystallization of the most enlightened public opinion; and, when desirable, to promote legislation in accordance therewith."

At present the application of these ideas is more than ever needed. It will not be questioned that the great wave of protest which has swept over the country for the past two years has developed in large part from the irresponsible statements of sensational writers. No one denies that there are certain deplorable abuses in the financial and industrial world to-day which must be rooted out. But against those who magnify these abuses beyond all truth and recognition the public has no redress, nor has it the means of knowing the facts. Moreover, the socialists and other agitators have been quick to take advantage of this in extending their operations over the country. At the present time socialists are maintaining printing establishments in various cities which are turning out literally tons of propaganda favorable to socialism. In addition to a number of weekly papers they have lately established a socialist daily in Chicago. They are attempting to educate the children of the country in their doctrines by putting socialists in control of school boards in various cities. They have organized a socialist intercollegiate society to reach the college men of the country. A socialist university established this year is now running in New York. They are sending their speakers to all parts of the United States to spread their propaganda. It is stated on good authority that in the city of New York alone during the winter one hundred meetings a night are held for the advancement of socialist doctrines. It is not one of the least crimes of the National Civic Federation that it represents the opinions of many men as against those who wish thus to undermine our existing institutions.

WHERE THE DOVE OF PEACE WILL SPREAD ITS WINGS

THE BUILDING AT THE RACE WHERE THE SECOND PEACE CONFERENCE WILL BE HELD IN JUNE

SHIROKO is very different from most of the dogs you meet in Japan. These other dogs are the sons of the wild packs which only a few years ago howled and prowled wolflike around the towns at night. They are long-legged and lean-bodied, with malignant eyes that stare at you coldly in spite of the taming that has brought them to head in this blessed era of Meiji. They have the long, keen, punishing jaw of the wolf, and I should hate to be a fat man and meet a jerk of them on a dark and lonely road.

Yes: Shiroko is very different. His eyes are a deep brown hazel, and they twinkle with humor and kindness, to say nothing of certain shrewd gleams of speculation at times. He looks like a big fox terrier at first, until you observe presently that he has

the broad chest, the bulging head, and chopped-off muzzle of the Boston terrier. Heaven knows how he ever came to Japan.

Shiroko met four of us at Katase when we were going to visit the shrine of the goddess Benten on the island of Enoshima. He who visits Japan and does not see Enoshima will regret it forever. It is the most beautiful, the queerest, quaintest, ancientest—

But no matter about the rest of the rhapsody: we went by train from Yokohama to Fujisawa, and by trolley-cars—cute little cars, where they cling the warning-gong on the back platform—from Fujisawa to Katase. It was a heavenly February morning, the sun pouring a golden benediction on the just and the unjust: and all around us, under the pink plum blossoms—daring adventures that bloomed a full month ahead of time—there were scores of smiling, chattering Japanese men and women on their way to picnic on Enoshima.

From the midst of a moving ambush of red and pink little kimonoes and fluttering fans, Shiroko popped out upon us, prancing like a poppy, wagging his tail and his springy body, grinning as we never had seen a dog grin before outside of story books, and leaping upon us with genial welcome.

"Hello, old boy! Glad to see you!" said the Brunswicker, and patted him on the head. Shiroko gleefully darted from hand to hand, taking all the pats we had to give, and wiggling to us the assurance of his most distinguished consideration.

"Honorable sirs and ladies, come in and have tea," urged a stumpy little red-checked woman, hobbling and smiling at the door of her tiny inn; but we declined for the moment, and said we'd take tea when we came back for the wraps we were leaving in her care.

"Whose dog?" asked Mrs. Hyattin, who speaks Japanese like a native.

"That dog, Oshona, lives over on Enoshima," the woman replied, with more smiles and bows. "He comes here every day to meet the trolley-cars."

Was it fancy, or did we really see a look of pleading in Shiroko's brown eyes as he wagged a propitiatory tail at the women? Of a certainty he wagged as one who begs, and of a certainty his glances

were full of the furtive appeal of him who divulges the revelation of a secret. And when he saw that the girl was telling no more about him, Shiroko cowered off gayly ahead of us, and encouraged us along the sandy way.

A Japanese gentleman, all in American clothes and gloves and gold watch and chain, patted the head of Shiroko and invited him to come along. The dog frisked and smiled.

"I'd like to, very much," he replied in dog language, as plainly as could be. "I'd be delighted to go with you; but, you see, I have taken charge of these Americans."

"Oh, come on," the Japanese gentleman urged.

"Sorry," said Shiroko, "but I can't leave these Americans. Some other time. Good-day."

A mass eight feet tall would find Enoshima island merely a high clump of wooded hills and cliffs at the end of a long peninsula, but he would have to wade out to it from the mainland through a foot or two of water. We ordinary mortals walked out across the tide on a long, ramshackle bridge made of bits of scantling and planks lashed together with straw rope. It is a fine, bouncing bridge for nimble light weights, but very shaky for big Americans. We ventured out upon it cheerfully enough, yet there was a long pause when we were half-way over. For on the right we saw Fujiyama in her spotless robe of snow, fully fifty miles away, but seeming in this clear, brilliant air almost within touch. Against the vault of

"Sorry," said Shiroko, "but I can't leave these Americans. Good-day"

turquoise blue, this white cone of Fujiian hung like an open fan of ivory. We were so fascinated by the sight that we stood speechless.

A sudden clinketing of galloping paws interrupted us. It was Shiroko. He had trotted ahead some two hundred feet before he noticed us, and now he was hastening back in a fever of hospitable anxiety.

"Poor soul! I can't be distressed!" Titania exclaimed in such a quivering mockery of sympathy that every-body laughed. The dog flinched a little under the shower of laughter; but with the rapid expression of a martyr at the stake or of a commercial traveler selling a hard customer, he smiled up at us, and wagged his compliments with the vivaciousness of forgiveness in each wag.

"Come on, ladies and gentlemen," he coaxed us. "You needn't be afraid. The bridge is perfectly safe. I've taken lots of parties over it. Give you my word it's all right."

What could we do but follow? For, as all the world very well knows, when a dog takes charge of a party of humans there is nothing for it but follow, honor, and obey. And Shiroko, happy in the belief that he had calmed our fears, did the proud parade at the head of our column. The proud parade is done as follows: the dog goes forward at a brisk pace, but with a most dignified gait. His fore legs walk straight ahead, while his hind legs pursue a parallel course about three points to starboard. Meanwhile he holds his head high and rigid, flutters his tail patronizingly at his humble human flock, and stares at the wide, wide world with all the arrogance of Alan Breck.

Once he hesitated and almost fell. Before the door of the first house in the village a tame cormorant was dozing on a high perch from which a fish was hanging. Shiroko, singing a hoarse chorus of apology at us, tiptoed toward the fish with open mouth. The cormorant, who hadn't been sleeping at all, ruffed his back, glowered most fiercely, and poised for a swampish defence of his dinner. Shiroko crouched for a spring. The battle was on.

But no. Shiroko stepped back and expressed his scorn with a perfectly lovely scowl of battle, murder, and sudden death.

Hurling it at Shiroko with a vigor surprising in such a lean and wrinkled arm.

Drawn by G. E. Coates

We lingered before an outdoor shop, where a smiling little old woman with blackened teeth and a bass voice brought us to buy lustrous shell necklaces and lanterns made of luminous, puffy fish, and queer, tiny replicas of Fuji carved out of black and white lava; but Shiroko relentlessly urged us on our way.

A big, wolfish-looking dog rushed out and stopped Shiroko, stalked around him on stilted legs, raised the bristles on his neck, and said, "Grr-r-r!" most ominously. Our leader grunted, and made the sign of ineffable contempt.

"About three this afternoon," he remarked, as he glanced casually over the wolfish one's head, "I will come back here and make a feather-duster of you. And now, get out of the way of my ladies and gentlemen."

That was about all for the challenger. He dropped his bristles and slunk. Shiroko led us carefully up the steps of the temple of Nichiren, and as we were panting in relief on gaining the platform there suddenly appeared before us an aged, aged man, brown and wrinkled as a russet apple in the spring, bent as a bow, and leaning on a staff. He had not a hair on his head. He bowed low

(Continued on page 557.)

NAZIMOVA—THE NEW HISORIC GENIUS, AND HER ART

By HENRY JAMES FORMAN

EVERY season of us who are interested in the theatre are thrilled by the announcement of some new stars, widely heralded with much pomp and circumstance. We go, we see, we are captivated sometimes, disappointed frequently. Because for the most part these luminaries prove to be shooting-stars that flash across the dramatic horizon and are then lost in the pathless gloom. In this there is nothing unnatural, for a success invariably shrouds through a crowd of failures, and only from a great deal of mortal endeavor does a single talent emerge.

The most conspicuous talent that has emerged in the present dramatic season is indubitably that of Mme. Alla Nazimova. In an incredibly short space of time this young Russian actress has established for herself a remarkable eminence in her profession. To be sure, she possesses a rich endowment of all the gifts required by her art—youth, health, talent, and beauty. But even with all these, how many have suffered defeat! Madame Nazimova, however, has been particularly favored by fortune with the qualities of courage and versatility.

Her courage was tested at the very outset when she consented to leave Russia, where she was known, and to face the uncertainty of strange lands, speaking alien tongues, in order to "beat" the Russian censor by playing in a forbidden piece. Paul Orloff, in whose company Mme. Nazimova left Russia, is a hot-blooded revolutionist of the Gorky type, who was bent on producing Tolstoy's *the new famous* drama, "The Jews," which portrays all the horrors of the pogrom, of massacre, the chief subject of Russian news despatches. As the censor would not permit him to play it in Russia, he took a company of players from the frontier and produced the piece in Berlin. And thus Mme. Nazimova's wanderings began. From Berlin the company went to London, and from England in due course to America, the land of promise.

No one of those who witnessed the first performance of these actors at the Grand Stage, who was bent on producing Tolstoy's drama, is ever likely to forget it. Even those of the audience who spoke not a word of Russian were moved to tears and wild applause by the intense, yet wholly artistic, realism of these actors, the wonderful technique with which they produced the effect of verisimilitude. At that time Mme. Nazimova was enacting the part of a poor young Jewish girl in a tongue unknown, but already the critics noted in her the qualities which they now praise in her interpretation of Ibsen. But then, somehow, the criticisms seemed mostly tentative and unconvincing. For those Russian players did not come here with a French Bernhard reputation, nor did they travel in *de luxe* trains. A language like the Russian, moreover, serves as a refracting medium, and the best of theatrical ability has a way of appearing distorted through a language that abounds in the sufferer.

A number of persons, however, were deeply impressed by the capacity of these actors, and particularly by that of Paul Orloff and Madame Nazimova. The plastic grace, the fine technique, and the versatility of that young actress brought many discerning thespians to the dingy little East Side playhouse subsequently taken by M. Orloff, and it seemed very strange to see dramatic art of such a high order in those surroundings. The place was small, crowded, uncomfortable; the scenery was poor, the tongue incomprehensible. Yet parties came nightly from uptown to that penitential Little East Side musical-hall because the acting was admirable. Particularly impressive was the versatility of Mme. Nazimova. Each role she enacted with a finish, a consummate skill, that made her audiences marvel. And in the course of that first winter, two years ago, the roles she enacted were many.

There was, first of all, that of the poor little Jewess, at the time of the massacres, facing bloodshed and persecution with heartrending realism. In that play the heroine is in love with a man who, by blood, if not by sympathy, is kin to the persecutors—a complex situation, yet every note she struck rung irresistibly true. It was in this role that she created the first impression upon a New York audience, and the impression was wholly favorable.

Shortly thereafter she played *Martha*, in Dosztoevsky's apocalyptic melodrama, "The Brothers Karamazov." Her role was the antipodes of the other. In Tolstoy's drama she was an ingenuous, pious and good. The *Grushchko* of Dosztoevsky is a siren, rollicking, wild and passionate, leading men to their destruction, content with nothing short of making the brother of one of her lovers, a youth intent on sustaining holy orders.

In "Zaza" she enacted the part of the music-hall singer with an abandon, and a freedom seldom seen before in that rôle. The verse, the *dash*, the *blatnost* with which she played the first scenes of that sentimental Little East Side musical-hall were so markedly well brought to the latter scenes, led her audiences to conclude that that was precisely the kind of part for her. But in Tolstoy's "The Fool," on the other hand, she assumed

the rôle of an intriguing and masterful Russian Queen with an less distinction and finish.

Besides, there are her numerous Ibsen roles. A very difficult part to portray is that of *Hedda*, in the "Master Builder." The combination of symbolism and realism makes all the rôles in that play somewhat hard to play. But the part of *Hedda* is especially so. For that bright, strong-willed girl of the mountains, cheerful and hearty, is yet very imaginative and spiritual. She talks in symbols, and admonishes her lover not to tell higher than he can climb. Altogether, this is a most difficult part to project across the footlights. But most critics, nevertheless, were agreed that Mme. Nazimova gave an almost perfect rendering of it. So much for her more notable rôles, as she played them in Russian.

Last spring, when Paul Orloff and some of his company decided to return to Russia, an opportunity was presented to Mme. Nazimova to remain in this country, learn English, and to play upon the American stage. The plan seemed to have no terrors for her. How many stars would undertake to learn German or French or Russian enough in a summer to play Ibsen or anything else in those tongues? Yet directly after Mme. Nazimova signed her contract with the Shuberts she began seriously to study English, and in the fall she was playing *Nora*, in "A Doll's House," and *Hedda* *Gabler*.

Mme. Nazimova's conception of the part of *Hedda* *Gabler*, as she explained to the writer, is that of the "ultra-archaic," the ultra-refined and hypocritical aristocrat; the aristocrat who is bored to mortality by her marriage into the most prosaic of bourgeois families. Every tone, every shade of her voice, has a significance, in this play she achieves a comparatively slight, and almost everything depends upon speech. The critic, to a man, agreed that Mme. Nazimova's rendering of the part is wonderfully true. The evanescent foreign accent which still clings to her utterance is noticeable only until the hour becomes absorbed in the story; then it is lost sight of, like phantasms in a brilliant man or woman.

At this writing she is rehearsing "Camille Coquette," an Italian piece, by Robert Bracco, in which she hopes to finish the season. She expects, moreover, to give occasional performances of Ibsen's "Little Eyolf." But what catches the ear with delight is "The Madstone," in which she is to appear next fall. "The Madstone" is a drama of modern life, the scene of which is laid in Ohio. It was written by Hildegarde Torrence especially for Mme. Nazimova, and she is enraptured with the part she has given her. The heroine is a young Ohio woman, who has spent fourteen years in France, and that, said Mme. Nazimova, hiding her face in her hands, "will allow for my accent." The play preserves the classic naifness, and its duration in time coincides with the two hours or so it takes to present it on the stage. Mme. Nazimova hopes to be much from the play, and, with the promise she has given, who can say to what she may not attain?

For her ambition is as great as her art, and she works incessantly. Her life now is a far cry from the days when she first began to play in East Third Street, but her method of work is almost as strenuous now as it was then. Her stardom cannot spoil her. Orloff once told the writer that his great ambition was to play *Hamlet*.

"Well, why don't you play it?" he was asked.
"Ah, no, yet," was the wistful reply. "After I have been on the stage twenty-five years I hope to attempt it. But I am thinking, thinking, thinking. Everywhere, at meals, in street-cars, in the wings, ideas come to me about *Hamlet*, and straightway I write them down. I have books full of notes upon the interpretation of *Hamlet*. But I am not yet ready to play it."

That is the Russian actor's way of looking upon his art. And Mme. Nazimova has her full share of that tradition. Her aims have from the very first been high. She has hopes of giving interpretation to the best that the drama affords, and her artistic ideals are of the purest.

The course of instruction for the Russian player is a long and an arduous one, and the students of the Moscow Dramatic Academy where Mme. Nazimova studied go forth untaunted by the spirit of examination. The examination generally consists in interpreting some great rôle from Shakespear, Ibsen, and Molière, and the examiners are not lenient. So arduous and thorough are these courses that only the fittest survive them, and when these go forth to interpret the drama it is no wonder that the standard they carry is high. That is why we may deem ourselves especially fortunate that Mme. Nazimova has succeeded in learning English and come to enrich our stage.

The writer recalls visiting her between the acts one evening when she was playing *Zaza*. She was weeping bitterly. The reason for the tears was that she thought she had struck a false note in a certain line of the play. But that same evening she believed that Mme. Nazimova's artistic conscience is proof against box-office temptation, and that we may continue to look to her for the highest artistic achievement.

MME. ALLA NAZIMOVA

THE BICENTENARY OF FIELDING
THE FATHER OF THE ENGLISH NOVEL AND HIS ART

By C. H. GAINES

IF, upon the two-hundredth anniversary of the birth of Henry Fielding, we turn back to the sources of English novel-writing in a spirit of critical curiosity, expecting to view the work of a master from the superior standpoint of two centuries' experience in the art, we shall meet with a pleasurable surprise; and it may ensure that this shall be stirred a little from that blasé indifference to the past which is the curse of us who are all too well versed in the subtleties of the modern novel. In fact, nothing can be more refreshing to the jaded reader of to-day than to dip into *Joseph Andrews* or *Tom Jones*; and a part of his pleasure will lie in the discovery of Fielding's remarkable similarity to the modern novelists, and the resemblance between the society of two hundred years ago and that of the present, that Fielding's characters seem but the fresh and vigorous prototypes of the people we meet in the life and in the books of our own time. His beaux are a trifle more gallant, his physicians and lawyers more pedantic, his military men more swaggering, his countrymen more ignorant, but the types are all recognisably the same.

If, however, we look for the cause which lies at the very root of our sympathy with Fielding, and make us all in a sense his contemporaries, we shall find it not in any resemblance between his age and ours, but in the character of the man himself and in the principles upon which he based his art. In his time the world was just entering on the earlier and more childish forms of romance; his first story was also the first complete, full-grown, full-blooded English novel in the modern sense. Since then the art of story-writing has passed through many phases; but more and more we have swung around to Fielding's original view of the novel as a true picture of life. We require of the novelist that he shall have red blood in his veins; that he shall possess the knowledge and skill to paint all sorts and conditions of men in their natural colors; that he shall have the courage to present them as they are, the humor to laugh at their shortcomings, the philosophy to make us see the good in them. And no writer of the past two centuries has come nearer to the modern ideal of truth and vitality which, in spite of much that is fanciful and overworn in our fiction, does predominate in our minds, than the grand common ancestor of them all, Henry Fielding.

It makes us open our eyes to find that this originator of the modern novel (for this title, by general consent, belongs not to Defoe or Richardson, but to Fielding) deliberately set himself a difficult standard—very like that of his predecessors—and lived up to it more honestly than we live up to ours. Human nature, he tells us repeatedly, is his theme; and he insists that in order to describe it in both its high and low aspects he must have had first-hand acquaintance with life in all its forms. One must have met the lady of fashion in society and in her boudoir, and stood for hours at the lady's lordship's levee; one must have conversed familiarly with the luncheon's waiter, and learned to "drink with a tinker in his own language." This is the attitude which Fielding maintained in a day when the naturalistic novel was in its infancy, and when the writers of Bayou de la Platte or Plogmasa sauvage, in the shape of a novel, were not even dreamed of. We find in him, then, the most hearty and humane of realists; but his realism is not that of decadent kind which runs to an accumulation of meaningless detail and incident. In his comments and asides to the reader he is particularly clear upon the duty of presenting only what is instructive or amusing. Life surprises us with its grasp and its variety, and we are bound to follow it. We are bound to follow the Father of the English Novel for he has us.

little; but we need not fear him; his point of view is quite the same as our own. His comments upon the novel which is merely "a continued newspaper" (his own phrase) read like excerpts from a modern review.

But while Flaubert possessed all the essentials of his art as it was practised to-day, there is in him a nascent vigor which, in a modern author to-day, quite equal, and his manner of writing is marked by a simplicity and a complete freedom from affectation that are foreign to the style of to-day. He seems always to refuse with scorn the little arts of mystification which are at present so much in use. No one has so completely as he the air of telling a perfectly plain, unvarnished tale; yet none more successfully.

the reader of his comedy entangles him in a complex situation, and finally leads him up to a surprise. He has, too, an invigorating way of discovering real motives in men and women; and we must add to this understanding of the true springs of human action, a complete mastery of individual character—a mastery so sure and unfailing that Fielding seems merely to play with the persons of his stories. He restrains them rather than urges them on; he lets them reveal themselves little by little, and seems desirous of saving them from those disclosures of their real natures which they are ultimately obliged to

It is the crowning merit of this author that, with all his depth and sincerity, he was able to write his novels in a manner that was not only readable but earned, continually diverting us by his unmasking of hypocrisy and affectation. There is hardly a novel of his that does not set out impairment of dignity, carry off his attitude of being at once judge and jester; but such was his power of observation that he succeeded in it. He was, moreover, master of an irony in which none equalled him save the French masters of the art, and epigrammatic in a way the trick of which has been lost. All this he could do without apparent effort, and with a grace and delightful fluency and exactitude which make him the most persuasive of writers; so that in his hands the most trifling details find ourselves reading with far less than our accustomed exaltation and far more than our usual

But in considering Fielding the novelist, we must not lose sight of Fielding the playwright, or Fielding the critic and philosopher. He is a generalist, like an Sheridan's, as full of life and spirits and general mockery; but their portrayal of life, more akin to what, the theatre never knew, is more subtle and more so big for the conventional stage. We already see in him the preoccupation of his genius created by his legal and miscellaneous essays and his unapplied man of letters and miscellaneous studies, and his naturalism when we recognize the fellow-countryman of Swift. His serious writings and common sense that are scarcely his equals in wit and little just before his death, slight-hearted in the face of his inability of resignation and even we see a little more clearly how he covers and authorizes his

MUSIC AND THE OPERA

A MATTER OF INTERPRETATION

By LAWRENCE GILMAN

MR. WASSILY SAFONOFF, conductor of the Philharmonic Society, uttered at the last of this season's concerts of the Society a challenge—displeased an unseasonable one—to those who insist that the ideas of a composer concerning his own music are always and necessarily infallible. It is altogether unlikely that Mr. Safonoff deliberately set out to exploit himself in the character of a Reviewer of Masterpieces, an Instructor of Genius. He is altogether too modest and unassuming a person for that; for in spite of such current misinformation, he is anything but a sensationalist, an assertive and ruthless egotist. He is simply one of those interpretative musicians of occasionally profound intuition who are, at times, enabled—much as one may dislike the idea—to instruct the maker of music. We all remember the encounter between Debussy's original conception of the tempo of the slow movement of his "New World" symphony and the intuition of Anton Seidl, a mere conductor, concerning the same matter. According to the intention of the composer, it will be recalled, this movement was to be played at such and such a tempo; but he heard Seidl play it at a considerably slower pace than his directions warranted, with a liberality of view uncommon in his kind, acknowledged the superiority of this new reading, and forthwith subscribed to it; since then, the version of the mere interpreter, as against that of the author, has prevailed. Now it is not to be inferred from this, of course, that the musical exponent at large—be he conductor or singer, pianist or violinist—has an unquestionable license to subject the productions of the masters to any vagary of interpretation which may seem to him good and desirable; that way lie, obviously, anarchy and disaster. What we are

Josef Lievinne

WHOSE DISTINGUISHED PIANO-PLAYING HAS BEEN A FEATURE OF THE MUSICAL WINTER

arguing here, in controversy of those who hold that the intuitions of a composer are necessarily inviolable, is that the occasional interpreter of genius is to be regarded as a potential instructor of the creator whose mouthpiece he is. Now in such a case, for all that may be said for the inspired producer; and it is absolutely certain that unless his revolutionary readings are genuinely inspired, they will not prevail.

The immediate application of these reflections is that Mr. Safonoff—whose performances, it will be admitted, have at least the merit of provoking controversy—is one of those occasionally inspired persons; and he is no more evidently so than in his remarkable reading of that not unfamiliar piece, the "Tannhäuser" Overture, which was the concluding number on the last of the Philharmonic's programmes. Mr. Safonoff's manner of performing this work has been criticised, first, because he played the pompous finale (where the theme of the Pilgrim Chorus is triumphantly intoned by the brass against an agitated figure in the strings) at too deliberate a pace; and, secondly, because he "discovered" in this passage a middle voice which could be used in one spot to bury the melody as given out by the trombones, and he accordingly so used it, and captured one of the most significant modulations in the closing portion of the score.

To consider, briefly, the first of these objections, let it be admitted that Mr. Safonoff unquestionably does play this portion of the overture more broadly than Wagner intended. Twelve minutes, said the meticulous Richard, was all the time that should be consumed in the performance of the overture. We have not held a stop-watch upon Mr. Safonoff's reading, but there is little doubt

that he does not traverse this music in anything like twelve minutes; yet there is equally little doubt that the effect of this expansion and emphasis is nothing less than a stroke of genius; not only is it precisely in accord with the spirit of the music at this climactic point, but it sets in high relief its dramatic significance. It is no more an "exaggeration" than was Mr. Seidl's inspired alteration in the raw of the Othello symphony, and we maintain that it would have delighted the soul of Wagner, who held extremely liberal ideas concerning the function of the conductor.

As to the other count in the indictment against Mr. Safonoff—that he has "discovered" and unduly emphasized a subsidiary part in the harmonic texture of the finale—we cannot perhaps do better than to reiterate what has before been said in this place in the matter of this alleged unhalloved proceeding on the part of Mr. Safonoff. To begin with, Mr. Safonoff did not "discover" this middle voice in the harmony (which may be studied by the curious on page 37 of the orchestral score, measures 4, 5, 6, 7); it was "discovered" and exhibited some time ago by Mr. Arthur Nikisch, and was subsequently exploited by Mr. Seidl. In the second place, the accentuation of this particular voice (scored for three and four horns in unison, which would seem to indicate that Wagner intended it to be prominently heard), far from "raising one of the most significant modulations in the closing portion of the score," accentuates and italicizes that modulation. The progress of this voice in the harmony is from A to G-sharp to F-double-sharp; and this F-double-sharp upon which the three horns, in the seventh measure, alight with vivid effect, constitutes the "third" of the "dominant seventh" chord on D-sharp which, in this measure, leads into the prevailing tonality of the overture—E-major. Now, as every conservatory student is aware, the "third" of this chord, as it is used here by Wagner, gives point and vividness to the particular modulation. Its accentuation is not only justified by its harmonic relationships, but it produces a superbly beautiful effect.

It has seemed worth while to go into this point with some technical detail, since it is easy to misrepresent such a matter in those who may not, for various reasons, investigate for themselves.

The Boston Symphony Orchestra has ended its twenty-first yearly series of concerts in New York. The Orchestra gives seasonally in Boston a series of forty-eight public rehearsals and concerts; New York is favored with a meagre series of ten. We say "meagre" for substantial reasons. These concerts are attended upon every occasion by large and eager audiences, and they afford a kind of musical delight which is, in the literal sense of that hideously abused word, unique. Moreover, the writer of this page has received numerous letters from music-lovers in this town advocating an extension of the Orchestra's New York series, from five evening and five afternoon concerts to six. In several instances—eight, of such. All of which is hereby respectfully offered for the consideration of Mr. Higginson and his able advisers.

MISS BECKER HAS BEEN HEARD IN CONCERT DURING THE PAST SEASON

KILLING AN ARMY OF HORSES TO REBUILD SAN FRANCISCO

By RUFUS M. STEELE

WHEN San Francisco was burning down and the streets were choked with fallen carriages, the automobile changed in a day from the world's whizbang to the world's most practical engine of salvation. It sped with millions' worth of portable valuables to places of safety; it whisked hundreds of helpless men and women off the breakfast-table of the flames. But neither gasoline nor electricity nor steam is the ultimate motive power of the rebuilding. An automobile cannot climb the forty-five per cent. grade out of a basement with a load of debris, and a winch is too ponderous to serve. There is only one great power that can move about without assistance and be applied at will. The horse is having his day in San Francisco as he has never had it in history, and it is a glorious one for the horse, even though the day must inevitably close with his death. The cry of the California metropolis today is not for sympathy, not for money, but for horses, horses—and more horses!

In two years new San Francisco will be ready for the painters. Its steel and concrete buildings will tower in a way that the structures of the old city did not. A new race in city-building will have been set for the world. Plans calling for four hundred million dollars' worth of buildings will largely have been realized. The money isn't the only cost of setting a world's record. Neither is it the most significant item of the price. Into the foundations of the new city is going the life-blood of fifteen thousand superb horses in order that the paint-brush may begin its final coating in two years. Deliberately fifteen thousand draught-horses are being worked to death. Their lives are a sacrifice to an exigency of the times.

When the ashes were cold, the railroads were ready with gangs to lay tracks through the down-town ruins upon which to run debris-trains. Half a dozen contrivances were invented and put into operation for lifting brick and metal and ashes and dropping the waste into the topless cars which locomotives and electric engines

street, for the ash goes out of the city in a solid line of debris-wagon, and returns as an incongruous unit in a phalanx of lumber-wagons and strebladen drays. For six months Market Street and Kearny Street and Third and Mission and East have resounded to the monotonous thunder of the double caravan of the old city going out and the new city coming in.

Horse-power has found a new meaning in San Francisco. A wagon-load in R. O. days is a cart-load now, and what four horses drew is now the every-trip load of two. It is so of necessity. There are more horses than the city ever held before, and there are barely more than half enough. The loads must be drawn, and the horses to be had are the horses which must tug and heave and plunge until the loads are moved. Removal of debris and hauling of material are jobs let by contract. The contractors have all sorts of promises for time saved. The contractor reaps the premium by driving his horses to death. It is wilful murder in a just cause, for no city might readily summon horses enough for a task like San Francisco's.

A half-hour's walk from Market and Kearny streets at any hour of the day will lead you to a dead horse—laid in the harness—worked to death. The vans that carry off carcasses are busier than the vans which carry drunk men to jail. And the men whose business it is to bring in new horses to replace those who go out in the struggle are growing more and more desperate. The California corral and the Oregon and Nevada ranches have been depleted of their surplus, and now the ranges of Montana and the States farther eastward are being called upon to yield horses and more horses. There is no fine quibbling over the price. The horses must be had. They are shipped to the San Francisco horse-market, which, after the arrival of a fresh consignment, looks like a bull day in Wall Street.

There are seven thousand debris teams in the city now, which means that there are 14,000 horses engaged in hauling away the

ashes, the broken brick, and the spilt mortar from the aggregate of ruins. The 14,000 horses are in sufficient for the task, and it is believed that 3000 more teams will be added to the force before summer comes. There isn't a road leading from hacienda or rancho to San Francisco that hasn't its teamster and his team coming this way, even as the prize-scholar was guided in '40 to the harbor of the Argentinians.

Most of the new teamsters are the owners of their own spans—men who are leaving the plough and other activities of ranch life to participate in the profits of reconstruction. These men, as owners and drivers of their own teams, are not entitled to membership in a union, but, with that class omitted, the teamsters in the city

A Labor which kills many Horses a Month in San Francisco

HORSES EMPLOYED IN DRAGGING GREAT LOADS OF EARTH OUT OF AN EXCAVATION

When the ashes were cold, the railroads were ready with gangs to lay tracks through the down-town ruins upon which to run debris-trains. Half a dozen contrivances were invented and put into operation for lifting brick and metal and ashes and dropping the waste into the topless cars which locomotives and electric engines cranes lowered debris-carriers to any spot on broad lots where the shovellers were at work. And still there remained several million loads of crumbled walls and wreckage which could never be removed except as it was pitched into wagons and drawn off by horses. Nothing has been able to replace the horses. In getting dirt up the steep embankment from the excavation for the steel case of a new building building materials arrived on many sites over the temporary railroad tracks, and still thousands of horses were busy from dawn to dark in dragging building wastes from the depths up the uneven streets. A non-imperative law thus municipal ordinance shows autos in two miles an hour in many a down-town

constitute one of the big organizations of the labor world. There are more than 2500 members in the Teamsters' Union. There are probably more than 4000 organized among the "sand-drivers." Those who hold the reins over the wagons and freighting outfits of the various manufacturing concerns being the organization of teamsters to a total of more than 10,000. Each of these men has to do with from one to a dozen horses. It is easily seen how strong a factor the horse is in San Francisco's return to power.

What the horse eats is a vital point in the situation. Grain hay is high. The teamsters must pay \$25 a ton for this feed, and alfalfa costs them \$15. Yet the team-owner is growing rich. And this, too, in spite of the fact that the wet winter, the mud, the holes in the streets, have caused more sickness and crippled three times as many horses as in any previous winter season. Under the conditions, any horseman, two years hence will find most of the horses at work in San Francisco to-day in the bone-yard.

The entire city government is in need of horses to run the wheels of ambulances, police-patrols, fire-engines, and dirt-wagons.

President Duffey, of the Board of Public Works, realizes the seriousness of the situation. He wants to go to Missouri for strong young mules fit for the wear and tear of the service demanded in the city's plans for repairing the streets. Duffey wants to spend \$400,000 for mules and wagons and building stables in which to house them. He says this investment would save the city half a million dollars. In the work he has under way he is hiring 250 teams at a cost of \$7.50 each per day.

Chief Skaugness, of the Fire Department, is getting along mainly with horses who inspired themselves for life in the tremendous work which they did during the great fire of last April. It seems practically impossible to get good horses to replace them anywhere in the West.

No finer horses for heavy work are seen in America than those which pass in endless procession through San Francisco streets to-day. There are not enough of them, though, for the work in hand, and few may hope to survive the work which is now theirs to do. It is a deliberate sacrifice of five million dollars' worth of horseflesh. But the rebuilders are not balking at big bills.

Hauling Boilers of enormous Weight, intended for new Office Buildings, over the broken Pavements of San Francisco's Streets

RESTORING THE CAPITOL AT WASHINGTON

By FRANK N. BAUSKETT

THE work of restoring the interior of the United States Capitol building, even as to details, according to the original plan, has begun in earnest.

Visitors to the Capitol during the past few weeks have been greatly disappointed to find that all the statues in Statuary Hall have been hoisted, scaffolding erected over the entire space, and an army of expert workmen there and in other parts of the building making it most unattractive to sightseers.

Statuary Hall was originally intended to be left with a natural sandstone finish, but a good many years ago the architect of the Capitol ordered it decorated in imitation marble. Every vestige of the paint now on the walls, however, will be scraped off and they will be left as at first intended. More than this, two of the old stairways which run from Statuary Hall—which until 1850 was the hall of the House of Representatives—to what was formerly the men's gallery and the women's gallery have been rediscovered and opened, and the men's gallery will also be restored to its original condition.

Congress at its last session appropriated the funds necessary for the "restoration of the building." The reason this action was taken was because the restoring of the walls of the rotunda to their natural sandstone finish last year seems to have met with the universal approval of both Houses of Congress as well as by visitors to the Capitol. It is universally the opinion that the rotunda in its natural sandstone finish is far more beautiful and artistic than was the case when the handsome rose-listed sandstone was covered with a dozen layers of cracking paint.

When the new Statuary Hall was used as the House of Representatives it was conceded to be the most beautiful legislative hall in the world. It was purely Grecian in its decorations, the outline of the plan being a semicircle of ninety-six feet chord elongated in

its vertical diametrical line by a parallelogram seventy-two feet long by twenty-five feet wide. The height to the top of the entablature blocking is thirty-five feet, and to the apex of the dome ceiling fifty-seven feet. So far as can be determined by sounding and testing, the entire wall space is of sandstone similar to that used in the construction of the rotunda. The circular colonnade is made up of fourteen columns and two antæ of the richest Corinthian proportions. The shafts are composed of a remarkably beautiful species of variegated marble called Breccia, in solid blocks, obtained from the banks of the Potomac River, a hundred miles or so above Washington. This marble is of very remarkable formation, and the blocks being of a nature which made it impossible to have them turned on a lathe, as is ordinarily the case, were hand-polished by slave labor. The capitals of these columns are of white Italian marble, sculptured after a specimen taken from the temple of Jupiter Stator at Rome, the most admired specimen of capitals of this delicate and beautiful order. The entablature is after the proportions of that in the same temple, ornamented with dentils and medallions enriched between and underneath with leaves and roses. Over the colonnade springs the magnificently painted panted dome, whose friars are familiar to every schoolboy in Washington.

The plans for restoring the building include the removal of the paint from all the pillars and crypt within it.

While the work of restoring the Capitol building to its former natural condition is a considerable undertaking, an extra large force has been employed in order that the scheme may be carried out and completed early in May, owing to the fact that during the summer many of the visitors passing through Washington on their way to and from the Jamestown Exposition will naturally want to visit the national legislative halls.

KANG YU WEI AND REFORM IN CHINA

By CHARLES JOHNSTON

LET us suppose that ten years ago the Chinese Empire had determinedly embarked on a movement of reform; that the old crusted bureaucracy had been broken up, and with it the endless extortion which pauperizes the four hundred millions of the Middle Kingdom; that instead of the present education based on the Chinese classics, there had been inaugurated a thoroughly modern system, based on the latest and best Western university models, and with all the added experience that Japan has gained; that a new Civil Service, thus trained, had taken the place of the old Six Boards of mandarins; the age-old quackery of the Chinese doctors had given way to modern hygiene and surgery; that modern science had been introduced into every field of industrial activity in the vast dominions of China; that mills and mines and railroads had sprung up from Gobi to Tonkin, from Manchuria to Tibet; that a finely organized army, patriotic, well-disciplined, well-offered, had taken the place of the old Banner Corps; and that a real fleet of modern steel vessels, battle-ships, cruisers, torpedo-boats, and so on, had displaced China's decrepit fleet; and, lastly, that all this had been done without any revolution, any violent disturbance whatever, should we not proclaim the man who inspired all this, and brought it to fruition, as one of the greatest of living men?

This is exactly the programme of His Excellency, Kang Yu Wei, and it speaks much for his immense ability and force, that he brought his vast plan within eight of realization, and seemed, indeed, to have reached complete success. A sudden turn of fortune changed him into an exile, fleeing for his life from a relentless enemy. Yet another turn of fortune may restore him to power, and he may live to see fulfilled the high hopes for his native land which inspired his early manhood.

Do not picture Kang Yu Wei as a gaunt revolutionary, fiery-eyed and destructive, like some renegade of underground Russia. He is really moderate, urbane, gentle, full of humor, and deeply religious in inspiration. In these days, when so many Orientals have adopted Western dress, Kang Yu Wei is still a typical Chinaman. His whole bearing is that of a calm and sober Minister of State, who happens for the moment to be out of office. He wears the gold-laced jacket, a cap adorned with the red coral button of the high official. A blue silk shirt and Chinese slippers complete the portrait. There is something even more Oriental, in the best sense, in the mobility and refinement of his face, changing from grave courtesy to sympathetic humor; in the idyllic and vivacity of his hands, quietly clasped in his lap, or following, with a score of gentle gestures, the turns and intricacies of his thought. One gains the impression that he is altogether to be trusted, at once wise and humane, energetic, and gentle.

Kang Yu Wei is no revolutionary. We should call him a moderate Constitutional, whose policy has received a temporary check, but who is waiting confidently for the tide to turn in his favor. The Dowager Empress, Tsun Hsi, the fierce old lady who, for a generation, has held China in the hollow of her hand, and who represents the forces of reaction, is aged and ailing. She will shortly celebrate her seventy-third birthday. The time cannot be remote when she will be gathered to the illustrious ancestors, and the Empress Kwansun, "Princess Hamlet of Peking," will once more hold the reins of power. He is not yet thirty-five; so time fights for him. Even in boyhood, while studying with his tutors the history of constitutional England, Kwangsun declared with

fever that he also would be a constitutional monarch, reigning not for himself, but for the whole people, in the spirit of the ancient Sun King, which declares that "Heaven hears and sees as our people hear and see."

Kwangsun found in his minister Kang Yu Wei an ardent idealist, altogether devoted to the reform of China, yet very temperate, moderate, and full of practical sense. The Emperor and the Minister worked heartily together. The reforms were planned. The edicts were even signed with the red seal of the empire. Then came the catastrophe. The Empress-Dowager in her wrath, like "the blind fury with the abhorred shears," slit the thin-spun thread of reform, and Kang Yu Wei had to flee for his life, barely escaping on board a British man-of-war. From China he fled to Hong-kong, going thence to Singapore and Kwangsun still pursued by the head-hunters of the reactionaries, yet courageously adhering to his high ideal of regenerated China, and working ceaselessly for its realization. The catalysts took place in 1901. Since then Kang Yu Wei has been travelling incessantly, visiting nearly every country in Europe, touching the coast of Africa, passing three years in India, and visiting this country now for the third time. And in all lands his first thought has been regeneration and reform. In Germany he sought relics of Martin Luther at Eisenach. In France he studied the tariff of the great Napoleon. In England he watched at close range the methods of a constitutional monarchy. In the United States he mastered the principles of democratic liberty.

As I said, Kang Yu Wei is no revolutionary. He does not seek to turn China into a republic, or to upset the Manchu dynasty. On the contrary, his policy of reform is closely bound up with the continuance of the dynasty. He is patiently awaiting the emancipation of Kwangsun, and the return of the reform party to power; and in the meantime, through the Chinese constitutional societies, is carrying on a vigorous campaign of education, spreading his organization throughout the length and breadth of the Chinese empire. Through newspapers, books, lectures, pamphlets, reform clubs, he is creating, what China above all things needs, an enlightened public opinion. The fact that nearly every Chinaman can read and write, and the generally democratic spirit of the Chinese race, greatly lighten his task; and his hope is, that, by the time the reform party returns to power, the Chinese people will be sufficiently enlightened to support intelligently the great transformation then to be begun. Two or three years, perhaps less, will see the young emperor once more free to carry out the hopes of his youth; and the reformers realize that they must be ready, and that the nation must be ready also.

As His Excellency had spoken of himself as a Constitutionalist, I asked him whether he included a Chinese parliament in his reform programme. Kang Yu Wei replied that ultimately he hoped for a national parliament, but that could not come for some little time.

Much remained to be done first. And he made it clear that his chief hope for China's development lies in industrialism, in a methodical development of China's enormous latent resources in coal, iron, minerals, cotton, manufacture of every kind. He cited two examples. The United States has, within two generations, built a network of railroads and factories from Maine to California, from the lakes to New Orleans, and has become the greatest producing country in the world's history. Germany has risen to

His Excellency Kang Yu Wei
FORMER CHINESE PRIME MINISTER, WHO
HAS BEEN VISITING THIS COUNTRY

the dominant position she now holds in European politics almost wholly as the result of a great industrial development.

First, industrialism. There is a great fleet and army. That is Kang Yu Wei's practical programme; and he is justified on counting on the young Emperor's hearty cooperation. Needless to say that the realization of this policy, the high development of China as an industrial, naval, and military power, will change the face of world politics, and especially the politics of the Pacific basin. Yet the awakening of China will be no menace to other lands. The growth of the Chinese industry will be a gain to other countries, not a loss. The more a country produces, the more it purchases from foreign lands. Both England and Germany, two of the greatest producing nations in the world, import more than they export; and the United States, in spite of the high tariff, takes a billion dollars' worth of goods from foreign countries every year.

China is following the path already taken by Japan. Twenty thousand young Chinese, among the most gifted and able of their race, are now studying in foreign countries, absorbing the culture of the most advanced nations on earth. Of these, some eleven thousand are in Japan, not only because it is so much nearer to their doors, and therefore so much cheaper, but also because the older Oriental nation is dazzled by the recent victories of the younger. Admission for Japan was an element of the reform programme in China two years ago, before the strong-handed intervention of the Despatch Emperor; and it was even proposed that Kwangchow should invite Marquis Ito to come to China as a special adviser to the throne, to forward "the material development of China under the intellectual leadership of Japan." The twenty thousand young Chinese at foreign universities are studying engineering, mining, industrial chemistry, railroading, every branch of the science of manufactures; and within a few years they will be weaving a network of railways over the Middle Kingdom, connecting ten thousand factories with the sea.

There is a religious side to the regeneration of China, and this Kang Yu Wei has carefully at heart. A great student of Oriental religions, who has read the two thousand books of the Buddhists, he is also a close student of Christianity. He finds the great humane principles alike in Christianity and Buddhism, and has been greatly struck by the resemblance of their institutions. On a recent visit to Spain, Kang Yu Wei went to a Catholic monastery near Toledo, and found among the silent monks very much that recalled the Buddhist monasteries on the hills of his native land.

Kang Yu Wei strongly believes in a religious revival in China, but it is not a part of his political programme to seek to influence or direct it. While he was in France a short time ago, he was particularly impressed with the necessity of separating the activities of church and state, and allowing the religious life to follow its own course. It is to the highest degree probable that the most advanced element in China has as its chosen leader a man so able, so wise, so moderate, so full of high ideals as Kang Yu Wei has shown himself to be.

Secrecy to be Maintained in the United States Navy

By orders of the Secretary of the Navy stringent precautions are to be taken by officers of the United States navy to prevent foreign nations from getting any information relating to the navy of this country which would in any way benefit them. In the future any foreigner desiring to go aboard a United States man-of-war, or to be shown over a navy-yard in this country, will first have to obtain permission from the Chief of the Bureau of Naval Intelligence in Washington, and be accompanied by an officer of the United States navy specially detailed for the purpose.

The Secretary of the Navy believes in secrecy, and the officers of the navy are upholding him in his endeavors to prevent

foreign nations from learning of the remarkable developments in war-ship construction, target practice, and live matters, which are being made in this country. In the past, Secretary Mettall declares, there has been entirely too much information given out to foreign nations about our navy.

The Secretary of the Navy has just issued two confidential orders to officers on duty at all navy-yards and aboard vessels of the navy. The first and most important of these places restrictions on foreigners visiting ships of the navy or navy-yards. All officers are enjoined not to talk about their profession to any foreigners, and are directed to refer all foreigners who desire permission to go aboard American war-ships to the Chief of the Bureau of Naval Intelligence. It will be his duty to ascertain what the foreigner's object is, and if it appears all right, a permit will be issued to him, and an officer of the navy detailed to escort him over the ship or the navy-yard, as the case may be.

The second secrecy order directs officers and enlisted men of the navy not to give out for publication any information relating to target practice, the employment and armament of guns, the speed of ships on trial trips, or any information of this kind. Excluded men are particularly enjoined not to talk about these matters after their return to port from a cruise.

In the past it has been the custom for line-jackets to give out with considerable pride the scores made in target practice by their respective vessels. The publication of such information is now much deplored by the Navy Department officials, and the greatest care will be taken to prevent its being repeated in the future.

It is just possible, however, that this policy of secrecy in the United States navy may be carried too far. The publication of information of a popular kind has done much in the past to popularize the navy throughout the country, and made it possible to obtain big appropriations each year for its up-building, which under the "secrecy" policy it would hardly be possible to procure.

MILK THAT IS WHOLESOME

Secure the scientific handling and preservation of milk only, found by Carl Brown in New York's best milk supply. Brown's Mink has become general, but for those purposes there is no substitute. Milk of perfect purity, freshness and flavor. Know the every moment, it's.

THE BEST ALL-ROUND FAMILY LINIMENT—BROWN'S HOUSEHOLD PANACEA. 12 cents a bottle.

Use BROWN'S Camphorated, Sassafras OINTMENT for the teeth. 12 cents per jar.

ADVERTISEMENTS

STRENGTH

Without Overloading the Stomach.

The business man, especially, needs food in the morning that will not overload the stomach, but give mental vigor for the day.

Much depends on the start a man gets each day as to how he may expect to accomplish the work of the day.

He can't be alert with a heavy, fried-meat-and-potatoes breakfast requiring a lot of vital energy in digesting it.

A Calif. business man tried to find some food combination that would not overload the stomach in the morning but that would produce energy. He writes:

"For years I was unable to find a breakfast food that had nutrition enough to sustain a business man without overloading his stomach, causing indigestion and kindred ailments.

"Being a very busy and also a very nervous man, I decided to give up breakfast altogether. But, luckily, I was induced to try Grape-Nuts.

"Since that morning I have been in a new man can work without tiring, my head is clear, and my nerves strong and quiet.

"I find four teaspoonfuls of Grape-Nuts with one of eggs and a small quantity of cold milk make a delicious morning meal, which invigorates me for the day's business." Name given by Postum Co., Battle Creek, Mich. Read the little book, "The Road to Wellville," in page. "There's a Reason."

Heats Water HOT On the Run

If you need to wait for a hot shower to wait at all. Just apply a lighted match to the burner of the

Humphrey Instantaneous Bath Water Heater

and before you can get the faucet open—even before the match goes out—the water is scalding hot. When the tub is full it boils with hot water, as you have enough, about of the water and you are off the gas foot. The Humphrey Instantaneous Heater will last a lifetime, cost you but a few dollars, and is the simplest, handiest, most satisfactory source of hot water you can have. The makers of the Humphrey Instantaneous Heater have said in THE H. we have decided to send the Humphrey Heater anywhere on

30 Days' Free Home Test

We'll send it to you on a 30-day trial basis—no money down. Use it 30 days—prove every claim we make for it, and if it doesn't make good, we'll send you a new one, or a refund of your money. No argument about it.

For General Use We Recommend Humphrey Bath Heater No. 6.

Price \$29.00.

Get your dealer and a list of dealers and write him for a copy of the Humphrey Instantaneous Heater. You can get it for 30 days' trial. Home Test on our 30-day trial.

THE SEASON'S PLAYS

JOYS OF A WANING SEASON

By "J"

MISS AMELIA BINGHAM has expressed annoyance—no doubt, sincere—because her production of "The Lilac Room," a comedy, as styled, by Evelyn Greenleaf Sutherland and Beulah Marie Dix, has not been received with shouts of jubilation and acclaim. According to a speech which Miss Bingham delivered from the stage of Weber's Theatre on the second night of the run of "The Lilac Room," her reason for producing this piece was because she could get nothing better—according to her, there is, in the theatrical world of to-day, a genuine play-famine. This is all doubtless true enough; yet the rejoinder is unavoidable that, such being the case, it is ill-advised to offer, in place of an unattainable good play, a play so incomparably fatuous, amorphous, and unedifying as "The Lilac Room." The authors, it is said, complain that their play has been tampered with—that Miss Bingham has amplified it, to its disadvantage. Miss Bingham, on the other hand, admits the fact, but adds that it is well she did so. Again, it is said in Miss Bingham's defense that she was forced, by uncontrollable circumstance, into bringing the play to New York against her better judgment.

Now all of this, of course, interests the public but slightly. The play is advertised in the regular way, seats are sold in the regular way, and the public is offered, in return for its good coin, a play concerning the quality of which it may not have been informed. What, then, is the situation of the public?—where, to paraphrase a recent and famous saying, does it "stand"? In the view of "J," it stands in an unenviable situation. To put the matter plainly, it will witness, in exchange for its coin, one of the saddest and boldest and maddest plays that have ever been put upon the New York stage. Of the acting, as apart from the play, "J" shall not speak; the weather is warmer than it was, the dogwood is beginning to blossom in the Bronx, the perennial organ-grinder is grinding on the sunny side of the street, and soon Broadway will be an innocent of plays and players as the main street of South Podunk on an August afternoon. So what's the use?

The welcome given to Miss Ethel Barrymore upon her appearance in "His Excellency the Governor" at the Empire Theatre was such as is accorded those who return from journeyings in far and dangerous lands. The fact is, she had just returned from an unfortunate experience in "The Silver Box," where she was undoubtedly lost. Granting that the charwoman is a very earnest and pathetic figure in our civil scheme, New York, nevertheless, prefers Miss Barrymore in other guise, which may be a fault of narrowness, but it is unquestionably a fact. As *Stella De Gez*, the dancer, Miss Barrymore is no charming and winsome as she was unconvincing in the role of the charwoman. It is not within the province of those columns, nor within the skill of the writer,

to say anything technically adequate about the gowns Miss Barrymore wears, but some one who understands these things should surely do so. They eminently merit it. All that "J" need say is to advise any woman contemplating possession of a white gown with spongy things all over it to see Miss Barrymore in this latest play, and she will undoubtedly learn something to her advantage.

"His Excellency the Governor" is not a new play save in Miss Barrymore's hands. It is more charming now than when first played in New York many years ago, because Miss Barrymore gives the rôle of *Stella* a touch of humor of which she herself seems conscious, as if she were enjoying to the full the predicament in which she places the Governor by her unexpected visit to his province. Mr. William Norris, who was in the original cast, appeared in his old part of *John Bacerstock*, private secretary to the Governor, *Sir Montagu Martin*, played by Mr. Bruce McEae, and shared the comedy honors with the star.

Without Eddie Foy, Miss Maude Fulton, and Mr. William Rock there is little doubt that "The Orchid," the imported "musical entertainment" now at the Herald Square Theatre, would still upon its stalk. Save for a brief interval during which Mr. Melville Ella plays the piano and apparently arouses the ire of the orchestra, which tries in every way to prevent his music being heard. These three alone of all the rest take proper care of this frail flower and keep it in some semblance of bloom during the evening. Eddie Foy is always funny, Miss Fulton is very pretty and dashing, and she and Mr. Rock dance and sing extremely well. The rest of the thing is made up of the usual amount of short dresses, light and music. Several of the songs are excellent, and "will probably be whistled on Broadway." Strange to relate, there is a definite plot to the piece. It concerns the theft of an orchid, one of the few remaining things which have not been stolen in comic opera of late years. Of course, the orchid, a two-thousand-pounds-sterling variety, returns to roost at home before the final curtain.

It is regrettable to have to chronicle the singing of an extremely vulgar verse in a song by Tricie Frigman, "No Wedding Bells for Me." While this song provoked hilarious applause in various parts of the house, it was a real comfort to note the granite immobility of face with which most of the women received it. This verse, if not the entire song, should be cut from the score. It is frankly and offensively vulgar and not in the least funny. Two of Eddie Foy's songs, "College" and "He Goes in 'Round on Sunday," are delightfully amusing. Mr. Rock deserves much praise for his singing of "Far Fera" and for his singing and dancing with Miss Fulton in "Liza Ann" and "La Promenade Anglaise."

WHAT SHALL I DO WITH MY SON?

A PRACTICAL TRAINING IN THE FUNDAMENTALS OF INDUSTRIAL MANAGEMENT

HOW many fathers at this very moment are sorely perplexed trying to answer the above query? It is one of the decisions wherein the boy may not participate; at least, when it simmers down to the finale. And that finale of decision is a very portentous point of ultimatum.

The spirit of the age calls for the practical men. And the parent naturally urges upon himself determination as to what phase of practical life his son exhibits the most aptitude? Piling up the varied vocations for inspection, and surveying and weighing them deliberately, the father will be pardoned if he inclines to apply his son to technical arts and sciences, as affording one of the richest fields for reputable life-work.

There is something high-sounding in the phrase "technical arts and sciences." But analyzed it means mechanical engineering, civil engineering, mining engineering, electrical science, and all those interrelated and allied pursuits that fit a young man to enter the race where they "do things." Undeniably in technical directions is where they do the big, essential, power-wielding, and money-earning things that the world of activity must have. After all, that is the end—what the world must have. That is where the boy must be sent, to learn to do what the world is waiting to have produced and accomplished.

In the majority of cases the father knows little or nothing of the relative seats of such learning; knows even less as to their comparative exaltedness. But—happily, 'twould appear—he hears that Stevens stands as well positioned. And he learns that "Stevens" refers to the

institute of technology at Hoboken. And naturally it is of some moment to ascertain that "Stevens" graduates succeed in mechanical, electrical, and other branches of engineering and industrial management in general.

When it comes down to the last analysis, it is a question as to what showing the graduates of any institution make in practical activity out in the world. And so the parent who hears of the splendid performance

of Stevens' eleven hundred well-equipped men, graduated into positions awaiting them upon their graduation, concludes that it means something to be world wanted, world helpful, and world famed; means something for the young man; means something for "Stevens."

Thorough parental investigation begins; to see if "Stevens" may not equip his boy. He finds the chemistry of materials taught, from the very rudiments of physics up; he finds that what woods, metals, and ores are made of and may do are taught from mother earth to the finished product; he finds that actual work in the blacksmith's shop, the machine shop, the foundry, the boiler-room, the engine-room, give the boy tool-handling experience; he finds that the student must learn by doing what it means to measure, weigh, separate, combine, all the facts that enter into light and heat; he finds that he is drilled in draughting, so that he can create, in values as he can lay, in costs as he can compute profits over expense; he finds that he is given every secret of computation, control, and manipulation of electrical forces, by study of the theories in the abstract, and then by actual experimenting in laboratories, with every known appliance for the perfect and thorough grasp and comprehension of all that the world knows and can utilize of this enormous commercial power; he finds that the boy is trained to use English so he can express it creditably in correspondence, is expressing himself in commercial and mechanical life; he finds that he is trained in the usages and requirements of twentieth-century modes and methods of business life, so he can converse on his profession with directness and precision.

Furthermore, the parent finds in charge of "Stevens" men who have made a mark and cut a figure in the commercial phases of mechanical arts, skill, and engineering in all its departments. He

finds at the head of the institution Alexander C. Humphreys, M.E., Sc.D., LL.D., of international note and authority, and about him a faculty composed of men to whom the outside world, the world of mechanics, look for expert judgment and opinion and tests and authorization upon knotty, complex propositions. They are not dreamers, theoretic idealists; but men who can, and who do, throw off their coats and roll up their sleeves—just as they ask their students—and drive into the actual doing of the most difficult things.

And thus are the father's eyes opened to the magnitude and vastness of "Stevens." He learns what mechanical life exacts of a man's mind; and he sees how "Stevens" fits the boy so that when they tell him he is "through" over at Hoboken he finds that his degree of "M.E." (mechanical engineer) opens the doors of the biggest interests on earth to his rounded, developed, disciplined faculties and endowments; for they want him, they need him, and they are looking for him.

Now what of "Stevens" alumni? After all, that is what provides the important deduction. Where are "Stevens" graduates? What are they doing? How are they regarded? Is the comparison of active life what is thought of them? Surely they are high up in the scale, acknowledged for proficiency, noted for thoroughness and exact accomplishments; for were this not so an output of graduation numbering eleven hundred would not all be license-makers, position-holders, and influence-wielders in the

sphere of mechanical engineering, especially where the criterion is so high in today's industrial world, made so by the advancement along all technical lines.

And so if the father has the sense to see the "Stevens" spirit, he puts in no vain search for evidence, a simply confirmatory of the wisdom of a practical education for his son; and such an intensely practical case as will make his boy sought for the moment "Stevens" in ready to deliver him over to the earning of a living. And as for very soon put into "Stevens," the late President Morton gave \$150,000 of his own fortune to it, and the present

head stands ready to follow the example set by his predecessor and to give liberally from the means he has accumulated in the practice of an engineer based upon the education he himself acquired at "Stevens." So the parent sees that "Stevens" (while it could wisely employ environment, and truly wants it) does not ask it swarming to add: "We will do our share also," and certainly such a spirit must commend itself to any father seeking the fundamental real that an educational institution must have to achieve greatest results in its product.

You may—as of course you will—revolve so vital a question and to give liberally from the means he has accumulated in the practice of an engineer based upon the education he himself acquired at "Stevens." So the parent sees that "Stevens" (while it could wisely employ environment, and truly wants it) does not ask it swarming to add: "We will do our share also," and certainly such a spirit must commend itself to any father seeking the fundamental real that an educational institution must have to achieve greatest results in its product.

The main thought, therefore, to be inculcated is, that lines where deeds count are the lines where gifts count, and where training counts, and where preparation counts, and where exertion counts, and future are to be found. Your son looks to you to make the choice; looks to himself to deserve the opportunity that choice will give him; looks to the reports of "Stevens" to give him a right-earned standing that will not make it necessary for him to struggle and wait and perhaps knock at doors tardily. Give the boy the Stevens' chance and he will accomplish the Stevens' record, which will mean that he will have achieved a profession opening directly into the arena of active achievement, which is never over-crowded. . . .

MR. CARNEGIE'S "INDUSTRIAL PEACE EVENING"

MR. ANDREW CARNEGIE INVITED SEVERAL HUNDRED REPRESENTATIVES OF CAPITAL AND LABOR TO ASSEMBLE AT HIS NEW YORK HOME ON THE EVENING OF APRIL 5 FOR PURPOSES OF BETTER ACQUAINTANCE. THE MEETING WAS ARRANGED UNDER THE AUSPICES OF THE NATIONAL CITY FEDERATION, AND A NOTABLE GATHERING RESULTED. BANKERS AND CARPENTERS, DISSEMINATORS AND MILLWRIGHTS, CEMENTMEN AND BRONZECUTTERS, MET UNDER MR. CARNEGIE'S ROOF, LISTENED TO INTERNAL SPEECHMAKING, AND EXCHANGED REPRESENTATIVES BOTH INTELLECTUAL AND GUSTATORY.

Shiroko

(Continued from page 573.)

three times, and smiled and sucked to his breath loudly as a sign of profound respect. "Dear me, we don't want a guide," said Mrs. Hypatia. "I've been here a dozen times. I know every inch of the island."

"Pardon me," pleaded the New York man, "but have you the heart to betray a good dog who has put his trust in you? Look at Shiroko. He's heard what you said, and he's almost ready to cry. Why do you suppose he has brought us here, and refused to eat or play or fight?"

"Oh, take the guide by all means," Mrs. Hypatia agreed, in haste. "But I never heard of a dog luring people to a guide."

So that was settled, and we all fell in line behind old Adam, while his lieutenant, Shiroko, frisked about on and occasionally darted into the thicket in hope of a plump mouse.

"Nice dog," Mrs. Hypatia remarked to old Adam, in his native Japanese tongue.

"Yes, yes; nice dog," he agreed, with smiles and bows and whistling leisters.

"Your dog?" she pursued.
"Your dog? Oh, no, no!" cried the old fellow, picking up a stick and hurling it at Shiroko with a vigor surprising in such a lean and wrinkled arm. Shiroko ran away with a backward glance of grief, of surprise, of regret at man's ingratitude.

My friend Melones was amused that night when I told him about the wise dog at dinner, and said I was going to take him home to New York, where the good dogs go.

"My dear fellow," he said, "you could not buy that dog with any amount of money. He belongs to old Onishi, the guide, whom you call Adam, and earns him at least five hundred yen a year by bringing up customers from Katase. The old man is feeble, and he can't walk so far through the heavy sand."

Court or Caught

"Sold your automobile, eh?" exclaimed Wynn. "What was the trouble?"

"Couldn't control it," explained Arber. "When I ran fast it took me to the police court, and when I ran slowly it didn't take me anywhere."

Going the Limit

A New York hotel man tells a good story of an Irishman from a Northwestern State who, until this year, had never seen the East, he having emigrated to the coast rid Australia.

The Irishman, a genial, whole-souled fellow, but very illiterate and ill-versed in the ways of the world, determined that while in New York he would let no one see his shortcomings.

The very first evening of his stay in New York he proceeded to a Sixth Avenue café, there to regale himself with a *table d'hôte* dinner. There sat opposite him a pale and intoxicated youth with a voracious appetite, who went through the dinner, as the saying is, "from soup to nuts." The Irishman, being in doubt as to his orders, would invariably reply that he would take the same as the intoxicated youth.

When the latter had finished, he called the waiter and said:

"Bring me a messenger."

"Bring me the same," chimed in the Irishman.

"Wood's one messenger do for the both of you?" asked the astonished waiter.

"Begob!" exclaimed the Irishman, pointing to his *vis-à-vis*. "If he eats his, I'll eat mine!"

Otherwise His

"Has it occurred to you," asked the lawyer, "that it was possible for my client's automobile to pass over you without injuring you in the slightest?"

"Well, no," replied the damaged witness, slowly. "It didn't strike me quite that way."

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

THE TOURING SUPREMACY OF THE WHITE

After a brief experience with the White, the average owner has gained such confidence in its supreme reliability and its ability to traverse any sort of a road, that he plans his tours without any thought as to whether the roads are good, bad, or indifferent. He knows that his tires will last much longer than on any other car of similar size or power. He is independent of everything except an occasional source of gasoline supply.

As an indication of the ceaseless touring activities of White owners, it is significant that, in many remote regions of this country and of foreign lands, the people think that all automobiles are propelled by steam-power. This conclusion is a natural result of their having seen no other automobiles but White Steamers.

Drive a WHITE and see the country as you have never seen it before

THE WHITE COMPANY
CLEVELAND, OHIO

DESIRABLE BUILDING PLOTS FOR SALE

In Queens Borough, City of New York. High level grounds. Well situated and very pleasant and quiet neighborhood, no restrictions in residential use. Liquid Fuel for Steamships

ONE of the best demonstrations of the practicability of using liquid fuel (petroleum) to afford motive power to steamships was the recent trip of the British battleship *Gothic*, which recently arrived at Thameshaven after a passage from Balik Pappen, Hormo, a distance of over 12,000 miles, without a stop. The average speed throughout the passage was something over nine knots.

"This is the third non-stop run made by this vessel while burning liquid fuel, the first being from Singapore to Rotterdam in 1901, and the second from Singapore to Thameshaven, during the same year, the three runs establishing a record for non-stop runs while using liquid fuel.

The advantages of petroleum as a steamship fuel are asserted to be almost numberless, though the chief ones would appear to be the reduction in bulk and weight of fuel, and the elimination of the necessity for the large number of stokers which a coal-burning steamer must have. That the British government has considerable faith in the future of the oil-burning marine engine is evinced by the fact that a number of cruisers and torpedo craft are being arranged for liquid-fuel consumption.

Quite So

Two members of the Princeton faculty, during a recent hurried trip to New York, were on a Broadway car when it was stopped by a blockade. As they were near their destination, they decided to get out and walk. The block was, however, soon lifted, and the car overtook them.

"When we left the car," said one of the "highbrows," who, by the way, has a bit of the Celt in him, "I thought we should get on better by getting off. But after all we should have been better off if we had stayed on."

It Would be Simple

In the days before the dawn of his fame, the proprietor of a certain well-known author to wander up and down the land, seeking what he might devour in the way of suggestion and local color. In this way he had drifted down into Arkansas, "roughing it," and so, as he expressed it, presenting an appearance calculated to inspire a hotel proprietor with unlimited confidence.

The only hotel in the town, a frame structure, seemed to have been built upon the theory that there was plenty of room straight up, but that ground had to be bought, and the wanderer was shown to a room on the third floor, reached through many narrow and winding passages. From the one window it was a straight drop to the ground.

"Say, how would I get out of this place in case of fire?" he asked the landlord, who had brought up his grip.

The other eyed him coldly.
"Well," he drawled, "all yo' would have to do would be to show ther night watchman—the one with ther shotgun—a receipted bill for yo' board an' lodgin', an' get him to tie up ther building."

Hire the Fewer

A WASHINGTON man, wishing to take his family into the country for the summer, one day crossed over to the Virginia side of the Potomac, to look at a small farm with a view to renting it.

Everything was to his liking and negotiations were about to be completed, when the question of hiring also the farmer's son came up. It was an excellent cow, the farmer declared, and even after feeding her calf she would give six quarts of milk a day.

"Six quarts a day?" exclaimed the Washington man. "That is more than my whole family could use."

Then, suddenly observing the calf following its mother about the pasture, he added:

"I'll tell you what I'll do! I'll hire the small cow. She's just about my size."

The World's Greatest Crop

The Bureau of the Census has just issued its final report upon the cotton crop of the United States for the season of 1906-7, and this report gives the enormous total of 13,376,225 bales of 500 pounds each, which is 1,000,000 bales in excess of the official estimates made in December, 1906. Included in this total are 321,100 bales of lint, 37,352 bales of seed-cotton, and 12,923 bales of 155,704 bales remaining to be ginned after March 10. The number of active gins is given at 28,702.

The average selling price for cotton during the past season has been good, and the result in an era of decided prosperity in the cotton belt, as, in addition to the sum of nearly \$700,000,000 received for the staple, must be added approximately \$100,000,000 received for cotton-seed products. Should the present indications be realized, there will be added in the near future still another item of value to this, the world's greatest crop; paper made from the cotton stalks, which are at present burned in the field.

Dead Letters

A NEW YORK business man, while in Chicago recently, was expecting a money-order letter in a day or two. In order to avoid any difficulty in identification, he went to a clerk in the post-office and asked him to send him a money-order to the amount of \$100, and my name is Thomas Blank. Here are a lot of letters addressed to me from various places. You will observe the postmarks. See, you see, if I am not the man I claim to be, I saved have murdered that man and possessed myself of his letters, and am now perusing him. As that is not likely, you must admit that I am the man."

The New Yorker, having delivered himself of the foregoing, left the post-office. In a few days the money-order came, and the man from New York repaired to the office to get his order cashed. He expected to find the clerk ready for him, but at first the clerk did not recollect him. Presently the New Yorker succeeded in recalling himself to the man's memory.

"Oh, yes," said the clerk, quite seriously, "you're the chap that murdered the other man!"

The Inverted Rake

THERE is a man in Pittsburg who will be married in a short while, and will occupy the house a few rooms of which he has used during his bachelor days. He takes the greatest pleasure in showing his intimate friends about the place, and is especially delighted at the astonishment they express when his own "den" is reached. He has always been a quiet, studious fellow, but as he sits in the room, gives the appearance of the lounging place of a regular rascal. There are racks of long pipes; photographs of actresses are stuck about the chimney glass; a shelf of beer-stains runs all the way around the room, and a few feminine gloves, handkerchiefs, and fans are scattered about.

"Great Scott, Jack!" the last visitor gasped, "where did you get this stuff, and why?"

"I thought out a college fellow," was the complacent reply. "Just think how pleased that dear little girl will be when she sees all this truck and thinks how much wickedness she has won me away from!"

For Better or Worse

A BALTIMORE woman who had "a perfect treasure of a cook," was horrified recently when Maggie came to her saying:

"Plase, mum, I'm givin' ya a waka's notice."

"Why, Maggie?" exclaimed the lady of the house, "this is a surprise! Aren't you satisfied here? Do you hope to better yourself?"

"Well, so, mum," responded Maggie, "not exactly that. The fact is, mum, I'm givin' to get married."

The new screw steamer S. S. Deutschland, holding the record for the Trans-Atlantic passage—from New York to Plymouth in 9 days, 7 hours, 28 minutes.

Hamburg-American Announcement

THE increase in European travel this season has been sufficient to warrant additional sailings to meet the demand for first-class accommodations.

Such splendid vessels as the Deutschland, Kaiserin Auguste Victoria, Amerika, Blauscher, etc., have been looked for by some sailings; however, owing to changes in the plans of travelers, it is still possible to obtain some very desirable rooms on board these vessels.

For those desirous of crossing the ocean in the QUICKEST POSSIBLE TIME, yet at the maximum of COMFORT AND SAFETY, no better opportunity is offered than by the superb S. S. DEUTSCHLAND, leaving New York April 30th (last sailing at intermediate rates) and May 30th and June 27, on which some excellent accommodations are still available.

In addition to the splendid steamer Pennsylvania, Patricien, Graf Waldersee and Pretoria, the new S. S. PRESIDENT LINCOLN and PRESIDENT GRANT offer excellent accommodations.

For complete particulars as to rates, plans, etc., apply to

The Mystics

By KATHERINE CECIL THURSTON

Author of "THE MASQUERADER"

FRONTISPIECE FROM "THE MYSTICS"

A YOUNG man, whose fanatic uncle wills away the family estate to a secret brotherhood, discovers the secrets of the society, and plans a daring *coup* to recover his possessions. He appears as the Mystic Prophet whose advent is daily awaited, and is accepted as the Head of the secret order. In this precarious situation the hero falls in love, and, at the peril of life and all, boldly chooses to play the lover's part. Romance and mystery are delightfully mingled throughout. The tale has the same persistent excitement and breathless fascination which marked "The Masquerader."

Waterman's Ideal Fountain Pen

IN VEST

EXTRACT FROM
TRADE PAPER:

Every where

"Did you ever notice how numerous the little Clip-Caps are which indicate the possession of a Waterman's Ideal Fountain Pen? The next time you go into a restaurant, for example, see how many of the little Clip-Caps appear in the pockets of those there. Notice along the street how many are peering from the pockets of the people you pass. When next you ride in a railway car, see how many are in sight. You will be surprised at the number. It sometimes seems as though they were everywhere, and that almost every one uses a fountain pen with the Clip-Cap on."—*American Stationer*.

HARPER'S MAY

THE CONQUEST OF OUR HIGHEST MOUNTAIN

Dr. FRANKERICK COOK is a mountain climber who does not know what discouragement means. After repeated attempts to reach the unconquered summit of Mt. McKinley, in which he was compelled to turn back, he at last succeeded. The dangers and privations of this adventure make Arctic exploration seem a comfortable amusement by comparison. With one companion Dr. Cook reached the highest peak of the mountain—a height of 29,300 feet—a new record for mountain climbing on this continent.

Dr. Cook's first complete account of his remarkable achievement, illustrated with his own photographs, appears in this May HARPER'S.

JOHN W. ALEXANDER'S GREAT PAINTINGS FOR THE CARNEGIE INSTITUTE

The largest contract for mural decoration ever awarded a single American artist was that given to J. W. ALEXANDER for the decorations in the new Carnegie Institute in Pittsburgh. These decorations, together with an appreciation by CHARLES H. CAPPS, are reproduced by courtesy of Mr. ALEXANDER in the May HARPER'S. They represent probably the most notable and certainly the most significantly American work that has been done in the field.

CAPTAIN MAHAN ON OUR NAVY BEFORE THE WAR OF SECESSION

Few officers could write of either the present or past of our navy in such delightful style and from so full a knowledge as Captain MAHAN—an acknowledged world authority. In the May HARPER'S he writes in an intimate personal way of the navy in that crucial and intensely interesting period just preceding the War of Secession.

THE TRIAL OF THE CHICAGO ANARCHISTS

This is the most recent of the "Deceptive Battles of the Law" dealt with in FRANKERICK TREVOR HILL's notable series. For this very reason so much complete study as Mr. Hill has made has yet been presented. His vivid picture of the trial is the more interesting now because most readers will readily recall the intense interest excited at the time.

8 SHORT STORIES

No one type of story can properly be called a "Harper story." The best and most interesting stories of all types are the real Harper stories. The stories of the May MAGAZINE are good examples. GRACE ELLERY CHANNING, an American writer who has lived for years in Rome, contributes an amusing story showing the humors of life where no one can be presumed to do anything in time. NORMAN DUNCAN's story is a tale of a Labrador fisherman and his wife, and of their sacrifice of their plans in order to properly entertain a visiting parson—a story where humor and pathos are curiously mingled. LOUISE FORD-LUND writes of a delightful situation arising from the admission of an old man into a home for old ladies. RICHARD LE GAL-LENIEN's story is a poetic fantasy—"The Death of the Poet," a man who, having accomplished by his life-work the payment of his debts, feels at last that he is free to die. ROSE VOISIN's "The Substance of Things Hoped For" is a story of American child-life—of the great event in childhood where the first break is made in a group of friends and the dearest boy goes away to school. AGAY MERRILL KOACH has written a charming little romance of the South; the feeling of the aristocratic Southern family against the intruding strangers, and its final happy settlement in a romance, is delightfully shown. The humorous story of the number is a tale of how two cowboys almost deceived a Berlin archaeologist with manufactured relics. JAMES BRANCH CABELL's two-part romance is concluded.

COMMENT

Peace Talk at Pittsburg

THE addresses at the meeting of Mr. CARNEGIE's many distinguished guests at the commencement of his Institute abounded in evidence that the whole world is seriously thinking that war is drifting back into the savage past, and that the powerful men of the world are looking confidently to a time when universal peace shall be established, and when war between civilized nations shall have ceased to be possible. From Mr. CARNEGIE's own noble address to the most important speech, the occasion was more than a celebration of the growing sentiment for peace; it was an educational influence. It will be many a year, doubtless, before our eyes shall see the passing of the armed man from his control of government; and it is many a weary year that has passed since TENNYSON foreshadowed the day when

The war drum throbbed no longer, and the battle-flags were furled.
 In the Parliaments of men, the Federation of the World;
 And that the day is nearer is manifested by the development of the dream of a sister into a moral public question which practical men discuss as if it were possible; while, as Mr. STEAR said, the rulers of the world are in favor of peace, and profess to have abandoned all desire for gain by war. It is true, of course, that practical difficulties, like cost and other things, have helped to freeze the poet's dream with material considerations; but good comes often that way, and remains good. Mr. STEAR perhaps made too much of the influence of yellow journals. The year 1888 was possibly the last time when they could bring a country into war; and maybe they were then not so influential as they were thought to be. At any rate, it would be so difficult to convict an editor for causing war by misstatements that the crime which Mr. STEAR would faden upon the yellows might in time come to be as easy and safe as murder.

The Peace Congress in New York

The Peace Congress which is in session in Carnegie Hall in New York has already developed, as the WEEKLY goes to press, very interesting disparities of conviction as to the kind of peace that is wanted and the way to get it. President ROOSEVELT, who has concurred his sentiments and sympathies by letter, wants peace with righteousness, but not without it. Mr. CARNEGIE says there is an indissoluble union between peace and righteousness. He wants peace with arbitration. Professor MÜNSTERBERG felt constrained to point out that peace missionaries often weaken their influence by mistaken arguments, and to maintain that the military system of Germany was not unpopular, and that the German army was not felt by the nation as a disagreeable burden. Mr. CARNEGIE knew better. He had talked with immigrant Germans in the mills at Pittsburg, and ascertained that the chief reason most of them gave for coming to America was to keep their children out of compulsory military service. Mr. STEAR said

that talk of disarmament made him sick, and that it is not disarmament that we want, but less armament. Mr. CARNEGIE said that Mr. STEAR talked too much. A Frenchman pointed out that France had led all countries in promoting peace; a Scotchman maintained that King EDWARD prayed for the peace of all the world every night of his life; Secretary OSCAR STRAUS pointed with pride to President ROOSEVELT as an unsurpassed pacificator—the *Bark Fashaw*, as it were; of all the peace-makers. Mr. CARNEGIE would have the peace of the world preserved by an international police force which should discipline nations which insisted upon fighting, but before using violence on such nations, Mr. CARNEGIE would try the virtues of a boycott. Secretary ROOT was not so advanced as that. He found great encouragement in the unceasing process of diplomatic intercourse, by which moral standards, evolved and accepted in the slow development of civilization, are pressed upon the governments of every nation, backed by the tremendous power of the opinion of the civilized world. The Secretary thought the path to universal peace was through the development of peace-loving and peace-keeping character among men, and that development, though slow, he found to be unimpeachably proceeding with steady advance from generation to generation. That is a view which accords with Christian faith. It was reflected by Governor HUGHES, who said: "The security of peace lies in the desire of the people for peace."

Through Discussion to Harmony

Altogether, the Peace Congress seems a very healthy gathering, where speech is free, though good-natured, and the coining of the doves is diversified by notes in many keys and of various degrees of penetration. Better so, much better, than too much monotony of soft sounds. There are great differences of opinion among peace-lovers as to what is obtainable and how to obtain it. Some degree of harmony among the peace-lovers is indispensable for useful co-operation, and a very good way to make progress towards such harmony is to get together and talk things out, every speaker speaking his mind, and hearing such views as are opposed.

Public Questions Should be Discussed

It is conducive to the public health that some important questions are being discussed by important men, and that Echo is not having it all its own way in American politics. It will be better for the President, too, if he and the people hear the other side of questions which have been heretofore assumed to be settled as soon as he has announced his conclusions concerning them. This is true because he has raised, and, to his own satisfaction, has settled questions which ought to be thought about before they are finally decided. Universal and agile acquiescence is not complimentary to a man who, having carefully thought out a proposition, announces the conclusion at which he has arrived. Overcautious acceptance is like overquick testimony. It is inevitable that there should be doubt of its sincerity, of its genuineness, of its truthfulness. A good many people have been thinking, at least they have been saying, that any one who opposes what are called the President's policies are "plotting" or "conspiring" against them. This is nonsense. There is no treachery implied in merely opposing Mr. ROOSEVELT. In Ohio, Senator FORAKER has entered the lists against such people and such a theory. He has agreed with the President sometimes, and sometimes he has opposed him, and in each instance he has done what he has the right to do. As he has set forth, his responsibility as a Senator is to the people of the State of Ohio, who have sent him to Washington to speak his mind on public questions and to vote as he thinks right or expedient for the public welfare. This is his contention, and he is right in making it. No one but the people of Ohio can demand an accounting of him, and if they do not like what he says and does as Senator, or if they do not like him, the remedy is in their own hands. It may be that they agree with Mr. ROOSEVELT, and not with Mr. FORAKER, or that they prefer Mr. TAYLOR to him. They have the right to say this, but they would be very foolish to disapprove of Senator FORAKER merely for disagreeing with the President. If they decide against him, they ought to make their decision on the merits of the questions from which come the differences of opinion. Public discussion will settle such questions judi-

clouds and wisely, and as the President doubtless desires a judicious and wise decision, he ought to welcome such a discussion as that which Mr. FORAKER has inaugurated.

Mr. Spooner's Views

Mr. SPOONER is another eminent Republican who has entered into the discussion of an important subject. It is a subject on which Mr. SPOONER has, in an especial way, the right to speak. It is the subject of the relations of the State and Federal governments. It has been held apparently by some that any person who believes that the dual form of government should be maintained is in some way treacherous to the administration, or at least to the cause against corporations. But Mr. SPOONER, who has been by far the ablest defender of Mr. ROOSEVELT on the floor of the Senate, says that he is strongly opposed to the effort to wipe out State lines. He speaks very strongly on this subject before the Wisconsin Society in the city of New York. He declared that he refused "to be stampeded into a departure from vital fundamental principles of government embodied in the Constitution of our country," and he told his hearers that he regarded this as "one of the dangers which to-day confront this people." Recognizing a tendency to which we have already alluded, he said that by this utterance of his he expected "to be called a reactionary." The following paragraph of his speech is one of the best statements of a profound truth on this question that has been uttered for a long time:

In my view almost any evil can be better borne than the infliction of a previous wound upon our constitutional system of government, which is dual in its character, combining the sovereignty of the Federal and separately of the State governments. Through a hundred years, during which we have grown up a nation of over 80,000,000 of people, and the richest, and perhaps, all in all, the most powerful, in the world, the Constitution has been adequate, both in time of peace and in time of war.

It may be that some people disagree with Mr. SPOONER, although to us he seems to be sound; but it is a very poor American—indeed, a radical disbeliever in republican institutions—who will not agree to the proposition that the man who does believe this doctrine and who does see this emergency owes it to his conscience and his country to speak out, and to speak with all the power at his command.

An Opposition Wanted

Apparently the thinking on political questions is not confined to eminent Republicans. Democrats and independents have been giving tongue to views and feelings that are helpful to the country, because they betray the right spirit and because they show that universal acquiescence and surrender of principle are not much longer to be tolerated. Every thoughtful and patriotic mind is conscious of the fact that the political reform of which this country stands most in need is a real party of opposition. This truth lay at the foundation of the speeches that were made before the Democratic Club of New York on JEFFERSON day. We want a new party, or a regenerated party, a party that will mean something different from the party of the administration. Whatever the party of the administration hopes that it is, or says that it is, the Republican party is a party of class privilege, and, being so, it is natural, in order to cover up sins that have become too obvious, that it should for a time become a party of class restraint; that its remedy for the class evils which it has itself bred should be the exaltation of its own favorites. "The wealth that we have given by our laws we may take away by other laws," is the conclusion. That it both gives and takes away at the expense of the whole country, of all the people, is a matter which evidently concerns it very little. Against such a party, for the public health, should be arrayed a real opposition. Such an opposition can only be organized by a union between the conservative South and the conservative North. It cannot be formed among the discredited persons who are spending fruitless and meaningless days rejoicing that the present leader of the party of class privileges has stolen their ancient weapon and has successfully turned it against them.

Tariff-Reform Straws

Some persons, the principal among them being EUGENE FOSS and ERIC DRAPER, are constructing a great cotton-mill in East Boston. EUGENE FOSS is the Republican leader of

the Massachusetts reciprocity movement. He is thus in antagonism to the tariff views of Senator LUTCH and all the DRAPERS. But all the DRAPERS are now finding fault with the tariff. They are helping to build the East Boston cotton-mill, which is to be of enormous size. They think that Boston may be made a great cotton-manufacturing centre, and also that there is no reason why we should not compete with England for the cotton-goods trade of China. But they encounter hampering duties on machinery which they need, which is protected by a rate of forty-five per cent. They find that building is more expensive here than in England, and they are beginning to wonder why our laws should so discourage the cotton-goods trade. Mr. BLAINE reached a similar conclusion in 1881. The archbishop of the tariff hierarchy is JOHN DALELL, of Pittsburg, and he, too, is seeing a light. The Pittsburg Post says that JOHN DALELL has announced that though he continues to be in favor of the tariff as it is, he has learned that there is in the country a desire for tariff reform, and he kindly adds: "Consequently I believe that we should take up the subject immediately after the next President has taken his seat." This is significant of more than one thing. JOHN DALELL sees that tariff revision is coming, and he has determined that the "stand-patrons" shall go through the form of making whatever changes may be absolutely necessary for the allaying of public clamor. If there be any one who thinks that JOHN DALELL & Co. will give the country a genuine reform, or any "reform" that will not, in some way or other, continue the worst and most expensive of the tariff's special privileges, he is hardly fitted for the political life of a country in which protectionists and their legislative agents possess such influence and power as they have exercised in the United States, for these many years.

Governor Woodruff's Effort in Connecticut

The State of Connecticut is waking up. It is a long time since it held an enviable place in the Federal government, and perhaps a longer time since it occurred to any one concerned of public affairs to think well of its State and local governments. It is, if we remember correctly, the only State in the Union which has sent to the United States Senate a man who has testified in public to his belief in the propriety of bribing voters to do what he thought to be right—that is, to support his party or himself. At present Connecticut people have a Governor—Governor WOODRUFF—who is doing his best to bring some order and decency into State politics. So far as we know, Governor WOODRUFF has not successfully emulated Governor HURDIS in taking the public into his confidence, and, to the end of winning their confidence, in enlightening them on the conduct of the usual politicians who compose the State Legislature. But Governor WOODRUFF has some intelligent and efficient allies. In order to aid him in his struggle for "better things—for clean politics, a cleansed State House, economy, and business sense"—they have started a paper called *Publicity*, and in it they have undertaken to make the people of Connecticut acquainted with those who are making laws for them and trafficking in their secret things. The Hartford *Courant* gives the paper a motto: "Every one that doeth evil hateth the light."

A Good Forest Bill Lost

The official bulletin of the Massachusetts Forestry Association—"Hunting and Roadside"—expresses not only profound, but reasonable, regret because of the failure of Congress to pass the pending bill providing for the establishment of two Appalachian forest reservations. This measure has suffered defeat at the hands of Speaker CANNON, who in this instance has displayed more than his usual obstinacy in opposing a measure in the interest of the community—a measure that recognizes valuable attainments of science and of civilization. Here is an instance where the Federal government may well interpose for the purpose of improving conditions in several adjoining States. The cutting down of the forest trees in one of these proposed reservations is now costing several Northern States losses of property averaging from \$6,000,000 to \$7,000,000 annually. For an expenditure now of \$15,000,000 the United States may save this loss for all time to come. In the end it will be obliged to take this land at a higher cost and spend much more for reforestation, or see valuable farm-lands go to ruin for lack of water. The example

of France, which has paid enormously for her procrastination in protecting her irrigation, ought to teach Mr. Caxton, or Congress, a lesson.

Peace Again in Central America

Washington advices, dated April 13, represented that the dove of peace had again spread herself over Central America. Thanks in great measure to the skilful and timely mediation of Secretary PHILIP BROWN, of the United States Legation in Guatemala and Honduras, the Presidents of Nicaragua and Salvador were about to meet at Amalapa to arrange terms of peace. The nucleus of the war, as may or may not be recalled, was a revolution in Honduras to throw out President BONILLA. Nicaragua supported the revolution, and Salvador came in as the backer of President BONILLA. Signor BONILLA is now whipped, and is presumably at this writing enjoying the hospitalities of the United States ship *Chicago* at Amalapa. Nicaragua and Salvador, through their Presidents and with the help of our Mr. BROWN, are arranging terms of peace, which are expected to provide for the permanent absence of ex-President BONILLA from Honduras, and the resurrection of constitutional government in that state.

The Thaw Trial Disagreement

THAW was saved from conviction because some of the jurors were doubtful of his sanity. Their verdict represented fairly enough intelligent public opinion. It would be difficult, we take it, to catch in a trap anywhere twelve intelligent men, caught without previous knowledge of their opinions, who would agree that THAW is sane enough to be a proper subject for capital punishment, and it would be at least equally difficult to find twelve men selected by chance who would agree that he was fit to go at large. The trial, dragging along through nearly twelve weeks, became long before its close a public nuisance. The failure of the jury to agree on any verdict was a calamity, but one that had been consistently expected. The point wherein the trial failed was in the failure to give the jury convincing evidence that THAW was or was not insane at the time of the commission of the crime, and that he was sane or insane at the time of the close of the trial. A commission found him sane at the close of the trial, but the commission's finding did not disturb the conviction of the District Attorney to the contrary, and probably did not affect the opinions of those jurymen who believed him to be crazy. It appears that the jury paid little attention to the expert evidence for and against the prisoner's sanity. Who can justly blame them for neglecting it? To sift out of the conflicting testimony of the experts a reliable opinion as to the condition of the prisoner's mind at any time seems to us to have been more than the jurymen could reasonably have been expected to do. The culling of experts to testify for or against the sanity of prisoners in murder trials has come to be a farce. Some better way must be devised to satisfy justice in this particular.

The Sleepless Jurymen

In his treatment of the jury, Judge FITZGERALD followed precedent. He had them locked up, and while they were let out to be fed, no provision was made for the refreshment of their faculties by sleep. The men were out forty-seven hours. Of course, after they had discussed the case until late the first night, they were tired, and needed, of all things, to go to sleep and recover their mental equilibrium. But, as is customary, their need of sleep was ignored, nor were any appliances of slumber furnished them, nor the means of such refreshment as they might have got from a bath, during the whole time they were out. What is wanted of jurymen is that they shall use their faculties to the best purpose possible. It would seem, then, to be worth while to give them a chance to keep their faculties in working order. That was not done for the THAW jurors, who for two days and nights had to sleep in chairs or on tables or not at all. By a natural consequence they soon got worn out, quarrelled among themselves, and behaved as might have been expected.

The "Biggest Living Englishman"

Lord CROMER, who has just resigned from the mastership of Egypt, is named by Mr. MOSLEY BELL, (of the *London Times*) as the biggest living Englishman. He got his growth, as everybody knows, in Egypt. He was there first in 1877

as English member of the Public Debt Commission, but later became Finance Minister in India, and his reign in Egypt did not begin until January, 1884, following the rebellion of the Egyptian army in 1881, the British occupation in 1882, and the governmental chaos of 1883, when the Khedive's authority was gone and the English had not yet organized the government. On his twenty-three years' work as ruler of Egypt, Lord CROMER's reputation rests. He found Egyptian four-per-cent. bonds worth forty-five, and left Egyptian three-per-centa selling at par. He found the fellah in rags and squirming under exorbitant taxation. He reduced taxation and left the fellah (as Mr. BELL says) driving in his carriage and travelling first class. Land worth one hundred dollars an acre when Lord CROMER came is now worth one thousand dollars. Mr. BELL attributes much of Lord CROMER's success to his being satisfied with his job and willing to stick to it and make it his life's work. No doubt there is much in that, but it was an exceedingly interesting job, and it had the advantage of being in a very interesting country and not too far out of the way. India is a place of exile, but Cairo is almost as interesting a town to live in as Paris. Nobody need be buried there unless he is dead.

Disarmament in New York

Contemporaneous with the Peace Congress on Fifty-seventh Street, in New York, a lively little peace movement has been started from Mulberry Street with which there is universal sympathy. It started with the killing of two brave policemen in arresting an Italian—or Sicilian—who had fired a revolver in a street dispute. The policemen were good men, favorites in the force, and esteemed by the department. They made the arrest, but both were fatally shot. They were victims of the habit followed by a large number of the Italian residents in New York of carrying deadly weapons, contrary to law and to the prejudice of the peace of the community. New York has a great many decent Italians and a very considerable group of bad ones. An absurdly large proportion of the crimes of violence committed here are done by the latter. They are lawless and impulsive, and habitually go armed with concealed weapons. The Police Department proposes to break them, if possible, of that habit. Everybody will wish the department Godspeed in that work.

Mr. Rogers is an Optimist

Mr. HENRY H. ROGERS has gone on record as a prophet of prosperity. "The country is all right," he says. "Conditions will adjust themselves, and there will be no stagnation or halt on account of the Presidential campaign next year." Mr. ROGERS thinks that the production of wealth has increased too enormously for prosperity to be halted at present. He finds an element of economic security in the diversification of agricultural products and the lessened dependence of the Western railroads on the wheat crop. He is full of belief in the favorable attitude of Providence towards the United States, and finds evidence of it in the timely discovery of petroleum, which, providing illumination in homes all over the world, he considers to have been the greatest civilizer, outside of the Christian religion, that humanity has known. The people must see, says Mr. ROGERS, that settled conditions are necessary for progress and development, and he expects to see within a few months "a practically united demand for the strongest conservatism in the conduct of government." That is a reasonable expectation. The pendulum can't swing in one direction indefinitely. Nature settles that.

Why Railroads are Peevish

The World calls the Pennsylvania Railroad "a peevish railroad," because it has announced that it will undertake no further reconstructive work for the present, but will restrict expenditures to improvements now under way. Most of the railroads are showing "peevishness" of the same sort. We see it computed, however, that the money lately raised by the Erie road on one-year notes to pay for indispensable work cost it eleven per cent. Are not the railroads "peevish" about going on with their plans because the people who have got the money are "peevish" about letting the railroads have any of it except on short time and at very high interest rates? And has not the actual and impending "peevishness" of legislators a good deal to do with the peevishness of the lenders?

What the New York Peace Conference Might Do

MR. W. T. SPREAD, who has attended many a meeting of unofficial friends of peace, seems to take a pessimistic view of the outcome of the National Arbitration and Peace Congress, which was opened on April 14, in Carnegie Hall. The recommendations of such "congresses"—to use the somewhat ambitious term they give themselves—are, as a rule, too visionary to obtain serious consideration on the part of such accredited representatives of nations as will assemble on June 15 at The Hague. Those who wish the suggestions of the present "congress" to be committed to an attentive hearing advise that it should confine itself to trying two reasonable proposals, namely, that heretofore the private property of belligerents, not being contraband of war, should be exempt from capture at sea, and, secondly, that the unfortified seaports of a belligerent should be immune from bombardment. Both of these proposals would undoubtedly be supported by the United States, and, probably, by a very large majority of the powers represented at The Hague, but hitherto they have been opposed by Great Britain, which, relying on the superiority of her navy, has been unwilling to forego two formidable means of coercing an enemy. It seems to us that Great Britain, on the whole, has more to gain than lose by the acceptance of both rules. In the first place, no other country has so many unfortified seaports open to bombardment. In the second place, no country in the world depends so dangerous an extent on the receipt of food-supplies from overseas. It is manifest, that, if the private property of a belligerent were immune from capture on the ocean, the transportation of food staples from British's nurseries in British colonies would, even in war times, be uninterrupted. Thirdward she could never be confronted with the risk of being starved into submission by a coalition of European powers, provided, of course, she retained the friendship of the United States, which constitute her largest source of supply.

Outside of these two proposals, however, which, on their face, are practicable, there is another suggestion which the so-called Peace Congress opened on April 14 in New York might make with some prospect of securing for it consideration at The Hague. The economical argument against war has never been presented in an international conference with adequate fulness and force. As a rule, the advocates of arbitration have limited themselves to biding up the portentous aggregate of the sums annually expended by the principal powers on military and naval armaments, together with pensions to soldiers and sailors, and the interest on that great part of their national debts which was incurred in war. That aggregate has been computed with more or less accuracy at three billions of dollars. If diplomats have not been profoundly impressed by these figures, it is because the aggregate wealth of the same nations is estimated at ten billions of dollars, and three-fourths of one per cent, thereof seems to them no exorbitant percentage for use by way of insurance. A few of the more long-headed champions of international peace supplement the argument just named by an attempt to estimate the amount that might have been added to the wealth of the nations concerned had most of the skilled or unskilled labor of adult males now diverted to military service been employed in peaceful industries. It is probable enough that the capitalized product of the labor thus diverted exceeds in value the whole sum annually allotted to expenditure for war purposes, actual and inherited. There is, however, a third argument, seldom, if ever, put forward in an official conference, which far outweighs in cogency the two that we have named. That argument, which has decisive weight with bankers, ought also, if properly submitted, to have tremendous influence upon statesmen and diplomats. The visible cost of war, even when supplemented, as it should be, with the loss incurred by the subtraction of the combatants from the ranks of labor, is really trivial compared with the enormous shrinkage of value caused by the drop in the quotations of securities on the stock exchanges of the world. The disabbling effect is due to two causes, which could be duly appreciated by statesmen and diplomats if they could be taught to know as much about the fundamental conditions of modern commerce and finance as constitutions, as in speak, the elementary premise from which a competent banker reasons. The two facts are, first, that modern commerce and industry, thereby differing radically from their medieval and ancient counterparts, are transacted almost wholly—apparently ninety-five per cent. is a just estimate—on credit. The second is that capital has long ceased to be localized within the boundaries of a particular nation. It has become internationalized—world-pervasive. That is to say, the civilized world, though still politically divided, has become an economic unit. In our day a revolution in Russia, if accompanied by a repudiation of that country's foreign debt, would inflict an immense if not irreparable injury upon the invested capital of the French people. A similar catastrophe in Argentina would convulse the London Stock Exchange, and bring about a series of failures like that of the historic firm of Baring Brothers. Even the temporary failure of a country which had been a large borrower, to pay interest on the foreign debt, owing to the financial burdens of

war, would spell disaster all over the civilized world. The financial crisis which would be provoked would almost certainly be followed by an industrial crisis. That is why most financiers already are the most ardent advocates of international peace, and welcome with enthusiasm any antislavery progress made in that direction. It only remains for diplomats and statesmen to recognize facts which to bankers have long been patent.

An Incredible Yarn about the Southern Confederacy

ALL well-informed Americans, whether they are natives of the South or of the North, will repel with amusement the assertion made by a Berlin newspaper that the Southern Confederacy, had it achieved independence, would have proclaimed itself a monarchy, and would have offered the crown to Prince FRANCIS CHARLES of Hohenzollern. The authority given for the assertion is the late Colonel RICHARD VON BUNKE, one of the few Germans serving in the Confederate army, and the further statement is made that the plan has known to the prince, and was favored by Lieutenant-General STUART, the distinguished cavalry commander, and by General ROMNEY E. LEE.

The charge is a libel on the Confederacy, and the assumption by which an attempt is made to buttress it is equally unfounded—the assumption, namely, that a government based on the institution of slavery would inevitably tend toward a monarchical rather than a republican type. To dispose of this assumption it should be sufficient to recall that almost all of the Greek city-states, although each of them contained a relatively large slave population, clung to the republican form, until they were absorbed in the kingdom of Macedonia or submitted to the rule of Rome. As for those itself, the social structure of which was based on slave labor, it remained a republic for ages, and, even after the accession of the Cæsar, long continued to be nominally republican.

So of the Italian republics: for a dozen generations after they gained practical independence they would not brook local sovereigns, although they acknowledged a vague sort of allegiance to the head of the Holy Roman Empire. So, too, the seven United Provinces, which made good their revolt against Spanish rule, refused for centuries to renounce the rights of self-government, or, deep as was their debt to the Prince of Orange, to give them any other title but that of Stadtholder. Only in the short-lived English Commonwealth can a precedent or analogue be found for the voluntary acceptance of monarchy soon after successful resistance from a civil war. To allege that this unique example would have been followed by the Southern Confederacy, had its independence been acknowledged by the States loyal to the Union, is to betray amazing ignorance of the history of that section of our country and of the habits of thought, the predilections, and the aims of its eminent orators and statesmen. The greatest speech delivered in the colonies against the Stamp Act was uttered by a Virginian, and the Declaration of Independence was penned by a native of the Old Dominion, while it was reserved for MASSACHUSETTS, a citizen of the same State, largely to fashion by his voice, and principally to defend by his pen, our existing Constitution.

For seventy years after the adoption of our present Federal polity, Southern statesmen were jealous and inflexible champions of the principle of local self-government embodied in the demand for State rights. The first constructive act of the newborn Confederacy was to frame a Constitution in most ways identical with that wrought at Philadelphia in 1787, the essential differences being that it made of the institution of slavery an inextricable cornerstone, that it introduced the principle of ministerial accountability to Congress, that it embodied free trade in the organic law, and that it forbade the maintenance of internal improvements at the general expense. It will be obvious at a glance that these provisions tended irresistibly toward, not the strengthening, but the weakening, of the central Executive. A Constitution so narrowly and thoroughly decentralized was, as experience showed, unsuited for a tremendous defensive struggle, and even so sturdy a republican as JEFFERSON DAVIS found himself constrained to disregard in practice some of its restraints, not, however, without provoking vehement criticism and remonstrance on the part of such sticklers for State rights, even in war time, as Vice-President STEPHENS and Governor BURNES of Georgia. Nor is there any doubt that DAVIS, after peace and independence had been gained, would have incited by example as well as precept the most scrupulous adherence to the Confederate organic law. As for ROMNEY E. LEE, although he became the idol of his countrymen, and, perhaps, could have, had he desired, made himself a dictator, he never evinced the slightest disposition to subordinate the civil power to the will of the chief commander in the field, while, with regard to his political opinions, of which he made no secret, he was by inheritance, possession, and conviction a republican of republicans. He would have been shocked and pained, could he have heard a prediction that after his death he would be accused

of favoring the substitution of a monarchy for a Federal republic.

Those Germans who have put any credence in the preposterous story to which we have referred are evidently unaware of what is patent to Americans conversant with their national history—the fact, namely, that the slow, though quite distinguishable, tendency of the Southern States under the pressure of the institution of slavery was toward an oligarchy, which, of all forms of government, is the most stubbornly opposed to one-man power. It is not an oligarchy, but a democracy, which most easily resigns its liberties into the hands of a CÆSAR.

Sounds

A symphony ought always to be provided with a tin roof near at hand, either the eaveless in a projecting porch beneath the window, or a neighboring kitchen, or something of that sort, to catch the music of the rain-drops. Dr. JAMES has told us that there is no sort of sensation, feeling, or idea which does not tend to discharge into some motor effect, not necessarily into rude action, but into some alteration of the rate of breathing or of the heart action. There would seem to be no sort of doubt in the mind of any attentive observer of life that sounds can conquer passion, inspire courage, create hope, and work various other wonders in the mind and heart. To go to sleep to the drip of rain-drops on a tin roof is as soothing, as tenderly quieting an experience as to come unexpectedly from the glare and bustle of the day into a twilight room where a harp is softly giving out arpeggios or where a sweet-toned pianist is singing that little prelude in D-flat major of CHOPIN, the reiterated dropping upon A-flat and the occasional step up to B-flat and back exactly imitating the faintest song of the rain when it falls upon metal. Let a man who has a tendency to nurse wrath or brood over grief listen on every possible occasion to this nightly song and he will find his grief becoming insensibly acquiescent and his anger will soon out of keeping. The steadily low melody, broken only here and there by a louder splash, is no full of the inevitable necessity of things as they are, and the personal passions were before as inextinguishable as lightning.

Quite different and of varying import is the sound of cat-drops heard as they fall upon sodden earth and decaying leaves in the February woods. Then the song breathes mystery and merriment. To take shelter under a heavy-branching tree and hold one's breath while one listens to the rain pattering down, to its soft shuddering accompaniment and its occasional rippling arpeggio, is to be made very credulous, very open-minded, toward all the hidden wonders and underlying miracles of earth. No one, under such conditions, would be surprised to open his eyes and see a small yellow and brown wood-fairy with a peaked cap and beady eyes peered upon the toadstool at his feet all ready for a general Scientific dialogue.

To lie still and listen to a winter wind roar at night is a quite other phase of the spirit's life, though this no less than the patter of rain-drops can free one from narrow thoughts. For the wind hushes with it all the sorrows of the world, since ever a world began to be, all the moanings of the desolate, all the shrieks of the terror-stricken, all the groans of the hopeless, and all those are gathered together and played as a wonderful symphonic poem by the wind's great orchestra. And then a man's spirit comes within him, even as the spirit of JESUS did when the Voice from the whirlwind was hushed, and he says:

"Behold I am vile; what shall I answer thee?
I will put mine hand upon my mouth."

The sounds of rain and wind lead the most intimate messages to man, but birds' songs are direct appeals and never to be missed. So straight fall the notes of the skylark as he climbs upward, upon the head of him beneath, that the child who had listened and then watched the bird swoop low in another direction, turned and asked, "And who will be talk to next?"

"He rises and begins to mount,
He drops the silver chain of sound
Of many links without a break
In chirrup, whistle, snare and snare,
All interlarded and sparkling wide
Like water-dimples down a rill
Where ripple, ripple overflows
And eddy into eddy whirls."

How can the human spirit fail to throw off its shackles and its burdens at this wild haunting of the sheer delight of sunshine and being alive?

"The song scrupulously free
Of taint of personality."

the poet says of the skylark's song; but not the skylark only, the thrush in early spring lessons the bonds:

"Full lasting is the song, though he,
The singer, passes; lasting, too,
For words not lost in hurry
The capture of the forward view."

"With that I hear my senses fraught
Till what I am find shoreward drives.
They are the vessel of the thought,
The vessel splits; the thought arrives."

The calls of the hermit-thrush, heard in the woods when the sun's rays are slant and the forest spirit-still, are like trumpet-calls to noble action, with its threefold repetition, higher still and higher. And the song of the mocking-bird outside the window on a warm May morning, bubbling, bursting, wild and thrilling, this, too, tears open the spirit's wrappings and launches it floating, high and away beyond all worldly care. And the nightingale, she too sings freedom, freedom and all its inexpressible:

"How thick the hushes come crowding through the leaves,
Again—thou hastest?
Eternal passion!
Eternal pain!"

This is the power above all others of the earth's sounds, that they let us go free of our prisons and they send us out into the larger life, the wider world where are scope and joy and pain and vastness and endless wonder. "Who are you," they say to us, "to be lonely within yourself? Are you not of us—a part of the silence and the sphere of sympathy, a part of the ebb and the flow of being? Are not you, too, life and death and love and wonder and being and growth? Cast, then, the fetters; be free; and live and speak as we live and speak in the endless spaciousness of eternity."

Personal and Pertinent

THE REV. WALTER LOWRIE, late of Trinity Church, Newport, is the successor of Dr. LOWIE as rector of the American Church at Rome. A despatch from Rome to the New York Times says that the Rev. WALTER has begun his ministry by issuing parish notes, in which he announces:

"With my revered brother JOSEPH TAYLOR (the English of GUSSEPE NASTRO, PUEBLO), across the Tiber, I have no quarrel."

The inference is either that the new rector has never heard of the expediency of doing at Rome as the Romans do, or else that his job, as he finds it, is not to his liking.

Down Boston way the people continue to recognize and love their great. Envious people say that the Boston neighborhood produces no few excellent human specimens in three days that they hail with glee the appearance of any neighbor, or any neighbor's child, who gets into the front ranks. This is nice as it is, but as one knows better than Hester that it and its neighborhood are just as full of great men as it used to be in the days of the elder ADAMS or EPHRAIM CHASE or DANIEL WEBSTER (both New Hampshire men), or the PAMUNTY boy, or FARMHOUSE GERRY, or BENJAMIN F. BUTLER. At any rate, Boston is loyal to its great, and when GERALDINE FARRELL travelled there to sing in Mr. COVARD's cage, it took only one item in the newspapers to make many people pay as much as \$8.50 a seat to see her, while a good many paid as much, or less, to hear her. That item revealed the fact that she was from Melrose. "Gee!" they said, "ain't she fine! It's worth the money just to see her. Her father pitched on the Melrose side. It was a grand combination for stimulating Boston based patriotism—baseball and singing—and Mr. COVARD and the speculations profited by it; perhaps GERALDINE did too.

They say now that there is an mistake about it, that JOHN CARLSON is going to be married to Mrs. LOWAN, who was Miss TUCKER, and the world that knows them wishes them well and entertains, perhaps emboldened, the hope that the wishes will be realized. The TUCKERS are a good family, and the Virginians think most highly of them. HARRY M. GIBSON TUCKER, Mrs. LOWAN's brother, is the present head of the family, and he has no distinction in a mild way in Congress, and as head of the Columbian Law School in Washington, while he is the energetic head of the Jamestown Exhibition, which is being denounced so vigorously by the anti-imperialists and the most generally discredited of the negro educators. The union—if it is to be a union—or the people, at least, that it is, results the "restoration" at the beginning of the first term of GUYTON CLEVELAND. "We have come to our own," said the old Southern society who had harbored themselves during the long political winter in Georgetown, where they turned their backs on Washington, and pretended not to know where the Treasury was. It was a glorious evening when they took the horse-cars and went over to Washington to TUDOR CITY's first reception, or when they put on their old silks and laces and carried their old manners—pretty safe manners they were, too—over to the drawing-room of JESSIE BLANTYRE's daughter. BLANTYRE was the usual light of the time. He was the father of Mrs. LOWAN and HARRY M. TUCKER.

and he was counted the ablest constitutional lawyer of Congress. He had been Attorney-General of the Confederacy, and his constitutional history shows how fair a mind nature had blessed him with. He possessed great masculine beauty and such manners as one remembers. Everybody loved him and called him "RAN," just as every one loved his brother, who was said to be called a lobbyist, and called him "REV." It was "REV" to whom STUBBS A. THOMAS said: "What can I do for you, Rev. when I'm President?" "Nothing," STUBBS, except to put your arm around me in public, like you're doing now, and call me REV." In those days when the old Confederates were coming back to Congress, the strongest friendships were between them and, to paraphrase a Republican commonplace, the better element of the Republican party. The closest friend that RANDOLPH TYCKER had in his own party was JOHN CARLISLE, and next to CARLISLE stood "GLADSTONE," as the Virginian called the Ohioan. "GLADSTONE," said he one day as the two sat together in the House. "I'm sorry if they're going to make you President: it's a heap better for you to be Senator; you'll like it more, and you'll live longer." TYCKER went to Washington and Law University after he was weary of life in Congress, and taught law, and taught it, as they say in Virginia, "mighty well." When "RAN" TYCKER's daughter is married to JOHN CARLISLE, he can have many a pleasant evening if she'll make her husband tell her stories about her father, who, among other eccentricities, possessed qualities which made him the most popular man on either side of the House.

A Consideration of Woodrow Wilson, of Princeton

(From New York Times, April 14, 1907.)

In these days of radical reform, with political parties badly mixed and political policies almost lost sight of in the middle, it is a question whether or not a movement launched some months ago, and which has quietly been growing in some quarters ever since, is not to be regarded as most significant. The movement was that started in this city to make Woodrow Wilson, now President of Princeton University, the Democratic standard-bearer next year, and, if possible, President of the United States.

Considering the personality of the present incumbent, the stream under which the administration is laboring, the economic questions that are rapidly taking the temper of the people of the country, and the undoubted tendency toward radicalism in everything, it is, to say the least, strange that as conservative a man as President Wilson should even be mentioned for the Presidency, and students of national conditions are wondering whether the movement, and particularly the fact that it was not immediately abandoned, does not presage a return to extreme conservatism and the election to the White House of a man calculated to steady things down a bit, and thus insure the prolongation of the present era of prosperity.

The Antithesis of Roosevelt

To one who has met Woodrow Wilson, yet who knows him but slightly, the idea of his being President does not immediately appeal. It is hard to reconcile the quiet just now occupied by the strenuous Mr. Roosevelt with the tall, silent, quiet-demeaned college President. It cannot be imagined that Mr. Wilson is the antithesis of Mr. Roosevelt, and thus, were things at present unexpected to happen, and Mr. Wilson, by any chance, to be elected President, the American people would achieve conservatism by about as radical an act as they could be imagined to.

To say that Mr. Wilson is solemn is not necessarily to suggest that he is in any way lacking in humor. It needs but one glance at the man's face, however, with his long, somewhat severe chin, to convey the impression that he looks on life as a serious proposition, and, while he enjoys telling or hearing a joke, he is nevertheless strongly of the opinion that it is well to think long and hard before doing or saying anything in a spirit of levity which may have an effect on another person. And as the smallest actions and most unimportant words frequently have a remarkable effect, it need only be fair to assume that Mr. Wilson is a man who does nothing hastily.

The tall, somewhat gaunt form of Mr. Wilson, seen on the Princeton campus or in the garden of "Prospect," as the students term the president's residence, strikes the observer at once as that of the idealized, latter-day college president. It is well to any latter-day president, for Mr. Wilson is up to date and looks it. And it may be added that while Mr. Wilson impresses one as conservative, and is conservative, as all his actions show, he is not by any means an "old fogey." Unfortunately, if he seemed so, the two terms are often confused, to the great injustice of the real conservative.

Mr. Wilson has searching eyes, the forehead of a student and thinker, and the mouth of a kindly, but nevertheless firm, man. His whole face gives the impression of intellectuality, combined with deep thinking on a broad plane. It may seem here and there that this is in no view of what is known of the man, but were Mr. Wilson encountered in a clubhouse, dressed in overalls and a gardener's hat, he would nevertheless give one that identical impression, and he would strengthen the impression the moment he commenced to speak. And the first word he utters convinces the listener that he is sure of his ground, and so strong is this

conviction, and so deeply does it sink in, that one is inclined to mind his "p's" and "q's" lest Mr. Wilson ask a question of history or mathematics that his interviewer would find it impossible to answer.

There are many people who meet such emergencies readily enough by "looking wise," as the saying is, and saying nothing. Such tactics, however, would not for one moment prevail with Mr. Wilson. In every sense of the word he is of an analytical mind. He analyzes conditions, men, even thoughts. In this respect he sometimes reminds the present Governor of New York State, Charles E. Hughes, who, by strange coincidence, was at one time a college professor also. Occasionally an expression crosses Mr. Wilson's face which reminds one strongly of Mr. Hughes at moments in the insurance investigation when he was concentrating his mind on one single point in the testimony and analyzing it at lightning speed and with absolute accuracy.

Mr. Wilson appears to have retained the ideals that he set up in his earlier years. He has not become hardened and cynical by what has taken place around him in the last few years. He is of the type of man who insists in believing that the vast majority of his fellow beings are as honest as the day is long. He impresses one as a man who not only believes in what is good and pure and best, but also believes that what is right and honest will triumph in the end, and that what goes before is simply a process of evolution necessary to growth.

This trait is denoted clearly in Mr. Wilson's expressions on the position college life holds in this country. He is of the opinion that it is a very vital part of the nation's life, offering the young man the one place above all others where he can put himself in the way of the main currents of thought which are the very life of the world. He believes that universities, besides teaching, give all the great truths gained from the past, gives him a thorough appreciation of what has been accomplished in the years gone by and encourages him to emulate those of whom he has read, and carry on the work of endeavor, accomplishment, and progress.

Looks for the Best Side

There is in that thought something different from what is to be found in the every-day platitudes of the present time. Mr. Wilson's character is clearly denoted in it. He looks for the best, seeing the good side and the great side of things.

It would be interesting to observe Mr. Wilson's attitude toward "practical" politics were he ever elected President. He has never held public office and has had nothing to do with the "practical" side of politics, other, perhaps, than those which may sometimes be found in university life. His point of view would be very nearly that of Mr. Hughes, but whether he would meet situations in the same way is a question. That he would achieve results as ably as Mr. Hughes is certain, but his methods would probably be very different.

The extent in which the personal attitude of a man in high office toward a certain question can make itself felt all over the country was never more thoroughly demonstrated than within the last few months. While no man's attitude on one question can be taken as an exact index of his personal or his official position, it nevertheless must give an idea of the character of the man and lead to speculation. Mr. Wilson's attitude toward the movement to make him the Democratic candidate for the Presidency is interesting in this connection.

"In my opinion it would be presumptuous for a man to decide whether he would accept a nomination for the Presidency that had not been offered to him," said Mr. Wilson in substance, when the possibility of such a thing was first suggested to him. "However, I cannot see why any patriotic American could refuse such an offer unless the burden upon his physical system was too great for him to bear. If the Democratic party should call upon me in the hope of routing the discordant elements, I could not be so insensitive to the honor as to decline, without careful consideration of the subject."

It is well to note that in this statement Mr. Wilson is very guarded and that he is immediately inclined to regard the proffered honor from the standpoint of a "patriotic American." The thought of being presumptuous is something that seldom occurs to the politician of the present day, but every one who knows Mr. Wilson knows perfectly well that it was the first thing that entered his mind when the suggestion of a possibility of his being nominated was made to him.

"If the time should come when the leaders of the Democratic party believe they want me for their candidate and should assume me that it was necessary for them to know my willingness to permit the use of my name, I should first consult my physician and then try to weigh the matter carefully."

Could anything be more guarded and more conservative than that? Mr. Wilson, as President of the United States, were to approach every question that came before him in the same spirit, things might not be done with the rapidity that the Americans are learning used to, but they would surely be done right or Mr. Wilson would not do them at all.

While Mr. Wilson has had an experience with what are called practical politics, as has been said, he has studied political conditions long and deeply, and his after-dinner speeches denote the fact that he keeps closely in touch with the political affairs of the day, both here and abroad. As a student, lecturer, and writer on political subjects he has gained a renown, and while his knowledge of the "ins and outs" of politics may not be very much less than that of some district bosses, his knowledge of real politics, the politics that make for accomplishment and the upbuilding of a great nation, is probably as great as that of any man in the United States. It might worry the machine politicians to have to deal with such a man.

UNCLE SAM—CANAL DIGGER

THE ACHIEVEMENTS OF THE ARMY ENGINEER CORPS
WHICH IS TO UNDERTAKE THE WORK AT PANAMA

By LIEUTENANT JOSEPH A. BAER

Sixth United States Cavalry

HALF a century ago former army officers were building the Panama Railroad, the first successful over-land route connecting the Atlantic and Pacific oceans. Today the Engineer Corps of the United States Army is assigned to the work of completing the Panama Canal, a work whose history is a romance of nearly four centuries of dreams, of plans, of intrigues, and of failures.

That the Engineer Corps is competent to complete this work will be evident to any one who will take the trouble to examine its record—a record remarkable as much for its unassuming modesty and lack of self-advertising as for its notable achievements. In preparing an outline of the various works of the engineers, it is but fair to include the works of those engineers who have received their education at the Engineer School, West Point, and in the practical school of experience in the corps, and have afterwards undertaken engineering work in civil life.

In two cases, indeed, I have included men who, through lack of vacancies in the Engineer Corps, have upon graduation at West Point been commissioned in the Artillery Corps, but have been engaged in engineering work. I feel justified in this including graduates of the Military Academy from the fact that up to 1868 West Point was purely an engineer school and a graduate was merely an engineer assigned to the engineers, or perhaps to the artillery, cavalry, or infantry.

Of the distinctively military engineering work no details can be given except to state that at a cost of \$130,000,000 they have drawn up all plans and have two-thirds finished the task of protecting 1000 miles of coast so thoroughly that not only do the great cities feel safe from foreign invasion, but also every Congressional district that borders on the sea sleeps in security from marauding landing forces.

The earliest work of the national importance that the engineers accomplished was the "National Road," the "Old Cumberland Pike," that ran from Cumberland, Maryland, to St. Louis and made possible the rapid settlement of the great Middle West. This road was thirty feet wide, 700 miles long, and was constructed at a cost of \$7,000,000.

But the most important service that

Lieutenant-Colonel George W. Goethals
WERE, AS CHIEF ENGINEER OF THE PANAMA CANAL, WILL DIRECT THE WORKS OF THE ENGINEER CORPS ON THE Isthmus

ford; Boston & Albany; Long Island; the Lake Shore; parts of the New York Central; most of the Southern R. R.; the Ohio & Mississippi; Tennessee R. R.; Mexico & Pacific; Cumberland Valley; Virginia & Tennessee; Cuban R. R.; and a list of smaller roads too numerous to mention. General McJannet built Illinois Central, and was President of the St. Louis and Cincinnati.

General H. H. Briggs built the Gulf, Colorado & Santa Fé.

Whistler (who, by the way, was the father of the celebrated artist of that name) designed and built the last locomotives and rolling stock of the time. So wide-spread was his fame that when Russia wanted to construct the St. Petersburg to Moscow R. R., Whistler was chosen by the Czar to engineer the project. While constructing this line he built the famous bridge over the Neva and the fortifications of Cronstadt. In this work he had first to educate his workmen

FACE THE FORMIDABLE TASK OF COMPLETING THE PANAMA CANAL**

before he could proceed. He died in harness with the Missouri road not quite completed; he was succeeded by Lieutenant Brown, of the Engineer Corps, who carried the work to its completion. Counting engineers and other army officers, forty-nine have been chief engineers, twenty-two served as railroad presidents, and counting assistant engineers and superintendents, the list mounts up into the hundreds.

During this same period the Chesapeake & Ohio Canal, the old Erie Canal and the Morris Canal were built by army engineers. At the present time, Colonel Symonds, of the Engineer Corps, is one of the board of consulting engineers on the enlargement of the Erie Canal. The great transcontinental railways were all surveyed and projected by the corps. Among the familiar names connected with this work are those of General McVittie, Hood, Parke, Weaver, Abbot, and Humphreys. Army officers explored the West and mapped it, especially from 1810 to 1830. For years one department of the Engineer Corps was the Topographical Engineers. They have rendered the country invaluable services in their mapping work. The Missouri country, the sources of the Mississippi, the basin of the La Platte, Green, Nelson, and Sacramento rivers, the Great Salt Lake, Santa Fe Trail, and Pike's Peak were all explored and mapped. The first extensive topographical work undertaken in this country was the survey west of the 100th meridian by Lieutenant Wheeler. To show the value of this work to the country it is only necessary to say that in England as high as \$100, and in Germany as high as \$65, has been the cost per square mile for topographical mapping. When the Wheeler Survey stopped for lack of appropriations it had completed 350,000 square miles at the average cost of \$1.48 per square mile.

Practically every boundary of the United States and most of the State boundaries were surveyed and marked by the Engineer Corps. The Coast and Geodetic Survey was reorganized, and the geodetic survey of the Great Lakes was made by the corps. In this connection Captain Talbot invented the zenith telescope and the zenith method of determining latitude.

Although the maintenance and construction of the lighthouses is under the Light-house Board of the Treasury Department, they are maintained by the navy and constructed by the Engineer Corps. The tale of the building of some of these lights rivals in interest that of Elysianum and Skerryvore.

The Tillamook Rock Light is probably the most exposed light in the world. Its site is a precipitous rock rising ninety feet from the Pacific about twenty miles south of the mouth of the Columbia River. On three sides the waves curl over the top of the rock, on the fourth is a treacherous swirling current. The first man who attempted to scale its side slipped and fell into the current beneath. His body was never recovered. After a month of scheming a few men were successfully landed and communication was kept up with the ship by means of a cable and breeches buoy. Due to the rocking of the ship, the cable whipped up and down so violently that one man who made the passage to the rock refused to return, and spent the many remaining years of his life a prisoner on the rock. The workmen had first to dig a niche in the rock in which to live. The roof and front were anchored by heavy ship's anchor chains to keep them from being washed away. The waves dashed over their roof and practically compelled them to live underwater. All material was landed by means of the cable. After six months the light was completed. An idea of the fierceness of the sea with which the builders contended can be obtained from the fact that the glass in the lantern, 140 feet above low water, had been protected by wire netting, has been broken by the waves during a storm. There are in all Bush, Indian, beacons, and ranges,

of which 1243 are lights. These have been constructed at a cost of \$65,000,000.

The regular peace work of the corps is the river and harbor improvement work, a work so diverse in character and so distributed over the entire country that a mere outline would fill a fair-sized volume. The general character of the work may be seen from the following comparison:

Taking the fourteen principal harbors of the Atlantic and Gulf coasts, the average available depth has been increased from 12 feet to 25 feet; a harbor of refuge at the Delaware capes has been constructed that has sheltered 450,000 vessels; docks and breakwaters have been added to the harbors, so that the cost of sending a ton of wheat to Liverpool has decreased from \$5.75 in 1868 to \$1.90 in 1900.

Taking thirty-seven out of forty-one of the present important lake harbors, the average available depth has been increased from 2 to 14 feet. Fifteen important harbors have been made by the construction of breakwaters and a 26-foot channel has been opened between Buffalo and Duluth. This includes the South St. Marie locks and canal. The canal is 1.6 miles long, faced with timbers. There are two locks side by side, one, the Wellin lock, 515 feet long, 80 feet wide, 145 feet available in chamber; the Fox lock is 800 feet long, 100 feet wide, with 20 feet available over the sill. This lock is the largest in the world. More tonnage passes through these locks annually than clears from the port of New York. In addition, the Hudson, Mississippi, Ohio, and Columbia have been made more navigable by a system of dredging and locks. The statistics of the Interstate Commerce Commission states that the saving to the United States due to these interior waterways alone is \$340,000,000 annually. The total expenditures of the Engineer Corps since 1820 on rivers and harbors have been \$315,000,000.

Of this immense work it is difficult to select the most noteworthy examples. The most important from a commercial standpoint is the improvement of New York Harbor. The main channel has been deepened from 23½ feet to 30 feet, and when the dredging is finished a straight channel 2000 feet wide and 40 feet deep will be made. All New-Yorkers are familiar with the removal of the reefs at Hell Gate. In this work the engineers blew up Hallett's Point and Flood Rock in two simultaneous blasts of numerous mines of high explosives with which the reefs were bombarded—100,000 pounds in Hallett's Point and 250,000 pounds in Flood Rock distributed in six miles of galleries; 400,000 cubic yards of rock were shattered. In their dredging work they have designed a type of self-containing dredge that is the most economical machine of its kind in the world.

This dredge is as big as an ocean liner and works up mud from the bottom of the channel until its hold is full. Then it steams out to sea, dumps its load, and returns.

Galveston Harbor is the most important port on the Gulf of Mexico west of the Mississippi. Up in 1890 there were but thirteen feet of water over the bar, and large vessels were loaded by lighters five miles from shore. To-day the jetties built by the corps aggregate twelve miles in length, and with the dredging and scouring from currents thus created there are now thirty feet of water over the bar. In building these jetties 2,000,000 tons of rock were used that was hauled from quarries 210 miles distant. On the Pacific coast Captain Mendell's name is associated with the improvement and creation of harbors, irrigation work, and the diverting of rivers from their courses that their beds might be mined for gold.

In 1833, President Pierce sent a note to Lieutenant Montgomery C. Meigs saying that he wanted him to build the most beautiful dam in the world. Meigs replied, "I will, sir." The

THE WORK OF THE WATER CORPS IN THE IMPROVEMENT OF OUR NATION'S INTERIOR WATERWAYS SAVES THE GOVERNMENT \$240,000,000 A YEAR

A Portion of the Twelve Miles of Sea-wall and Jetties, built by the Engineer Corps, which helped to make Galveston Harbor the most important Port on the Gulf of Mexico

wings and dome of the Capitol Building at Washington were the result. Thomas W. Walter was associated with Meigs as architect, but the beauty of the structure was mostly due to the latter and all the plans of construction were of his designing. In this work Meigs invented the process of turning stone columns in a lathe. Meigs also built the Washington Aqueduct which crosses a ravine by Cable Joses's Bridge, a single masonry arch of 328 feet span. This was for years the highest masonry arch in the world. Meigs afterward was Quartermaster-General during the Civil War.

To Thomas L. Casey was given the task of building a foundation under a masonry structure then 150 feet high, weighing 35,000 tons—the half-completed Washington Monument. This was successfully accomplished by a system of opposite tunnels, and the monument was continued to a height of 555 feet. Casey afterward built the State, War, and Navy Department Building, and afterward the Library of Congress. This was Casey's life-work—a monument that he left to the corps. The Post-office Building at Washington is another of the corps' structures. F. V. Greene, when an engineer officer, conducted his famous experiments on paving material. He resigned to become president of an asphalt company and has developed, practically single-handed, the asphalt pavement of to-day. Another engineer, Captain Eugene Griffin, made an exhaustive examination of street-railway traction. His treatise, distributed through the country, started the electric traction system. He resigned to organize and manage the railway department of the General Electric Company.

Army engineers were associated with the Croton Aqueduct, Philadelphia Water Supply, plans for the Elevated Road (George S. Greene), and General Raymond (retired) is at present engaged in the digging of the East River tunnels. Professor E. S. Holden, formerly a lieutenant of engineers, built the Washburn Observatory in Wisconsin and also the Lick Observatory.

Scientific books and publications too numerous to mention have been written by members of the corps. One of the latest is by Major D. B. Gaillard on *Rare Action in Relation to Engineering Structures*. Major Gaillard is one of the engineer officers detailed as

assistant to Lieutenant-Colonel Goethals in the work of completing the Panama Canal. The treatise is on an entirely new field and shows the originality and thoroughness of the author. This same originality he displayed in his work on the Duluth Harbor improvements. In the construction of his breakwater he evolved a method of moulding his concrete blocks in place underwater. A folding form to mould a block of required section was lowered into the water and filled with concrete. When this had set the form was opened, drawn up, and moved two form lengths forward and another block moulded. The space between these two blocks was then moulded in by a second form and a continuous concrete wall thus built. From Duluth Major Gaillard went to Washington, where he served on the General Staff.

Major William L. Silet, the second assistant of Lieutenant-Colonel Goethals, has lately been on the Ohio, Allegheny, Monongahela, and Kentucky river improvements. This is an enormous work, including thirty locks and dams and

maintaining a six-foot channel for the coal and iron barges throughout the year.

Lieutenant-Colonel Goethals, who has lately been named chief engineer of the Panama Canal, has been in charge of the Mussel Shoals Canal on the Tennessee River, the Culbert Canal, and the twenty-six foot lift lock at Riverport, and of the defensive works at Newport, Rhode Island. He has been four years in the chief of engineers' office as assistant, and four years on the General Staff. Not the least important river and harbor service that the Engineer Corps has rendered the country is the work of the Engineer Board in killing unworthy improvement appropriation schemes. This and their construction work are necessarily so important in the eyes of Congress that there is danger that the true weight of the Panama Canal work may be lost sight of. The digging of the canal is a project that has baffled engineers for four centuries. It is the greatest administrative problem of the age. To succeed, the office of the chief of engineers must be free to concentrate all its energies upon this one project—everything else is secondary. Until the canal is well under way, let the army engineers alone.

Showing the solid Constructive Work on the Breakwater at Marquette, Michigan. The Government has expended, through its Engineer Corps, over \$500,000,000 on River and Harbor Improvements

THE GOLD AT THE END OF THE RAINBOW

SOME FALLACIES OF SOCIALISM

By W. H. MALLOCK

I HAVE been asked to give, in a brief and condensed form, the main points on which I insisted in a series of addresses on socialism lately delivered by me at various universities in America. All that is possible here is an outline or bare skeleton of my argument.

We hear a great deal about the rise and spread of socialism; but when we speak about this, whether as sympathizers or opponents, there is one thing which we are often apt to forget. We are not speaking of the rise and spread of socialism in a sense like that in which socialists and other historians speak, and very rightly, about the rise and spread of capitalism—which, in its modern form, as socialists correctly say, began to rise and spread about the middle of the eighteenth century, and has thereupon been establishing itself in all the civilized countries of the world. When the rise and spread of modern capitalism is spoken about, what every one means is the rise and spread of an elaborate method of production in actual and successful operation—a method whose practical success is the multiplication of wealth is insisted on by no one more strongly than by socialist writers themselves. In this sense it is impossible to say that socialism has ever spread, or even risen at all. For up to the present time no example exists—except those provided by a few small and unsuccessful communities of anything like productive socialism in practical operation at all. Socialism as an existing fact stands not for a new organization of industrial society, which spreads because it is successful, but merely for a theory, a belief, or a vague hope or feeling that an industrial reorganization of society on socialist lines is possible. In discussing socialism, then, we are discussing not a fact, but a theory—a theory that a new system is workable, and would, if tried, be successful.

Socialism, then, being a belief that some new system of production, which would co-exist with—as a consequence result in—the distribution, is possible, the next thing to ask is what, in its distinctive features, the proposed new system would be. How far would it resemble the present system, and in what specific points would it differ from it? And to this question it may well seem, at first sight, that it is not possible to get any intelligible answer; for if we address ourselves to the different types of people who to-day call themselves socialists, some will give one answer, some another, and some are unable to give any at all.

Two Kinds of Socialism

It, however, we consider the matter farther, we may soon reduce this confusion to some sort of general order. We shall find that so-called socialists divide themselves into two classes, one of which has nothing to give us but sentiment, and has no detailed knowledge of the industrial or productive process at all; while the other class, whatever may be its errors and crudities, attempts to deal in detail with the forces which produce wealth; and having laid down certain propositions as to how wealth is produced at present, proceeds to specify, with as much precision as is practicable, in what special respect the existing method of production, and of the distribution arising from it, may be changed.

But here, again, a new crisis for differentiation. These socialists themselves with whom alone it is possible to argue—for they alone give us anything to argue with—divide themselves into two classes, according to the degree of sustained thought which they bring to bear upon the problem; and we shall find also that, in proportion as their thoughts elaborate themselves, there arises amongst them an increasing difference as to details, and as soon as one of them has told us that he believes and thinks so and so, another instantly tells us that they want and think something different. Still, even amongst them, it is possible to find some general points of agreement; and to these I shall refer presently. But another kind of simplification—and one still more important—is one which can be made at once. This results in a discrimination between socialisms as preached to the masses—to miscellaneous public gatherings, or to the passing workmen in the street, and to socialism which is mainly confined to more or less thoughtful cliques. And for practical purposes, that which concerns us first is the former kind of socialism, as distinguished from, and in many respects opposed to, the latter. For in so far as socialism represents anything which could enable socialist principles to be actually tested, by experiment, through any legislative change in the Constitution, this is the want of men, whether any regard to their intelligence, who could be induced to vote for whatever change might be proposed.

We must, then, begin with popular socialism—the socialism of the street corner, of the leaflet put into the hands of the passing workman—which alone is addressed to, and is alone comprehended by, the multitude.

Utopian Promises

The socialism of the street corner is calculated to attract those who listen to it, solely because it embodies an exceedingly simple

promise—the promise, namely, that the ordinary manual laborer, may, without any additional effort on his own part, decide or trouble, or perhaps quadruple, his income, if he is a only vote into power a certain class of legislators; and this pecuniary promise is frequently reduced to figures. But a promise alone is not enough for the most thoughtless. Utopian promises have been made over and over again, from time to time, during the past two thousand years, and more especially during the past hundred. Yet they have not moved the masses to any important degree, because the latent common sense of the masses has instinctively dismissed them as Utopian; and in the modern world more especially the general feeling has become prevalent, even amongst the least instructed, that no promise will do the workman any good which do not rest upon some intelligible and scientific truth. This fact has been illustrated by the actual history of socialism. Its promises never formed the nucleus of any practical movement until they were supplied with a foundation in some intelligible formula which professed to be scientific, and which was capable of being accepted as such. This desideratum was supplied by Karl Marx, who, in his work on capital, succeeded in exhibiting, as the outcome of elaborate economic reasoning, a doctrine which has been crystallized into the following well-known formula: "All wealth is due to labor; therefore to the laborer all wealth is due."

An Abandoned Formula

The meaning of this formula, when expanded a little farther, is as follows: The wealth of all classes, other than the manual laborer, who alone are really productive, is derived from the products of labor, which are only rendered possible because, owing to bad laws, a minority has been able to appropriate all the modern implements of production—or the great machines and so forth, now in use—while as so monopolized by a minority consisting, according to Marx, the substance of modern capital. Let this minority, which represents an absolutely ineffective overclass, be only dispossessed by law, and the elaborate machinery of to-day made over to the laborer, and the laborer will have nothing to do but divide amongst himself the enormous wealth which he has thus produced into the pockets of others. Moreover, each laborer, according to the hours for which he labors, will be entitled to an equal dividend; and this last doctrine illustrates with the utmost precision the nature of the efficiency which Marx attributed to ordinary labor. He declared that its productivity was in all cases so exactly the same, that the claims of the laborer, individually on their share of the total product should be accorded to them by means, not of money, but of labor certificates, the possession of which by each man would be a guarantee that he had worked for as many hours as matter on what, or how, and was therefore entitled to receive any assessment of commodities he chose, which had involved the expenditure of an equal number of hours of labor, no matter what or whose, in making them.

The more thoughtful socialists of to-day have now abandoned this doctrine; and if it is attacked declares that they no longer hold it. Indeed, Marx himself unconsciously repudiates it as soon as he comes to consider socialism as a practically constructive scheme; for in order to make socialism workable, he assumes the authority of the state, which is supposed to be able to impose labor some sort of control. But meanwhile the fact remains that the doctrine to which socialists appeal when addressing the laborers generally, and in virtue of which their theory gains the vast majority of its adherents, is simply the crude and primary doctrine of Marx, that the mass of manual laborers alone produce all wealth, that each of them produces a virtually equal quantity, and that every man, let him be what he may, is entitled to an equal share. In illustration of this I may quote from a socialist leaflet, at this moment being distributed amongst thousands in New York. "You know, or you should know," it says to any workman who may read it, "that you and you alone produce all the good things of life; and that by so simple a process as casting your ballot intelligently you may gain—" What? The writer a little later tells him, "He does a sum which shows, in his own opinion, the amount of income which would go to the manual laborer if all the wealth of the United States was divided equally among the laborers, and the amount of income which, on the average, each laborer actually receives; and he tells the laborer that, by simply casting his ballot intelligently, he may secure for himself the entire difference between the larger sum and the less."

This doctrine, then, being as an actual fact the main doctrine by which socialism gains adherents amongst the multitude, one primary concern must be to analyze it, and see whether it is true or false.

Labor and Wealth

We find here that we have a definite starting point in the fact that in certain states of society labor really does produce all the wealth that exists, including the rude implements of production which are capable of being made by anybody. These states of

DRAWN BY JOHN EDWIN JACKSON

society are the savage, the semi-savage, or certain isolated modern peasantries, which still may be found existing in more or less inaccessible regions. But in such states of society the wealth produced is very small; and civilizes themselves are constantly increasing on the contrast between the insignificant results produced by labor under these conditions and the immeasurably greater amount which is annually called into existence in those parts of the world where the modern system predominates. Man for man, the productivity of industrial effort with the former is as one to a million; in the latter case it will be as six. What is the cause of the five, or the difference between six and one? The only answer which socialists of the school of Marx can give is that labor has become more productive. But this is merely to state a fact. It does nothing to explain it. The obvious explanation of it lies in a further fact, by which the theory of Marx allows no place whatever; and this is the fact that labor, in proportion as industrial effort has increased in productivity, has been steadily brought under the influence of a human force other than labor itself; and this force consists in the increasing concentration on the industrial process of certain mental, imaginative, and executive powers on the part of exceptional men, by means of which powers labor is directed and coordinated, so as to yield results unobtainable, and generally, indeed, incomprehensible, by the laborers themselves. This can be illustrated, without recourse to history, by the most familiar facts of to-day. Let us take, for example, the case of two printed books, of each of which there are printed ten thousand copies. Both books are put in type by the same compositors; but one book is worthless. The other is a work of genius. Ten thousand people want to read the one. Nobody will read the other. The ten thousand copies of the one are a mere encumbrance in the publisher's warehouse. The ten thousand copies of the other are articles of economic as well as of literary worth. To what is the difference between these two piles of printed matter? It is not due to the labor of the compositors, for this is just as skillful in the one case as in the other. It is due to qualities residing in the manuscripts of the respective authors. These manuscripts, on their economic side, constitute a series of minute orders, emanating from a single mind, by which the movement of the hands of any number of compositors are simultaneously guided for as long as their technical labor lasts; and their labor results in commodities, namely, books, which are valuable or valueless, not in accordance with the compositors' manual skill, but in accordance with the quality of the author's mind, by which the manual skill of all of them was simultaneously coordinated and directed. And so it is with all commodities which are due to these modern methods which alone produce the enhanced wealth which distinguishes the modern age.

And the same is the case with modern production generally. Industrial effort increases in productivity only in proportion as manual labor ceases to be the sole form of effort, and passes under the guiding faculties of other men who are not laborers. To these faculties I propose to give the name of *ability*; and I shall use the same of ability; and the essential difference between labor and ability in this—a difference not of degree, but of kind. Labor is the application of a man's faculties in one task at a time, whether this be the wheeling of a wheelbarrow or the juggling the most delicate of delicate jugglers. Ability is the faculty which directs and coordinates the labor, whether skilled or unskilled, of any number of laborers at once.

The Meaning of "Wageless"

Now I need not for the moment insist on this point farther, and for this reason. The more thoughtful amongst the recent socialists admit the general fact themselves, though they have not submitted it to any very close analysis. They have indeed adopted the very same ability as standing for these directive powers on which the greater or less efficiency of labor in the modern world depends. I will speak of this again presently; but meanwhile a further immediate question confronts us; and this is the question of how the directive powers of the few manage to impress their guidance on the manual operations of the many; and the answer is that they do so through capital under one of its several forms. This form of capital is wage-capital, or a collection of the daily necessities of life, which the capitalists do not monopolize in the sense of keeping them for their own consumption; but which they monopolize merely in the sense of controlling their distribution so that they are apportioned to the laborers on certain special conditions—those conditions being that the laborers shall use their hands from moment to moment in accordance with special instructions. In the making, for instance, of the Panama Canal the first thing required is food and clothing for twenty or thirty thousand workmen, which will supply their requirements for all the years which will elapse before the work is completed; and these necessities are apportioned to them at convenient intervals on condition that each man performs the special task assigned to him. Wage-capital becomes thus the means of ability, by means of which the whole innumerable team is guided. "Fixed capital," such as machinery, is merely the result of this application of wage-capital. Capital is primarily the mind of the few guiding the labor of the many; and it is secondarily the mind of the few directing the machinery which enables the many to cooperate in producing. What socialists call wageless is, in the modern world, simply the means by which superior minds impose their technical guidance on average mind and muscle.

And now let us go back to the socialists. In spite of their wild talk about the emancipation of labor under capitalism, the more thoughtful of them admit that this guidance must still be a necessity, unless society is to relapse into the methods and the poverty of primitive barbarism; and that such is the case they not only admit by implication, they have actually formulated the fact, and devoted special attention to the problem on which I have just been

dwelling—namely, that of the means by which the few may impose their guidance on the many; and their main preoccupation has been precisely this—how to provide a means by which this guidance may be accomplished, which shall not be the existing wage-system called by another name. This problem is dealt with specifically in a volume published not many years ago by the most thoughtful socialists in England—a group which comprises Mr. Bernard Shaw and Mr. Sidney Webb; which book was subsequently republished in America, under a special preface by the same group of writers. In this preface it is stated that no scheme is really socialistic which will not abolish all inequalities of remuneration, and "prevent the possibility of their ever arising again"; and the only way to do this, the writers continue, "is to make an equal subsistence for all men the inalienable right of each man, quite independently of the specific services rendered by him." On the other hand, the writer continues, the requisite services will be exacted from each by the able directors of industry under a uniform law, just as taxes are now collected, and military obedience exacted from soldiers.

Now no doubt, so far as ordinary labor is concerned, this proposal is not theoretically unworkable. Indeed, it is a system which has been in operation for the greater portion of human history. It is, in fact, the system of economic slavery; for the essential feature of the system of slavery is this—that the subsistence of the slave is guaranteed to him by his master, just as the subsistence of a house is, and the requisite industrial obedience is extorted from him by direct coercion—by the lash, for instance, or by the fear of it.

That the laborers of America would prefer this system to the present one, which is far from being as good as the one as ordinary labor is concerned, it is not theoretically unworkable.

But there is a further point to be noticed. It would be theoretically possible by coercion to extort any prescribed form of manual labor from the ordinary man, because anybody can tell approximately what the ordinary man is capable of doing, and the one could have told that Shakespeare was capable of looking horses, and made him hold them. But no one could have told, by looking at him, that he was capable of writing "Hamlet." The same is the case with exceptional industrial ability. The only way in which it can be elicited is by the offer of some inducement or reward which the possessor of these talents will himself feel to be adequate.

Now here again, somewhat unexpectedly, we find ourselves in touch with the more thoughtful socialists of to-day. For they have not only been discussing this very question of what kind of reward, inducement, or motive, could be offered by a socialistic state, of a kind which would really stimulate the faculties of the exceptionally able man; and have admitted that, unless they were stimulated, they would be practically non-existent.

Thus, in proposing this system of industrial slavery, instead of slavery, tends step by step to resolve itself into a constitution of society like the present; still at last we find that its one distinctive feature consists of a scheme relative to this single problem; namely, how to secure the services of the able man cheaply—how to get the best of him, and give him something or anything as long as it is not dollars.

Art, Warfare, and Drudgery

In order to discuss some substance of the kind in question, the intellectual socialists have turned their attention to fields of human activity other than that of economic production—the activity of the great painter, for example, and more especially that of the soldier; and have argued that because a *Vincent* will paint a Christ or a Madonna, or because a soldier will risk or lay down his life in battle, without a thought of gaining any monetary or commercial recompense, the same temper of mind can easily be produced in the men whose talents are devoted to the multiplication and cheapening of neckties, carpets, stay-laces, and the trifling for women's petticoats. Nor, indeed, is this idea peculiar to professional socialists. Ruskin declared that his whole system of political economy was based on the possible assimilation of industrial activity to military; and Mr. Frederic Harrison, to the delight of many English socialists, has asserted that the readiness of the soldier to risk his life in battle shows how readily the human being can be induced to dare and to do anything out of devotion to his country's welfare, if he will die for his country without monetary reward. It stands to reason, say the socialists, that he can easily be induced to work for it on similar terms.

This attempt to establish a connection between industrial activity and military is a type of the childish superficiality with which socialists are accustomed to reason. If they really took, as they profess to be taking, a scientific survey of the human character as a whole, they would see that men's conduct as fighters is altogether exceptional, and that, though they are often stimulated by attachment to the country or cause for which they fight, their activity as fighters has some other cause behind it, with which attachment to cause or country has nothing at all to do, and in without a parallel in action of any other kind. The instinctively about the fact, which Mr. Harrison seems to have forgotten, that the most reckless and boldest soldiers known to history have been mercenaries who would fight as willingly for one country as for another. The fundamental explanation of the fighter's conduct in this—his constant eagerness of the intestine struggle to which the development of the human race is due, the fighting instinct is ingrained in the nature of the dominant races in a way in which the industrial instinct is not; and will always prompt numbers to face, without ulterior motive, toil and pain and danger, which in the field of industrial activity we find only when the stimulus of some ulterior motive whatever. We may see this by the conduct of boys at school, who will risk having their noses broken for the mere pleasure of fighting, when they would not run the risk of a headache for the sake of learning their lessons.

(Continued on page 612.)

A black and white photograph capturing a large crowd gathered for a parade or festival. In the foreground, a large, ornate float is visible, heavily decorated with many small, light-colored objects, possibly balloons or flowers. A large American flag is prominently displayed on the float. The crowd is dense, filling the street and surrounding areas. In the background, a street lined with buildings and trees is visible, suggesting an urban setting. The overall atmosphere is one of a significant public event.

From photomicrographs prepared, after, by Goldmann & Goldmann (1963), it is possible to see that the

W. A. ROGERS

THE REVOLT AGAINST THE WHISKER

EXHIBITS BY DAN SAYRE GROESBECK

PERHAPS no greater evidence can be found of the sure and rapid growth of the aesthetic sense of the American people than the present revolt against whiskers. Originating in Upper Montclair, New Jersey, a suburb of New York, inhabited by patriots whose feeling for the beautiful is equalled only by their Spartan readiness to die, if need be, for the right, the revolt has run like wild-fire over the land, leaped lightly across the Atlantic, and spread with marvellous rapidity throughout his latest England.

Mr. Cornish, a Democratic Assemblyman from Essex County, is the embattled hero who fired the shot that is heard around the world—at least the civilized world. He introduced in the New Jersey Legislature, on April 1, a bill to tax whiskers. There was some sharp debate, during which cowardly attacks were made upon the measure by low-minded persons emboldened behind No. 1 Red Winter whiskers; but at last right prevailed, and Speaker Edwin referred the bill to the Committee on Fish and Game.

Of course it was necessary to emphasize the utilitarian as well as the aesthetic side of the project. Mr. Cornish showed: (1) the tax on whiskers will go far toward paying off the State debt; (2) the discarding and suppression of whiskers will give employment to 3000 New Jersey barbers, and make life happier for the 12,000 wives and children who look to them for bread. He also reported the deplorable fact that in northern and central New Jersey there is a growing tendency to cultivate whiskers.

Involved Breese-Involters

"I made," he said, "many inquiries and collected much valuable data. Many whom I questioned were coarse and vulgar men, whose language to me when I politely asked the reason they wore whiskers is not fit to repeat. The majority said that they wore beards as a matter of economy, to save both barbers' fees and the cost of neckties."

Mr. Cornish thought that an equitable schedule would be about as follows:

Common or garden whiskers, \$5 a year.

Mutton chops, or Senatorial side fuzz, \$10.

Square chin and side pattern, \$30.

Red (of any design whatsoever), 25 per cent. extra.

Here we find the germ of a great idea which, as these lines are written, is being developed and elaborated in committee. The following cuttings have been added to the whiskeriferous schedule:

Dandycary, or lamproquin style, \$8.
Ministerial sideboards, \$10.
Imperial, paint-brushes or ordinary camel's-hair pencils, \$30.
Geometrical reticous dusters, \$30.

A secret rumour of the Legislature reveals the fact that the members of both Houses are eager to tax the capillary molecule-carriers, but they fear reprisals. It is reported that even now groups of sturdy, burly men are gathering in the mountain fastnesses of Museum-Long, Pennsylvania, Watkinson, and Pumpton, resolved to take hideous revenge. The pen trembles to write of the ingenious and horrible tortures they purpose to inflict. Pale accents bring in word that these vandals have bound themselves by oath to weave their whiskers into barbed and thereafter to rope and hang all legislators who vote for the tax. The barbers were ever a cruel folk.

No matter. If worse comes to worst the Loyal League of Defenders of the Face will afford a refuge for the hairied legislators.

A picked corps of commuter warriors from the Upper Montclair Democratic Club has promised to go to the aid of the whisker-tasters at Trenton, and, armed with rapid-fire lawn-mowers, to disarm the hairied legislators.

Square Chin and Side Pattern

The Walrus

Enthusiasts for hygiene no less than lovers of the beautiful will be gladdened to hear that the good work is surely advancing in England. That eminent capillary connoisseur, Frank Richardson, called Frank Whiskerson by Punch, because he is the greatest living English authority on whiskers, is doing all he can to help the taxation plan.

"It is the best thing in the world," he said, in a recent interview. "The idea is splendid. It ought to be introduced in England at the earliest opportunity, but the taxes are not heavy enough. They should amount to £20 per whisker. I've never seen a man wearing a single whisker, but I don't see why it should not be done, just as a single eyeglass is worn. If men insist upon going about as if they were blebs on the hind-

Geometrical reticous Dusters

scape I don't see why they should not pay a high price for the privilege. Of course the tax would be difficult to collect, and the only way out of the trouble would be to make people take out whisker licenses, just as they take out dog licenses. Police constables should be empowered to stop any man they saw between whiskers and nail upon him to produce his license."

Mr. Richardson supplied the first official list of known face furnishings. It is as follows: Whiskers, ear guards, face fins, weather-crecks, face fagias, bodalls, bearth-rugs, cutlets, paint-brushes and the whiskered, mustaches, the inverted eyebrow, and the walrus. He said:

"There is no reason why mustaches should not be taxed also. A modified mustache like an inverted eyebrow, such as I wear myself, might retail at a pound, whereas a walrus should not be allowed in the street until the man behind it had paid \$20 to the government."

But much remains to be done. The New Jersey legislators may still find certain species of the crafty whiskerifics escaping just taxation because of a discrepancy between the State's schedule

Mormon Elders' Face Mats

Hackensack Tufts

—hop whenever the wearer eats, talks, or smokes. To resume the list:

Sprinklers, whether straight or curly, \$75.
Highway slingers, except red ones, \$40.
Comely Antrim life-boats, \$35.

Hockeloren Kaiserliche schnurrbartbinden, \$100.

Mormon elders' face mats (with shavers upper lip), \$500.

Oriental baggies, \$30.
Black, brown, or gold-throat-latches, \$3.

Upholstery on points of jaws, \$25.

Neck-white-hair red banners, \$100.

Unintentional lavatories between-livers, \$1000.

Birds' nesting-grounds—usually, VINIFLATHIN.

This may look rather savage, but the punishment doesn't half cover the crime. It is designed to prevent the propagation of the duck,

noisome, unbarbered, deep-angled wildwood whidgerage to which Edward Lear so pointedly drew attention in this wise:

"There was an old man with a beard
Who said, 'It is just as I feared,

An owl and a hen, two
birds and a wren.
Have all made their nests
in my beard.'"

Prudent barbers and economists will work harder than Dingley-tariff schedule-makers and find still other taxable capillary forms. For example, there are the chin-chills, and guards, farmers' field-mouse traps, bad straps, whiskerets, whiskereras, whiskerados, whisker-crowns, and whiskerolls, to say nothing of the many styles of pseudo-whiskers or false beards worn by actors, highwaymen, second-story operators, and other indistinguishable persons who must needs conceal their identity.

The owners and trainers of whiskers may fight the tax as arbitrary and unconstitutional, but they cannot prevail. For, as Paracelsus, or some other fellow, very truly said,

"Whiskers have no friends."

Imperial, or Paint-brushes

Birds' Nesting-grounds

and their particular sort of whisker parterres. To aid in the capture of such evaders these amendments to the whisker tariff are submitted:

Fairbairns, plain or curly, \$30.

Hackensack tufts, \$127.

These latter are the sprouts spoken of by the poet Tony Pastor in his exquisite romance whose refrain runs:

"And he went back to the town of Hackensack
With a little bunch of whiskers on his chin."

For the benefit of dwellers out of Jersey let it be noted that the Hackensack tuft is shaped like a thick dove, and thrusts boldly downward and forward from the end of the chin. The reason for taxing it so high is that it intrudes itself into all conversations and makes a noise like hop—hop—hop

OUR ELDER STATESMEN

By JOHN KENDRICK BANGS

I see beside me those who are described by Mr. Choate as "back numbers" and "ex-officials," but whom I think could be better described by the Japanese term of "elder statesmen."—*Mr. Bryce at Pilgrim's Dinner*

WHAT a tactful, gracious way
To speak of those who've had their day,
And sought Salt River's saline spray,
As "Elder Statesmen!"

Just think of Chaucery M. Depew,
And Thomas Platt, and Hayden too—
The idea's really fresh and new—
Our "Elder Statesmen!"

O who can estimate the scale
Of tact it takes this way to hail
A Kansas Senator in jail—
An "Elder Statesman!"

Then there's the genius near the Park
Who owns that architectural lark,

His name, as we recall it, Clark—
The "Elder Statesman!"

And Richard Croker, now of Cork,
Who used to grill the towns of York
Upon his private toasting-fork—
As "Elder Statesman!"

Moran and Hearst, and dear old Murph,
Care masters strong, not one a wolf—
Now twenty-three along the turf—
All Elder Statesmen!

I wonder if we'll ever see
The day when we shall dub the P—
B—E—S—I—D—E—N—T
An "Elder Statesman!"

THE THORN IN ENGLAND'S SIDE

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY."

WHEN Parliament reassembles after the Easter recess one of the first matters it will take in hand is bound to be the Irish question, and it is fair to say that Irish will be only in the programme in so far as a forward-looking measure for the better government of the country, but it is also announced its initiation of tackling the problem of Irish university education. Both are thorny issues; both are sure to stir feelings even more than the normal level of the Irish question, and they will accordingly absorb the energies of Parliament for many months to come. Of the two, the government's devolution project, while really less important—for the supreme need of Ireland is education—is from the purely political point of view more so. To meet that need, the Government has been endeavouring since Dublin, through no fault of its own, has enjoyed almost since Queen Elizabeth's day, is to rouse a fierce but restricted antagonism. To take an avowed even of a tentative step towards home rule is to summon up in opposition an hazy but very real legacy of centuries of English misgovernment, and the Government's devolution scheme that the full force of the storm will burst. There is evidence here of that sense of disproportion which is the hallmark of politics. But there is no use in fighting against the wind. The Irish question is a fact of life, and it is a fact of life for Ireland that the most important thing is home rule. The only thing in the Irish question that really engages outside opinion is the struggle for autonomy, and as devolution represents a phase of that struggle, it at once becomes the centre of a commanding interest. It is not surprising that the Government should write, merely prefacing it with my private conviction that while self-government of some sort is an essential aid to Irish regeneration it is by no means the most essential aid, and that the Government should be more than anxious to see that the Government will, in due time, be shown that the House of Commons

To any one who wishes to get a clear idea of the Irish situation I would most heartily recommend a book just published by Lord Dunsany, *The Gaelic in Ireland*. Lord Dunsany has played many parts, but none more conspicuously useful than his part as a student of the Gaelic language and the Gaelic Irish landlord, he has risen clear above the narrow traditions of his class and environment. A Unionist, he is yet an ardent Irish patriot whose mind, within the ample limits of its political range, plays with a dispassionate neutrality over the whole gamut of the political and social problems of Ireland. He is, he says, a Protestant, and a Unionist. I hold to my class, my creed, and my political faith." But he has proved that to be a Protestant is not to be a bigot, that to be a landlord is not necessarily to have any sympathy with the aloofness of the ascendant class, that to be a Unionist is not to be a traitor to the Irish people. He acknowledges all that is unsatisfactory, anti-national, and strife-producing in the scheme of Irish administration, and falls on his knees behind the most fervent Nationalist of them all in his desire for reform. Lord Dunsany stands in the very front rank of those who are doing their best to clear up the Irish situation, and it is out and that if it is to have any usefulness and any justification in the future it must put itself in touch as far as it can with national sentiment, he more than any man was responsible for that incredible coming together of landlords and tenants that held the country together in the time of the famine.

He presides over that historic conference with an ability and a grasp that in my judgment will always procure for him a high place in the too small list of those who have worked for Ireland with a thought of self and along lines of scrupulously practical conduct. He has the gift of a clear and simple style of expression, and the same happy talent for progress-linked with reconciliation, to the wider hopes of Irish government—hoping to establish a common ground on which rational men of all parties may meet and work for the national good. This book, admirably written and ably illustrated, is a most valuable and interesting summary of what has been achieved and a strong and consistent plea for a further advance. I know of no volume which presents so clearly, acutely, and persuasively or with so much of the true statesmanlike insight, the determining realities of the Irish

It is the custom of Lord Dunraven's case that with the least question at last in its way to settlement, a unique chance of effecting a durable harmony is offered to both England and Ireland. If the Irish will only show themselves more conciliatory, more willing to believe that justice will follow upon reasonable demands, and if the English will only get out of their heads that notion of a "Anglo-Irish" alliance, and realize that Ireland cannot develop on her own lines and that in Ireland, as in the great self-governing colonies, imperialism, to be worth anything, must follow and cannot possibly precede, the sense of nationality—then there is no reason why the two peoples should not join together in the practical march of betterment. The need for such cooperation is more pressing, and the opportunity more favorable, than has ever been facing away. Nearly four and a half millions of them have left the Irish shores since 1841 and partially all of them have been in the full vigor of life, and those who have remained have, for the most part, been the less physically fit, the most mentally deficient, and those who correspond to the lowest industrial standard, and this unparalleled exodus, besides all the other political and economic consequences, has left Ireland less a later acquisition of need than any other country in the

King's rheumatism, means also that among those who lay behind labour, pauperism, consumption, are terribly on the increase, that the Irish birth rate is the lowest in the world, and that the wages of the Irish agricultural labourer touch the appalling average of £2.75 a week. We might Lord Dunraven exclaim, "Ireland is the poorest of people." But he sees signs of hopefulness in the gradual growth of wealth. He has seen the progress of agriculture, the reform, of the long agrarian strife, in the comparative peace that has settled over the country, and in the almost universal agreement that the Dublin Castle system of government stands condemned. He makes, however, no attempt to hide the immensity of the work which must yet be done. The administration of the Wyndham Act needs improvement; it needs more energetic supervision by men who write with unequalled knowledge and authority; the uneconomic holdings, of which there are 200,000, must be enlarged and their occupation must be encouraged and assisted to supplement their incomes from other sources; the railways and the post-office need reorganisation; there must be radical changes in the taxation which at present paralyses the manufacturing industry; the very poor; drainage and harbor works ought to be prosecuted by the state; relief must be had from the overwhelming financial burdens under which Ireland is staggering; and the whole educational system should be pulled down and rebuilt from top to

To all these, others Lord Dunraev devotes paragraphs or chapters of extreme clarity and good sense. His conception of Ireland as a whole is this: "A country not naturally adapted to the growth of a great manufacturing power, but one of great power and of some coal; a country extremely well adapted to agricultural industries of all kinds, but containing a large number of uneconomic holdings; a country poor in this world's goods, but rich in the goods of nature; a country with a high level of development; a people endowed with great natural capacity for industrial manufacturing pursuits, especially of an artistic character, but forced to depend upon agriculture through a lack of capital; an industry of the land, but with a large part of its labour earned, engaged largely in a speculative branch of it; a people hourly handicapped in respect of agriculture by the weight of the rent; a people who are largely ignorant of the conditions of the districts under the land of local rates, feeling the burden of indirect taxation more acutely than any of the other units of the United Kingdom, England, Scotland or Wales; a people suffering from a general loss of initiative and energy, and from a number of restrictions upon their natural development." Estimation, the light of modern science and modern thought, and more all "the self-regard begot by power, the self-esteem derived from duty," are the chief causes of this state of affairs. "The chief cause of apathy, lifted out of despair, and though much may be done in minor directions, the real motive-power can only be found in self-government—in an active interest in the management of their own affairs."

Insisting always on the necessity of the crisis and appealing to all Irishmen to lay aside their factional wranglings, Lord Dunsany went on to develop his scheme for reforming the system of government in Ireland. He describes, with all the mastery of a man in whom administration is an instinct, that amazing jumble of a system, which is at once a chaos, a confusion, a waste of time and sort, and a very bad sort, of bureaucracy—a government by departments in Ireland, uncontrolled by Parliament, uncontrolled by any public body in Ireland, subject only to a department in London. . . . It is the most expensive system of government in the world." Lord Dunsany estimates that if it were properly reformed, it would save the country £1,000,000 a year, and if at the same time the judiciary were reformed, economies to the extent of from one to three millions sterling a year could be effected. I do not propose to describe in any detail his plan of devolution. It is set forth with the utmost conciseness and lucidity, and if it were to be realised Parliament would be free at last to do its duty. The only question is whether it can be properly, Ireland's claims would be dealt with by men who know the country, and all the savings effected by Irishmen in the administration of their own affairs would be spent in the country. Those are the objects to be kept in view, and Lord Dunsany shows that they can be attained without in the slightest degree impairing the efficiency of the Government. His plan is consistent with Unionism, and that at the same time they put the effective administration of Irish affairs at last in Irish hands. In some admirable chapters he points out that devolution has been the key-note of British success in Imperial rule. To whatever country it has been applied, that country has been prosperous and powerful. It is the only policy which has been successful, and it is, neither nepotism nor loyal. May there not, he asks, be here an instance of cause and effect? And he answers decisively that until the Irish are associated with the work of government, the country will never be contented and never feel the impulse and the stimulus to betterment from within which only responsible government can give. "The only way to bring about its complete effective supremacy is my circumstance; but, emanating from that centre, and within that circumscriptible limit, I desire to see the largest possible freedom of action and self-governing power delegated to Ireland." That, of course, is not Nationalism, neither is it the old form of Unionism. But it represents a half-way stage between the two. It is a policy which is not only perfectly practicable for ten and possibly twenty years, confident and

THE LIVINGSTON'S NEW CLUB-HOUSE AND GARAGE OF THE AUTOMOBILE CLUB OF AMERICA IN WEST FIFTY-FOURTH STREET, NEW YORK

TWO GILBERT STUART PORTRAITS RECENTLY ACQUIRED BY THE METROPOLITAN MUSEUM

The First Spanish Minister to the United States, Don Josef de Jandenes y Nebot, and his Wife

A CERTAIN historic interest attaches to the two portraits by Gilbert Stuart recently acquired by the Metropolitan Museum of Art, apart from their noteworthy intrinsic merit. They represent Don Josef de Jandenes y Nebot, Spanish Minister to the United States, and Dona Matilde Soughton de Jandenes, his wife, and were painted in New York in 1794. The paintings were taken to Spain on the recall of the minister, and have remained in that country until their recent purchase by a firm of art dealers in New York. Don Josef was born in Valencia on March 25, 1764, and was therefore thirty years of age when this portrait was taken, while his wife was only sixteen, having been born in New York on January 11, 1778. Both canvases bear the signature and date, G. Stuart, R.A., Sept. 8, 1794. "Rapidly and lightly as the pictures are painted," says Mr. Kenyon Cox in an interesting appreciation, "they can hardly have been done both in one day, and one is left to wonder what this precision of date may mean. Not improbably September the 8th was the day of this early international marriage which the pictures were intended to commemorate. It should not be difficult, by a little research, to determine the question."

"The pictures are very similar in general composition, the man facing to the observer's left, the woman to his right, the heads occupying almost exactly the same place on the canvas. The Spanish minister is dressed in a dark blue coat lined and faced with scarlet, a scarlet waistcoat and breeches, and white stockings. The coat and waistcoat are profusely decorated with silver lace. He wears a dress sword, and his high cocked hat and gold-headed cane lie on the table at his side. The chair is upholstered in light blue, and the taboleths and obligatory curtain are green. The looped-up curtain shows a conventionally treated bookcase with a few books. The lady is all in white, with a high head-dress of feathers, and wears a profusion of pearls and jewels. The curtain is a brownish pink, the chair and taboleths red, and in place of the bookcase there is a glimpse of blue and pink sky."

"Stuart was thirty-nine when he painted these pictures, and had been two years returned to this country. Some of his later work was in its broader, softer, with a vaporous quality about here, but nothing so very did is cleverer in its way, and portraits by him in which so much attention is given to the costume are rare. The portrait of the lady is the more agreeable of the two.

The high head-dress gives an apparent reason for the placing of the head low on the canvas, which was a habit with the artist, and the gray-whites and sharply touched jewels have been softened by time into an agreeable tone. Even a hundred years have not availed to mellow the blue and vermilion of the male portrait, which is still somewhat thrill in color, while the position of the head, probably painted first on a black canvas, has forced the painter to a reduction of scale in the figure which makes it rather absurdly tiny. In sheer economy of means, and ease and freedom of touch, both portraits are astonishing. The pearls and jewels and the gold stripes on the lady's dress, the man's habit and cuffs and silver embroidery, are marvels of prodigality, as far as the handling alone is concerned. But it is the freedom of routine and recipe. There is no serious study of drawing below the faces and no serious study of values anywhere. Compared with the workmanship of the great masters this is the handling of a clever journeyman decorator, who has painted the same ornaments a thousand times until he knows exactly how many strokes are necessary to produce his effect, and who never puts in one more than is necessary. He is not concerned with any subtleties of form or tone or color; he is producing with the utmost expedition and the least possible labor what will pass for a satisfactory portrait."

"Even in the heads there are evidences of routine—notably the high-lights in the eyes, which are touched in sharply to give the desirable sparks which others tread upon, without any regard to where they would actually occur. But the heads show also that sense of character and of construction which is absolutely essential to success in portraiture, and that of the lady is distinctly charming. They are evidently likenesses, and what are called, by friendly friends, "pleasing likenesses," of his sitters. The pictures reveal Stuart as essentially what used to be called a "face painter," and this he became more and more as time went on. The bodies, the hands, the draperies, here treated cavalierly enough, are increasingly neglected until he is tolerably successful in such canvases only as were left unfinished after the first sitting, with so impossible bodies to distract the attention from the admirably suggested heads. Never a great artist, he was, for long, the best painter America had produced, and the museum is to be congratulated on possessing two such important and well-preserved examples of his relatively early work, painted before his greatest faults had reached their final stage."

MOTOR-CARS IN THE EGYPTIAN DESERT

HOW BUSINESS AND PLEASURE PROFIT BY THE NEW MACHINES

By W. G. FITZ-GERALD

THIS season has seen a greater number of motor cars than ever in Egypt, nor have they been all of the touring or pleasure variety; for the desert is being opened up in all directions by big corporations, both agricultural and mining, and the pioneer staffs of these concerns are using entirely new types of machines, especially that known as the tri-car, which weighs about seven hundredweight, and costs, with a nine-horse-power engine, \$725. It is fitted with a double cylinder, water-cooled engine, with forced circulation, high-tension ignition, three forward speeds and reverse, roller-chain transmission and wheel steering.

It is amazing to see how the Libyan Desert is overrun with these curious little engines, carrying inspectors, pioneers, agricultural experts, and members of the home staffs of big agricultural and mining interests, such as have been attracted to Egypt lately during the season. The car covered 2500 miles with an average of 25 miles for each gallon of petroleum.

The ordinary pneumatic tires are protected from the burning sand by leather and iron-studded bands; and companies have been

The number of automobiles in Egypt during the past winter has shown an intense increase. There were nearly 300 powerful machines registered in Cairo at one time, as against about 105 last season; and several new garages have been built in the city of the caliphs.

The opinion of everybody is in favor of cheap cars which have an enclosed top and are of low horse-power. There are no hills to climb, and admirable roads for police service in the Eastern Desert are in construction by the Mining Department of the Ministry of Finance. The road from Edfu to Iking has just been completed, and is a magnificent racing track 80 miles long.

From Iking it will branch both to the north and to the south, the latter way going through the oases, while the northern branch is to join the Keneh-Cosseir road from the Nile Valley to the Red Sea. Keneh is another base for a road running north along the old Roman way, constructed in ancient times to bring down porphyry and precious marbles from the Red Sea coast to the Nile, where it is to be used for the construction of stately palaces. The Edfu Iking road has been very largely used for motorcars; and new types of cars have been specially built for the Department of Mines, and have proved most satisfactory; for, strange to say, they are a far less costly and difficult means of conveyance than the camels, which from their immemorial have ruled all things in the desert.

During the last trip of the Mining Department tri-car, 773 miles were accomplished in four days, which were spent in the ordinary work of inspecting roads and government and private mines. The corporation in western Egypt is also using the new tri-cars for its officials, striking away from the Nile and making for the Western Oasis. The rulers take provisions with them, and sometimes small shelter-tents. And with this unrivaled means of transport they are able to cover immense areas and take valuable notes about the possibilities of irrigation, especially in the way of sinking artesian wells, such as have already made Nile valley land worth \$75 an acre.

More of these tri-cars are ordered for the alum, ochre, and salt prospects; and even some of the French and German scientists engaged in excavating desert tombs use these motors, and find they can accomplish in an hour or two what it formerly took a fleet and the greater part of a working day to do.

The Egyptian cotton planters of the Delta, too, are turning their attention to these light fleet tri-cars, which have a petrol capacity of about 120 miles, and have proved themselves the ideal means of transport in the Egyptian desert.

Egyptian Mining Inspectors setting out from Cairo on a Tour into the Libyan Desert on one of the new nine-horse-power Desert Tri-cars

formed, such as the one at Port Said, to inaugurate special desert services. The Port Said motors accommodate twenty-five passengers each, and, by taking short cuts to the Arab villages, do the journey in less than half the time taken by the ordinary horse-drawn.

The Government as a Lumber Merchant

From several aspects a striking interest attaches to the recent sale by the government of about 50,000,000 feet of timber on the Montana division of the Yellowstone Forest Reserve to a contracting company, which will convert most of the timber into railroad ties.

This is one of the largest sales ever made of government timber; the price is advantageous, and a large percentage of the cut will be of a species which a few years ago was without market value, namely, lodgepole pine. Further, it may be said with assurance that had not the preservative treatment of ties been shown to be both profitable and economical, such a sale could not now have been made, for sixty per cent of the cut, or approximately 1,000,000 ties, is to be treated with preservatives by a

process which experiment and trial have placed on a sound business basis.

The purchasers of the timber have contracted to supply the Chicago, Burlington and Quincy and the Northern Pacific railway companies with ties for a period covering three years. The timber for which they applied in the government consists of lodgepole pine, red fir, and spruce. A large proportion of the stand of lodgepole pine grows very densely. Consequently, after all the specified timber has been removed, a plentiful stand of young trees will be left, which in a few years will again form a forest of merchantable dimensions.

The government will receive a stumpage price of \$2.50 per thousand feet for the red fir, and \$2 per thousand feet for the spruce and pine.

The story of the strange use of lodgepole pine into the timber market is an interesting chapter in the history of the use of forest products. Five years ago this tree

was classed among the nearly worthless, inferior timbers growing in the Northwestern States. It had never come into extensive use. Its liability to attack by insects and its check in drying, its softness and lightness, and the large percentage of sapwood in its structure were disadvantages which seemed to handicap it permanently. Yet the possibility and the need of finding substitutes for scarcer woods had already led to the closer study of a number of unexploited species, and efforts were being sought by which artificial treatment might be made to take the place of natural adaptability to a specific insect.

Among these devices were improvements in seasoning methods and the use of preservatives. It was found that preservative treatment, which greatly prolonged the life of certain timbers, depends largely, for its success upon the penetrability of the wood, which permits the preservative to enter the wood substance easily.

The Gold at the End of the Rainbow

(Continued from page 638.)

But the fallacy of the socialistic reasoning, in this respect, is still more strikingly shown by the arguments which they use themselves when they turn from human nature, as they say that they can easily make it, to human nature, as they actually find it at present. The more thoughtful socialists of to-day, such as Mr. Sidney Webb, admit that "business ability," or the higher directive faculty in its higher forms, is the "natural monopoly" of a minority, and he and other modern socialistic writers recognize in these monopolies a class which, in virtue of its talents and temperament, is clearly distinguishable in all periods of history; and applied this class their main moral indictment is that from the days of Tyre and Sidon till now its industrial activity has always been dependent on one motive—namely, its desire to be paid in kind—that is to say, a desire to retain under their own control an amount of wealth proportionate to that which their own exceptional efforts have contributed to the total stock. And these men, in whom they declare this temperament to be innate, and are the precise portion of the human species whose characters they propose to transmute by a decade or two of popular legislation.

This is not all. There is a stronger argument still, supplied also by themselves, which shows how completely futile their ideas are to this subject. An educated socialist, who was one of my listeners at Philadelphia, had some private conversation with me; and he told me that, in his own case—he being an official employed by some large business firm—and in the case of all the working men to whom he preached the socialistic gospel, the root-idea which made men socialists was this—the idea that, under the present system, the wages or the salaries which they received were not in all respects equal to the service which was actually done in their various personal exertions. Some portion or other was always subtracted by the employer. This supposed situation, my socialist acquaintance told me, was what he and socialists generally could not stand, and it was this situation which he looked to socialism to remedy. And in the teaching of other socialists the same thing is implied also. This is the moral implication of the doctrine of Karl Marx as to labor. Since all wealth is due to labor, the laborer is unrightful unless he gets everything; and on these grounds he has a sacred right to demand it.

Now, this state of mind which the socialists assume on the part of the employed, and the demands arising from which they appeal to as the instinctive expression of the normal man's idea of justice, stand precisely for their state of mind which, when it occurs in the case of the employers, they represent as easily changeable by the workman's use of the ballot-box. In short, the socialists virtually say to the employer: "You, the vast majority of mankind, naturally desire, and always will desire with justice, to possess to the utmost dollar's worth all that your labor produces"; and they then turn to the man by whose ability labor is directed, and who, as they admit themselves, contribute most to the productive process, and say: "As for you, we will turn your nature upside down. Instead of securing to you all that you produce, we will take away ninety-nine hundredths of it; and we will raise you, by means of our ballot-boxes, to receive as a delightful privilege the same kind of apportionment—that on a very much more extensive scale—that we are giving the majority of mankind to reward as an intolerable injustice." And that such is the case has been recently admitted by Comal Toloday in one of his publications, entitled *The Only Issue*. In that work he confesses that the desire of the great director of labor to retain an amount of wealth proportionate to the amount produced by him is merely an equally admitted desire which is equally operative in the case of all hundred and ninety-nine out of every thousand workmen also. In other words, according to Comal Toloday's admission, the desire of the producer to

possess in proportion to his products is the normal desire of every man, and the most ordinary laborer or the most gifted director of labor; and such being the case, he proceeds, with a truly magnificent naïveté, "all that is necessary, in the present state of affairs, is that men of all classes should abandon their present motives, which have been inoperative in human nature from the dawn of civilization till to-day, and suddenly invest themselves with a new character altogether."

This proposition, when put in its naked form, is too chimerical for the more thoughtful socialists themselves, though it is precisely this proposition to which they have been reasoning concrete them. They have been forced to admit that some men produce indefinitely more than others; and they realize the absurdity of proposing to mankind at large that they should make the human race, who produce comparatively little, are to lose something on their right to the whole of their own products, the minority, who produce much, are to have it on an imperative readiness to let their products be taken away from them. But being still determined to secure the adherence of the laborers, and to justify the claims of labor with which they originally started, the intellectual socialists of to-day, whenever they address the masses, give all their attention to making the admissions which they eagerly make when confronted by competent critics, and still insist, in the presence of men of sense, or the old doctrine of Marx, that labor produces everything, that the directors of labor are a wholly negligible quantity, and that all wealth ought to go to the manual laborers. They are, in fact, like Oriental, who profess to have been converted to Christianity, and who, when in the company of educated men, recite the Athanasian Creed; but who, the moment they go round the corner, and find themselves in an alley, begin shouting to the inhabitants that there is no God but Allah, and that the blessed Mohammed is his prophet.

Open Sesame!

A WELL-KNOWN New-Yorker who spends a good part of his time in Paris relates how he once met a fellow countryman who favorably sported a huge red badge bearing the legend of the National Republican Committee.

After a time the New-Yorker's curiosity got the better of him, and he asked his fellow countryman why he was displaying such an emblem to the foreigners.

"It's just this way," cheerfully explained the other. "One day, at one of the big hotels, I reached a number of shops who got the best of me at all times. I brought me that it would be a good idea to consult one of the waiters as to the reason. Incidentally, I tipped him."

"A great light burst upon me when I was politely informed by the waiter that one of the gentlemen indicated to me the Legion of Honor, that the other sported the insignia of the Order of the Star of India, and that the third was the proud possessor of the Order of St. Michael and St. George. Catching meaning those and other replies, I added the waiter, were invariably given the utmost consideration."

"It didn't take me long to drop in this. I dug down into my trunk and pulled out the badge you are now adorning my manly chest. I put it on and have worn it ever since. Of course none of our French friends has the least idea what it represents, but it's a decoration, and—well, there! Since I desired it nothing has been too good for me."

The First Vote of the Filipinos

On July 30 next, all males in the Philippine Islands not under twenty-three years of age, and not citizens or subjects of any foreign power, will be permitted to vote for members of the Philippine Assembly, and for provincial Governors, a third member of the provincial board, municipal presidents and vice-presidents, and municipal com-

missioners. This will be the first step towards Filipino self-government. The first Assembly will convene early in October of this year. Secretary Taft will be present at this meeting of the Assembly.

American citizens residing within the requirements will be permitted the right of suffrage, for American citizens are not considered "subjects of any foreign power."

The first Philippine Assembly will consist of eighty-four members, apportioned on the basis of one delegate for each 50,000 of population. Provision is made to increase this number, but the total number of delegates cannot exceed one hundred. All acts of the Assembly must secure the approval of the Philippine Commission before they become laws.

A Distinction Without a Difference

IN Mississippi there was a colored preacher noted in these parts for the extreme frankness and candor of his exhortations to his wicked brethren to reform. On one occasion, rebuking Representative John Sharp Williams, the divine was talking forth on the sin of theft. Among other things he said:

"I am lef' me ten chicken-thieves, includin' Dan Samson."

This bold statement of fact rather aroused the resentment of the aforesaid Samson, and he threatened the minister with personal violence. The latter's friends persuaded the divine to withdraw the accusation if Samson would promise not to offer the minister any hurt. The question seemed about to be adjourned, it being settled that the clergyman should, on the following Sunday, publicly retract his statement as to the honesty of Mr. Samson. Therefore, rising in the pulpit on the day appointed, the minister said:

"It 'pears dat a remark of mine, in de sermon of last Sunday, has been de cause of offence, an' I derefore amends it. What I should have said was dis: 'I am lef' me ten chicken-thieves, not includin' Dan Samson.'"

THE EASON'S PLAYS

EUROPEAN COMEDY AND
AMERICAN FARCE

By "I"

THE artistry and versatility of Madame Alla Nazimova have, in a sense, become a legend in New York. From *Insidious Hilda* she changed to impulsive Nora; now she has turned, with as great skill, to the interpretation of the half serious, wholly amused, and most delightful character of *Contesse Vona di Lorence* in Roberto Bracco's brilliant comedy, "Contesse L'opette." As the portrayal of Vona's two remarkable features demanded the employment of widely ranging talents, so the rôle of the Italian contesse requires methods strikingly dissimilar from either and served as a most potent token of the art of this Russian actress. In the part of the contesse Madame Nazimova has an opportunity to reveal such a new facet of her brilliancy that it was difficult to recognize in the figure on the stage, other the gloomy, compelling personality of "Hilda Under" or the high, dominant figure of "A Doll's House." The Italian play imposed an entirely new personality upon the actress, that of the thoroughly conceited, older woman of today, with an inordinate vanity and love of admiration; yet, with these, a very keen appreciation of her duties and obligations as a wife.

It is scarcely necessary to say that Madame Nazimova achieved a marked success with her interpretation, because even in this short time New York has learned to look to her for success in everything. The play deals with an agreement which the contesse has made with her husband regarding the personal liberty of each, to the end that there shall be no jealousy on the part of either. She warns him that the first time he makes direct charge against her she will give him ample ground for the accusation. She is at heart what she says, "a good woman, but a bad wife." She is devoted to the admiration of men, and prone to be indiscreet for its accomplishment. The indiscretion leads her into a duel with a friend of her husband's who is much enamored of her. He challenges her in order to his villa, which she does, and the temperature of the water she dips upon his armor may be well imagined by her speech to him as soon as they are alone and the doors are closed upon them. She waits herself in the middle of the room, feels her arms, and says: "Now, here I am, tempt me!" Very naturally, progress is quite slow. Suddenly word is brought that the husband of the contesse is without. The key to a secret cell is offered to the contesse for the price of a kiss. Instantly she declines to purchase it, and her indignation is expressed. She bids that her husband be shown in, and the act, instead of ending in a duel between the husband and the contesse, comes to a close with the most delicious comedy, the contesse and her husband being by far the least

discovered. The third act of the comedy is the most artistic. It opens revealing the contesse at tea in her boudoir. She waits for her husband to join her in their first informal meeting in a long time. It happens that she has made an engagement to receive the would-be tempter, but she sends for her husband instead and tells him of the engagement. Later the suspect enters, feeling that at last conquest is to be his. However, a moment after he has looked at himself in a hand-mirror to realize his self that there is really no reason why the contesse should be so dying of love for him, he sees the door of her inner room open and catches a glimpse of her with her husband's arm around her and hears their much-amused laughter. With rare discretion he tips her from the room and the final curtain falls.

Madame Nazimova plays her part with rare charm and distinction. The world's singer, *Glass Records*, of Mr. Stanbury, was much interested in her telling, and the part of the contesse, by Mr. Arthur Forrest, was only possibly impressive. The play itself is one of the most effective comedies which has been played in New York in many a day.

Those who, attracted by its martial title, may be tempted to visit the Lyceum Theatre to observe Mr. Arnold Daly in "The Boys of Company 'B'" will be disappointed if they expect to be stirred by a representation of the bravery and danger of warfare. This play the authorship of which is acknowledged by Edith Johnson Young, the author of "Boys of Harvard" is yet heralded as "a comedy of New York National Guard life." Therefore, we know that it is a comedy, but does it depict faithfully the inner life of the Nation's volunteers? Are their sacrifices, upon whom our security so greatly depends, such dreary, dull cut ups as the author presents? Do they interpret their exercises by the singing of "own" songs and college songs, by plane playing and hop frog? (One hesitates to think so. Let us assume that some one has been cruelly mistaking this excellent playright—who is her "Boys of Harvard" told us the "real truth" about college life; let us assume that those glimpses of hidden and sinister doings are base, laugh atrocious, calamities.

It would be ill-advised to set forth in detail the ridiculous wickedness of these doings as they are mercilessly set forth in "The Boys of Company 'B'."—such matters are not in the stern and unequivocal glare of relief. Let it suffice to say that Miss (or Mrs.) Young is singularly fortunate in the person who makes actual "comedy" time. Mr. Daly, abundant for a close-though one hopes not for long—the exposition of Mr. George Bernard Shaw's light-fifteen imaginations, reads the

Mr. Arnold Daly as "Tony," the immaculate hero, in "The Boys of Company 'B'."

HOW THE SHIP SURGEONS BROUGHT THE "SUEVIC" TO HER HOSPITAL

THE STEAMSHIP "SUEVIC," BOUND FROM BOSTHAMPTON TO AUSTRALIA, WENT ASHORE NEAR THE LIZARD ON MARCH 17. IT WAS FOUND IMPOSSIBLE TO GET HER BOW OFF THE ROCKS, AND IN ORDER TO SALVE AS MUCH OF HER AS POSSIBLE, SHE WAS CUT IN TWO BY THE AID OF A DYNAMITE CHARGE A LITTLE FORWARD OF THE BRIDGE; THE BELONGED PORTION WAS THEN TOWED INTO BOSTHAMPTON, WHERE A NEW BOW WILL BE FITTED TO THE HULL. THE PORTION WHICH WAS DELIVERED IS 400 FEET IN LENGTH.

A SPRING DAY IN NEW YORK

FIVE AND A HALF INCHES OF SNOW FELL IN NEW YORK CITY ON THE 17TH OF APRIL BETWEEN 6.25 A.M. AND 5 P.M.—A RECORD SNOWFALL FOR APRIL. THE PHOTOGRAPH PICTURES THE VERNAL ASPECT OF CITY HALL PARK DURING THE DEMONSTRATION.

Chance for American Autos

The Scottish reliability trial for touring-cars which will begin on the 25th and end on the 28th of June next, will afford an excellent opportunity for the manufacturers of American touring-cars to make good their claim that their output equals in reliability and staying qualities the best of the foreign manufacturers. The course over which the trial will be conducted will be from Glasgow to Inverness, a distance of 754½ miles.

At the Scottish trials last year five American touring-cars were entered, and while making a good showing as to reliability, were rather outclassed in the matters of hill-climbing and fuel-consumption. These Scottish trials have a very great effect upon public opinion in Europe and other divisions, as people are beginning to realize that the best machine is the one which will give the most satisfaction under, not the best, but the worst conditions. Thousands of machines are being used in the mining districts of South Africa, and this, as most of the other foreign markets, demands a thoroughly reliable car. Entries for the Scotch reliability trial must be made on the forms supplied for that purpose not later than May 14 next. The Bureau of Manufactures of the Department of Commerce and Labor is prepared to furnish manufacturers with these forms.

Don't Shoot the Actors!

Tuesar is a theatre in New York not more than a Sabbath-day's journey from the White Light Trail in which a roaring burlesque has been played since early last fall. Singularly enough, the programme presents to the patrons of the house this naïve announcement:

AFTER THE SHOW

If you feel like Shooting come around the corner to — West — Street

Getting a Line on Him

AN Alabama man tells of an odd character in a town of that State for whom the local creek had more attractions than the but and grassy cotton-field. Not long ago "Tobe," as the dorky is called, took a day off in pursuit of his favorite amusement. Tobe baited his hook, and long and patiently sat upon the bank of the creek vainly waiting for a bite. At last, under the combined influence of the warmth of the day and the sluggish movement of the creek, Tobe fell asleep.

As the weary angler dozed a big fish took the bait and almost pulled the dorky into the creek.

"Good Lord! Good Lord!" exclaimed Tobe, with a gasp, as he awoke, "Is dis almighty a-fishin', or is dis fish a-nigger?"

Fetched Him

A YOUNG New-Yorker of means who maintains a residence, at certain seasons, near Liverpool, Connecticut, recently nursed a grievance against his hamlet-neighbor. The latter, it appears, has been appealed to in vain to put a stop to the foraging of his hens in the New-Yorker's garden.

Finally the New York man decided to use a little strategy when appeal and persuasion had failed.

One day a friend, who knew of the trouble between the neighbors, asked:

"Still troubled by Blank's hens?"

"Not a bit of it," answered the New-Yorker, with a chuckle. "They're shut up now."

"How did you manage to accomplish it?"

"Well," explained the New-Yorker, "every night, for a week, I put a lot of eggs in the garden under the grape-vine, and every morning, when I was sure that Blank was looking, I went out and brought the eggs in."

BARRETT JACKS

The only Jacks which will not interfere with the body of the car

The buying of an Automobile Jack not bearing the name Barrett is really a confession of professional incompetence.

See that the name "Barrett Jack" is cast on the socket.

You may save fifty cents or a dollar on an inferior jack, but it is likely to cost a hundred times that in damages to your car.

If your dealer cannot supply you, write direct to us. Catalogue free on request.

THE INCOMPARABLE WHITE

THE CAR FOR SERVICE

THE TOURING SUPREMACY OF THE WHITE

After a brief experience with the White, the average owner has gained such confidence in its supreme reliability and its ability to traverse any sort of a road, that he plans his tours without any thought as to whether the roads are good, bad, or indifferent. He knows that his tires will last much longer than on any other car of similar size or power. He is independent of everything except an occasional source of gasoline supply.

As an indication of the ceaseless touring activities of White owners, it is significant that, in many remote regions of this country and of foreign lands, the people think that all automobiles are propelled by steam-power. This conclusion is a natural result of their having seen no other automobiles but White Steamers.

Drive a WHITE and see the country as you have never seen it before

MY PEOPLE OF THE PLAINS, BY ETHELBERT TALBOT, D.D., LL.D.

A volume, largely unrecalled, telling of the strange experiences of the author's twelve years' service as the first missionary
chief pioneer of the West who made up this diversified society irregularly but in most amazing incidents, which Bishop
Talbot has related with a simple, rich humor.

American Diplomacy ITS SPIRIT AND ACHIEVEMENTS

by
JOHN BASSETT MOORE

Author of
"Extremities and Intervenor Conditions," "History of
Diplomacy of International Arbitration," etc.

For years Professor Moore has been regarded as being the highest living authority concerning the history of American diplomacy. This series of papers on American diplomacy has commanded wide attention, not only in this country, but in all the capitals of Europe as well, and places many historical facts before the reading public for the first time. It shows how from the very first the American policy has been to negotiate treaties and carry on international business fairly, squarely, and aboveboard; and it unfolds and expounds in a clear and connected form the distinctive principles and policies the maintenance of which has caused American diplomacy to be acknowledged as one of the great formative forces in modern history.

The Cruise of the *Shining Light*

By NORMAN DUNCAN

SOMEWHAT like Dickens, somewhat like Stevenson, somewhat like Barrie is Norman Duncan's remarkable new novel. And yet Mr. Duncan's story is absolutely unlike any of the stories of these great writers. It is so original as to be absolutely unique—a story of mystery, of love, of quaint humor and vigorous action. It is not a story of the sea.

It is a story full of real characters that will live—the boy Dannie, about whom a veil of mystery hangs and in whose love story the book ends—an old man, Nicholas Top, who brings the boy up to wear jewels and fine clothes, to be a gentleman after the rules of Lord Chesterfield, and to look down on his strange guardian—a girl, Judith, whom Dannie loves from childhood, and the story of whose first kiss is as tenderly and quaintly humorous as anything in modern literature.

A powerful story, a lovable story—a story that is full of fine, manly, religious feeling—a story that holds one as the great old-time novels hold, and demands more than a single reading.

IF YOU WERE A MILLER

If you were a Miller, would you bother to wash the wheat and scour it? That's what WASHBURN-CROSBY CO. do in milling GOLD MEDAL FLOUR. Then the wheat is run through TWENTY sets of steel rolls to grind it very fine and even. And it's sifted TEN times through the finest silk. Our process makes the dough a uniform mixture - makes nice light, creamy bread and biscuits - makes the bakings a success.

COMMENT

Roosevelt, Wadsworth, and the Civil Service

THE quarrel between Congressman WADSWORTH and Mr. ROOSEVELT is one in which the country may well refuse to take any interest except as it illustrates or emphasizes the character or the practices of the principal party to it. Mr. ROOSEVELT has turned out of the office Collector-of-Internal-Revenue SANDERS of the Rochester district, a man who was recommended by Mr. WADSWORTH, then Congressman. Then, are others apparently to go. Some people say that Mr. ROOSEVELT does this to punish Mr. WADSWORTH, who has become his enemy; some say that the action of the President is part of a general plan to reorganize the Republican party of the State of New York; no one says, so far as the public is informed, that the removals followed by appointments on the recommendation of the new Congressman, are for the improvement of the Federal service. It is well known that the New York Republican machine is not enthusiastically loyal to Governor HUGHES, and that Mr. ROOSEVELT intends to do all in his power so to change and improve the organization that it will think better of the Governor. It is perfectly right and it is judicious for any individual Republican to do all that is in him for Governor HUGHES and good State government; but the President of the United States has no right to use the Federal offices for this purpose—no more right to do it than Mr. HAYES would have, if he happened to be President, to fill the collectships in cities and all the postmaster-ships with men who would be expected to devote themselves to preaching government ownership of railroads. If Mr. ROOSEVELT is doing this to punish Mr. WADSWORTH, it is unnecessary to characterize his conduct; self-respecting men need no instruction on this point. If he is doing this to aid Governor HUGHES, he is treating the Federal offices as party or factional spoils, and the President who uses the Federal offices for spoils in order to accomplish what he thinks to be good is violating the principles of the merit system, and is laying up a precedent for some President who will use the offices to accomplish any object which he may have, bad or good or indifferent, for the country's interests or against them, for the country's welfare or for the gratification of his own ambitions or his own desires. Against the sort of thing with which he is freely charged Mr. ROOSEVELT has preached for the better part of his life; and now the time is here when the country has the right to ask him to practise what he has preached, notwithstanding its possible effect on his personal desires.

Where is Mr. Hughes Coming Out?

It is possible that the use of Federal patronage in New York State in support of Governor HUGHES will be effective, and will constrain the Legislature to do the things that the Governor wants done—dismiss Commissioner-of-Insurance

KELSEY and pass the public utilities bill. But it is still matter for discussion whether the President, by using the Federal power to help the Governor, is doing him a real political service, or the contrary. The Governor, by his intimacy with Mr. FRANKLIN C. STODOLSKY, whom he has put in charge of the building of the barge-canal, is already sufficiently at odds with ex-Congressman WADSWORTH, but he has not yet broken with any considerable faction of his party in the State. If he should win his own fight in his party, it would leave him in a very strong position in his State; if he should lose his fight, his position might still be strong, for he could put the responsibility for the defeat of his programme where it belongs, and invite the voters to choose between him and his measures and those Republicans who had opposed him. But if he wins by the aid of the President and by a use of Federal patronage which a good many of his best backers will disapprove, where will he be? Who, in that case, will really have succeeded—ROOSEVELT or HUGHES? It is these considerations which make observers wonder how far the Governor has liked and welcomed the assistance that the President has been so ready to afford him.

A Jarring Note in the Peace Symphony

During the session of the Peace Conference on April 15 a letter was read from Mr. ROOSEVELT in which he reminded the auditors that it is not peace but righteousness that exalteth a nation, and that if peace and righteousness are ever at odds we must stand for the latter. This somewhat familiar homily provoked the wrath of Mr. CURRIE, who insisted that under no circumstances could a distinction be drawn between peace and righteousness, and invited his hearers to imagine the confused mental state of a man who could draw such a distinction. We apprehend that on this occasion the ironmaster was at fault. Not long afterwards Ambassador FINCK pointed out that there are contingencies in which an inflexible, not to say pusillanimous, determination to maintain peace at any cost could not be reconciled with righteousness. He told his audience that he could recall at least one such situation in the nineteenth century, but left them to name it, evidently having in mind our Civil War, wherein each of the sections at the time of the firing on Fort Sumter honestly believed it to be its duty not to keep the peace. The only influential man at the North who advised that the Southern States should be allowed to depart from the Union in peace was HOWARD GARDNER, and even he ultimately restricted the proposal and became a zealous advocate of coercion. On the whole, we find it hard to believe that Mr. CURRIE can have intended to condemn a resort to arms in self-defence. According to MALCOLM, there was once a war in heaven, and the task of repelling the rebellious angels was committed by God Himself to His Son. Earthly wars are sometimes wantonly aggressive, and we are not likely to see the last of such contests until the Hague Congress succeeds in very much widening the field of arbitration. Mr. ROOSEVELT said truthfully enough in the same letter that the speakers at the New York Peace Conference would do well to urge the extension of arbitration rather than disarmament. The President did not hesitate to rebuke the custom of uttering or applauding sentiments which represent mere wind, and neither have been nor can be translated from words into deeds. He justly said that harm and not good would result if through general disarmament the most civilized and peace-loving peoples, maintaining the highest standards of municipal and international duty, should be placed at the mercy of other peoples still in the stage of military barbarism or military despotism.

A Man of War Denounces Warfare

Another speaker was during a part of his discourse must have worried Mr. CURRIE a little was Colonel Sir ROMNEY CRANSTON, formerly Lord Provost of Edinburgh. Sir ROMNEY, although ultimately he condemned on biological grounds warfare between civilized human beings, began by denouncing at some length on the tremendous indebtedness of organic life in general and of the human race in particular to warfare of the most incessant, ruthless, and atrocious kind. He reminded his hearers that "Nature, red with tooth and claw, with raving shrieks against the cruel" of the peace-lover, and recalled the indisputable fact that but for the hideous and exterminating warfare which has gone on for countless ages, and which is only another name for the struggle for existence,

nobody present at the Peace Conference would have been as intelligent as a jellyfish. Modern warfare between civilized peoples Sir ROBERT denounced, mainly for the reason that it is conducted on the principles of chivalry instead of on the scientific principles exemplified in the survival of the fittest and the evolution of species. Civilized man for his warfare picks out all his strongest and most virile representatives and exposes them to all the risks of conflict, while females and all the weaker males are left safe at home. By such discrimination the human stock is physically not improved, but deteriorated, by warfare. Modern warfare, therefore, is a crime against nature, and the human race must pay the penalty. It was at this point that the frown vanished from Mr. CANNON's forehead.

Europe on the Peace Conference

It is reported by cable that some European statesmen and writers do not take the Peace Conference seriously, and that they accuse us of an inconsistency between our words and our recent warlike enterprises. We cannot argue any more intelligently about a nation's character than of an individual's from a single act. We must have a consensus of the whole to reach an intelligent conclusion. The United States government has done more to promote the peaceable settlement of international disputes than all the governments of Europe, and more than any other power to influence the civilizing of war and the just treatment of neutrals. In a word, it has done most to establish and extend the principles and teachings of GORTRES. Recognizing this, the American delegate to the Hague Conference in 1899—ANSWEL D. WHITE—was recognized as the proper person to eulogize GORTRES in the church at Delft. When foreigners are inclined to magnify what they call our lapses, they might do well to ponder on the broad, deep, and almost constant current of our influence on international relations before they let fly their shafts of wit.

Searching for Candidates

The suggestions of other names than Mr. BEVAN's for the Democratic nomination in 1908 are not the outcome or result of any factional movement, as is usually, and perhaps not unreasonably, intimated. There is no combination of Democrats looking for a candidate with whom Mr. BEVAN can be beaten; there is, however, a strong feeling which is governing and directing the thinking of many men who are patriotic and who patriotically differ both from Mr. RANSWORTHY and Mr. BEVAN. There is, too, a good deal of hard thinking on the subject by men of both parties, men who are anxious to lead their party into another direction than that in which it is moving, and other men, of higher ideals, perhaps, who are thinking much less of their party than of their country. This feeling and this thinking are not to be considered as having for their object the capture of the Democratic party by those who are called "conservative Democrats." The thoughts of all men who comprehend the serious conditions of the time are turned to the Presidential election coming on, and both Republicans and Democrats who do not like existing conditions are looking about for some one who will help restore to us the government as it was; who will keep the faith of the Constitution; who will respect the conceded sovereignty of the States; who will restore, so far as an Executive can, the independence of the legislative branch of the government; and who will again grace the high office with the dignity, the absence of which good men have so often and so regretfully remarked. It is true, perhaps, that even Republicans who desire a change recognize that it will be much easier to elect a Democrat who believes in maintaining our constitutional government than a Republican, and this for obvious reasons.

Some of the Candidates Suggested

In looking about for some one who might be the candidate of a real opposition party, many names have been suggested. Governor JOHNSON of Minnesota is a recent one, and still more recent are the names of Judge GRAY and of JIMSON HARMON. All these men have elements of strength among the Democratic voters, Judge GRAY and Mr. HARMON, perhaps, especially among the Democratic voters of the Southern States. Both of them possess also the respect of the better element of the Republican party with whom they have come

in contact. They are public men of character, of patriotism, and they possess those qualifications of statesmanship which, in England and in all European parliamentary countries, almost inevitably insure their possessors continuous public careers. It is especially worthy of note in discussing this subject or in mentioning contemporaneous phenomena that the serious suggestion that, next year, the Democratic candidate ought to come from the South is made by Northerners. It is the well-known fact that the Southerners themselves hesitate; they are not sure that it is yet their time, or that they possess precisely the man whom they would be willing to see nominated. There is one name that is constantly recurring to the minds of men who are looking for a possible candidate of the kind who desire a President who will put an end to spectacular turmoil; who will be a true reformer, but who will not be willing to break the law or to play obnoxious politics for the purpose of securing what he regards as reforms. Mr. WOODROW WILSON's candidacy was first suggested, in print, in these columns. It was accepted kindly, notably by the South, whence he came to the North, but at first the suggestion was often regarded as academic; but it becomes more and more apparent, as time goes on, that it was a very practical suggestion, so that the thoughts of serious men are coming back to it again and again, as was pointed out in the article copied from the New York Times in the last number of the WEEKLY. So far, WOODROW WILSON is the man who most satisfies the desires and convictions of men who for good and patriotic reasons would like to see a change; who think that Mr. ROOSEVELT's administration is injurious to the country; and who will strongly desire to defeat any candidate whom he may impose upon the Republican party—a desire that has within the week been severely rebuked by more than one prominent Republican newspaper.

The Conference of Colonial Premiers in London

The home politics of the United Kingdom is likely to be affected sensibly by the firm demand put forward by most of the colonial premiers now participating in a conference with Sir H. J. CANNING, BARTON, the British Prime Minister, and Lord ELGAR, Secretary of State for the Colonies. What the colonial premiers demand is exactly what Mr. JOSEPH CHAMBERLAIN desired to give, to wit, a preference in the British market for colonial products over similar commodities imported from foreign countries. Evidently the protectionist snake was only scratched, not killed, by the tremendous victory of the Liberals at the last general election. It is now becoming pretty clear that the victory was not gained solely or even mainly on the issue of free trade versus a preferential tariff for the colonies, but was due largely to an organized revolt of English Non-conformists against the Education Act put on the statute-book by the Balfour government, and to the resentment aroused among the representatives of organized labor by the Maida Vale decision rendered by the House of Lords, which made the funds of a trade-union liable for damages caused by its members when the latter were obeying the union's orders. The House of Lords has shamefully permitted that decision to be annulled practically by a statute, with the result that the Laborites are already tending to separate from their Liberal allies. If the Lords could also see their way to accepting such amendments of the Balfour Education Act as would conciliate the English Non-conformists, and would sanction such a moderate installment of home rule as Mr. WYNDHAM, formerly Irish Secretary, was at one time inclined to favor, the Unionists could insist on making the next election turn on the naked issue of a preferential tariff for the colonies, in which event, should the present drift of public opinion continue, they might recover control of the House of Commons and insert the thin end of the protection wedge. We need not say that Americans are deeply interested in the matter, for if ever a tariff preference is conceded to the food staples and raw materials of the British colonies in the markets of the parent state, it will be principally at our expense.

The British Budget

It was a very interesting budget that Chancellor-of-the-Exchequer ASQUITH opened the other day to the vision of Parliament and to the world that reads cable despatches. The expenditures of the Empire of Great Britain are not as great as those for the United States, judging by the appro-

prisons of the last session, and it is reducing its public debt. It is proposed to change the income tax radically, making a difference between earned and unearned incomes. This is a logical step in a direction in which England has long been moving. The tax on earned incomes of less than \$10,000 is to be lowered, and a rebate of sixpence in the pound being granted. The two principal objects which the Chancellor announced as the fiscal policy of the Liberal government were the continued reduction of the national debt and provision for social reform. The reduction of the debt last year was \$68,570,000. Social reform is to be advanced, says Mr. Asquith, by the adoption of old-age pensions. In saying this, Mr. Asquith denied that he is a socialist, while contending that the reform is the most important that is before the government. It will be difficult for Americans to agree with the Chancellor that old-age pensions can be anything but socialist. However, we can wait patiently until the government's policy is formulated in a bill.

Appeals in Criminal Cases

A good many remarks have been made about the delays in this country in criminal cases owing to the liberality of our laws in permitting appeals. There has been much truth and some folly in them. It is not so much the liberality of the law as the weakness of judges in interpreting the law that is our peculiar fault. The English system has been usually referred to as an illustration of the right way to conduct criminal cases. The English system is, indeed, admirable, and especially is it admirably conducted by able judges, who are selected for appointment by an acknowledged leader of the English bar, and who hold during good behavior or for life. One of the characteristic features of English administration of the criminal law was that appeals have not been allowed. But the English bar is now saying that this has been a mistake, and that it has resulted in the conviction and execution of many innocent persons. A bill for the creation of a court of criminal appeal has, therefore, been introduced in Parliament. This court is to consist of seven judges of the King's Bench Division of the High Court of Justice, to be selected and presided over by the Lord Chief Justice. An appeal on questions of law is to be permitted as a matter of course; appeals on questions of fact are to be permitted in the discretion of the court. One evil, which is peculiar to us, is to be avoided. There is to be no new trial. The court may determine whether the conviction shall stand, be modified, or set aside, but this work of review is to be done at public expense. The poor man as well as the rich man may avail himself of it. An official is to be appointed to collect new evidence, and the government is to appoint and pay solicitors and counsel for poor prisoners. The decision of this court, it is expected, will be of great assistance to the Home Secretary, who is to continue to possess the prerogative of pardon. Here is law reform of a substantial kind, doing away with recognized evils and promoting justice. Our principle of appeal is recognized as sound, but its practice is to be greatly bettered.

Taxation of Education

The universities and colleges in Massachusetts are up and doing, and President Eliot is their leader. Moreover, the newspapers and churches of the State are taking a hand in the conflict. The cause of the uprising is a favorable report on a bill before the State Legislature providing for the taxation of the houses of presidents and professors of institutions of learning. The tax would be very small. To some of the colleges, to Harvard especially, it would be an inconsiderable burden; to others it would be greater; but all are standing together, for the very little profit which such a tax would bring to the several towns indicates to the minds of Dr. Eliot and his associates that the bill is intended as but an entering wedge, and that those who favor it are intent upon eventually taxing all college property. This is also the view taken by the newspapers of the State, notably by the *Springfield Republican*, the *Boston Herald*, the *Boston Journal*, the *Boston Post*, and the *Boston Transcript*. The real interest of the incident is to be found in the issue as it is stated by Dr. Eliot. He says, and he is followed by the others, that this is a movement to revolutionize the historic relation of the State towards higher education. Other States, notably the Western States, support their own universities, and the

towns in which these universities are situated not only do not desire to tax their property, but willingly pay their contributions to the support of the State institutions. Massachusetts pays practically nothing directly for the support of higher education, but aids it by exempting the property of universities and colleges from taxation. The Supreme Court of the State has decided that the houses sought to be taxed by the pending bill are within the exemption. With the exception of some inconsiderable sums given by the State in the eighteenth and early nineteenth centuries especially, higher education has been supported by private gifts made largely by the citizens of other States. When this money has been given, the State has promised through its laws that none of it should be taxed. This exemption was the contribution of Massachusetts to higher education. To tax college property now would be a reversal of the State's attitude towards education, and would imply a refusal to make any contribution to a cause which Massachusetts has always been supposed to have peculiarly at heart.

The Jamestown Fair is Open

The opening of the Jamestown Exposition (on April 26) is impending as the WEEKLY goes to press, and its readers will already have learned before these lines reach them how the President came down from Washington and made an address and pressed the traditional button that set the machinery of the show in motion. The Exposition is reported to be at this writing about four-fifths completed, and may be expected to be very shortly in full running order. The entertainment side of it, including the marine spectacles, has doubtless made most impression on the public. The army and navy features, about which there has been so much lamentation, are the two most notable exhibits in that department, but there is a great deal else to see—the various State buildings, in which famous old mansions are reproduced, the exhibits usual to great fairs, of manufactures, the liberal arts, machinery, transportation, agriculture, and the like, and a historic exhibition of very unusual scope and quality, including very full and detailed social economy and educational exhibits, and, among other things, what is said to be the best collection of relics and heirlooms that have ever been brought together in this country. The setting of the fair is exceedingly pretty. The site includes four hundred acres of land and an enclosed forty-acre water-basin, all looking out on Hampton Roads, and embellished with beautiful buildings and charming evidences of the landscape-gardener's skill. The Exposition promises to be very pleasant and profitable, and we trust that the reports of the early visitors will be such as to bring to it a generous and continuous attendance.

The Moyer-Haywood Conference Answered

There is not much comfort for the Cook County (Illinois) MOYER-HAYWOOD Conference in the President's reply to the letter of its chairman asking him to retract his classification of MOYER and HAYWOOD along with HARRISMAN as "undesirable citizens." The conference took the ground that MOYER and HAYWOOD, being about to be tried for the murder of Governor BREWSTER, were prejudiced in their choice of acquittal by the President's expression of an opinion so unfavorable to them. It rebuked the President for an utterance which it found to be designed to influence the course of justice. The President agrees heartily with the conference that such a design would be exceedingly improper. But what, he says, is the conference doing, writing letters which bear the heading, "Death cannot, will not, and shall not claim our Brothers." "You are not," he says, "demanding a fair trial or working for a fair trial, but are announcing in advance that the verdict shall only be one way, and that you will not tolerate any other verdict. Such action is flagrant in its impropriety, and I join heartily in condemning it." He is right about that. What the conference exists for is to secure the acquittal of MOYER and HAYWOOD by such means as it can command, and it is in no position to accuse the President of impropriety in calling them "undesirable." As to his own words, the President denies that they have any bearing at all on the question whether the men were guilty of murder, which is what they are to be tried for. Nevertheless, they were words the President had no call to speak, and which, considering his position, he had better not have spoken.

Mr. Root's Speech at the Peace Conference

MANY admirable speeches were made at the Peace Conference held in Carnegie Hall during the week ending April 30, but the most illuminating and weighty of them all was that delivered by Secretary Root. He began by directing attention to the memorable difference between the attitude of the world toward the Peace Congress which will meet on June 15, of The Hague, and the view generally taken of its predecessor, which was held in the same city eight years ago. There is no doubt that the feeling with which the previous gathering was regarded by most of the participating powers was one of polite incredulity, whereas the practical significance of the approaching second Congress is universally recognized. Such a gathering is no longer looked upon as an occasion for the mere academic discussion, but is accepted as one of the agencies by which the world is governed and guided forward. Mr. Root proceeded to remind his auditors that three broad questions affecting the conduct of nations toward each other were relegated by the Congress of 1899 to its successor. These questions had to do with the rights and duties of neutrals; the inalienability of private property in naval warfare; and the bombardment of undefended towns, villages, and ports by a naval force. In addition to this specific programme for consideration at a second Congress, the famous *accolade* at The Hague declared itself that the restriction of military charges, which are at present a heavy burden on the world, would be extremely conducive to the material and moral welfare of mankind, and expressed the hope that the next Congress would at least examine the possibility of an agreement as to the limitation of armed forces by land and sea. It is well known that, at an early stage of the international parleys surrounding the programme of the second Hague Congress, the United States government, through Secretary Root, reserved the right to present the subject of a reduction of armaments, and several European powers have since indicated an intention of supporting the proposal made by our representatives. Evidently, Mr. Root does not expect that the discussion of reduced armaments will lead to any definite and practical conclusion, for he is aware that Germany and Austria have declared against such a reduction, and he knows that there can be no effective agreement which binds some of the great powers and leaves others free.

The Secretary of State also recalled the purpose of our government to urge, through its representatives, the second Hague Congress to put some limitation on the employment of force for the collection of ordinary contract debts due by one government to the citizens of another. He brought forward the indubitable fact that it has long been the policy of the United States not to use its army and navy for the collection of contract debts, for the reason that we do not deem the use of force for such a purpose consistent with that respect for that independent sovereignty of other members of the family of nations which is the most important principle of international law, and the chief safeguard of weak nations against aggression. We have considered the practice injurious to the welfare of weak and disordered states, because it offers frequent temptation to bullying and unnecessary warfare. Mr. Root recognized, indeed, that the non-payment of public debt may be accompanied by such circumstances of fraud and wrong-doing or violation of treaties as to justify the use of force as a last resort, but he held that an attempt should be made by international agreement to discriminate between such cases and the simple non-performance of a contract with a private person, and to prohibit a recourse to violence in order to insure specific performance in the latter case. Some of those who heard the Secretary would have liked to know whether he would draw a distinction between a government's failure to pay the foreign holders of its bonds and its withdrawal of a concession made to a foreigner—such as the privilege of constructing railways or public works—a concession for which the grantee may have paid a valuable consideration, or in reliance upon which he subsequently may have invested money. We presume that Mr. Root would draw such a distinction, and expects to see it drawn if the principle of arbitration can be so extended in its application that the class of adventures who have long been in the habit of trading upon the necessities of weak and disordered governments may be required to submit their demands to an impartial tribunal. That the claims of such adventures are often exorbitant and unconscionable is evident from the record of the cases submitted to arbitration during recent years, which record shows that the total awards made by the arbitral tribunals have amounted to only a very small percentage of the demands submitted.

In the general field of arbitration Mr. Root thought that much progress might be looked for if the coming Hague Congress would recognize that the chief obstacle to the universal adoption of arbitration is not the unwillingness of civilized nations to submit their disputes to the decision of an impartial tribunal, but rather an apprehension that the tribunal selected will not be impartial. The Secretary is convinced that what we need for the further development of arbitration is the substitution in the arbitral benches of judicial action for diplomatic action, the substitution

of the judicial sense of responsibility for the diplomatic sense of responsibility. We need, in other words, for arbitrators, not distinguished public men, actively concerned in all the international questions of the day, but judges who will be interested only in the specific question appearing upon the record before them. It is plain to Mr. Root, who is familiar with the different kinds of responsibility accepted on the bench and in the council-room, that the end in view is only to be attained by the establishment of a court of permanent judges, who will have no other occupation, and no other interest than the exercise of the judicial faculty under the sanction of the high and acute sense of responsibility which has made the courts of justice in enlightened nations the representatives of all that is best and noblest in modern civilization.

One heard, of course, in the conference at Carnegie Hall—no avoid the too ambitious term of "Congress" for such an unofficial gathering—a great deal of frostiness and rudeness; an outpour of extravagant aspirations and baseless hopes is characteristic of such irresponsible assemblages. The Secretary of State did his best to check by cool and sober words the tendency of some of the speakers to become hysterical. He warned his hearers not to expect too much of the second Peace Congress at The Hague, pointing out that it is an essential feature of such international official meetings to deal, not with matters upon which nations differ, but with matters on which nations are selected or nearly agreed. Insurmountable differences, no doubt, may be smoothed away; misunderstandings may be explained; consideration and discussion along lines that do not run counter to any immediate and specific interest of a participant may work out methods of applying general principles in such a way as to prevent future differences; some progress, at least, may be made toward agreement upon matters not yet ripe for complete adjustment; but Mr. Root cautioned his hearers that if an attempt should be made to give the Hague Congress any coercive effect, if even any number of nations should endeavor to use the Congress for the purpose of compelling any one nation to do what it deems inconsistent with its vital interests, the Congress will be doomed to failure. Nevertheless, although the Parliament of Man, the Federation of the World, shall be seen to be still far off when the Hague Congress of 1907 adjourns, a forward step will really have been taken; a positive advance will have been made towards the reign of peace, and justice, and righteousness among men, and that advance will go just as far as the character of the great mass of civilized men permits. In the general standard of character upheld in a given community lies the true measure of its capability of moral progress, and the true origin of its reforming force. Too often overlooked is the fact driven home by the Secretary of State that arbitration and mediation, treaties and conventions, peace resolutions, declarations of principle, speeches and writings, are all so much as nothing unless they truly represent, and find a response in, the hearts and minds of the multitude of the men who make up the nations of the earth, the average men, whose desires and impulses determine the issues of peace and war. No one knows better than Mr. Root the ruinous cost of huge armaments, of the withdrawal of millions of able-bodied men from the walks of productive industry, and of the industrial and financial catastrophes caused by protracted warfare, yet he remains thoroughly convinced that the path to universal peace is not through calculation, or reason, or intellectual appreciation, but through the development of a peace-loving and peace-keeping character among the mass of civilized mankind, and that this development, slow though it be, as measured by the shortness of individual lives, is proceeding with steady advance from generation to generation.

Polonius's Saws

HAMLET, being King in the realm of ideas and words, naturally enough felt Polonius nothing more than a dry old chatterbox, uttering dull, traditional saws without vital significance. But there comes a time in most mature lives when we speed our young not into the world, and the pose of Polonius seems for the moment to be forced upon us. If at the critical instant we seem to lack the necessary epigrammatic wisdom or those flashes from the infinite that occasionally shed light upon the affairs of this finite world, we can at least console ourselves with the thought that words, except to a born lover of words, are a rarity of rarities, and that not our utterances will engrave themselves upon the young memories, but our little daily ways and habits, our smiles and silences and ordinary courses.

It is futile to drop the burden of our mature comprehension of life upon the young mind about to go out from us, for the knowledge of virtue, like the knowledge of letters, is progressive, and only the prodigy learns his letters from KATY'S Critique. So to tell the child as he departs that he projects from his own spirit the world into which he is going, and that according to the force of this spirit shall his control be over that world, is worse than wasteful. Indubitably true as it is, the child will never be-

lieve it. The illusion of the outer reality is a step in nature, and is for certain stages compelling. Only after hard experience do we grasp that as would the counters we look upon by the light shod from the depths of our own spirits.

There is nothing to be gained by telling the child that there is no true happiness to be had until we have overcome fear and desire, for the young person is compassed of desires and the fear that he may miss them. Like the rest of us who have attained to Patmos's years and wisdom, he must go through the tragic discipline of tasting his desires and finding them bitter as Dead Sea fruit; he must grasp the prizes of life and see them crumble to ashes as he holds them in his hands, for in such wise only does the spirit get understanding. All the true realization that the donor (andeth and the grass withereth and that man is but a grasshopper on the circle of the earth is a later acquisition, and that sense of proportionate values which the Catholic Church teaches us is a gift of the Holy Ghost can only come to the young through miraculous interposition.

However, truth and good nature are virtues that may be described and extolled to him, and if it be an intelligent child we are addressing, we may learn upon his attraction the fact that in the eyes of the Almighty our creature is as vital as another, and that in as far as he can realize and act upon this truth is he likely to find peace and harmony in himself. There has been published recently a picturesque and amusing story called *The Beloved Unpleasant*, where this was the one necessity stressed. The vagabond was a Glaxo, with all the brilliant elegance and veering moods and compelling impulses of that odd race; he had a distasteful leaning toward disorder, dirt, and dissipation, but he instinctively recognized the worth of a soul and the honor of a human conscience, and thereby he became the hero of a book and a real and a forcible being amongst men.

We can offer the child some glimpses, too, of the compelling beauty and order of the picture in which his life is set. There are both distraction and solace to be derived from the holy method and regularity with which the sun is lifted above and dropped below the horizon, the secret journeys of the moon by day and its luminous wanderings by night, from the lighting up of the stars, and from the fellowship of beasts and birds and plants. We can assure him that life is indeed like a garden wherein an industrious insect will seek honey and store it away for higher purposes of which he may know nothing, and that even if there are poison plants, poison is often medicine.

But if, as may chance between the aging and the budding minds, our best wisdom may emerge dusty as Patmos's saws seemed in the young *Reader*, there is the consolation of knowing that atmosphere is more convincing than advice, and environment begets safer effects than sermons.

Moreover, it is not all our own fault but a part of the order of nature that morality must be backed out of the rough block of life anew by each workman. Like religion, it is not a great thing outside ourselves to which we may be led, but it is the transformation we make of the brute facts of life, in return again to the spirit which begot it. The generations of man rise and pass like a wind, and no man knows whence they come nor whither they go—but the ethical intent of life stands firm and rock-fast, while the wind of destiny blows into the world and out again the little lives of men.

Personal and Pertinent

WHEN THOMAS NELSON PAGE drops into poetry, as he has done in "The Coast of Bohemia," and WILLIAM MONTEY PAINE says that PAGE can do well anything that he tries to do, everybody will be satisfied with the lyric and gratified by the comment. Everybody likes to think that PAGE has succeeded in anything he has undertaken, for not only has he great merit in flustering things from the pen, but he has induced the world to look upon him as he looks upon the world. And this is how it is: One day in a club some men were handling an absent man's character with freedom. They had concluded that this man was a contentment, smiling maliciously, deflating wretch, who had started out well before he was understood, but had finally reaped the reward of his bad manners and his mean nature.

"What I can't understand," said one, "is that TOM PAGE likes him."

"Oh, that's easy," spoke another. "Tom's such a good fellow himself that he thinks that every one else is a good fellow."

Something was said in the WEEKLY a fortnight ago about "the overcast incident" at West Point. A correspondent who writes from there finds the WEEKLY's comment to have been "misconstrued and unjust," and "injurious to the character of Colonel HOWZE," the officer most concerned. The WEEKLY said nothing, and knows nothing, of the propensities of Colonel HOWZE's character. West Point correspondents are very liable to be mischievous or misinformed in the newspapers, and perhaps the WEEKLY would have done better to say nothing about the "overcast incident," especially since

It appears that Colonel HOWZE's order to have the girls take off the cadet overcoats has brought down upon him the criticism of some very energetic women, which is trouble enough for any man, without reflections from the press. The order coincided with the letter of the rule at West Point, and was within the commandant's authority, and however hard it may have been taken, it should not hurt the officer's standing as a soldier.

It is interesting now to recall, and it may be suggestive, that HENRIETTA OLNEY was the candidate of the Massachusetts Democratic organization in 1904. They tried to persuade the party that he was the best man for it to nominate against ROOSEVELT. Mr. OLNEY never had any faith in the scheme. He is a pretty determined man, and he forbade his friends to mention him in the convention. He was disagreeable about it; his friends persistently avoided his society for a good many weeks. Finally he thrust into the hands of "PAT" COLLINGS, then Mayor of Boston, and the head of the Massachusetts delegation, a letter in which he forbade COLLINGS to put him in nomination at the convention. COLLINGS talked over the subject with CHARLES HADLEY and other delegates, but these men, with the pleasant assent of COLLINGS, all said that they did not care to see the letter, and that they did not think that Mr. OLNEY had any particular concern with their affairs; that his opinion on such a subject was of very little importance in their eyes; that they were going to the convention to express their views and their choice for candidate, not Mr. OLNEY'S. Therefore COLLINGS kept OLNEY'S letter in his pocket and put him in nomination. It was a precedent, perhaps, and perhaps it was suggested by Mr. BRYAN'S conduct at Philadelphia in 1900.

The recent eulogies of JOSEPH R. BRYAN against President ROOSEVELT recall that BRYAN, then Senator from Kansas, was a figure in the Philadelphia convention. He has as eloquent a manner and almost as profuse a vocabulary as Senator REVERIDGE. In their efforts to push Mr. ROOSEVELT out of the Governor's chair at Albany, the "bosses" resorted to BRYAN. The New York delegation, or Mr. PLATT and Mr. ORRILL, had promised not to nominate Mr. ROOSEVELT for Vice-President, and they were forced to keep the promise because Mr. ROOSEVELT'S friends on the delegation—and they were numerous enough—would not vote for him against his desire. Mr. PLATT, of course, could not consistently with his title—the organization—vote a divided delegation. As one of that statesman's friends remarked: "The Governor stood the old man on his head." Mr. ROOSEVELT having requested his friends on the delegation to vote against him in the convention, if Senator PLATT urged himself so far as to name him on behalf of New York, Mr. BRYAN was sent, at the head of his Kansas, to announce, with fiery eloquence, that Kansas would put him in the field whether he wanted to run or not, because Kansas believed in him, and "because, sir, your comrade, General Grant of the Civil War, and your comrade, Private —, of the Spanish war, demanded it, sir!" But on this fervid occasion, a friend of Mr. ROOSEVELT'S was heard to remark: "That fellow delivered a paid speech; TOM PLATT sent JIMMY to him this morning. BRYAN was defeated for the Senate the last time; now he'll have plenty of money to win." This may have been a grave injustice to Mr. PLATT and JIMMY. It was one of the rude speeches characteristic of politics; but men accepted it, and their belief was strengthened by BRYAN'S subsequent election. It might be better for them if they were not so ready to credit scandal, but the man of whom such scandal is credited loses impressiveness. Men look at him askance.

Somebody has been reciting the tale that the German Emperor is to be credited with the defeat of the suggestion, made by the Austrian minister in Washington, to unite Austria and Germany in a protest against our war with Spain. This time it is true said that Lord PALMERSTON, who was dean of the Diplomatic Corps in Washington, favored the movement which Austria, as in duty bound to its relative the queen-regent of Spain, had inaugurated. This is not a new tale, having been invented in 1902 in seeming preparation for Prince HENRY'S visit to Mr. ROOSEVELT and the rest of us. Lord PALMERSTON was deeply grieved because the queen of the country accepted the German theory, and JOHN HAY was much annoyed. When JOHN HAY was annoyed he used to express himself in remarkably sound English, the kind that TRUSSARD liked to see. Mr. HAY used to say that if he hadn't a profound reverence for words to that effect—and the singular generosity of the German Emperor, or of his remarkable power of reticence, he would think that this story had been invented to grease the ways down which his brother might slide the more easily into America. From him it was learned, at the moment, that Lord PALMERSTON had always been of great service to WILLIAM MCKINLEY at the beginning of the war, and had accomplished much in keeping the Continental Europeans off our back. As dean of the Diplomatic Corps, he headed that distinguished group on one fraternal visit to the White House. The group desired to give expression to their hopes that the United States would not make war on Spain. It was Lord

PAUCKER'S intention that nothing should be said that would mean much, or would look like interference, or would cause the American government embarrassment, and JOHN HAY agreed with him and approved of his disposition. Both of them knew what was going to be said by both sides, before the visit was made. When the Austrian minister, subsequently, wanted to bring about a union of European powers to prevent war, Lord PAUCKER declined to participate, although, as dead, he was forced to call the meeting of the corps on the request of the Austrian minister. But he prevented another visit to the White House, asserting that he had once been told to mind his own business and that he did not need the lesson over again. This in the PAUCKER side of that story, and JOHN HAY'S resolution agreed with that of PAUCKER.

Correspondence

A VARIABLE YAKINTICK

To the Editor of Harper's Weekly:

St. Louis, Mo., April 3, 1907.

Sir,—At any time you run short of ammunition don't forget that, as every one knows who stops to think, the moral judgment, i. e., the judgment as to "reasonableness," "fairness," "squareness," etc., in any given "deal," is peculiar to the individual, and more or less variable, from time to time, with him. The popular belief in a discoverable yardstick of "squareness," usable in all social relations, and acceptable to all "decent" and "honest" men—a belief which, curiously enough, many railroad officials, and also some high-finance bankers, appear to share with the President—is a belief in a thing that does not exist.

I doubt if historians will have any more seething criticism to pass upon our latter-day statesmanship than will centre about our current "fair-trade" and "square-deal" legislation.

I am, sir, etc.,
S. R. MERRON.

A WIDE RANGE OF FEELINGS

To the Editor of Harper's Weekly:

Worcestershire, Mass., April 3, 1907.

Sir,—I have just completed the perusal of the first five or six pages of your issue of April 6, with feelings ranging from indignation to amusement. I don't know how suitably to care for expressions of opinion from individuals of no especial note, and I have no ambition to get into controversy with the editor of one of my favorite magazines, but the spirit moves me to testify.

You are very fair in quoting some of the disconcerting opinions of the press on that "wonderfully effective address" made by the "strong and able" military hero, Colonel Harvey, at Charleston, and I am very sure that those disconcerting opinions are not only in harmony with prevailing public opinion, but are in themselves mainly just. The brilliant effort of one Perkins, under the heading "Some Letters," is a touching illustration of the state of mind described in the last paragraph of your extract from the Savannah News.

Reverting to your discussion of "Woodrow Wilson on Class Legislation," you say many reasonable things. The extract from Mr. Wilson's speech is very interesting, especially in the side-light it throws on his habits, indicating that he (and you?) does not play cards. The rest of us have taken the President's "square deal" to be a figure of speech taken from card-playing, and "so deal at all" means no game at all. To Mr. Wilson (and you) "deal" seems to have no other meaning than "hargula." On the whole, however, there is considerable cogency in much of what you say, especially about our own laws having created the opportunities of which the men now so vigorously assailed have availed themselves. It is true. But it is true that these men resist efforts to change these laws. And it is true that the circumstances, while mitigating the offence to some extent, does not entirely efface it. In the same issue you yourself say unkind things of the predatory gangs at San Francisco and Hurlburg, without allusion to the mitigating circumstance that lax laws and insufficient scrutiny had their share in trapping these miscreants to their particular form of evil-doing.

I have for some time noted with pain your growing animosity toward the President. It took, at first, the form of "praising with faint praise." I think I shall like you and your paper better if you drop all pretence and come out with hammer and tongs, though, I think, you will find your position a somewhat homelier one.

I am, sir, etc.,

A. C. ANASTAS.

A WORD OF ENCOURAGEMENT

To the Editor of Harper's Weekly:

—Ore., March 21, 1907.

Sir,—Not being really scared from a course once well thought out, the criticism which I notice in the WEEKLY will have very little effect on you. However, I feel that it will not be out of place for me to make a word of encouragement. I therefore congratulate you upon the stand you have taken.

The letters from our Ohio friends, Persons and Dickey, published

in the issue of the sixth, are rather amusing. Living in Ohio myself, I know something of the situation here. I do not know what may happen to Mr. Forsker. I know what happened to him at the last State convention. That being the last square deal contest, I would not assume to speak positively as to the situation up to date. At that time the opposition at the show-down on the question of endorsement was too thickly to show itself in the open, I believe, though, that Mr. Forsker is stronger to-day than he was then. One thing is certain. Whatever may happen to Mr. Forsker individually, no one will be so silly as to attempt to pinney the assumption that such persons as he and yourself are bringing the country back to its senses.

I am, sir, etc.,

THE STATE CAN DO IT

St. Louis, Mo., March 29, 1907.

To the Editor of Harper's Weekly:

Sir,—Your editorial on the "Exactions of the San Francisco Labor Union" has attracted my attention. Owing to the great misfortune which San Francisco has suffered, the labor-unions are shown up in very bad light. It, however, resolves itself into a simple question of protection. There are thousands of workmen ready and willing to come to the relief if they are only assured of protection from personal injury. If the State cannot afford that protection, it seems to me that it is the bounden duty for the national government to do it. A government that cannot protect its citizens in the ordinary pursuits of life is certainly in a bad way.

Adequate protection will instantly settle any and all labor troubles.

I am, sir, etc.,

W. M. HALEY.

DIVIDE THE BASEBALL HONORS

To the Editor of Harper's Weekly:

Sir,—The New York baseball season being lately opened promptly we put forward the following argument:

The New York "Giants," of the National League, and the New York "Yankees," of the American League, are made up of players "discovered" throughout the country. The way I have found it is that about one out of nine players happens to be "local talent."

Now, if it should happen that at the summing up at the end of the season either team had won the pennant, why should the credit and honor (what little there is) go to New York?

Why not divide up the credit (and honor), and publish a report crediting each and each a town for so much for producing such and such a player?

I have a relation who lives in a small town just outside of the city. Why could he (if he wanted to invest the money) establish a team of players "discovered" all over the country, and call them the Haverstraw Giants, or whatever the case might be?

And I at the same time establish a team here in the city. After both teams were playing all right, and things running smooth, a league could be formed.

Now, if I were to "sell," as it is called in the "A." and "N." leagues, seven or eight of my players to the team in —, and the manager there were to do the same thing, would I be managing my team and he his, or he mine and I his?

For the last two or three seasons it has been the custom for the American and National leagues to "sell," or, in other words, exchange, their players, so that it has become most difficult for even an expert baseball enthusiast to tell what team is what.

As for the pennant, the way I see it is that it can be placed according to the manoeuvres of an energetic manager, who knows how to "cray," or "something," for "something"; that is, to pick out the poor ones and keep the good plays in one barrel.

And naturally the best players constitute the best team, and the best team gets the pennant.

I am, sir, etc.,

ROBERT CARPENTER.

JAMESTOWN ISLAND AND THE EXPOSITION

New York City, March 21, 1907.

To the Editor of Harper's Weekly:

Sir,—Please be kind enough to make a correction in regard to the Jamestown Exposition. In the article in your issue of March 21 it is stated: "The Exposition is held in sight of the place where, in May, 1607, three small boats first anchored, just off the peninsula which jutted into the James River, thirty miles from its mouth." This is not correct. The Exposition is being held on Sewalls Point, at the mouth of the James River, while the site of the first settlement is on Jamestown Island thirty miles up the river, and the Jamestown Exposition has no connection whatever with Jamestown Island, the historic spot.

I am, sir, etc.,

LORINE J. BARNET.

It depends on the place and the atmosphere whether one see thirty miles or not. Perhaps we should have said, "Almost in sight of the place," etc. Jamestown Island is within excursion distance of the Exposition, and the public reservation on the island, which includes what is left of the old settlement, will doubtless be visited during the continuance of the Exposition by thousands of people. There will be that much connection, at least, between the island and the Exposition.—EUREKA.

THE BACKSLIDING OF PHILADELPHIA

FOLLOWING THE GREATEST VICTORY OVER A POLITICAL MACHINE EVER ACHIEVED BY A CITY IN THE UNITED STATES, PHILADELPHIA—OF HER OWN CHOICE—HAS RETURNED TO THE SAME CORRUPT GANG WHICH MISRULED AND PLUNDERED HER

By T. EVERETT HARRY

ON the night of Friday, November 10, 1905, more than 3000 of the great citizens of Philadelphia met in the Academy of Music to celebrate the glorious victory of the reform movement over the Republican machine at the polls on the previous Tuesday.

The great building blazed with electric lights. From floor to ceiling it glowed with colors—red, white, and blue—hanging draped the galleries and boxes, the blue and yellow colors of the City Party hung in festoons over the stage. In the hand of every man, woman, and child was the national flag. Over the stage, in iridescent lights, flashed the glad tidings—

THE VICTORY OF THE PEOPLE

An intense silence, breathless expectancy prevailed. Below the stage the band waited, their eyes, in that tense moment, fastened on the leader's baton poised high in the air.

Then, arms in arm, to the stage marched John C. Winston, chairman of the Committee of Seventy; Francis B. Reeves, chairman of the meeting; William T. Tilden, George W. Norris, Sheriff-elect Wilson H. Brown, County Commissioners-elect Rudolph Minkenberg and E. A. Anderson, Comptroller-elect J. M. Rush Johnson, and other crusaders of reform.

As they appeared, the leader of the band impetuously swept the air with his baton—the musicians bent to their instruments, horns whined across the strings, horns shrieked, and "Forward, Christian Soldiers," rolled and swelled voluminously through the building.

Rising to their feet, the audience broke into song—wild, unrepentant; flags fluttered and waved; the words of the hymn as the band ceased were translated into cheers, and salutes of exultation rolled deafeningly through the vaulted halls of music. Men shouted until they were hoarse, whistled and clapped their hands and frenziedly stamped the floor; and women, caught in the storm of enthusiasm, cheered and screamed over the wonderful success of the City Party, the redemption of the city.

And why should they not cheer? Overwhelmed by a majority of 50,000 votes, the gang was routed unanimously; Israel W. Durham, in one instant and disgrace, had left the city, the gang's henchmen were deserting the discredited leaders—and this after an unbroken reign of more than thirty years!

The meeting was the climax of the campaign which resulted from the gas-lease upheaval of the preceding May. How City Councilman-elect Durham, boss and city contractor, attempted to pass an ordinance leaving the city gas

works to the United Gas Improvement Company for seventy-five years, leaving the citizens and their children to pay 41 per thousand cubic feet of gas until 1927, and ninety cents until 1940; how the one and one-half million people arose in their might, how they held meetings of protest, carrying their objections into council chambers, and denouncing the municipal legislators as "robbers" and "thieves"; how prayer meetings were held and pulpits rang with denunciations; how Mayor Weaver took a stand and defended the people against their betrayal by the iniquitous "combine"—all these things were fresh and green in the minds of those assembled.

Philadelphia was redeemed! Over the entire country had spread the wonderful news of the city's emancipation. "Philadelphia the Most Corrupt" had risen and cast aside her yoke of shameful bondage. After the most spectacular civic uprising of a century, she had attained the most glorious height of civic purity of any of the cities of the entire United States!

Philadelphia was redeemed! And its citizens were on a debauch of reform. They were intoxicated with exultation and self-glorification. They were drunk, reeling, mad with municipal self-righteousness.

"We have met," said Mr. Winston, "to celebrate the greatest victory the people of any municipality have ever accomplished. First, the people have won a victory over themselves and their own indifference. Secondly, they have been victorious over the greatest enemy of free government the world has ever known."

"Our watchword is 'Forward!'" cried Mr. Francis A. Lewis, "Forward—until every Councilman shall represent all the people and not a boss! Forward, until the ballot box is restored to its sacred functions as a palladium of liberty! Forward, until ballot-box stuffers and repeaters are exterminated! Forward, until our city representatives, in the State Legislature are not representatives of a Durham or a Penrose! To-night again this old town-meeting proclaims 'liberty' throughout the land and to all the inhabitants thereof."

The sound of our Liberty Bell is now ringing forth throughout the nation, God bless! Our city is saved! Let us thank God!"

"The battle is over," declared Franklin S. Spencer, Edmunds, and Philadelphia is free! We should pledge ourselves to even greater efforts than before!"

"We are not going to stop fighting," affirmed Rudolph Minkenberg, "We shall not stop until we have effaced the last vestige of the Organization from the face of the earth. It is our duty to stand by the guns and be ready to shoot the enemy shows its head."

Mayor Bryson

Mayor Weaver

Exit John Weaver, the Political "David" of Philadelphia, reviled by those who once acclaimed him as the "Savior of his City"

HERE HE IS LEAVING HIS HIGH OFFICE AND WELCOMING HIS "MACHINE" ADVENOR, JOHN E. REEFER

There were thunders of applause. Outside on the street thousands who were unable to enter roared their jubilation. Broad Street was crimson with a noonday of sky-rockets and red lights. The meeting in the Academy ended with the singing of "My Country, 'Tis of Thee." Men and women and children went to their homes singing the Doxology—trolley-cars buzzed to the words of "Praise God From Whom All Blessings Flow."

Since that November victory seventeen months have passed. What, the country is asking, has Philadelphia the Victorious done?

Since then a new Governor has been elected in the State. Another Mayor has taken the seat of John Weaver. And another great and overwhelming change has passed over the City of Brotherly Love.

Following the greatest victory over a political machine ever achieved by any city in the United States, Philadelphia—of her own choice—has gone back to the same corrupt "gang" which misruled and plundered her. By her own free will the city has deserted a reform administration for the one from which she so valiantly strove to free herself. Philadelphia the Victorious has fallen!

Durham, who fled from the city in fear of imprisonment one and one-half years ago, has returned, and again controls municipal affairs from the eleventh floor of the City Building. Snaring his power as a twin loss, is State Senator James P. McNiheol, of the contracting "Combine" which was charged with robbing the citi-

zens, on his return from the South several days before he took office, held a conference with former Insurance Commissioner Durham and David H. Lane. Lane, a month or two before, at a banquet in the Bellevue-Stratford Hotel, declared, "Let us be done with this talk of civic righteousness."

Before deciding on his department heads, Mr. Reysburn held a conference in the office of Senator Penrose in the Arcade Building, at which were present "Boss" Durham, Senator McNiheol, Recorder of Deeds William N. Vaux, boss of the southern section of the city, and Senator Charles L. Brown. Reysburn later announced his selection of Henry Clay as head of the Department of Public Safety; for the Department of Public Works, George E. Strass, an engineer of some repute, said to have been selected by Clarence Wolf, a banker who loaned the Organization thousands of dollars for campaign purposes; for Director of Health and Charities, Dr. Joseph S. Seff, a loyal adherent of the machine, and for the Department of Supplies, Joseph H. Klemmer—Klemmer, popularly known as "Durham's valet," the man who accompanied the former "peerless leader" on his jaunts South and made arrangements for hotel accommodations, boss of the notorious Eleventh, or "Police Ward."

Commenting on the appointments, the *North American* said: "If John E. Reysburn had sold himself, body and soul, to his evil counselors, he could not have advertised the barrier more eloquently than by the course he has pursued. If the old gang felt itself strong enough to restore the reign of vice and lawlessness and corporate plundering, it could not have chosen fitter

WHAT A DIFFERENCE A FEW MONTHS MAKE!

FATHER PENN. "And I Stand with You"

From the Philadelphia North American for May 24, 1909

It Crawls Back

From the Philadelphia North American for November 3, 1908

area of Philadelphia of more than \$5,000,000. The new Mayor, John E. Reysburn, has bared his neck to the yoke of the reinstated bosses, daily confers with them, making changes in his administration and appealing men to offices at their discretion. City Council, reorganized and freed from political assessments under the reform director, Cubert Sheldon Potter—has been placed Henry Clay, a man who for twenty years has been a tool of public-service corporations in City Council, the man who championed the very gas lease ordinance which, like a faint star on the horizon, developed into the bonfire of reform.

Philadelphia has backslid. Her reform movement, like a summer thunder-storm, has passed. Her armor for good government has cooled. She again has folded her hands in her lap and with a smug, sanctimonious smile has relapsed into apathy and content. The City Party, torn with intestine warfare, is disrupted. John Weaver—battled two years ago as the "New Deal," "the Savior of his City," "The Twentieth-century Moses"—after returning to the gang, has gone out of office reviled and maligned by those who hailed him as a hero of heroes.

Philadelphia again is in the hands of the most corrupt organization that has ever held its pestilent head over a city.

John E. Reysburn took the oath of office as Mayor of Philadelphia on Monday, April 1. After his election last spring, he declared: "I don't pretend and I don't want you to think I am going to be non-partisan. I was born and raised a Republican, and propose to make my administration a real out-and-out Republican administration for the city."

With this purpose in mind, it is not surprising that the Mayor

instruments than some of those whom his servant has placed in office."

Philadelphia elected John E. Reysburn, Mayor, on the Republican ticket, believing the Organization had undergone Quay's "reform within the party." Mr. Reysburn's appointment of Henry Clay as head of the Police Department made even the back-sliders sit up. Philadelphia realized the Republican machine had not reformed, after all—that it had merely worn the mask of virtue. The appointment of Clay was a give-away. Machine leaders have since expressed regret at his selection. Of his record the Committee of Security declared:

"Mr. Clay has long been the Organization leader of his ward. He was elected to Select Council in 1892, and has always been an advocate of corporate interests and an active supporter of the organization."

Clay championed the extension of the Gas-lease Ordinance in Council in May, 1902. Last February, Councilman Trainer offered a resolution which would force the United Gas Improvement Company to reveal the secrets of its books. Clay opposed it.

"The election is over," he lazily declared. "The people have shown they have had enough of this appeal to the gallery. No attempt has been made by the gas company to day the information to which the city is entitled. The gas company has taken up old leaky pipes and put down new ones of a larger size." And he added, "I have known Thomas Duhan since the time I knew myself and to more honorable men lives."

"Do you rise as a stockholder of the U. G. I.?" asked Mr. Trainer.

"I look upon Thomas Duhan as a friend," Clay replied. "A charge that Clay had sold \$100,000 on stock and had politicians go on his note before his appointment was withdrawn.

Within three days after Mayor Reysburn's appointments, United Gas Improvement stock jumped from \$14, to \$16 1/2, or \$2 1/2 a

Israel W. Durham, Philadelphia's "Boss," returned from Exile, who says, "I've got all I wanted"

State Senator James P. McNichol who, with his Partner, Durham, holds the Whip over Philadelphia

share. In financial circles this was regarded as a sign that all danger regarding any unfavorable development of the lease of the city's gas-works was at an end.

Two days after Reburn's inauguration Durham visited the Mayor and Clay in their offices in City Hall. Outside of Clay's office was a crowd of ward leaders and purple-faced, half-intoxicated boozers.

"Durham is the saddle again," one remarked. There was a chuckle of satisfaction. At that moment Durham came out of Clay's office. Edward A. Berlin, mercantile appraiser and leader of the Eighth Ward, grasped his old chief affectionately by the hand.

"Well," declared Durham, triumphantly, "I've got all I wanted."

"Well," laughed Berlin, "have you got anything for us?"

Durham met Clarence Wolf, the organization's banker, Insurance Commissioner and former "Boss" David Martin, and "Nestor" David H. Lane. This was Lane's first visit to City Hall since the gas-lease agitation of 1903. McNichol, for the first time since Mayor Weaver's stand for civic righteousness, visited the Mayor's office on April 6. The settlement over McNichol's claims against the city for \$2,500,000 for annulled contracts is pending.

This is a picture of conditions in the city whose reformation attracted the attention of a nation nearly two years ago. Inspiring and glorious as was its reminiscence of political wickedness, just as pathetic and tragic has been its fall. It is a story of men leavening wrathy of well-doing, of reformers becoming self-seekers, of indifference and apathy on part of a people—the story, in a way, of all great cities where men, immersed in business for private gain, lose interest in their government and the public weal.

Those who read of Philadelphia's pyrotechnic revolution of 1905 perhaps will find it hard to understand its reversal to old conditions. Should other cities again point to Philadelphia as "the most corrupt," the city's own reformers will be much to blame.

How has Philadelphia relapsed and why? Through John Weaver Philadelphia accomplished its work of reform; through him, in a way, the reform cause was finally lost. Of the figures who took part in the spectacular civic revolution none has passed out of active public life more pathetically than he. Once, after his stand for the people and their rights in the spring of 1905, his name was blazoned before the action. On the street his appearance was a signal for stirring emotions; hundreds crowded about him, following and cheering him as he went for luncheon from his office in City Hall to the Union League. Councilmen who had fought for the gas-lease ordinance fell head over heels in pledging him their allegiance. With sweep after sweep of his pen he severed the heads of the machine dragon, appointed just and good men to office, cleaned out the Police Department, had McNichol's contracts annulled. He was honored, petted, flattered. By his advisers he was crowned the Governorship, and hailed by many as the future chieftain of his party.

Today the newspapers which pictured him in cartoons as an angel writing words of doom at Debbanaz's feet, and a "Boss" leading the people from the wilderness of machine rotteness, scathingly picture him as a ringing ear flapping McNichol's boots. For John Weaver, after charging the City Party with parading old "gang" methods, and alleging the formation of a new combination, flipped back to the machine and, it is charged, used the police as a force to reestablish the organization in power. Despite the contumacious brazen upon him, John Weaver—it is his conviction—acted sincerely, and mistakes though he was, his part in discrediting the reform movement was taken without any ulterior motive. Turned down by the men who promised him the Governorship, he was plumed; this was natural. His vanity was

wounded; and, it must be confessed, John Weaver's besetting sin is vanity.

The success of the City Party at the polls in the fall of 1905 was influenced to a large degree by the sympathy of the administration at Washington with the reform cause. Elkins Root's designation of Durham's machine as "a corrupt and criminal organization masquerading as Republicans" was taken

as the sentiment of Roosevelt's. As will be seen, the success of the machine in the fall of 1905 in a large measure was brought about by a feeling that Roosevelt's sympathies had changed. Mr. Roosevelt sent to Philadelphia Speaker Joseph Cannon and Senator Knox, who urged the people to vote the "full Republican ticket."

With Elkins Root, whom Mayor Weaver selected as his legal adviser during the gas-lease agitation in 1903, was associated former Judge James E. Gordon, a man of great forensic power and a potent though invisible factor in Philadelphia reform politics. It was Gordon, and not Weaver, who inspired the gas-lease agitation and effected a victory over the "Boss."

While Weaver was getting the laurels, those on the inside saw Gordon pulling the strings and Weaver, marionette-like, playing the part of hero. Through Weaver men heard Gordon speak and saw Gordon act. Mayor Weaver chose an advisory board composed of the best citizens of the city, he acted on many measures by their advice, and, it is said, was goaded to wage battle by the promise of the Governorship. With this decoy before him he was led to believe that he, and not his advisers, was the leader, the heart and soul of reform.

When the last breath of the "Gang" seemed to have expired after the election of November, 1905, John Weaver began to observe his advisers and friends looking for office themselves. In December, 1905, a month after the victory of reform, city department offices were delayed by 3000 applications for "jobs" from City-Parties; City Party leaders themselves, to the astonishment of John Weaver, looked from one to another as a candidate for Governor, and, it is said, with "no little animosity." Weaver was soothed by adulation and gently yet firmly told he was "needed in his present capacity." At the convention of the Lincoln Party, which fused with the City Party in Philadelphia, Lewis Emery was nominated as the Fusion candidate for Governor. John Weaver's hopes were killed. The promises made to him were broken.

There were many in Philadelphia who contended that Weaver should have had the reward. His advisers, however, said that he was too weak a man for the position; that to keep him in line constant prodding, urging, pleading, expostulation, demands, and threats were needed. It is doubtful, however, if Emery was really better fitted than Weaver. Weaver, recovering from the jolt, felt that he had been deceived. He still believed himself a power in his city and that his influence would have to be considered. He advocated the nomination for District Attorney of the friend of his stenographer days, Frederick J. Shoyer, who then filled the office of Director of Supplies. Shoyer is a nice young man, a lawyer of fair ability, of good reputation, and a favorite speaker at Sunday-school meetings.

Instead, the reform leaders slated as their candidate D. Clarence Giboney, a whimsical clerk, secretary of the Law and Order Society, and Philadelphia's Anthony Comstock.

At the convention of the City Party delegates in the Academy of Music on September 18, 1906, Giboney was nominated over Shoyer by a vote of 550% against 321%.

In nominating the tall, florid, secretary of the Law and Order Society Mr. Lewis said:

"Go into the streets and lanes of this town and ask anybody, man or woman who, in these fifteen years, has hunted evil-doers in Philadelphia, and it matters not whether they honor him or fear

him, whether they love or hate him, they will all give you the same answer.

"Search out the nearly 300 cases he brought to trial in the Criminal Court against all the power of a hoodlum and corrupt Police Department, with convictions of 97 in the 100, and match it if you can with the record of any member of the bar!"

"Is it small wonder that in this hour of his need Philadelphia turns to the man who has jailed so many criminals, and, as more than one, calls to him to jail more?"

Philadelphia was to have reform with a vengeance—it is the old case of the city which, having done with crooks, turns to croaks.

The meeting took a recess until the following Friday, and in the mean time Mayor Weaver struck his blow at the reformers. Denouncing the convention as "more corrupt than gang tactics," Mayor Weaver charged that Gibbons was nominated by bought votes. He declared that within the City Party had been formed a combination as arbitrary and malignant as the old "Gang."

"For two years," he said, "I had a gang on my hands. Then when I arose in all my might and cast it out, it seems that another phalanx took its place. I have both to fight now."

Mayor Weaver embodied his charges in a letter which was read at the resumed convention, and enclosed eighteen affidavits to support his allegations of bribery. A committee of seven was appointed to investigate the charges and the meeting adjourned. At midnight of the following day Gibbons wrote a letter to Franklin Springer, chairman of the convention. He said he had been shown a copy of the Mayor's letter, that he observed that there were only three specific cases where bribery was charged, but declared that he could not allow the reform movement to be smothered by the Mayor through him.

The Mayor's charges raised a storm of protest within the City Party. Embittered by his "turn down" for Governor, they said, he tried to discredit the reform movement. The old Organization, creeping from its lair, howled with glee. On September 22, by request of the Mayor, Colonel Sheridan Potter resigned as head of the Police Department. In a public statement Mr. Potter charged the Mayor with attempting to use the heads of the official departments to further his political ambitions, and secondly, that the Mayor had demanded the discharge of his assistant director, Thomas W. Smith, and Superintendent of Police John R. Taylor, because they failed to use their influence to have Mayor nominated for District Attorney. In a letter written to the editor of the Philadelphia Press, on September 24, Mayor Weaver declared that, six months before, he found a new political combination had been formed, headed by John M. Mock, a former contractor and financier. On September 26 the Mayor held a conference with Alexander K. McClure, said to have been acting as the agent of James McKeloh, who, in the absence of Durham, had taken the reins of leadership and was quietly gathering together the fragments of the Organization. On September 27, the investigation committee of the City Party convention declared that Gibbons's nomination was clean; that it had held six meetings, examined forty-three witnesses, and found attempts of bribery on the part of only one delegate and by a person not connected with the convention. At the last and third session of the City Party convention Gibbons was renominated by an increased majority of 202½ votes. On October 19 the Mayor's Advisory Board resigned.

The resignation of the gentlemen who had acted with the Mayor during the tumultuous months of the gas-house agitation was presented to the Mayor in person by Charles Emory Smith, William Potter, W. W. Justice, Morris Newburger, Charles H. Harling, Walter F. Hager, Hugh McCaffrey, and Francis B. Reeves.

"We do not wish to embarrass you and we are unwilling ourselves to be embarrassed," the resignation ran. "We cannot render you or the city through you any effective service unless we have full measure of your confidence and, at the same time, the approval of our conscience."

By the public this was backed up as the termination of the Mayor's alliance with the reform element. On November 2 Mayor Weaver announced that he would support the Organization candidates and vote for them at the November election.

The City Party passed away on John Weaver's guillotine.

In the mean time the Organization had not been idle. The Republicans party formed a new City Committee. It adopted the mask of virtue. It meekly and humbly acknowledged it had committed sins in the past, but would do good in the future. It nominated for Governor Edwin S. Stuart, a former Mayor of the city and a man of unimpeachable character, and for District Attorney a little-known lawyer of the name of Rotan. For County Treasurer the City Party put up W. W. Allen, and for Register of Wills a magistrate, Albert H. Loden. The City Party ticket was endorsed by the Democratic Convention. For City Treasurer the Organization placed on its ticket Mr. Robert Bringham, a former Councilman and a City Party leader in the former campaign, one of the first to return to the folds of the old Organization.

Upon Mayor Weaver's announcement that he would use his influence for the Organization, candidates the City Party newspapers opened upon him with a flood of unmerciful abuse. Nothing was too dirty to say of Mr. Weaver, no adjective too extreme to place before his name. I attended a meeting where fusion spellbinders spoke one Sunday in the southern part of the city. There Mr. Blankenship, William T. Tilden, Charles F. Carpenter—who later dropped back to the "Gang"—spoke, and the unmentionable terms by which they vented their spite on Mr. Weaver, the unprintable epithets which they hurled at him, would have made any auditor doubt the sincerity or good of a reform for which they stood. Mr. Weaver had undoubtedly acted unwisely, but after the meeting I heard men asking each other the question, as I heard them asking it in other parts of the city after the meeting, could a man who had been so upright as these men a few months before had declared Mr. Weaver to be, change so utterly, and become so low and so abominable a traitor as they now designated him charged? Personally, Mr. Weaver's following could not have influenced the election by a large number of votes. The denunciation of the man, however, by his former colleagues and co-partners turned thousands to the Organization.

Into the City Party itself had come dissension. As in other cities and before in Philadelphia, the spirit of selfish ambition had crept into the Garden of Eden of reform. In the previous July the Committee of Seventy presented a report on the Filtration scandal, prosecuting the Durham-McNichol combine guilty of fraud, but legally absolved from prosecution. And this after the same reformers had declared that Durham, McNichol, et al., should be sent to jail. Besides this, the Committee of Seventy, charged by trying to "run" the City Party organization, demanded that all place-holders in the City Committee of the City Party should resign, whereupon there was a great hue and cry. People lost confidence in the reformers, and they had no confidence in Gibbons. Edwin S. Stuart, the Republican candidate—while the reformers stormed, while Lewis Emery went through the State Capitol, as though the exposures of Treasurer Berry were not strong enough—went frankly before the people, pronounced an investigation of the State (spit) scandal if elected and a pure and just administration.

Mr. Stuart in one of the most magnetic men I have ever seen—the Organization owes his victory to this honest, right-minded gentleman.

Mr. Rotan, who ran in the city for District Attorney, never did anything that was noteworthy, but he said this of Mr. Gibbons:

"Gibbons is a man whom you could see any night hounding unfortunate women in the Tenderloin, serving warrants on poor wretches whose lives were sinful and sad enough. But when you heard of Mr. Gibbons waiting at the gates of Moyamensing Prison the morning the poor women he had arrested were freed, taking their heads and leading them to a better life."

Mr. Rotan's simple remark rang true. Philadelphia cheered. The people had not forgotten that, in the previous May, Gibbons's men carried on one of the most wholesale raids ever perpetrated in a city that seventy-five places were invaded on one night, that 200 persons were arrested, cuffed and belted by policemen, and driven in patrols to the central station in City Hall. They returned

Philadelphia during the Fever of Reform.

REPEATERS, BALLOT-BOX STUFFERS, AND GANG HENCHMEN ARRESTED AND BROUGHT TO CITY HALL ON ELECTION DAY, NOVEMBER, 1905

THE LAW—OR THE POLICE?

THE HAND WHICH ONE NEW YORK CITY MAGISTRATE HAS
TAKEN UNBIDDEN IN AN OLD-ESTABLISHED POLICE GAME

By ROBERT JERMAIN COLE

THE first court to which a prisoner is brought after arrest is sometimes called the magistrates' court; more often, the police court. Which is it? Seventy per cent. of all complaints there are policemen. If the police system is corrupt the whole court is affected. An honest magistrate feels the humiliation of the alliance between police and criminals with a sting that does not end to the ordinary citizen. The court is asked to make bricks of justice, in many of the cases brought before him without a trace of evidence. Such cases are not brought there for the ends of justice. From a place in which the innocent are protected and the possibly guilty held for a higher tribunal, the magistrate has often seen his court transformed into a police whig to lock refractory criminals into obedience to the law of the station-house. For the police, he has been forced to discipline the saloon-keeper, the gambler, and the woman of the streets who did not pay up. Worse yet, the bench is held as a shield to ward off police charges. The lawless, admirable police make many arrests, shrug shoulders and say:

"We done our duty, but the judge he turned 'em out." Previously, he had no choice on the evidence, or no evidence, offered by these same policemen. The more conscientious the magistrate, the more effectively he serves their ends. The more strictly he enforces the law of the State, the more useful he becomes to a corrupt official in extorting blackmail from lawbreakers. Any wise police captain knows exactly what a really good magistrate is going to do and makes his plans accordingly.

The police captain and his men Friday—likewise his man of all the other days of the week—know the precinct like a book. They know it far better than all the books, as the old steamboat pilots knew the Mississippi River bottom. They take soundings often, with greatest plummet, and there's more than sand on it when they haul it in. In plain English, they take tribute from saloon-keepers for allowing them to keep open at unlawful hours. Now and then a dealer resists this and rebels vigorously. Not long ago one of these men approached a lawyer of good standing. "I want to retain you to defend my rights," he said.

"What rights?" asked the lawyer.

"The right to keep open on Sunday." The man appeared to believe that the captain had taken away an honest citizen's privileges by force. Now a really successful captain must be able to deal with such unreasonable demands against his own law, so that others shall see, fear him, and obey. He knows the other law, the written will of the people. He knows exactly what evidence will force a magistrate to hold the prisoner, and what lack of evidence will result in a discharge. Sometimes, however, his honor is in a fogging mood when the captain, for reasons of his own, wants the prisoner held. Sometimes he holds when he ought to discharge. But here is where the faithful, law-abiding magistrate serves the station-house best. By judging strictly upon the evidence he brings about the result foreseen and desired by the corrupt official who directed the gathering of evidence, complete or incomplete. Thus the just judge aids in the working of the most scientifically automatic injustice. As the inspectors and captains plan, so he executes. When they wish to make a show of enforcing law without having faithful taxpayers they raise many arrests, the policemen testify to nothing vital, and all prisoners are discharged. If they wish to punish those that refuse tribute, the evidence is easy to get and the result certain. To a man of Whitman's type the court's position is unenviable.

The creation of the night court will not only make it possible for innocent persons wrongfully arrested to obtain their liberty forthwith, but will put an end to the barroom business of the professional bondsmen. These ventures are always warned when a raid is to be made. One morning I saw forty-two women arraigned before Magistrate Whitman in the Jefferson Market court, the first after they were discharged for lack of evidence. In one case, typical of all, a policeman of the "Tenderloin" who had made the arrest testified under oath that he had seen the woman talking with a man.

Q. Did the man complain to you? A. No.

Q. Do you know what she said to him or what he said to her? A. No.

Q. Have you presented all the evidence there is in this case? A. Yes.

By THE COURT: The defendant is discharged. Why, then, were the forty-two women arrested when it was well known that they were not breaching the law? Because each one paid the bondsmen five dollars to bail her out—\$250 for one evening's work. The \$250 is the price of the professional bondsmen divided with those who provided the victims.

The city magistrate works in the raw material of crime before ever it gets to the slow grinding mills of the higher court. At his bar, justice has that intimate personal air it had in the ancient cities when the Cui sat at the gate. The Court may be as

paternal as a patriarch. His fines or forgives the drunkard. Whether or not the man who sold the liquor shall be dealt with at all by a higher court, he must decide. But he may decide only upon the evidence. He can find some threads for patching up the tangles of two gossip in a tenement, because one gossip brought the other to court, and rack is thoroughly in earnest. But in twelve cases the policeman-complainant has made the arrest only under compulsion, and he rarely brings evidence to show that the saloon man has actually broken the law.

There are two vices of the magistrate's duty. One was expressed by a man who used to sit upon the bench.

"Yes, there is plenty of graft among the police. There is graft everywhere, and violation of the law. As long as hope remains in the human mind men will gamble; as long as there is third men will drink. You can't stop it. Only a young man would think it possible to change anything. No young man should be a judge, or a judicial position, one greater than a longer life, and we can see these things pass before him without being thrown off his balance."

Magistrate Charles S. Whitman is a young man. He has not been content to let the police have their own way. For three years, he killed his time. He is naturally a conservative. Those who have watched his course on the bench were surprised when, a short time ago, he entered a saloon after closing-hours, proved that it was easy to get the evidence policemen had refused to bring before him, and heard from the policemen on the beat and from the bartender of the saloon the shameful reason why such violations are allowed.

A second time Magistrate Whitman entered a saloon in the same precinct and purchased liquor, proving that the condition was a permanent one. He says he has acted, primarily, to stop the other side of the evidence. He has seen the corrupting effects of repeated falsehoods into his court.

It is only a step from the corruption of the police who bring false evidence, to the corruption of the clerks who sit behind the desk and of the other employees of the court. Anybody who has been familiar with police courts knows how ready the clerk is, in many instances, to give stage advice to policemen and complainants. It is very easy for a clerk to change a "sale" of liquor into a mere "exposure." He has clever enough to see to it that the other side of the desk, I do not mean to say that all clerks as a class are corrupt, but I do assert that even the best of them are affected by the general situation. They hear the testimony of the police, they note the number of cases turned out for lack of evidence, and they get in the habit of thinking that the simplest way is to make a complaint as light as possible. That clerical habit has its part in making it more difficult to check all sorts of crime.

The records of one year with which I happen to be familiar in Jefferson Market, then the heaviest court in town, showed forty-eight arrests of gambling-house keepers. Fifty-five of these had been discharged for lack of evidence. The excise arrests numbered two hundred and forty. At one violation a day that brava yet a hundred and twenty-five dry and peaceful days when nobody took anything to drink after hours or Sunday and of these cases more than half were dismissed—no evidence! They after day I stood and listened to the policemen chanting their little ditties—like a refrain perverted from *Treasure Island*:

"Sixteen men on the tickle-down chairs,
Sixty-hen and no bottles of rum."

But the singing policemen and the rummy clerks are not the only allies of the saloon-keeper. If the liquor business were generally admitted to be as useful as the selling of iron or oil, there couldn't be more than one honest opinion about its right to any special influence in courts of justice. Yet this business has put two of its own former counsel on the bench in the last few years, and one of these has been "promoted." I have heard this man berate poor bartenders in a voice like thunder for being so foolish as to get caught. It may be that he is too terribly angry to be compelled to hold one for trial. The point is that sometimes he was compelled to hold them; and when the police are made to get evidence even a sympathetic Court can have no alternative.

Well, but what if they be made to get evidence? A week after Magistrate Whitman showed them the way by getting evidence himself, he opened court in Jefferson Market. It was more like the Supreme Court than the police court of other days. The jostling rabble of lawyers and friends of the prisoners were thrown out of the courtroom. The judge, who has often let his record as if everything that could be an obstruction to justice were heaped within, while a vigilant guardian turned the few harmless citizens that had no "business" there sternly away! On this fine Monday after Magistrate Whitman's visits to early morning saloons, every policeman who brought an excise case had the

Magistrate Whitman on the Bench at Jefferson Market, the busiest Court in Town

"FROM A PLACE IN WHICH THE INNOCENT ARE PROTECTED, . . . HE HAS OFTEN SEEN HIS COURT TRANSFORMED INTO A POLICE WHIP TO LAKE REFRACTORY CRIMINALS INTO OBEDIENCE TO THE LAW OF THE STATION-HOUSE"

evidence on his tongue's end—instead of leaving it in the inspector's pocketbook—and it came off the policeman's tongue trippingly. He had learned his lesson.

"Suppose they forget after a while?" I asked the magistrate.

"Then I'll go out and show them over again." Magistrate Whitman is not a "rascally judge," as he has been called, nor has he undertaken to do the work of the police. He does not love it, but he cannot shirk it. He is in the business of court-cleaning now and nobody can get that beam out of his hands. All kinds of weapons have been used against him. His foolish enemies made themselves laughingstocks by saying that he was drunk. Another more disgraceful charge was discussed in their plotting; but that was abandoned as transparent. It is almost too bad they did not make it.

The magistrates' bench is a hard test of a man's quality. Even those of clean purpose are likely to grow weary or cynical. The very fatality of their efforts to find out the truth from the police ruins upon them. They are kind to the women whose husbands have beaten her, and if the police are more kind to the man who sold the husband the whiskey—why, that is the policeman's fault.

Mayor Strong, in the old fighting days of reform, appointed a number of excellent men to the magistrates' bench. Mayor Low respected some of these and added wisely to their number. Survivals of more antique days remained long to honor themselves and the city they served. The first magistrate I knew was Judge Hagan. Some time before his death he told me how it hurt to be classed as a survival of the Twined Ring. True, he was a Democrat and he was active in Tweed's time.

"But I fought Tweed and all his crowd," protested the old man. And nobody had a word to say against his court dealings. He was a fatherly man, and the greatest delight he had was to reconcile some young married pair.

Of late years men whose loyalty to the local machine has been proven appear to be the favorite candidates for the bench. The result of their appointment is easily marked. Yet even these men have acquired some sense of the dignity and responsibility of their office. They do not enjoy the brutal demands of their party friends for favors. I do not believe that they are free from fear of the result of a continued deterioration of these courts. They have turned for help to their associates of another type. I have seen two or three magistrates leading a forlorn hope in the board meetings against a party-bound crowd. Now Whitman is president, and the others have voted him an absolutely unprecedented power to represent them in any action he may choose to take for cleaning the courts. Something has already been done. More will follow, though not, perhaps, in slashing noisy strokes. It has taken Magistrate Whitman three years to get angry enough to strike. He is angry now, with the slow, unquenchable rage of the just man who sees daily evil done before him. It will take him a long time to get over being effectively angry.

Nobody who was in court one day two years ago is likely to forget the case of a woman of position and wealth—her name has never been printed—who stood charged with shoplifting. The complainant had withdrawn the charge. It was within the discretion of the Court to dismiss it, since the amount stolen was so small as to constitute only a minor offence. The woman's husband was

a man of real political power in another State. His New York friends had beseeched the court to let the woman go, and they were not obscure persons either. Some of them fairly commanded him to dismiss the charge. He would win favor that might be useful in the future, and he would lose nothing in reputation.

"Is it conceded that the prisoner is guilty?" asked Magistrate Whitman.

"It is," replied her lawyer.

"Within a few days," went on the low voice of the man behind the desk. "I have held men and women without friends, on the same charge. I will not have it said that in this court there is one law for the rich and another for the poor. I hold this defendant for trial."

That is the impartial spirit of the man who is trying to lift the magistrates' court to a higher level. It is not a personal fight. This tribunal has been called the people's court. To keep it clean is to make the town safer for all, and to exercise a wholesome influence upon the whole police situation. Ask your friend the straight policeman about it. I did.

"The judge is all right," said the man upon the sidewalk. "I've had clerks frame up a complaint so as to throw a case out or let it off easy, but Whitman would see through the game and make the clerk write it over just as I had told him in the first place."

A number of policemen have expressed very similar views. They declare that they are ready to bring the evidence if their superiors will allow them to do so. The change in the system that should follow the passing of the Bingham bill will give these men the opportunity to show whether the fault lies chiefly with inspectors and captains or with the rank and file.

Some of the magistrates are delighted with every step their president has taken, both in teaching the police how to get evidence and in turning out lawyers, businessmen, and the nondescript crowd which has infested the inner enclosure. The better class of these lawyers does not object to the change. As for those magistrates who were appointed for purely political reasons—more political than pure—the fact that enough of them voted with the others to make Whitman president of the board indicates that some are men as well as politicians. Whitman has won their absolute confidence in his fairness. They do not fear that he will take a partisan advantage of them.

One result that may be confidently expected is a cleaner handling of election cases in November. Of late years it has happened too often that the best magistrates have found themselves, for some mysterious reason, expiring their vacation on Election day, or they have been assigned to the courts covering districts of least political significance. I have seen voters of the lowest rank, no drunk that they had to be supported on each side, discharged in order to vote, while apparently honorable gentlemen were held on the flimsiest technicalities, and their votes lost.

To remedy all this is not the work of a day nor the work of one man. Magistrate Whitman has been building quietly a reputation that makes his more striking acts effective. He has not boasted of what he will do, but he has proven that he can act quickly when the time comes. Is this man too young to be president of the Board of Magistrates? I have no doubt the police-inspectors think so.

THE AMERICAN INVASION OF THE CONGO

By S. P. VERNER

VARIOUS accounts, mostly erroneous in one way or another, have been appearing of late in the newspapers concerning concessions recently purchased by American capitalists in the Congo Free State. This is the first authentic and accurate statement which has been published.

A group of American capitalists has for years, sometimes under great discouragement, been developing and perfecting machinery and reactionary chemical methods for recovering the rubber known to exist in a great number of tropical vines, grasses, shrubs, and weeds. The first commercial venture in this line was made in Mexico, where, for some time past, large quantities of serviceable rubber has been mechanically extracted from a shrub known as guyle. Exploration developed the fact that the acreage on which the plant is indigenous, while very great, was not extensive enough to secure an unlimited future supply; nor was it likely, unless immigration was secured, that the shrub would be cultivated, because the available native help was hopelessly inadequate for that purpose. Thereupon a worldwide search began for other fields, and Africa naturally came under observation. Here there are six different rubber-bearing growths, heretofore unused, but all available for the new American methods and promising tremendous yield. These plants grow throughout the whole Congo Basin. The Congo Basin is a very general phrase, the territorial significance can be best appreciated when it is stated that if the great web of the Congo and its affluents were lifted and superimposed on that portion of the earth known as Europe, it would reach from Belfast in Ireland to the Red Sea; from one hundred miles west of Lisbon to the beginning of Asiatic Russia, and from Finland to the toe of Italy. To gather rubber, build railroads, operate mines for gold, silver, copper, coal, and iron (all known to exist there), to cut and ship timber of all varieties, to maintain steamship lines, to build roads, and in fact to do every and any thing leading to the development of the Free State, are among the rights secured by Mr. Thomas F. Ryan from King Leopold over this great sweep of territory.

In the development of this vast estate, whose mineral wealth is believed to be as great as that of the land, from which Brit, Rhodes, Barnato, and their associates reaped and are still collecting vast fortunes, Mr. Ryan has associated Mr. John Hays Hammond, the Guggenheims, and Senator Aldrich of Rhode Island.

These regions lie on both sides of the Congo River, extending north and south of the equator, embracing both forests and plains, alluvial bottom-lands, and hilly and mountainous districts. They include locations sufficiently elevated to be free from both mosquitoes and malaria, and to offer inducement to settlement by white agents and colonists. They are also traversed by navigable streams and well watered by smaller tributaries. They are populated by enough friendly natives to perform most of the manual labor required, and it is the determination of Mr. Ryan and his associates to treat the natives in such a way as to attract

their services, to render them comfortable, to free them from many of the hardships incident to their semi-savage life, and to give them a fair share of the proceeds from the development of the country. It is well to remark here that there are excluded specifically from these concessions all lands now in actual occupation by the natives. The concessions cover only vacant and waste lands, not cultivated or otherwise used by the natives, and which would never be developed by them. As a matter of fact, out of the whole of the million square miles in the Congo Free State, only about 20,000 have been used by the natives, and not more than twice that amount would be required for their use, at the rate of the increment of population obtaining before the advent of the white man, for, another century.

The concessions occupy various parts of the country, from the mouth of the river across the continent to the great African lakes, and north and south from the Sudan to the southern waterholes of the Congo. The extent and the character of these concessions are undeniable evidences of the fact that properly qualified Americans, with genuine intentions of development, are allowed a legitimate share in the work of the industrial reclamation of Central Africa. This fact came to the writer as the greatest pleasure in the history of his own efforts in that continent, for he had a long anticipated great difficulty in securing from European powers commercial advantages for himself and his countrymen in the territories dominated by them. The fact of the Monroe Doctrine might be said to carry in the eyes of Europeans its reciprocal corollary with reference to America in Africa; but it is obvious that the Monroe Doctrine has never extended enormous and substantial commercial European interests in South America. Consequently, it is entirely legitimate that we should expect equality of commercial opportunity in Africa. Since our

Thomas F. Ryan

THE LEADER OF THE AMERICAN COMMERCIAL INVASION OF THE CONGO

government is disposed to uphold the vested European rights in their relations with our South-American neighbors, we have every right to expect similarly fair treatment in the great tropical continent on the opposite side of the Atlantic.

The practical objects in these concessions are principally three: To produce for export in their country articles of high value in proportion to weight or bulk, the cost of the transportation of which is easily borne by their intrinsic value; to produce and deal in other articles of less intrinsic value, but upon which a profit can be made in local commerce—for example, the lower grades of lumber, iron and steel, agricultural products, and miscellaneous domestic manufactures; and to develop for permanent investment and the general improvement of the country and people transportation lines, by water, rail, and automobiles, and other needed public and semipublic works of general utility.

In the practical pursuit of these objects, it is intended to use the most highly advanced progressive methods applicable to the existing conditions. While it is a fact that, in view of the tre-

THE SPARK AND THE FLAME

SMALL CAUSES OF GREAT FIRES, AND HOW THEY MAY BE ELIMINATED

By FRANCIS J. LANTRY

Fire Commissioner of the City of New York

WHEN you see any case running in the fire-box on the corner, tacking the handle and pulling down the hook, you never can tell what serious consequences are to follow. You know in a general way that a fire alarm has been sent to headquarters, that almost at that instant the men in the responding apparatus companies are sliding down the poles and manning the apparatus, and that the powerful horses, with all their vim and dash, are heading an horde of men to the scene of the fire. You know that human lives and valuable property are being imperilled, you know that an undiminished light is to be made against the fire, whether it be little or big, and you know that the men are there to go the limit in their day's work. And what results from it, of course, is impossible to determine. It may be a burning lamp, and nothing more. It may be only a minute's work, or hours and hours of fierce combat against the flames.

Naturally, the mind turns towards the cause of all this peril and work. Usually this cause is an extremely small one; and it is on this point that I should like to focus public attention in order that every one may be aroused to the fact that it is possible, by caution and common sense, greatly to minimize the dangers of fire.

The slightest cause may start the greatest fire. Historically we know of the somewhat famous day on which Nero played his violin solo while the flames swept Rome to its foundations; but whether it was caused by the lamp or the torch of those days, we do not know. The fire marshal's office had not yet been established. The kicking over of a lantern while Mrs. O'Leary's cow was being milked is the traditional explanation of that conflagration which destroyed the city of Chicago. A slight explosion in a Baltimore cellar, responded to first, I believe, on a still alarm, resulted in the partial annihilation of the city.

These instances may be multiplied for days, but so many things have occurred in New York showing that the slightest causes have resulted in the greatest fires, that there is not the slightest doubt that a crusade against carelessness and for caution would result in the saving of thousands of lives. These instances, however, have been the causes of many calamitous fires that one is appalled at the carelessness displayed. There is proof to show that in numerous instances mice and matches have started the blaze, driving people from their homes in the dead of night, and in many cases resulting in the destruction of the buildings or of some of the brave firemen themselves. In some cases where fires were torn up after fires, in the process of investigation, matches have been found in a nest of mice, showing conclusively that the rodents have a fondness for matches which is not by any means conducive to safety. There are now in the fire marshal's office boxes of matches showing the holes made in them by the gnawing of mice. It is explained that mice are very fond of the sulphur found in the matches, and that they eat it whenever an opportunity presents itself. For that reason alone it is plain that the use of matches in households should be very carefully safeguarded; but there are many other reasons showing why extreme caution should be exercised in the use of matches in the household. For instance, the fire marshal's report for the boroughs of Manhattan, the Bronx, and Richmond during the year 1906 states that among the principal causes of fires 887 were due to carelessness with matches, and 288 due to children playing with matches or fire. The fire marshal for the boroughs of Brooklyn and Queens reports that 732 fires were caused by matches igniting rags, beds, clothing, rubbish, straw, etc.

I have already, in my annual report for the year 1906 to the Mayor, called the public's attention to these conditions, and I have suggested that every city department coming in close touch with the people should warn them of the danger of this sort of carelessness, and the necessity for caution. I have also suggested that the matter be taken up in the public schools, and that the children be trained to the necessity for this caution, so that later in life they will appreciate its importance and apply it in their homes.

Speaking of the careless use of matches, reminds me of an incident that occurred one night while I was sitting on a roof-garden of one of the New York theatres. The roof was enclosed by a fence or guard-rail made of wood, or perhaps some fireproof material. At any rate, I saw a match that had just been used to light a cigarette thrown by one of the members of a very jovial party sitting at a nearby table. The match fell to the roof just under the fence, and immediately ignited the material of which it was made. It was not by any means a large blaze, but I remarked to my friend of the cigarette, expressing my self for interpreting that the match was still burning, he looked at me rather good-naturedly, and said, "Nobody has told me anything about it yet," and turned again to his companions. I then called his attention to the fact that the match had ignited

the fence, and he replied that he had not noticed it, but was very sorry for it! He then extinguished it, and I took pains to call his attention to the fact that it was the way some very disastrous fires were started—which is precisely the point that I am trying to emphasize in this article.

Suppose that this almost unobservable fire had been allowed to burn for a short time longer, there is an telling what serious trouble might have been caused by it. The theatre, or, if it might not have been injured by the fire itself, but the excitement of the people who were on the garden or in the theatre below would probably have become so great that a panic would have ensued. Small causes result in great pains as well as in great fire, and in places where crowds congregate has probably resulted in more loss of life than the fire.

Away fires are far too plentiful, and could be very easily prevented by caution. A few men sit smoking after their dinner in their apartments, either in houses where there are stores beneath or where the use of awnings during the summer-time is general, discuss the events of the day after dinner, finish their cigars or cigarettes, and throw them out, as they think, into the street. They lodge on the awnings, there is an alarm of fire, and then perhaps thousands of brave men are called upon to risk their lives in consequence. Moreover, I know of a case where two expensive pieces of apparatus were both practically wrecked in responding to a fire caused by the turning over of a lamp in a shanty. The fire itself probably did a few dollars' worth of damage, but the damage to the apparatus ran into the thousands. Either Deputy-Commissioner Hugh Bonner, who was Chief of Department for years, or Edward F. Croker, who is the present Chief of the Department, will testify that many disastrous fires are caused by carelessness in the handling of rubbish in the cellars of old-fashioned buildings and in houses of fire. In the first instance, to violations of the regulations concerning the storage of rubbish in basements. In the old-fashioned buildings the elevator and dumbwaiter shafts are responsible for the rapidly with which the fire, runned originally, in many cases, by carelessness, spreads to the building. These old-fashioned buildings, constructed years ago, form chimneys to furnish the draft that carries the fire up through the structures, previously as ordinary chimneys would furnish the drafts for furnaces and stoves. Of course modern building laws have reduced this hazard to some extent, but they have not reduced human carelessness. In many cases where the shafts are protected in the basement and subterranean by metal doors, which under the law should be closed when not in use, are left open by owners, tenants, or employees, and that destroys the benefit of the new construction of these shafts. It takes but little time at the close of the day's business to see that these doors are tightly closed, and the same is true of any other character of building; but this attention is not always given, and again carelessness endangers life and destroys property.

This is the time of year when classes meetings of the lace curtains and the gas-jet produce a great crop of fires. All winter long it has been quite possible to light the gas near the window with perfect safety, because, although the highly inflammable curtain hung near by, there was nothing to drive it against the flame. But with the first warm days of spring now yields, the perfectly natural impulse to open the windows, breezes and blows briskly into the room, and in the twinkling of an eye the flimsy lace lies over the flame. Instantly the fire runs up the fabric, spreads to the curtain pole, and the dry, combustible wood of the window frame, and presently the house is ablaze. Probably it will surprise most readers to know that in the boroughs of Manhattan, Bronx, and Richmond last year we had 216 fires from this cause alone. The habit of caution would have prevented all of them.

And equally surprising to most citizens will be the fact from the records that in these three boroughs last year 491 fires were caused by carelessness in throwing away lighted cigars and cigarette stubs. Cigars are dangerous—any burning thing is dangerous—but cigarettes are especially perilous. For a cigar and will soon stop burning, while the cigarette burns completely to the end. The only safe thing to do is to stamp out the last spark.

Numerous other instances could be given of the result of carelessness in producing fires. It would take many volumes to furnish even an adequate list of these slight causes of great conflagrations. Caution is the great remedy, caution applied later. Evidently and impressed on the minds of every one. If people would only stop to think what might result from the careless use of matches, from the careless handling of rubbish in cellars and private houses, and in old buildings, from the careless disposal of the most apparently harmless fireworks, from the careless disposal of lighted ends of cigarettes and cigars, vast good would be done to the community, and this crusade for caution would be of incalculable benefit.

A THEATRE, A SOMERSAULT—PRESTO!—A BALL-ROOM

AN INGENUOUS FRENCHMAN HAS PATENTED A THEATRE IN THE RUE DE CLICHY, PARIS, WITH A FLOOR WHICH REVOLVES ABOUT A HORIZONTAL AXIS. The Stowaway

by William Inglis

DRAWINGS BY O. E. CESARE

WK had just picked up Diamond Head, two points off the port bow, and as the *Mongolia* was making along at a good fifteen-knot pace we were in a fair way to make Honolulu an hour before sunset. Bailey was hustling half a dozen dejected-looking Japanese laborers toward the stowage, and as big Bill Hanabusa, the carpenter, looked at them he grained and lit a fresh cigarette. Also he soliloquized: Stowaways. You'd think they'd learn something, but they never do. There ain't a packet comes out o' Yokohama that don't carry a bunch o' 'em. The ship's people always put 'em out and put 'em in shovelling ashes in the stove-hold. Then they lock 'em up in Honolulu and make 'em work their passage home on the next ship. Don't make a bit o' difference, though. They just keep on coming.

You see, they can't make more'n a fifty cents a day at home, and out in San Francisco any kind of an old rick o' bones on two legs can get his good old two per. But the ship's people stop 'em all right every time. What? Sure. Why, it's a case o' five hundred for every stowaway that a ship brings over, unless he's grabbed and sent back.

The *Mongolia* had thirteen o' 'em a while ago, and one o' 'em beat it past Honolulu, though they did sail him before we got to Prison. This was before Cap'n Hathaway took the *Mongolia*. Talk about trouble! We'd come this far, and Bailey was herding his towaways up out o' the stove-hold into the lockup in the stowage, and he sees they're one short. Counts 'em over again—ten, eleven, twelve, but divid a thirteen. Well, he runs to the third officer, after he locks up the bunch, and tells him they's a stowaway missing.

Talk about your Sherlock Holmes! I'll bet you there ain't an inch o' this ship from the foremast in the rudder-post that ain't scraped out. But nothin' doin'. Oh, them Japs is the easy boys, all right all right.

Time we got off Honolulu and the doctor and the custom-house people come alongside it's up to some one to tell the Old Man. You'lla heard his mar.

"What?" he says. "Wha-a-s-a-t? Been looking for him two hours and can't find him? Well, all the Han-nan-nan! Here I got a crew on this ship, or have I got a lot o' pin-headed, pie-faced, mushy-brained HANSETT-BAXO-BAXO celtar?"

Oh, it was grand to hear him.

"Now, you get that Jap," he says, "and get him quick, and don't let me hear another word. Get—get him—understand?"

Well, sir, the hull ship's company don't do nothing but search. No use. We go all through the cargo. Nuthin' to it. And here it is getting close to sunset, and the company's orders is positive not to run up in the pier after sunset, and here's the Old Man been burning extra coal to make a quick trip, too, and the ship's liable to a fine for delaying the mail, besides having a lot of cargo to discharge at Honolulu, and she's been laid out two hours now, all on account of that Jap. I tell you, no captain's job for Willie Hanabusa. Oh, I know the grid here and the big cabin under the bridge, and the head of the table in the cabin and all the business trying to make a bit with you—it's all in the moonlight. But you run up against snags like this stowaway thing that just make you old before your time. You take that from me.

But at that the Old Man put up an elegant bluff when the custom-house inspector tells him they're one short on the stowaways.

"More matter of detail," he says with a smile—just like that. "More matter of detail. I'll put a couple of extra watchmen on the job, and I'll guarantee that coulie'll never get ashore."

But the inspector was afraid to take a chance, and I don't know that you could blame him much. No here we are with the sun swelling up big and red and sliding down pretty close to the ocean and still no signs o' that easy Japanese. We're all breaking our backs to fit him, when the bo's'n passes the word that the captain has had to put up his personal bond for \$100 that the Jap won't be let to land at Honolulu, and, sure enough, we break out the anchor and go alongside the pier.

You can bet a good cigar that below never had a chance to get up on the beach. Next afternoon we're leaving Honolulu on time, though it's at a price that staggers humanity, as the old fellow says, and you can see that the skipper is madder than a bull in the ring. Every time he makes a move on the bridge you can see the second officer kind o' gathering himself up and bracing himself like a scrapper getting ready to stop a punch. And every one else is sore, too: all on the *Freezer*, as the Frenchman says. The fine old Hawaiian band is playing us off as usual, and the crowd is out on the end of the pier waving handkerchiefs, and their friends is all gathered on the promenade-deck wearing red and pink and yellow leis 'round their waists and waving their handkerchiefs back at 'em, and little Kanaka is diving for nickels the passengers heaves over, and some with bags, very dignified, hanging on to the wind-fall rail, and there's what you might call a grand outpouring of sentiment all 'round.

Not that any of us is taking notice of all these things. No. We're enjoying the pleasures of the chase after that three Japanese. Live and let live is what I say, and I'm a pretty easy-going fellow, but about that time I was beginning to think I'd like to take a belt at him myself.

We was a little ways past the Maple bent club and just beginning to get good way on her, when I hear Bailey singing out. "There he goes! *The-e-e-r* he goes!" and I see a middle-aged Japanese running along the after-deck to beat the cards. Say, you can bilge me if he wasn't moving faster 'a a scared rat. He hadn't nothin' on but shirt and pants and him just streakin' for the tailfin, head up and heels flying. I have my hammer at him, but pokah! he was six feet past it when it hit. Three or four of the Chinese sailors makes a dive for him, but—well, you know yourself how much of a chance a hundred Chinese has against a Jap. He's up on the rail and gone in a wink, while they're still rolling all over the deck.

"Stop her!" yells the First Officer, up on the bridge, and the quartermaster smashes away on the fog. "Stop her! Hey, you lie'n, station in the quarter-on boat! Stand by to lower away!" "Slack work, eh? Well, I guess you never saw Mr. Woodward in a hurry. He don't ask any odds of any man on the Pacific. He's in the boat, lowered away, and chasing this here Japanese before you can say dark Robinson.

Poor devil! It's kind o' tough to see any one lose his liberty and pursuit of happiness just as he gets pretty close to shore in a

Drawn by O. E. CESARE

It's kind o' tough to see any one lose his liberty and pursuit of happiness

aise, long, overhand stroke; yet we was laughing all along the rail when the boat runs alongside this fellow and Mr. Woodward ups with a bout-hook, harpoons him in the back o' the pants, gives the hook a twist and yanks him aboard. And with that he hands him a cuff on the ear you could hear the length o' this ship, for it was a still, quiet day with just the best bit of air stirring out o' the south-west.

The boat's alongside the *Woozulis* quicker's you c'n shie an ock, and before she's hoisted check-a-blook on the davit, the First Officer's out of her, dragging this Japanese by the collar. Bing! he hails him an upper-cut as he yanks him inboard over the rail, and bang! he gives him another for luck as he drops him on the deck.

"Oh, you lobster!" he says, with another fierce wallop, "you thought you'd go to Honolulu, did you? (BING!) Do us out of five hundred, eh? (BANG!) Make us two hours late on the mail, would you? (BING!) Think you're a swimmer, don't you? (WHANG!) Now, I guess you'll be quiet a while!"

And with them words he gives the Japanese a whirl that sends him down the companion into the stowage on his head—you know how strep that companion is, and the high coaming had caught him just under the knee. The poor fellow lays there on the deck below, clean down and out.

"Here, Buckley!" the First Officer yells. "Put cuffs and leg-irons on that fellow and make him fast to a ring-bolt! I'll learn him to swim to Honolulu."

"A neat piece o' work, Mister Woodward," the Old Man says as the First Officer goes up to the bridge, buttoning on a dry pair o' cuffs, seeing he'd got his other pair wet fishing the Jap out o' the harbor.

"Yes, sir," Mr. Woodward says; "and I guess he won't see Honolulu for a while."

Which was true enough, and yet, as you might say in a manner of speaking, you never can tell.

I happened to pass the Jap about half an hour afterward. He'd come back to his senses by that time and he was laying there shivering like a peasant in a twenty-knot breeze o' wind. He wasn't saying anything—you know these Japs never beller—but his eyes was searching round and round and he seemed plumb puzzled.

Mr. Woodward was down on his deck about three bells in the first watch, when Kumashi, the Japanese deck-steward, comes up grinning and slaps his hands across his stomach and sticks in his breath and bows three times, and says he:

"Mister Woodward, Mister Hatomachi say he very much want speak to you."

"Hatomachi? Who's Mister Hatomachi?" says the First Officer.

"He Japanese gentleman, merchaan of Honolulu, you put in stowage," Kumashi tells him, still smiling and bowing and sucking in his breath.

"What?" Mr. Woodward asks like a man in a trance. "What's that?"

"Yes, sir," says Kumashi, smiling and bowing, oh! terrible polite. "He say he don't understand why you take him in boat

Drawn by G. E. Cooney

"I'll learn him to swim to Honolulu"

and all these things happen. He want ask you something, if you please. He say he have no chance talk before."

Say! did the mate make a dignified dash for the stowage? Did he? Well, you'll have to ask some one else. And Kumashi goes along and interprets, so the hull thing comes out.

It seems this man Hatomachi was seeing off a couple of friends of his, big merchants from Tokio who had been visiting him for a week on their way to New York. They were all drinking tea in their stateroom below and didn't notice when the *Woozulis* cast off. And then this Hatomachi, being a good swimmer, thought the easiest way home was the best, and slipped off most of his clothes and made a rush for the rail.

Well, the Old Man nearly had a duck fit. Mr. Woodward looked at his knuckles, all puffed and skinned from upper-cutting the Jap on the head, and made an apology that sounded like a lawyer's speech. Then the Old Man took a trick at apologizing. They give Mr. Hatomachi his pick of Mr. Fisher's wardrobe (he's the third officer and a slick dresser) and they put him in the bridal suite (three rooms and private bath, costing \$500 each way), and he has a seat at the captain's table and free sponge-cake and champagne all the way over and back—all to keep him from being sore.

Say? I wonder sometimes do we seem as funny to the Japanese as they do to us?

A seat at the Captain's table and free sponge-cake

Drawn by G. E. Cooney

ART AT THE PITTSBURG INSTITUTE

By ANNIE NATHAN MEYER

THESE are difficulties in the way of showing the people of America what is being accomplished abroad in art. When the work of a foreign artist is selected for exhibition in the United States, the artist must await to its valuation before the resident American consul. On reaching these shores meretricious must be found to give bond for double the valuation. This bond is forfeited if the pictures are kept in the country longer than six months, unless an extension of time has previously been secured. In view of this condition, the international character of the eleventh annual exhibition of the Carnegie Institute at Pittsburgh is really remarkable, and the director, Mr. Beatty, is to be congratulated. The comparative standing of the pictures can be far better judged when they are hung as they are in these galleries,

First, the Scotch animal-painter, whose two ghostly sketches certainly do not reveal his greatness, and Pissarro, whose large canvas by no means does him justice. Neither can it be said that Mauve, Mesdag, Boudin, or Zougel can be fully appreciated at this exhibition. The great Scotch painter, McTaggart, is shown only by a sketch, but it is a sketch so full of charms that one cannot quarrel with it. Not only is the color delightfully strong and original, but with a few strokes of the brush we are given the feeling of the figure in the round, the charm of childish contour in action. It is a remarkable picture.

Of American art an admirably complete idea is obtained, for there are few omissions of importance and almost every artist is seen at his best. Weir has done nothing better than his "Gray Gown." Wilcox has seldom if ever approached his "In Profile," and Mary Cassatt has given us a picture that is actually beautiful. The four Twarthmans reveal admirably his tender poetic interpretation of nature, the portraits by Cecilia French would be important say-bets, and the large group of Gari Melchers shows he is a powerful and sincere artist, which means far more than a mere clever handler of brush and pigment. The single landscape of Tyron hardly expresses him adequately, but it is easy to slip into the adjoining room where hangs the important permanent collection and see one of the greatest canvases he has ever painted, a picture so full of the spirit of outdoors, so lovely and tender in color, as to place him in the foremost rank of American landscape.

It has elsewhere been pointed out that there is injustice in forcing a comparison between a dead foreigner and living Americans. In this show at Pittsburgh the comparison is quite just, quite properly contemporary. While perhaps the very foremost niche is reached only by a couple of Frenchmen, yet no one can study the exhibition without being proud of the superb showing made by our American painters. The "Confidante" of the Frenchman Aman-Jean is a lovely bit of delicate and restful color, which, taken together with his large picture in the permanent collection, reveals him as an important artist of the decorative order. For this quality of decoration only Brunser, the Englishman, in his "Summer," and our Benson, with his "October," are comparable at all.

These men have not only color, but, what is too often overlooked in decorative work, they have rhythm of line. In a picture like Ballin's "Mother and Child," on the contrary, one sees, instead of dignity or grace of line, a mere fantastic jumble of design leading nowhere. There is a certain decorative quality in the work of the Englishman Brangwyn, but it has more of brutal strength than of pure decorative loveliness. But it is in his portrait that Aman-Jean is particularly delightful. Here we have really great color, an unaffected restful pose, mastery without bravura, a frame filled from end to end, lovely textures, and, more important than it is the taciturn to admit, an admirable, sympathetic likeness. Another great Frenchman, Bonnard, is well represented with an early picture of his family, full of life and color, strong and individual, and a portrait of Madam Bonnard, one of the most noteworthy portraits in an exhibition that contains many

"Portrait," by John W. Alexander

without regard to nationality. The visitor makes up his mind whether he likes or dislikes the picture before he has time to learn from the catalogue whether it be by a Frenchman, an Englishman, a Scotchman, or an American. Every picture stands or falls purely on its merits.

It is not so easy to single out the nationality of the artists as it might seem. It is easy to pick out those who are under the sway of certain methods or artistic ideals, but to do this is to break down race distinctions. It almost looks as if Whistler was right, after all. In weighing the importance of this exhibition there are of course two points to be considered. First: Are the representative artists of each country chosen? Second: Are the individual artists represented by their best pictures? Unquestionably, of the foreign countries France is most adequately represented. Although the superlative draughtsman Degas is absent, the point is run from the powerful realism of the great colored Rembrandt to the poetic delicacy of Aman-Jean, and while from Great Britain one regrets the absence of Suer, Tonks, and John, and the noble canvases of Will Rodenstein, yet an excellent idea is obtained of the many important currents of art outside of the Royal Academy. Several lines of German development are shown—the strong and interesting work of the Royal Akademische Kampf, the heavy strokes of Claus of Munich (somewhat à la Brangwyn), Fischer-Thurig of Dresden, Clarenbach of Düsseldorf, grave and big, and more than a dozen others. There are also pictures by some Norwegians, Belgians, Austrians, Italians, and Russians. Although several important Dutch painters are represented, their examples are not happily chosen.

On the whole, the average standard of the pictures is remarkably high. Among the few artists who are not shown at their best are

"Portrait of my Children," by Paul Bonnard

worthy of being called great.

I should think that only the fact that Lucien Simon had once before received the prize prevented him from carrying it off this year for his fine "Woman with a White Glove." Other important portraits are by Uman, Ivanovitch, Jastreboff, Henri, T. Austria, Brown, and Lambert. Currier's strong "Whistling Boy" makes one wish that he exhibited often. The only other picture of his that I remember was also a strong head, shown at the Comparative Exhibition. One wishes that Chase always lived up to the quality of his "Portrait of Mrs. V." The Englishman Greifenhagen shows a most distinguished portrait of his wife, George Henry, of the celebrated Glasgow school, should have received high honor for his exquisite and original "Chinese Kite."

The second prize, which was conferred on the Philadelphia painter, was well merited by his masterly portrait of Professor Miller. Three portraits of old women make an interesting study—that by Alexander is a delightful interpretation of sweet and gracious dignity, of the poetry and refinement of old age, painted with exquisite tenderness and charm; Thavenock's portrait of his mother, painted with superb sincerity and breadth, a woman old only in years, strong, erect, of indelible courage and splendid common sense; and—not the equal of either as a work of art—MacNominie's artificial, shrewd, worldly wise, overdressed old countess. The Sargent portrait of Mr. Philip's daughter is one of the few women he has painted which suggest that he was in sympathy with the subject. The big group of doctors hangs near by, but notwithstanding certain great qualities which it undoubtedly possesses, one feels that the figures are too small for the huge canvas, that there is restlessness in two of the academic poses, and that there is an absence, save in the portrait of Toler, of any real interpretative power.

There is one more portrait which must be noted—by Harry W. Coar, an Ohioan, living in New York, whose "Maiden" is held yet reserved, and while painted in a big way that overlooks details, yet carries with it a vital sense of the figure inside the gown. Altogether

the number of names that were new to me told of a refreshing determination on the part of the director to consider merit rather than name. Among these were Ericson, the director of the Buffalo Art School, who has one of the most poetic landscapes in the exhibition, and his predecessor Daffner, whose landscape is delightful, and whose "Repose of the Model" is one of the most satisfactory figure pieces shown; Caroline Stebbins, whose "Study" is a remarkable canvas; and Mary Foote, of New York, who shows an admirable portrait of Eliza Emmet—whose own work, by the way, is missed. One must not forget Charles Morris Young, nor Everett Warner, whose "Brooklyn Bridge in a Snow-storm" is one of the few absolutely satisfactory street scenes I know. Petersen's work seems to me to be growing better and better, and he is particularly happy at this exhibition; and Curmeyer's "Old Homes, Chelsea" is exquisitely painted, but of course of such pictures Casson is easily the master. Among the foreigners, Bredner and Fischer-Grieg, two Germans, are not so good as our men, but from

"Portrait," by Edmund Aman-Jean

Billette, the exquisite "Evening" with its lovely study of the fresh outdoor glow of Manilla, and the organic tones of the great Monet. It is pleasant also to remember that although there are many huge canvases in the nine galleries, yet in most of them there is a hominess of more than size; this is true particularly of Lavory's "Equestrian"; and one of the loveliest pictures of the entire exhibition is the exceedingly tiny "Forgiveness" of W. Lee Huxley, of London.

(Continued on page 655.)

another German, Sauters, from Baccaria, an Italian and Morrice, a Canadian, there are hints to be taken.

The highest honor of the exhibition has gone to a purple and yellow conception by La Touche. Only omniscience could ever fathom all the complicated ratiocination involved in prize-giving, yet this seems a case where sensationalism has been taken for courage, and may colors for "color"—a fairly great difference, as all who know will allow! La Touche's other canvas, a red and yellow riot, has been called, mistakenly, I think, imaginative. I cannot see how the mere substitution of monkeys for human drivers centers this delightful quality.

It is a relief to turn from these pictures and breathe the beauty of the grave, an

ne landscapes of the lovely made by Monnet, and the organic tones of the great Monet. It is pleasant also to remember that although there are many huge canvases in the nine galleries, yet in most of them there is a hominess of more than size; this is true particularly of Lavory's "Equestrian"; and one of the loveliest pictures of the entire exhibition is the exceedingly tiny "Forgiveness" of W. Lee Huxley, of London.

THE WANING THEATRICAL SEASON

110 李秋生、王月、田家明、李国成、杨世、王天、李国成

Art at the Pittsburg Institute

(Continued from page 613.)

Since the show will remain open until the middle of June, there will be time for at least the fortunate citizens of Pittsburg to visit it again and again, to grow to know intimately such pictures as really represent time to appreciate. Such a picture, for instance, as "The Letter," by Dewing, whose subtle art has never been so great to greater advantage. There will be time to delight in the lyric sunlight of Metcalf's "Coke and the Revolver," or to respond to his perfect "Silver Silence," a really great moonlight, neither sardonic nor spectacular. Time to dream before the poetry of Meichen, or Jonas Lie's ghostly town seen through the fog; to enter into the strange charm of Ludwig Dill's sad greens and grays, his personal statement of nature; to thrill before the big feeling in Verne's portrait of his wife; to wonder before Hildebrandt's "East" that the same hand could paint the rollicking Partisan cooler of a couple of years ago, or the burly building of this year, to absorb surely all the big humanity of Jerome Myers, who paints as no one else the heavy load of childhood drooping on its staid life neck, who paints into the shoulders of his men and women the burdens that they carry, who paints with a mind behind his hand.

It is somewhat humiliating for a New Yorker to admit that at the moment there is a distinct advantage in being a citizen of Pittsburg.

From Uncle Sam's Military Ledger

A STRIKING picture of the daily activities of the men of the United States army is presented in General Order No. 68, just issued by the War Department at Washington. In the order one finds enumerated with great care the sums of money appropriated to meet the expenses of Uncle Sam's family of fighting soldiers up to June 30, 1906. Great expenditures and small, though important, details are set forth with particular care. On page 7 we find that \$250,000,000 will be spent in buying submarine mines and material for closing the channels leading to our harbors and coasts, while \$175,000,000 is to provide for the procurement of one torpedo bomber for use on the Pacific Coast." Then follow:

- "For construction of seacoast batteries in the Hawaiian Islands, \$200,000.
- "For construction of seacoast batteries in the Philippine Islands, \$300,000."

In the section devoted to the Military Academy we find that the pay of the chaplains and the pay of the master of the academy are the same—\$2000. And here are some interesting items:

- "For pay of engineer of steam, electric, and refrigerating apparatus for the cadets' mess, \$1190.
- "For pay of janitor for bachelor officers' quarters, to be selected and appointed by the Superintendent, \$600."
- "For pay of one janitress, Memorial Hall, \$900."
- "For pay of one civilian plumber, \$1500."
- "For pay of assistant plumber, \$900."
- "For pay of one plumber's helper, \$600."
- "For compensation of chapel organist, \$300."

Consideration of these facts forces the unprejudiced observer to reflect that so far as mere profit is concerned it is much more profitable to play upon the desire than the the intellect; also that the more the number of syllables denoting the honorarium they decrease the dollars. Still, there are compensations. The plumber merely "has a job," while the organist undoubtedly "discharges with distinction the duties of an exalted position."

Nothing is too tiny to compensate enormous. Witness the following:

- "For purchase of reeds, pads, strings, and other materials necessary for brass, wood, wind, and string instruments; for purchase of music-stands and other equipments; for purchase of music for military band and orchestra, and for extra parts: all to be purchased in open market on order of superintendent, \$2300."

And what in the world can this mean? "For the purchase of one dough-dividing machine for the bakery of the cadet mess, to be immediately available and to be expended without advertising, \$1000."

Then we leap in an instant to the duties of our fathers:

"CLAIMS FOR PROPERTY TAKEN FROM CONFEDERATE OFFICERS AND SOLDIERS AFTER A SURRENDER. For payment of claims filed with the Quartermaster-General, under Act of February 27, 1902, and amendments thereto, for horses, saddles, and bridles, taken from Confederate soldiers in violation of terms of surrender, \$40,000."

Then we leap in an instant to the duties of to-day:

"For the destruction of a dangerous ice gorge in the Missouri River, near Vermillion, South Dakota, under the direction of the Secretary of War, \$1000."

Is all most interesting booklet to those who would know how our soldier boys live, and what they are doing in these piping times of peace.

Quits

JUDGE CARROLL BENNETT, for many years Judge of the Kentucky Court of Appeals, who is a resident of Franklin made his home at Upper Main Street. Next to the Judge's yard was a livery-stable. In the capital city, as in most small cities, the liverymen did not have room to house all of the conveyances of their customers, especially on big days, and the buggies, carriages, etc., were lined up in the streets, close to the curbing.

This was very annoying to Judge Bennett, and he decided to try to break up the practice. His first appeal to the liverymen, then to the newspapers, and finally to the city authorities, but the custom was too firmly planted in the city, and his efforts were all in vain.

One day Judge Bennett was walking downtown and was greeted by a friend, a prominent member of the Franklin County bar.

"Judge, how did you come out on your fight against the liverymen; did you win out or not?"

"Well," said Judge Bennett, "we compromised the matter, yes, we compromised it. I am mighty glad to hear that, Judge, and if it's no secret, I would like to know the terms of the compromise."

"It's no secret at all, no secret; I merely agreed to quit grumbling, complaining, and kicking, and they agreed not to put any of their vehicles in my park."

How About the Employer?

HOME-OWNER. "What proof have I that you managed your late employer's car satisfactorily?"

CHAUFFEUR. "Why, I've alive, ain't I?"

Leadership of the United States in Automobile Construction

It has been nine years since the experiments of self-propelled road vehicles first succeeded, and now there are more than 350,000 motor cars in use. These machines cost for more than a billion dollars.

France, the pioneer, led the world in the production of the motor vehicle until a year ago. Now the United States has taken the lead.

In 1901 the United States built only 314 cars, and during that same year France built 23,711. In 1906 the United States built 60,000 automobiles; France, 55,000; England, 32,000; Germany, 22,000; Italy, 19,000; and Belgium, 12,000.

The increasing popularity of motor-cars in the United States and in countries with commercial relations with France during the present year, greatly augment the lead which the American built car now commands.

PURE AT THE SOURCE.

Most of the chief articles of food in the sick-room and hospital every physician should have at hand, and from the source of supply he can obtain in any form. It is not often, however, that he can obtain as sanitary milk. Rogers' Patent Condensed Milk, the original and best, is made from only healthy and approved milk every day.

THE METALLURGICAL FAMILY LINIMENT—BROWN'S HOUSEHOLD FAVORITE. It cures a little.

USE BROWN'S Chamberlain, Sore Throat, Cough Syrup for the Cough. Directions. 25 cents per Jar.

Former U. S. Senator JOHN F. DRYDEN has returned to Newark, fully recovered from the illness which prompted him to withdraw from the Senatorial contest, and has actively resumed business relations. When asked for an expression of opinion as to the effect of radical insurance legislation enacted by the different States during the past few months, Senator Dryden said:

"There has been a much new legislation upon the subject of life insurance, and many important measures have been passed, while many others are still pending. While it is too early to forecast the future effect of these laws, the practical one will be relied upon to meet the situation in a spirit of the utmost fairness. Not only has the company always done what it was legally required to do, but it has gone far beyond the mere letter of the law, and in the most liberal spirit has extended to the policy-holders the privileges and advantages of one concession after another. In other words, the company has always tried to do more than the law required, and it may be relied upon to continue so to do. In its final analysis, the practical one will be a declaration of a broad and generous principle of administration, and in the execution of details a successful company must necessarily be governed by a higher law than a statute—a moral obligation which calls for the most liberal treatment of the insured compatible with safety."

"In pursuance of this policy, it has been my pleasure to sign an order in conformity with a resolution passed by the Board of Directors of The Prudential Insurance Company granting concessions this year to Industrial policy-holders in The Prudential who have attained the age of 75 years which will result in relieving holders of a great many thousands of dollars from the payment of any further premiums, costing the company over \$750,000, and a continuance of this policy during the next ten years, it is estimated, over three and one-quarter millions of dollars. These concessions, I understand, will affect proportionately more policy-holders than a similar concession in any other life insurance company. Other voluntary concessions in the form of increased benefits, cash and monetary dividends, more liberal paid-up policies, etc., not called for by law or contract, have been made aggregating over eight million dollars, and this large amount will be necessarily greatly added to in the future."—[Ed.]

ADVERTISEMENTS

FRIENDS, HELP

St. Paul Park Incident.

"After drinking coffee for breakfast I always felt languid and dull, having no ambition to get up my morning studies. Then I began to use, or so, a weak, nervous derangement of the heart and stomach would come over me with such force I would frequently have to be down."

"At other times I had severe headaches; soon I actually became affected, and diagnosed as such I feared that I had serious chronic dyspepsia and constipation. A lady, for many years State President of the W. C. T. U., told me she had been greatly benefited by putting coffee and wine Postum Food Coffee. This was tried for years with success. She said it was no more to spit coffee when she found she could have as delicious an article as Postum."

"Another lady, who had been troubled with chronic dyspepsia for years, found immediate relief on ceasing coffee and beginning Postum twice a day. She was wholly cured. Still another friend told me that Postum Food Coffee was a godsend to her, her heart trouble having been relieved after leaving off coffee and taking on Postum."

"So many such cases come to my notice that I concluded coffee was the cause of my trouble, and I quit and took up Postum. I am more than pleased to say that my days of trouble have disappeared. I am well and happy."—[The Rev. Dr. F. H. "The Road to Wellville," in play.]

THE AMERICAN INVASION OF THE CONGO

(Continued from page 644.)

mendous initial difficulties against which they had to contend, the Belgians have done wonders on the Congo, still they themselves admit that very great improvement is possible, and much remains to be done. The Americans expect specifically to address themselves to the improvement of the healthfulness of the white residents, the comfort, easiness, and efficiency of the blacks, and to the development of an increase in the output of commodities by the use of modern machinery and up-to-date mechanical processes. These three points are important enough for definite illustration.

The healthfulness of the whites is of fundamental importance. In the early stages of the exploitation of the Congo it was unavoidably necessary for the whites to reside temporarily, and often permanently, in extremely undesirable places. At first they were confined to the unhealthy Atlantic littoral. Then they had to work along the low and often marshy banks of the inland rivers. The peculiar geological character of the Congo Basin, however, makes it easily possible to reach a high plateau only a few miles from the river's banks in almost every district, generally free from mosquitoes and other malarial conditions. It is practicable to locate stations on these plateaus with a fringe of forest between them and the river. Roads may be constructed down to the navigable rivers, and communications and transportation to the water's edge be effected by automobiles, and traction-engines for heavy transport. As the natives can work along the rivers in good health, their services may be utilized for work which must be done in the lower localities, and these higher regions may be used for administration centres. The inability in the past to conform to these principles has resulted in much loss to the Congo, due to abandoned stations, but the Americans expect to profit by these lessons of experience from the start. In the location of the stations of the company full consideration will be paid in each case to this matter of healthfulness as well as of proximity to navigable streams or rail communications, to the accessibility to fuel, timber, drinking-water, fertile soil, intrinsic resources, both vegetable and mineral, friendly natives—in a word, in every requisite for ultimate success.

From personal experience over many years, the writer knows of no undeveloped country more likely to afford all these requisites than certain parts of the Congo valley.

The comfort and contentment of the natives are essential to any permanent scheme of occupation. The American concern-somnolence expect to make this feature of their work a specialty. The writer's observation has shown him that one condition especially, arising from changes due to the advent of the whites, has done much to complicate the question of native labor, and this condition is easily subject to complete remedy. It has often been necessary for the whites to build up establishments at points remote from native centres of population where food for the native employees is procurable with great difficulty. For example, a railroad camp or a streamboat port must often be established at places where native towns may be far away. A very large number of native employees must be concentrated there, consequently there is often much real hardship on account of the insufficiency of fresh food. At the same time a crop of corn, potatoes, and other vegetables, can generally be raised in an extremely short time, if adequate measures to that effect are taken. Neglect in this respect has been one of the most culpable of the white man's shortcomings

in his dealings with his black allies. The Americans expect to plant as soon as they begin to pitch their tents, and to make every provision by careful foresight for all the needs of the Africans in their employ. When this is done, the natives will work both cheerfully and efficiently, and their services will be of very great value in the development of their country. The oft-repeated statement that the Africans cannot be made to work except by force, the writer denounces as absolutely false, and backs up his assertion with the whole of his twelve years' experience in dealing with the most savage of all African tribes in the most remote part of the continent. It is only necessary in this connection to cite the fact that the crews, pilots, engineers, conductors, and brake men on the Congo railroads and streamboats are almost entirely black men who were the wildest savages ten years ago.

In reference to the building of industrial enterprises for permanent investment in the Congo, it is to be said that the American empire-builders who have undertaken this work are the men who have carried out the most colossal undertakings on the American continent, and are probably more competent to transform the wilderness of Central Africa than any similar number of men anywhere else in the world. The development of rapid steamboat service, of the cable, telegraph, and telephone, of stable international, commercial, and banking organization, renders it comparatively easy to administer an enterprise of this kind even so remote from its base. Highly trained experts and technicians will be used for work in the field, and all the results of the wonderful growth in effective modern business methods will be applied to the great opportunity presented by the lavish hand of Nature.

If any doubts should be expressed as to the political stability of the country in which these investments are projected, it is to be remarked that the European powers occupying Africa afford as reliable governmental security as those South-American governments which guarantee the safety of European capital there. To be plain on this point, we have as much right to expect and demand a guarantee of the safety of our investments in Africa as our European neighbors have to look to us for protection of their South-American interests.

The ascription of mean and sordid motives, of cruel and unscrupulous methods, to the great empire-builders of the world has become so common in a certain class of cheap, justified writing to-day, that the public at large often judges these men unfairly. If the writer is able to fathom their minds at all, that which is uppermost in the motives of the men in these enterprises is to enjoy the pleasure of doing a great work in an efficient way. It is the stern delight of doing the task worthy of one's mettle. It is akin in kind to the mental attitude in which Solomon builded the Temple, Ramses constructed the Pyramids, Cesar scaled the Alps, Michael Angelo designed St. Peter's, Columbus crossed the Atlantic, and Washington founded the great republic.

What the future may hold for these enterprises in the Dark Continent only the future itself can tell, but it is certain that no foreign enterprise emanating from this country has yet been launched across the seas more fraught with great possibilities, more opposed by great difficulties, and at the same time more powerfully supported by a mighty combination of capital and a great array of efficient men. Actual operations are to commence this spring, and it is probable that the history of the movement will be watched with no little interest on both sides of the Atlantic.

A GENTLE TRIBUTE TO THE MEMORY OF JEFFERSON DAVIS

WHEN THE CASE CONTAINING THE NEW STATUE OF JEFFERSON DAVIS REACHED REBUDS FOR ENLARGEMENT, IT WAS DRAPED WITH FLAG AND BENTON AND DRAWN THROUGH THE STREETS TO ITS FESTIVAL BY MORE THAN A THOUSAND CHILDREN

Moving-Pictures to Allure Recruits

THE Navy Department has experienced so much difficulty in securing the enlistment of desirable men for the navy, that schemes to draw the service in its most attractive form have been resorted to. During the winter months a recruiting ship touched the South-Atlantic ports, and even went to ten seaward oceans which could be reached with the vessel, to illustrate the life of the sailor aboard. A more recent idea as an incentive is about to be introduced, and consists of an exhibition of naval scenes by means of moving pictures.

As many as ten thousand feet of biograph films have been made from a large number of pictures, taken on board the ships of the Atlantic fleet while at Guantanamo, Cuba, and some fifty subjects dealing with the life of the blue-jacket will be illustrated.

It is contemplated to send the biographs with travelling recruiting parties, accompanied by electricians to operate the machines, throughout the interior middle West, and give exhibitions in connection with lectures to be delivered as a means of advertising the advantages of enlistment in the navy, and disseminating information concerning the naval service.

Strange

LITTLE FRANK. "Mamma, please tell me how father got to know you."

MOTHER. "One day I fell into the deep river, and your father jumped in and saved me."

LITTLE FRANK. "Well, that's funny; he won't let me learn how to swim."

Hobson's Choice

A LAWYER who had some business to attend to in a small Virginia town, not long ago, tells of an amusing case which he witnessed tried. A negro was charged with stealing a hog. The actual merit of the evidence of the dozen or so witnesses amounted to half of them rather thinking that he had stolen the meat, and the other half sort of having an idea that he hadn't. The old judge waved them aside impatiently, lighted his corn-cob pipe, and addressed the prisoner.

"Look here, now," he demanded. "Did you steal that hog, or didn't you?"

The negro furnished his word hat and rolled his eyes.

"En' Gord, Mars Henry?" he said, earnestly. "ah neither stole dat hog, but—as a disbeliever frozen gathered on the judge's bench—" of yer kinder thinks ah done stole him, Mars Henry, an' gwine give me six months lob lyle, lack yo' done befo', ah realize he 'bout hit me 'less ah did steal hit, 'an' got two months for stealin' de hog ah didn't stole—ah ah pleads guilty, sah!"

River-side Repartee

THE hose fisherman was having miserable luck, and the presence of a small boy did not contribute to his amiability. The youngster seemed greatly interested in the man angling in struggling form on a hook.

"What yer fishin' fer?" inquired the boy.

"Sardines," retorted the fisherman, testily.

"Huh!" grunted the youngster, edging away. "That crooked thing on the end of yer line wouldn't take no prize in a run-spike contest."

Substitutes

"We haven't any deviled eggs, sir," said the waiter. "I can offer you some very nice deviled eggs."

"I might! I presume if you were out of marketable soup you'd suggest some very nice marketable soups?" retorted the diner.

"Yes, sir," answered the waiter, calmly. "At least I would suggest that you give them a mock trial."

ABBOTT'S BITTERS

Important to see that it is Abbott's.

THE BACKSLIDING OF PHILADELPHIA

(Continued from page 631.)

bered the brutal treatment of the prisoners; how young and unfortunate girls were packed and jammed into ill-ventilated, rocking cells and made to stand on their feet for an entire night with breaded and hardened women, negroes, keepers of dives, and other degraded creatures. The sixth floor of City Hall sounded with sobbing; daughters of respectable families, caught in the drug-nets, were disgraced for life. The places raised were not brotherly, but questionable lodging-houses. Women dressed in silk, lace, and fur—a number society women—were caught and herded like sheep in cells with notorious women.

If the City Party had selected a crook it would be in power to-day—if it had selected a man representing a happy medium it might have won despite the personality of Mr. Stuart and the influence of the sentiment at Washington; but they chose otherwise—and lost. In selecting Gibbons the leaders forgot that although Philadelphia, personally and individually virtuous, insists on having candy-stores and milk-shops closed on the Sabbath, it refuses to submit to municipal rectitude during the six days of the week. They forgot that although Philadelphia goes to church on Sunday, unless violently aroused it stays at home on election day, and does not go out to vote; that while it gleefully glories on unfortunate women penned in police-station cells, it folds its hands unemotionally and serenely smiles at civic impurity. Because of Mr. Gibbons, Philadelphia at the election last November went to the polls and voted for Mr. Stuart and Mr. Rotan.

In the mean time the Organization had been busy "purifying" itself, whatever that might have meant. Senator Penrose was wisely kept away from the city. Durham continued to recuperate in the West, and a new City Council Committee was elected. The position promised to be good, and many persons became convinced despite the open fact that McNichol, in Durham's absence, was quietly marshalling the Machine men into order. McNichol was wary. He knew that people get tired of well-doing, and, keeping in the background, bided his time. Last summer I saw him in his cottage in Atlantic City, and asked him about his suits against the city. He leaned over a rocking-chair, his small eyes screwed up, and bawled: "If I had the choice of getting ninety-nine cents on the dollar for our work on a compromise with the city, I wouldn't take it."

Late into the night of the election day of last November the City Party leaders sat in the party headquarters on Walnut Street and listened to the election returns coming in. To their dismay they saw ward after ward in the city rolling in majorities for Stuart for Governor, and Rotan for District Attorney. With set faces they sat and listened, hoping that the returns would change. In sadness they parted only after the morning had come. Reform had been defeated. Stuart was elected Governor by a majority of 70,000 in the State; Emery had lost, polling 30,000 less than the State had given the Democrat, Berry, for Treasurer a year before; in Philadelphia Stuart polled a majority of 30,000 more than he was defeated by a vote of 30,000; the Organization, over the election of the previous year, gained 40,000 ballots—and that despite the fact that 70,000 names of dead men, children, dogs and cats, which had been voted a year or so before, had been stricken from the November lists.

Defeat brought the City Party leaders to the realization of their monumental blunder in downing Weaver. They realized that his popularity through the State was not to be destroyed by one blow of newspaper attack. Among themselves they understood that if they had continued to "push, urge, and entreat" Weaver to pursue the path of righteousness—and had put him up for Governor, reform would undoubtedly have won. On November 13 the party deemed it necessary to appoint a committee of nine "to weed out traitors." The leaders found a statement that they would continue their fight for civic righteousness, and at the next February mayoralty contest, which would be free of national or State issues, would put this question to the people—"Will you or will you not go back to the conditions that existed before the City Party was formed?"

Among the people the conviction spread that the City Party cause was lost; it also became generally felt that the Republican Organization intended to forsake the evil of its ways. Naturally apathetic Philadelphia's fever for reform passed; Councilmen, City Party leaders, place-holders, all fled back to the machine as if seven-league boots carried them. McNichol openly took charge of things; Durham sneaked to the city. Within a week the City Party dissatisfaction began to manifest itself, and there were petty plots and counterplots. The people lost interest and confidence in the independent movement. The nomination for Mayor revolved about Rudolph Blankensborg, for thirty years a valiant reformer, and William Potter, who once toured the State and spoke for Quay. Blankensborg who advocated the nomination for Potter fought against the supporters of Mr. Blankensborg, and how City Party leaders before their November defeat endeavored to sell out to the Organization, was exposed in a statement made public by Mr. Blankensborg after the election of last February.

Mr. Blankensborg, to the amazement of the people, declared that certain well-known reformers held a conference with Senator McNichol on a Sunday preceding an election of the presidents of Councils to effect a compromise on Mr. Crothers and Mr. Armstrong, City Party candidates. He said the meeting was arranged by Riley Penrose. He also declared that, during the gubernatorial campaign, Albert E. Turner sought an interview with Penrose and McNichol to offer the forces behind Weaver and Shover if the Organization would accept their candidate for Mayor. Mr. Blankensborg stated that his candidacy was fought with unusual bitterness, that all the City Party and independent reformers were urged to join him for Potter, and that W. W. Justice, chairman of the Finance Committee of the City Party, sent a special delivery letter to him

stating that contributors to the City Party had refused to do any thing until assured that William Potter was nominated, and asking him whether he cared to finance the campaign. Mr. Blankensborg said he was informed that Potter was chosen because it was of his association his family had promised to underwrite a campaign fund of \$100,000.

Mr. Blankensborg, the logical candidate for Mayor, was allowed out. Before the primaries the state-makers put Mr. Potter's name before the people in the type of Philadelphia's ordinary respectability. The leaders, in their choice, again forgot that Philadelphia, eminently respectable itself, has shown a preference for Tenderloin language and garbage contractors for public offices.

For Mayor the Republican Organization put up Congressman John E. Reynolds. Mr. Reynolds is thirty-two years of age, and has been in politics since he was twenty-five. A respectable man, a good father, member of a church, yet an easy-going man, one not to be feared, who could be trusted to go along unswervingly with the Organization, Mr. Reynolds was elected Mayor last February by a majority of 33,024. A Machine receiver of taxes and four quadrants of votes. It was the quietest election they ever conducted.

"I had hoped Philadelphia would cast out the corrupt leadership that dominated the Republican and Democratic parties in the city for their own selfish purposes," declared Mr. Potter after the election, "but the people have indicated that they prefer party regularity to honest government."

"We have made a game fight and did what we thought was our duty," said Mr. Lewis, chairman of the City Party. "But since we see that the great majority of the voters of Philadelphia prefer to be ruled by the present leaders of the Republican party, we will as though we never done our duty and have no apology to offer."

Mr. Reynolds came to Philadelphia from Washington a few days before taking the oath of office. He held daily conferences with Durham, McNichol, Lane, State Senator Charles L. Brown, and other old leaders. At their direction he made his appointments, and Philadelphia realized that his promise of an unbiased administration was "a sound in words." Since then the old order of things has come in with a swing—"Durham's in the saddle again," is the word passed throughout the city.

At the organization of Councils on the day of the Mayor's inauguration, George McCurdy, a henchman of McNichol, was elected president of Common Council, and James M. Hazlett, a representative of garbage-contractor Isaac Varn, of Select Council. At the first meeting after the inauguration the appointments to the committees were announced. Of the twenty-nine City Party members in both branches not one was named on an important committee. The only City Party member named was on the Soldiers' Monuments Committee, fourteen to the Boiler Inspection, ten to To Compare Bills, fourteen To Verify Cash Accounts, and thirteen on Election Divisions. Former City Party President Armstrong and Crothers were put on the same committees to which they assigned Organization members one year before. This was the turning of Fate.

Mr. McCurdy, after his election as president, declared that he intends to introduce an ordinance providing for the widening of the proposed boulevard from Logan Square to Fairmount Park. The extension of the avenue will reach over to Senator McNichol's white mansion and give him the corner site. Mayor Reynolds announced that he favored the plan. It is said the Mayor contemplates the reappointment of John W. Hill, who was discharged by Mayor Weaver as head of the Filtration Bureau after an expense showing how he schemed to have surplus money "eaten up." Charles P. Donnelly, Democratic State Commissioner, who helped the Organization in the gubernatorial fight, has been appointed County Commissioner. In the Police Department have been significant changes. Reappointments have been in order: "Tim" O'Leary who is the former hey-day of Machine domination is said to have carried on a profitable scheme selling assignments to disorderly houses, has been appointed to the detective department; former Police-Captain David McCoach, former Police-Lieutenants "Pal" Richards, John Lynch, and John Milburn, are selected for promotions and reward.

The Police Department, which was taken out of politics and reached a higher standing than ever before under Superintendent Martin G. Brumbaugh, has been "investigated" by a committee appointed by the Legislature at Harrisburg, with the purpose of discrediting City Party men on the Board of Education, and again securing the School System as a rallying-point for the reform Gang.

The other evening I saw a group of men, dressed in suits, on Broad Street. A party of half-dozen politicians and ward bosses stopped at the door of the Young Republican Club. One of them looked up to City Hall tower, where, standing above an ivy-covered corner of the Bank, the figure of William Penn could be dimly seen against the moonlight sky and said: "I have been waiting for this."

"Hail, hail," the fellow began, skipping another of the part on the back vigorously. And, as if unable to contain their mouth exultation, they broke into the infamous song which proclaimed Gang rule for forty years—

Hail, hail, the Gang's all here!

What the hell do we care.

What the hell do we care.

Hail, hail, the Gang's all here!

As I looked at the great governmental house blocking the bend above before me, I realized that again in Philadelphia the old Machine is in power—that the Gang is all there.

Chihuahua Dogs Becoming Extinct

CONSUL-GENERAL A. L. M. GOTTSCHEALK, of Mexico City, is responding to numerous inquiries from persons in the United States in regard to the preservation of Chihuahua dogs, says:

The Chihuahua dog, which as late as twenty-five years ago was quite commonly to be found in Mexico, is a curious little creature, popularly supposed to be a cross-breed between the prairie dog and the jack-rabbit. The animal resembles a small dog, whose weight is sometimes not over 1½ pounds, with a disproportionately large head, bulging eyes, and long ears. The hair is usually sandy, showing the pink skin underneath, or of the marks is said to be an unbroken oval fissure, through which the brain can be felt throbbing underneath the skin. These little animals are particularly destructive, and are constantly scratching at things with their long claws. They are quite susceptible of taming. If taken young, and in numerous instances the breed has been domesticated, although they seldom show the usual dog traits of sagacious and intelligent attachment.

Unfortunately within the last twenty-five years the breed has become so largely mixed with small dogs of various mongrel types that it is now a most difficult thing to find a Mexican example of the true breed. Such are sold occasionally at prices ranging from 200 Mexican pesos (\$20.00 United States currency) upward. Even in Chihuahua these dogs are very rare. A few recent specimens sold in this city are said to have been specimens of the true breed.

Shop Talk

DRESSMAKER: "Dear me! Mrs. de Style writes that she cannot pay her bill just now."

FRIEND: "How's that?"

DRESSMAKER: "It seems that some stock her husband bought is moist-d."

A Reasonable Excuse

THERE is a young lawyer of New York who is not, but who yearns to be, a sportsman, and avails himself of every opportunity to go hunting, fishing, or yachting. One day last winter he, with a friend, were after ducks, following the somewhat original method of tramping along a river-bank, expecting to find them swimming in the stream.

Presently, with an exclamation of delight and a word of caution to his friend, the lawyer began to creep forward, and a few moments later his amicable design was blazed like a gnat. From a tiny short distance away arose a wretched hunter.

"Hi, there, you consummate idiot!" he roared, "don't you know a wooden decoy when you see one?"

His excitement somewhat abated, the lawyer looked again—a dozen shattered decoys floated upon the stream.

"Well—yes, you know," he protested, feebly, "you can't altogether blame a fellow; even the wild ducks make mistakes about them, you know!"

In Need of a Pilot

PRACTISING before the Federal courts for the southern district of New York are two classes of attorneys who hang themselves respectively with bankruptcies and admiralty, two widely divergent branches of the law.

A noted admiralty practitioner appeared before Judge Hough to argue a motion for the discharge of a bankrupt.

"It seems strange," said the judge, "to see a maritime lawyer representing a bankrupt."

"Not at all," replied the witty advocate; "my home will explain over the record in this case, you will find that so far as his finances are concerned, my client is entirely at sea."

JAP-A-LAC

REG. U.S. PAT. OFF.

A STAIN AND VARNISH COMBINED

JAP-A-LAC produces the finest finish on old or new FLOORS.

With JAP-A-LAC you can renew the finish on any floor, in a short space of time, and at a trifling cost. The surface will be as hard as flint and as smooth as glass. JAP-A-LAC "wears like iron." Hard pine will not mar it, nor show white on it. A JAP-A-LAC floor is easily kept clean.

Besides Natural (clear) JAP-A-LAC, there are fifteen beautiful colors, for refinishing everything about the house from cellar to garret: Interior Woodwork, Furniture, and all things of wood or metal.

For Sale by Paint, Hardware and Drug Dealers. All sizes from 1 lb. to \$2.50.

A WARNING AGAINST THE DEALER WHO TRIES TO SUBSTITUTE

Some dealers will not let JAP-A-LAC so long as they can substitute something else on which THEY MAKE MORE PROFIT. If your dealer offers you a substitute, decline it. He will get JAP-A-LAC for you if you insist on it. Write for beautiful illustrated booklet and interesting color card FREE for the asking.

If building, write for our complete Finishing Specifications. They will be mailed free. Our Architectural Glass Label Varnishes are of the highest quality.

The Glidden
Varnish Co.

338 Rockefeller Bldg., Cleveland

If your dealer does not keep JAP-A-LAC, send us his name and we (except for cash) will send you a complete set of finishing and we will send FREE samples (unopened) when we hear from you the nearest dealer.

Ball-Pointed Pens

(H. HEWITT'S PATENT)

Suitable for writing in every position; glide over any paper; never scratch or spurt.

Made in England of the finest Sheffield rolled steel. Ball-points are more durable, and are ahead of all others.

FOR EASY WRITING.

Buy an assorted sample set of 24 pens for 25 cts., and choose a pen to suit your hand. (Hewitt's Patent, No. 1,111,111)

The Greatest War-ships in the World

CONGRESS at the last session authorized the construction of two 20,000-ton battleships. The details of the plans and specifications are not given to the public, but it is known that they will be twin vessels, more formidable than the British *Dreadnought*, and with a speed of twenty-one knots. When Congress only asked for the submission of plans for a ship superior to the *Broad*, though, the Navy Department considered the new Japanese and British monsters as well.

It is certain that the twin ships will each carry ten, and possibly twelve, 12-inch guns, and a second battery of fourteen 5-inch rapid fire guns, four 3-pound saluting guns, four 1-pound semi-automatic guns, two 3-inch field pieces, two thirty-caliber machine guns, and two submerged torpedo tubes.

The size of the battle-ships, approved by the Navy Department in plans submitted to Congress, was as follows: Length on keel, water-line, 510 feet; extreme beam, 83 feet 2½ inches; displacement on trial, not more than 20,000 tons; total coal-bunker capacity, 2350 tons; speed on trial, 21 knots.

According to the plans the hull armor is to be a waterline belt eight feet in width, and a maximum thickness of eleven inches, the giving effective protection to the boiler machinery, and the magazine. It will also give reasonable assurance of stability in proposed type of ship carrying a high center of gravity.

It is provided in the plans that the side above the main armor belt will be protected by armor 7 feet 2 inches in width, with a maximum thickness of ten inches. Above the main armor belt the side is to be protected by 5-inch armor, protecting the main battery, and the hull structure. Protective decks and bulkheads are important features of the protective design of the ship.

The exact arrangement of the turret is not known, but it is claimed that the new ship will have greater offensive qualities than the battleships now in use so far as broadside firing is concerned. The arrangement of the main battery guns is such as to permit a broadside fire exceeding that of any battleship now built by more than twenty per cent; the excess of broadside-fire over any ship now under construction is at least twenty-five per cent. The average elevation of the guns, as contemplated, is much greater than that of any other battleship, and this gives a distinct advantage under all conditions of weather in long range firing.

These ships are to be completed by July 1, 1910. The present initiative of the Navy Department is for them to be built by private contractors, and bids for their construction will be opened June 20, and the contract will be let July 1 if any bids are accepted. In the mean time the plans and specifications are being carefully studied by government experts at both the Norfolk and Boston navy-yards, and estimates on the cost of construction will be compared with the bids of private contractors. No doubt that the plans submitted by the government experts will largely influence the acceptance or rejection of bids by private shipbuilders. The government is determined that fighters shall be built at the earliest date possible, and the known ability of a bidder to comply with the terms of the contract, as to time as well as construction, will no doubt figure to an extent in the awarding of contracts.

A little inside history relating to the authorization of these two vessels by Congress has just come to light. In June, 1906, Congress asked the Navy Department to submit plans for the ships. The plans were prepared and sent to the Senate during the opening day of the last session. They were sent up sealed and marked confidential and when they were returned to the department the seal had not been broken. The action, it now develops, caused no little friction between the Secretary of the Navy and Senator Hale, the chairman of the Senate Committee on Naval Affairs. At the time the construction of these ships was under discussion Senator Hale was vigorously clamored with intentions to prevent their authorization for at least another year. All is now harmony, and the monsters will be built at schedule time.

HARPER'S NEW NOVELS

Through the Eye of the Needle

By W. D. Howells

Done in this great master's most delightful manner, this novel tells the whimsical story of how a certain kind of what might be called socialism really works. A traveller from Altruria falls in love with, and marries, a charming American woman, takes her to Altruria, where she has an interesting time learning how to live in a country which has no money, and where one can get things only by working three hours a day—a country where you can't tell a cook from a lord, or a farmer from a poet.

The Cruise of the "Shining Light"

By Norman Duncan

This is an unusual story, unusually told. It is a story of the lives of three people—a boy, an old man, and a girl whom the boy grows to love.

It is a story of to-day, yet full of the mystery of a more romantic time. There is humor in it and drama and tenderness, and the same fine, manly, religious feeling found in Mr. Duncan's earlier book.

The people, minor characters and all, are live people, and when you finish the story they seem like old friends—people you are sorry to part from.

The Long Trail

By Hamlin Garland

This is a tale of adventure—the story of a boy who goes to the Klondike over the old Telegraph Trail. Like *Treasure Island*, it is a story which older readers will enjoy reading even more than young folks.

It is rich in outdoor adventures, perils, and bravery. Cold and heat, hunger and thirst, the lure of gold, and the rivalry of fierce men go to make up the vivid and varied life in the famous Yukon gold-fields.

You Take a Big Risk

WHEN YOUR DEALER SAYS TO YOU:

"We have our own brand, which costs less because we don't have any advertising expense;" or, "This is just as good and costs less;" or, "We know this brand and recommend it. The kind you ask for costs more, and you couldn't tell the difference."

If you take his advice instead of insisting on the advertised brand

You asked him for what you wanted—probably because advertising of one kind or another had convinced you.

The manufacturer who did that advertising did it at considerable expense to prove to you that his goods were worth trying.

If he didn't use every care to make them just as perfect as he knew how, he couldn't hope that they would convince you of their merit when you tried them. Yet he spent his money to reach you with his arguments, trusting to his goods to prove them.

Isn't it pretty certain, then, that they are good of their kind?

When he has created a general demand for his goods, in come the imitators, trading on his demand—the "just as good" and all the rest, with no carefully built up reputation to preserve, no expensively bought business to endanger, and probably little or no expense in making the product they hope to substitute for the advertised article.

YOUR SAFETY lies in the advertised brand—back of it is the makers' guaranty and the magazine's guaranty. The Dealer who offers you something "just as good" isn't good enough for you. Tell him his guaranty is not good enough and

PRUDENTIAL LIBERALITY AGAIN DISPLAYED

The Most Important Voluntary Benefit Ever Granted

By The Prudential is now Announced.

All Industrial Policies now in Force under which the Insured have attained age 75, or under which the Insured may attain age 75 during 1907, will be made Free or Paid-up Policies, and the

Further Payment of Premiums Will Not be Required

After the Insured has reached the said age.

The Business of The Prudential is so large that, should the present plan be continued, it is estimated that the cost of this concession alone, in ten years, would be over

Three and One-Quarter Million Dollars

For years it has been the practice of The Prudential to add to the benefits already accorded to those who insure with us, giving Policyholders more than their Contracts called for when experience demonstrates that we can safely do so.

These VOLUNTARY CONCESSIONS TO POLICYHOLDERS already aggregate more than

EIGHT MILLION DOLLARS

and every year adds to this amount.

The Company which deals with Policyholders in this spirit of Liberality and Fairness, combined with absolute Financial Security, is the Company you should insure in.

MILWAUKEE

What Prominent Men are Saying of this New Book—

The Future in America

By H. G. WELLS

BOOKER T. WASHINGTON—"I have read with cordial interest Mr. H. G. Wells's *Future in America*. He has written with an alert, open mind, and has discriminatingly set forth in his admirable study the trend of American institutions. I find myself with him especially in his deep sympathy with those parts of our American citizenship that most deserve and need at this time the helpful sympathy of all good citizens."

A. CONAN DOYLE—"I think there is as much wisdom and political insight in Wells's *Future in America* as in any book I have ever read."

FRANKLIN H. GIDDINGS—"Mr. Wells's observations are so keen, his style is so vivacious, Professor of Sociology, Columbia University and his humor so kindly that his study of the future in America appeals to a multitude of readers merely by its interest and charm. But to the thoughtful it is far more than so much good reading. It is safe to say that Mr. Wells is one of the ten or twelve most up-to-date men just now alive, and in his 'search after realities' he has found and described some realities here in the United States that we shall do well to face and examine. Impressionistic as it is, Mr. Wells's volume is quite as serious a challenge to sober thought as Mr. Bryce's more detailed and conventional account of our institutions."

ROBERT C. OGDEN—"The sympathetic spirit of Mr. Wells's study of American conditions stamps his work with a winning note of sincerity. The book is stimulating, instructive, interesting. It should be carefully read by every American with a weary head and an anxious heart concerning present-day problems in this country. The chapter on the 'Tragedy of Color' is impressive and masterful."

ROOSEVELT AND BRYAN

We make no apology for printing herewith an abundance of press comments upon a speech delivered recently at a dinner celebration in this city. The expressions, favorable and unfavorable, gathered from all sections of the country, constitute a remarkable portrayal of a state of mind precisely analogous to, and confirmatory of, that depicted in the address referred to. Thoughtful men, students of history, intelligent observers, regard our present political situation with grave apprehension but in silence, while the great mass of the people prostrate themselves before the idol which they have conjured up in their imaginations, without perceiving the feet of clay.

There is no occasion to reply to the many animadversions passed upon the utterances contained in that speech. They bear no refutation of argument; they recognize no necessity of reasoning in the presence of obvious peril; they merely, in varying degrees, impugn motives and point a warning of the dangers attending the espousal of an unpopular cause, heedless of the consideration that the probable consequences of such lack of general favor had already been frankly conceded and as freely accepted.

What, then, is the situation portending evil days? In a broad sense it is the abdication of the people. "Each party," declares the sober New York Times in a leading article, "appears to have a perpetual candidate. It can hardly be doubted that if the President should get another term, the tide of 'Roosevelt talk' would rise about as high four years hence as it has risen now. The minds of the people appear to be shut, also their eyes and ears. They are thinking about nobody but Mr. ROOSEVELT and Mr. BRYAN. They will listen to the mention of no other names, they see no other possible candidate. A man from Mars would conclude there were but two great living Americans." A more succinct statement could not be desired. Not that there need be anticipation that the minds and eyes and ears of the people will remain forever shut; far from it; the fear is that the opening will be so rude as to encounter fearful consequences.

Premonitory prophecy does not afford agreeable recreation; easy assurance that all will come right somehow is vastly more comfortable; but when for reasons that seem impressive one is filled with a sense of foreboding, it may be the part of duty to speak out, in the hope of averting some portion of possible disaster. The country is now swinging along in a happy-go-lucky manner under a momentum preciously acquired, and

so it may continue for some time. So it did continue to the very end of the JACKSON administration. But the present basis is false, and the end must come as surely as the sun sets. Our national life has become artificial to a degree; public and personal extravagance is woful to contemplate; all prizes for the necessities as well as the luxuries of existence, for labor, for capital, for every component part of the foundation of true and safe living, are unprecedentedly and abnormally high; the confidence upon which the permanence of prosperity absolutely depends is seriously impaired—and eighteen months before election day we are actually engaged in an exciting national campaign, with every prospect of "four years more" of unrest and turmoil.

It is possible that the sober sense of the country may be aroused before November, 1908, but even so the awakening may come too late. Hitherto prudence has found an avenue of expression in our national elections. If a BLAINE promised jingoism, there was a sober CLEVELAND as an alternative; if a BRYAN threatened confusion, there was a safe and sane McKIMLEY. For the first time in the history of the nation no opportunity for choosing now exists or promises to arise. Unless a remarkable change be wrought within the next twelve months, the sole discrimination to be made at the next election will lie between virtual anarchy and ignorant quackery, surcharged in about equal measure with possibilities of harm.

We need not deceive ourselves continually. Already Mr. ROOSEVELT is confiding to his intimates that the demand that he violate an established tradition of the country and incidentally break his personal pledge is giving him "many anxious moments"; moreover, none knows better than he that, despite the alibi use of the branding-iron, no other living man except Mr. BRYAN can by any possible stretch of conviction stand for all of his "policies"; so what is most natural to expect, and what, as a matter of actual fact, do nine out of ten anticipate, except a renunciation? So, too, with Mr. BRYAN! Still coolly undetermined in mind respecting the advisability of his own candidacy, he even now defiantly forces each and all of his nostrums down the throat of his party, and threatens to "drive out" those who may rebel.

Resistance to either and especially to both of these popular politicians may and probably will be futile, but it is none the less the unmistakable duty of all sober citizens.

"Public officials," firmly declared THEODORE ROOSEVELT in his valiant essay on civil service reform, "should be condemned when they do ill; and attention should be called not only to what they do, but to what they fail to do. To an even greater extent, of course, this applies to the President."

To head the radical ticket we propose for President the Eminent Reformer of the Tariff and Civil Service, and for Vice-President the consistent Advocate of the old, original Jeffersonian Doctrine of the Initiative and Referendum:

ROOSEVELT AND BRYAN.

Secretary Taft's Candidacy

Apparently it may be assumed that Secretary TAFT is in the field, and that his friends are, with his authority, to do all in their power to secure for him the Republican nomination for President in 1908. Mr. Taft's visit to Cincinnati was primarily for the purpose of addressing the Yale associated club of the West. His speech was an excellent Yale document, and in it he told his friendly listeners of the peculiarity of Yale loyalty—a peculiarity that is common to the alumni of all American colleges. Mr. Taft said nothing about politics openly, but he and his brother CLEVELAND are reported to have had conferences with leading Republican politicians who do not belong to the Foxglove wing of the party. Senator FOXGLOVE professes to be certain of defeating Mr. Taft, and others,

as is usual, think differently. Men who are in a political contest are seldom foolish enough to admit that they cannot win, or that there is any doubt about the result. All this being true, it is evident that Mr. TART has turned his back on the ambition of his life—the ambition to be Chief Justice of the United States. This will not be altogether ill news to those who believe in the Federal government, in the maintenance of its dual sovereignty, dual rights and obligations, and dual loyalty. Mr. TART has become as great a centralizer as Mr. ROOSEVELT, and, as President, he would be as great a paternalist. But it is clear now that he will be President if he can be, and also it is clear that, nevertheless, he may yet be Chief Justice.

Roosevelt's Intrusion in Ohio

There is naturally much demoralization in Ohio politics, and this demoralization is irrespective of parties. The intrusion of Mr. ROOSEVELT into the Republican politics of the State does not need matters, and that he has intruded seems to be certain. It is bad for him, bad for Secretary TART, bad for Ohio, and bad for the country. We cannot truthfully say that it is bad for the Republican party of Ohio, because it is difficult, next to impossible, to spoil so bad a thing. It is said, and there is evidence to support the assertion, that Mr. ROOSEVELT has determined to employ the Federal patronage to secure for his friend Secretary TART the Republican nomination for President in 1908. Also involved in the struggle are the political fortunes of Mr. BRYAN, now Representative in Congress of the Cleveland district. Mr. BRYAN is ambitious to be the successor of Senator FORAKER, and Mr. ROOSEVELT is very angry with the Senator because of the latter's attitude in the unfortunate Brownsville affair. It may be admitted that TART and BRYAN are excellent men; that is a phase of the controversy, however, which is not now important. We are now to deal with the conduct of the President, and that, in Ohio as in New York, is worthy of the severest condemnation.

Roosevelt Against the Merit System

One of the principal arguments for civil service reform from its earliest days has been furnished by the possibility, under the spoils system, for a President to perpetuate his tenure of office by the abuse of the Federal patronage. At this argument a good many of our most practical politicians used to smile; but we are now having a living illustration of its soundness. If Mr. ROOSEVELT is using the patronage of the United States to aid in procuring the Presidential nomination for Mr. TART, he himself is doing precisely what he used to contend would be a menace to free institutions. He may not be doing this for his own re-election, but it might as well be that; he is using the offices of the United States in behalf of one whom he has selected to be his successor, in order that his "policies" may be perpetuated. It was the feeling of GEORGE WASHINGTON that the Federal offices might thus be used, and partly for that reason he was opposed to a third term. This is the argument which has also strongly appealed to those who favor but one term for a President, and which induced the framers of the Constitution of the Confederate States to fix the term of the President at six years, and to make him ineligible for a second term in succession. So also it was because they believed that ANDREW JOHNSON was filling the Federal offices with men who supported his policy that GEORGE WILLIAM CURTIS and other civil service reformers favored the enactment and retention of the tenure-of-office law. Civil service reformers who have acted with Mr. ROOSEVELT in the past, who have believed in him, and who hope that they may receive him back some day as a sincere reformer, are astonished and grieved by his conduct with respect to the Federal patronage in New York and Ohio. In every way this business is injurious to Mr. ROOSEVELT. He is attempting the part which ANDREW JOHNSON played when he forced MARTIN VAN BUREN upon the Democratic party as the candidate for President. JOHNSON succeeded, but VAN BUREN suffered. Will Mr. TART, if ROOSEVELT succeeds, enjoy a sweeter experience in the office? Would the Congress which elects ROOSEVELT for fear of the people obey the man whom ROOSEVELT names to be his successor? Will the politics of Ohio, already of evil character and repute, be benefited by this adoption of its own worst methods by the man whom it and its leaders have regarded

as its and their most virtuous enemy? Will Mr. TART himself like to be nominated through wicked activities such as those for which a short time ago he denounced "Boss" Cox of Cincinnati? Will the country's civil service be made the poorer by this abuse of it by one of the leading reformers—a reformer who has fought so long in behalf of the system in favor of which public sentiment has grown steadily since 1883? Mr. ROOSEVELT owes his start in politics largely to his advocacy of this system and to the energy with which he has contended against the arts that he now appears to be practicing. He is laying up stores of gladness for the speculators who may come after him. Not only is a practical question thus put to Mr. TART, but it may also be asked of Ohio whether it is any more ready to accept from Washington the intervention of the President to determine the State's choice of Presidential delegates and Senator than was New York in 1882 to accept a President's candidate for Governor. It is impossible to believe that Mr. ROOSEVELT comprehends the nature of his conduct, or its consequences.

The Referendum and Initiative

Old DR. WILLIAM J. BRYAN announced the other day that he would drive out of the Democratic party any man who should refuse to accept his latest political nostrum, to wit, the introduction of the "referendum" and the "initiative" in the machinery of Federal legislation. MARSH HENRY WATTS, hearing of the threat, expressed the belief that it could be executed, on the ground that as a driver of men out of the Democratic party Mr. BRYAN has already been phenomenally successful. "The principle of the referendum is, of course, embodied in every State Constitution, which provides for the submission of a constitutional amendment to the popular vote. Not only the referendum but the initiative is exemplified in our Federal Constitution; for Article V., after declaring that two-thirds of both Houses of Congress may propose specific amendments to the Constitution, goes on to say that as the application of the Legislatures of two-thirds of the several States, Congress shall call a convention for proposing amendments. In neither case are the amendments valid until they have been ratified by the Legislatures or State conventions of three-fourths of the States. Obviously the initiative as well as the referendum is authorized by this article in fact, though not by name. Evidently, however, what Mr. BRYAN has in mind is a much less cumbersome, dilatory, and difficult process of eliciting the popular will.

How it Works in Switzerland

Mr. BRYAN, it seems, studied the "referendum" in Switzerland. There, if the revision of the Federal Constitution is demanded by one of the two Houses of the Federal Assembly, or by 50,000 Swiss citizens, the question of revision must be submitted to a popular vote, as also the draft of the proposed change in the Federal organic law. Since 1874 all Federal laws, too, must be submitted to the popular vote on demand of 30,000 electors, or of eight out of the twenty-two cantons. It was apprehended by Swiss conservatives that such an extension of the initiative and the referendum would lead to radical and sweeping innovations, but, as a matter of fact, during the twelve years following 1874, out of one hundred and seven statutes and resolutions passed by the Federal Parliament, only nineteen were submitted to the popular vote, and of these but six were accepted, the remaining thirteen becoming law in the absence of a demand for a referendum. The extension of the principle of the referendum and initiative to the Federal government came naturally to the Swiss, who long before 1871 had adopted in most of their cantons the referendum in either a facultative or an obligatory form, by providing that laws made by a cantonal legislature may or must be submitted to the people for their approval. It is well known also that the three "Forest Cantons," so called, remained pure democracies—that is to say, cantonal laws were passed, not by a representative legislature, but by the primary voters assembled in mass-meeting. Of course the introduction of either form of the Swiss initiative and referendum in our Federal system could only be effected by means of a constitutional amendment, and long before such a step could be taken the objections to such encroachments on the principle of representative government would be made thoroughly known. On the face of things it is doubtful whether institutions that seem to do no harm in a small and compact

commonwealth like the Swiss Confederation would work well in so huge a conglomeration of States as is represented in the American Union.

Why Not Elect Better Representatives?

In Massachusetts discussion has prompted a good many people of good intellect to urge a modification of the suggestion. A public-opinion bill is pending, and one of the customary Faneuil Hall meetings has been held in its behalf. This bill provides for expressions of opinion on public questions at the ballot-box, not necessarily on formulated bills. It is a better idea than the other, but it is also indicative of a general feeling that legislatures have lost reputation and their usefulness. Some of the opposition to the measure expressed by the Massachusetts legislators is that submission to instructions from the people will degrade them. President Eliot speaks soundly, in answering this, that they are already degraded because they receive instructions—nay, orders—from bosses who are themselves under instruction, coupled usually with a pecuniary consideration. Moreover, the Massachusetts Constitution contemplates and permits instructions by the people to the legislators. It is natural, perhaps, at this time that the plan involving the assumption of a paternal direction by the people of their legislators should occur as a remedy of the evil of bad representative government. But why not try another plan? Why may not the people be induced to elect better representatives, men with the training for the task of lawmaking, the time to attend to it, and the virtue to work for the public good—a training and a leisure that the people cannot have, although they may possess the virtue? The basis of all these desires is that the legislators of our time are continuously and persistently refusing to do what the people think ought to be done, or are actually doing what the people do not want done; but what guarantee have we that the people who have elected these disappointing representatives will do any better in the matter of direct legislation? If legislatures are as bad as they are said to be by friends of the initiative and the referendum and of the public-opinion bill, the remedy is not more duties for the democracy, but more political education and greater political activity, to the end that worthy representatives may be sent to the legislatures.

Plutocratic or Mob Government

The President said in his speech at Jamestown that this government "shall never become the government of a plutocracy and it shall never become the government of a mob." This renewed assurance is welcome. There have been times when one or the other of the two kinds of government seemed to be threatened, and the two classes at different times have met with partial success. For example: a Congress dominated by the beneficiaries of a protective tariff is to a certain extent a plutocratic government; a government that would be the parent, now enriching and again punitive, of all the corporations of the country would naturally, from time to time at least, fall under sordid plutocratic influences. A Congress or a State Legislature that would enact laws in obedience to the orders of the mob would be a government of the other kind. Indeed, any government that favored or restrained by class legislation would likely be either a plutocratic or a mob government, and Mr. Roosevelt is correct in saying that either kind should not be the government of this republic. Whether it "shall" be one or the other or neither depends partly on the courage, the self-restraint, the obedience to law, and the sense of justice of the executive and judicial departments, and partly on the wisdom, the education, and the independence of the legislative department. Thus far in the history of the country there have been no laws passed in the interests of plutocrats, *ex nomine*, although there have been laws, like the tariff law, enacted in their interest, and of which they have taken due advantage. It is also true that many laws have been enacted antagonistic to plutocrats and contrary to the interests of all who possess the talent or the virtue to get on in the world, and in aid of a noisy multitude. It would have been odious if the President had particularized.

President Roosevelt's Historical Address

The historical part of the President's Jamestown speech was first rate. The general opinion about it as reflected in the

papers has been that it could hardly have been better done, no matter by whom. In truth, there is hardly any one in sight so well qualified by knowledge and sympathy to talk about the American pioneers and their work in opening a continent to civilization as President Roosevelt. He has studied that chapter of our history, and has written a good part of it himself, and his rapid and condensed review of the labors and achievements of the settlers down to the time of the Revolution was full of life and interest.

Mr. Ingalls Reviews Railroad History

At the dinner of the Traffic Club of Pittsburgh, on April 26, Mr. MELVILLE E. INGALLS, chairman of the "Big Four," went briefly over the history of railroad rates in this country in the last quarter-century. Prior to 1886 all the railroads habitually made secret contracts, selling their transportation to wholesale bidders at the best prices possible, and trying to build up the industries of the country and pay dividends to their stockholders. When competition got too lively, the roads made pools, and by that means were able to maintain rates. When the interstate commerce law of 1886 prohibited pooling, the railroads did their best for a year to do business according to the law, but competition increased, the rate system grew up, published tariffs were ignored, and the roads were in a struggle for life. In 1895, the situation being extremely bad for the railroads, there was a meeting of all the lines north of the Ohio and east of the Mississippi to devise means to maintain rates and save the railroads from bankruptcy. The Joint Traffic Association Agreement was then invented as an expedient that would comply with the interstate commerce law and aid the Interstate Commerce Commission in enforcing the published rates. The agreement worked well, but the shippers who did not want rates maintained promptly took it into court, and to the extreme surprise of its designers got a decision that it was contrary to the Sherman law, and that the railroads had no power to make an agreement for the maintenance of rates. Following that, there came secret agreements between the roads, but they were ineffective, and secret rebates and contracts multiplied apace. Then followed the "community of interest" idea. State taxation of railroad securities had driven them to Wall Street and into the control of cliques. The new plan was that six or seven men should buy control of all the railroads in the country, and so maintain rates. That plan was nipped by the Northern Securities decision, but for which, said Mr. INGALLS, a few men would have controlled the great transportation interests of the country, and while maintaining rates, would have made and unmade statesmen, and controlled legislatures and Congress, so that no one knows what the end would have been.

The Lesson of Twenty-five Years

Thus reviewing railroad history, Mr. INGALLS told his railroad brethren that they must have legislation giving them authority to contract and make agreements between themselves that could be enforced. These agreements must be public, and referable to the Interstate Commerce Commission in case of complaint. And they must also have legislation providing that no new railways shall be built or new stock and bonds issued except with the Interstate Commerce Commission's approval. "I know," he said, "that this will cause a storm among some railway promoters, but, gentlemen, you have got to submit." Railroading, Mr. INGALLS considers, is no longer a private industry, and the railroad man who is not prepared to manage his railway as a public institution in accordance with law ought to resign and go into some other business. That is the lesson of twenty-five years of railroad history as Mr. INGALLS reads it.

No Senator for Rhode Island

The Rhode Island Legislature has adjourned and has made no choice of United States Senator. This was especially annoying to Boss BRYANT, because he had ordered the Republicans to elect some one, and the order was disobeyed. This humiliation, coming as it did after Rhode Island's Governor had directed BRYANT's exclusion from his hunt in the State Capitol, ought to indicate to the boss that the time has come when he might well be thinking of retiring. When bosses are growing unpopular in Rhode Island and Connecticut, decent public opinion must be waking up every-

where. As to going without a Senator, Rhode Island need not take this to heart as if it were a great evil to the State. Deadlocks have happened before, and have in the end been beneficial to the States in which they have occurred by resulting in better Senators than were contemplated by the deadlocked legislatures. Delaware's experience ought to encourage Rhode Island. Worse things can happen to a community than the lack or loss of some kinds of United States Senators.

The Problem in Russia

All friends of individual liberty, of the rights of men to their lives, their liberties, and the rewards of their toil, must wish to the Russian Duma good fortune—the good fortune that attends the clear thinking and self-restraint that are inspired by patriotism. And yet there is doubt. The Duma is not yet under the control of the steady-headed, but fortunately it is also not under the control of the others. The Revolutionist members favor political assassination because they think that all that has been gained thus far has been by assassination. The Constitutional Democrats desire immediately a constitutional monarchy, but not yet a parliamentary government. The Reactionaries think that they would benefit by the triumph of the radicals and the consequent dissolution of the Duma. The problem will work out one way or the other; in the mean time no party yet dares to take a positive step.

Mr. Hill's Tranquil Forecast

MR. JAMES J. HILL sees a slowing up in business, but it does not frighten him. The reaction, he believes, will be a healthy one, affecting luxuries, but not including the business pursuits that are concerned with the necessities of life. He expects the steel trade to hold its own because of the multiplication of new uses for steel. Car-building, he thinks, may show up a little, and some of the big manufacturers of things which are in demand in flush times will find their orders falling off before the year is out, and will have to lay off men. Dry-laborers who have been getting from \$2 50 to \$3 a day will presently be working for less money, and bankers will find their funds in less demand and get lower interest rates. Nothing about this prospect dismays Mr. HILL. "I would call this," he says, "a healthy reaction, far more helpful than the disastrous panic of ten years ago, or even the reaction that preceded the last Presidential election." A controlled reaction is what he anticipates; not one that takes the bit in its teeth and runs into panic.

The Rush of Housemaids to Europe

It is becoming so familiar an incident of household experience in these parts to have domestic servants give notice in April that they expect to give up their situations for the summer and spend that season in Europe that it has ceased to excite surprise, though it still invites reflection. Inasmuch as the calling of domestic service is not especially popular, and the demand for competent servants everywhere much exceeds the supply, it may be worth while to point out some particulars in which domestic work seems particularly advantageous. Servants' wages have gone up along with all other wages. The increase in the last year or two has been from fifteen to twenty per cent. But while the increased cost of living has commonly been named as the chief basis for the increase of wages in general, domestic servants who are boarded and lodged by the families they work for get their increase of pay without any notable corresponding increase in their cost of living. Upon their employers fall the burdens both of paying them higher wages and of paying very much higher prices for everything they eat and drink, and higher rent for the house they lodge in. The housekeepers are perfectly aware of this condition of things. Everywhere where money has to be considered at all comes the same wail over the calamitous and unavoidable increase in the cost of living. It is not that the housekeepers—those that are sensible—grudge their servants higher wages, but that so many of them are so hard put to it to maintain incomes that have not increased, the style of living to which they are used that the wage increase becomes a serious problem in finance. Servants get, and should get, the riding rates, whatever they are. Demand and supply regulate that. But when the housemaid or the cook gives notice that she will spend the summer in

Ireland or in Sweden, the housekeeper feels more acutely than ever that "service" is a good deal better vocation than it is cracked up to be, and that more competent women would take to it if its advantages were better understood.

Gifts to Colleges

Gifts to colleges and universities are beginning to come in very early this year, and if the rate continues to progress naturally, the sum of the gifts that will be announced at the various Commencements ought to be something astonishing. JOHN D. ROCKEFELLER leads the givers. A few days ago he presented the University of Chicago with \$2,000,000 worth of land. This makes for this year \$5,000,000 of his tainted money which the University of Chicago has shamefully taken, with felonious intent to employ it in the business of education. There is, too, to be counted the distribution of the income of his former \$12,000,000 among other desecrating educational criminals. A generous soul has presented Dartmouth with \$300,000. Within a few weeks Yale has received about \$200,000, and during the year Williams has had considerably more than \$200,000. The fact has not yet been published, but Amherst is to receive a very large sum of money either now or at Commencement. Moreover, Wisconsin has increased its tax for its university, and on the wide horizon no enemy of education appears except the Senate of Massachusetts, which has voted to tax university and college property.

Apocryph of Child Labor

A neighbor (the *Evening Sun*) quotes HERBERT SPENCER as speaking of

the curious truth that while an evil is very great it attracts little or no attention; that when, from one or other cause, it is mitigated, recognition of it brings efforts to decrease it; and that when it has nearly disappeared, there comes a demand that strong measures shall be taken for its extinction; natural means having done so much, a peremptory call for artificial means arises.

This seems a remarkably appropriate passage to bring to the attention of Senator ECKHART and the other enthusiastic rooters for a national child-labor bill. Not until the child-labor evil had been much diminished by intra-state work was there real rebuke of demand for strong measures by the Federal government.

Dangerous Classes

The Boston Transcript of April 23 quotes the Rev. HENRY C. HARTMAN, D.D., of New York, the new secretary of the Congregational Home Missionary Society, as saying in the course of an address before the Congregational Club of Boston:

The only unqualifiedly dangerous class in America is the self-centered pleasure-seekers, men and women to whom existence is synonymous with dining and sleeping, with automobiles and yachts, with Sunday jaunts and theatre parties. They know no burden of church or state, who have abdicated thought and renounced parenthood—these are the men and women, if multiplied sufficiently, who can sink our nation to a bottomless hell.

To our mind the "self-centered pleasure-seekers" are not so dangerous as Dr. Hartman thinks. If they have renounced parenthood, the chances are against their multiplying sufficiently to sink our nation to hell. If they have abdicated thought, they seem considerably more likely to get into mischief themselves and go to pot than to bring doom on their fellows. Dining and sleeping, automobile and yachting, Sunday-pleasuring and theatre-going, and neglect of pious and political duties may be paths to perdition for those who travel them to extravagant excess, but we do not observe that the country is critically imperilled by the pleasure-seeking of the idle rich. It is not they who make the streets of Chicago unsafe; not they whom the trust-busters and railroad-reformers are after. They make at times a good deal of trouble for the courts, but, as a rule, they are almost as harmless as they are worthless, and not nearly so dangerous as some folks who are immeasurably superior to them both in morals and in intellect. The people who have raised the most hell in the world have been people of brains, energy, and industry—good people, some of them—whose efforts have been misdirected. Thugs and scamps do mischief too, but mere pleasure-seekers count for little that is either good or bad.

True Conservatives versus Dangerous Radicals

A SPEECH which hitherto has received but scant attention, but which deserves to be studied carefully and pondered deeply, was delivered by Mr. MARTIN LITTLETON at the banquet given by the National Democratic Club at the Hotel Waldorf Astoria on Jeremiah's birthday. With rare facility and with irresistible cogency the speaker traced the growth of monopoly, and pointed to the only efficient remedy. He began with a convincing demonstration of the truth of the dictum that the tariff is the mother of the trusts. With the skill of a surgeon he laid bare the fundamental vice of protective legislation, and with the art of an logician he tracked its evil influence through the far-reaching network of its mischievous results.

Mr. LITTLETON reminded his auditors that no sooner was the alliance between protected industries and the Federal government firmly wrought than it became inevitable that those industries would, when need arose, corrupt popular elections in order that this alliance should be upheld. To that end the twin agencies of intimidation and seduction were persistently employed. So it came to pass that if any political party dared to level a blow at the iniquitous union between cupidity and perverted power it was at once proclaimed to be at war with the business welfare of the country. If any party strove to rescue the government from this degrading partnership it was met with the alarm-ery that American labor would find itself without employment. If any party challenged the wisdom of a policy which exploited the power of government for the furtherance of class enrichment, it was confronted with the avowal that should this policy be abandoned the government would be left without revenue to defray its expenses. So fear begeth ignorance, ignorance begeth arrogance, and the gain begeth a prostitution of power, held fast remitted the alliance between the government and the protected industries, until the swollen fortunes of a few could take their toll of all the earnings of the many. The government did not, and assumed that it should not, stop with the protection which it gave to the manufacturer; but, taking this as a precedent and an authority, lavished on interstate railways concessions of the public lands. These railways, obviously, were to be the great arteries of commerce between the States, and as it had entered into a bargain to protect this commerce, it was but logical and natural that it should show itself equally generous to the channels whereby the output of the protected purveyor could be conveyed to the consumer.

Mr. LITTLETON went on to show that scarcely were trunk lines, thus stimulated by prodigal grants of the public domain, completed when the protected industries drove a bargain with the new common carriers for discrimination in their favor. They argued that if the Federal government had the right to discriminate by the bestowal of protection on one class, the railroads must have a similar right to discriminate by the giving of advantage to the same class. If the Federal government would accept as a reward for tariff legislation the pecuniary support of protected industry, why should not railroads accept stock in manufacturing companies as a reward for a like unfair discrimination? Passing to the next step in the evolution of perversion, Mr. LITTLETON drew attention to the fact that when protected industries had cemented their alliance with the government, and had reached the desired understanding with the railroads, they had but one obstacle left in the way of unimpeded supremacy, and that was such competition as still survived to annoy them. Since the government had given them protection in the interests of business, and had given bonuses to the railroads in the interest of that same business, and had allowed these industries to drive discriminating bargains with the railroads, always in the interest of business, why, it was urged on behalf of prospective monopolists, should not the government, in the interest of the same business, allow them to combine and consolidate in order to cheapen their products, reduce the cost of production and distribution, and improve the article made and sold? The Federal government was their government—such, practically, was the contention of the protected industries—it was their avowed and willing partner in the share and consequence of their trade. Did they not elect its officers by the supply of money at elections? Were they not representative of all the business interests of the country? Was not, indeed, their welfare synonymous with prosperity itself? Why, then, should they not enjoy the further protection of their faithful partner in the process of creating by combination private monopolies? Reasoning in this way, the protected industries took the fast step toward the complete system which rested entirely on an indefensible, if not corrupt, alliance between private enterprise and a great government.

Thus did Mr. LITTLETON demonstrate that the insidious influence of the protective system has run to the very finger-tips of American life. The virus of its unjust discrimination has touched and tainted every detail of American business. From a political instrumentality, impartially and honestly holding to a perfect level the balance of its great powers, our Federal government has

become on the one hand the shelter of wealth, swelling and obtaining undue advantage, and, on the other hand, the ally appealed to by lawless labor, aiming to secure in its turn a share of paternalism. From a republic representing the wisdom and virtue accruing from ages of contest for just legislation, our Federal polity has been pulled into a complicated alliance with capital and labor. Mr. LITTLETON points out how the two great political parties to-day are scurrying in frantic distraction amid the confused consequences of a protective system, and delivering blow after blow at symptoms, with never a thought of the disease. As the speaker just it at the Waldorf banquet, the Republicans are riding like a rudderless ship under the full steam of a stormy capita, while they rack not of wind or weather or barometer. Meanwhile the Democrats are resting in the calm of accustomed defeat, although, from age-long habit, they still have an eye to the life-boats. The old party names, however, have become empty sounds. Mr. LITTLETON does but state a truth patent to all clear-sighted onlookers when he says that half the men who profess to be Republicans are not Republicans, and half the men who profess to be Democrats are not Democrats. Whatever they call themselves, they do but yield to the attraction of instant or the allurement of gain. The speaker recognized, as all of us must recognize, that the line of cleavage runs no longer between Democrats and Republicans; it runs between conservatives and radicals.

Mr. LITTLETON explained that he did not have in view the conservatism which burdens under the government, dislocates its foundations, and saps its vitality. Neither does he mean the conservatism which shudders at the sound of honest controversy, and shrinks at the intrusion of daylight. Nor yet does he have in mind the conservatism which, impelled by greed, seizes upon a political party, and under the shibboleth of preserving property rights appeals to the people to promote its private interests. The conservatism advocated by Mr. LITTLETON is that which would hold the Federal government so high above the reach of class interest that it could have neither the cry of the lawless mob nor the invocation of those fast with privilege. In other words, the conservatism which cares not how rich people may grow, so long as they stand alone and earn their wealth without the aid of government; and cares no little how poor people become, if their poverty be not due to oppression and inequality before the law. By radicalism, on the other hand, he does not mean that which has the righteous courage to denounce the inequality of special privilege, nor yet that which is earnestly striving to liberate this government from its alliance with class interests. The radicalism which Mr. LITTLETON has in view, and which he would repudiate and repress, is the radicalism of those, some at the top and some at the bottom of society, who, on the one hand, would bring about the anarchy of unbridled wealth, and, on the other hand, would produce the disintegrating socialism of thriftless poverty. It is because he takes this view of the actual situation that he conceives the Democratic party to be, and to be bound to be, the great conservative, redeeming factor in American politics.

It is an impressive conviction in which Mr. LITTLETON summed up the purport of his warning and the fervor of his hopes. He told his auditors that, just as surely as the Democratic party, having strapped itself to the institution of slavery resting upon special privilege, was doomed to eclipse for a quarter of a century by the indignant revolt of an outraged public conscience; so the Republican party, if it continues to be strapped to the institution of private monopolies resting upon special privileges, will be swept out of power and place by a moral revolt electrifying the public conscience of America to-day. Our Federal government, he said, must be stripped clean of the leeches of special privileges that have sucked its blood and fattened on its strength. It must be rescued from the debauching influence of protected graft, and safeguarded alike from the madness of the mob and the arrogant and mercenary dictates of monopoly. It must be lifted to a plane where it will neither tremble at the murmur of disorder among the poor, nor buckle to the demerger exactions of the rich. Its life, in a word, must be planted firmly upon the constitution of its arms must be straddled forth in equal protection over the life, liberty, and property of every class; while its head must be linked with the light of a new century, transfiguring the spirit, if not the form, of a great democratic republic.

Spirit and Body

EMANUEL CHURCH, in Boston, is carrying on an interesting work in an interesting way, and while it is yet too early to know just how effective it will be, it at least points a possible method of dealing with a very prevalent evil.

Life is becoming more and more complex, and the burden of adjusting oneself to conditions is breaking many a spirit and leaving many a struggler on the march, whose courage has failed, and whose part in the general movement has become a drag instead of an impulsion. Such are folk whose nervous systems are

in continuous conflict with the scheme of the universe; and the firmness and ruthlessness of the establishment of the universe being more fixed than the individual nervous system, they are inevitably pushed to the wall. The result is the great army of the vanquished: people hopelessly a prey to melancholy, to hysteria, to depression and drugs. There are many attempts to deal mentally with these diseases—methods hair, unhair, and hair fail—but the attempt of the pastors of Emanuel Church to cope spiritually with such invalids and yet to have the careful advice of physicians, is a most hopeful sign. It seems to be a rational and a wise attempt to enter a field too often rashly and foolishly entered. The nice adjustment of spirit and body, the training of the spirit to take charge of the body, and the training of the body to obey the behests of the spirit, are difficult but surely unimpossible matters. It is no wonder that in the multiplicity of objects and ideas many individuals should stumble; rather it is a wonder that so many find an anchor and remain steadfast to some ideal of truth and self-sacrifice and high intent. These folk have come like DANTE to the dark wood where the "straight way" is lost, and where sin and sorrow and despair lie in wait to trap the falterer. It was after this night in the wood, so wild, rough, and stubborn that even to think on it long after rendered the fear of it bitter as death, that DANTE met his guide, who offered to lead him out of the wood by a road which should show him the eternal roots of misery and of joy, where he should hear the hopeful strains, should see the ancient spirits in pain calling for a second death, and also see those who are content in the fire of trial, because they yet hope to come, whenever it shall be, amongst the blessed.

So the pastors of Emanuel Church are attempting, with great precautions and much care, to gather together these invalids, preyed upon by diseases of the will and the personality, and by encouragement and kindly suggestions, by brave thoughts and healthful words, by repeated infusions of wisdom, to lead them from the lands of self and renew their relations to life and effort. "Happiness," an old German writer has said, "has no private business to transact." Indeed, hard as it is to realize, happiness comes in those moments when most of us are rid of ourselves. Whether in a disinterested love of an art, whether in a faith or work of human service, it is when we consecrate our energies to something beyond ourselves, and grow to feel, as well as to say, that our little personal sorrows or failure does not matter, that we are on the road that leads to happiness. This is a hard lesson to teach even normal man, but to teach it to the abnormal man, who has thrown up his hands and given up the game, who has submitted to the thralldom of a diseased will, is one of the noblest and greatest of works. For no one can be spared. "Not a sparrow falleth to the ground," is one of the most difficult of scriptures to believe, and to bear in mind that there is no completion anywhere while so much as one soul lingers in the valley of despair is as hard to realize as it is indubitably true.

The antidote to being born in virtue; the antidote to destiny is wisdom. There is no suffering, no struggle, no shame that may not justify itself, provided the issue be virtue and wisdom; and it is probably to enforce just this truth, and the old adage that while there is life there is hope, that the work in Emanuel Church has been established and is being systematically carried on.

Personal and Pertinent

PRESIDENT ROOSEVELT said in his Jamnecow speech:

"The fact that so many of our people, of whom as it happens I myself am one, have had a very small portion of English blood in our veins, in no way alters the other fact that this nation was founded by Englishmen."

It is possible that the ROOSEVELTS have lived for 250 years or so in New York without acquiring more than "a very small portion" of English blood! The President's mother was a HOLLAND. "HOLLAND" sounds English.

After undergoing a protracted series of baronial dinners and acquiring the store of losing-cups and like memorials of affection, three sailed for home, on April 27, SIR PERCY BARNARDON, the admirable British subject who has been the British Consul-General in New York for the past fifteen years. Very greatly liked and admired and respected has SIR PERCY been in this town. He said he was coming back as soon as he could, and that he had so many friends here that he had come to regard New York as his home. New York, on its part, had come to regard him as a cherished emblem of its recent existence, and was fully as regretful at parting with him as he could possibly have been at leaving.

MR. SUMNER LEE recently addressed a British society recently established "to help to maintain the correct use of English, and to promote the due recognition of English as an essential element in national education." In the course of his remarks he made known a fact which has interested Americans for a good while. This fact is that a good many more teachers are instructing in

English the youth of American universities and colleges than are doing the same task in the English universities. He said that there were twenty teachers of English at Harvard, while there is only one teacher of the language and its literature at Oxford. At some of our smaller colleges there are five or six instructors in English. Not long ago a professor in literature at one of our larger universities was consulted by a younger brother who is an instructor in English in a small college. The trustees of the college had, kindly or wisely, given to the young man a leave of absence for two years in order that he might go abroad to find out something about his subject. He asked his brother where he should go, in Oxford or to Cambridge. But his brother told him that he would do better to go to France; that they paid more attention to the study of English at the College of France than they did at the English universities, where they suggested a first-hand to know his mother tongue and its literature when he came up for matriculation. Whether a boy of any country wants much instruction in his own language when he goes to college depends a good deal on what he gets at home. Evidently there are some Englishmen, including Mr. SUMNER LEE, who think that efforts in England would not be thrown away.

EX-GOVERNOR PENNYFACER, of Pennsylvania, has been selling, with his lawyerlike accuracy, "one-fourth part" of his library, and it is agreeable to note that the books have brought good prices. GOVERNOR PENNYFACER lost some reputation by going into politics and by feebly setting his friend SENATOR QUAY. Possibly he did not dwell in Philadelphia more much acquainted by what they considered the downfall of this excellent lawyer and judge, but those who were intimate with him, and also fellow citizens of his who knew him as a neighbor who lived south of Market Street, did not lose respect for him. They realized that PENNYFACER was a lover of books, and that QUAY had the reputation of entertaining the same passion, and they realized, too, that those who have the collecting mania, or who ardently read strange things, are irresponsible, so far as their mutual friendships are concerned. They can be no business in a fellow bookworm, and to meet a good man QUAY was one of the best because of his literary tastes, which were said to be extensive. No better man than JONATHAN CHACE, of Rhode Island, ever sat in Congress, and once, when an overwrought reformer was denouncing QUAY for his alleged wickedness, the mild and learned Quaker said, "You should not say such things of QUAY; you ought to see his library." Even Mr. ROOSEVELT was enraptured by this wonderful strange man. "I've just had a delightful hour with QUAY in the White House library," he said to a friend, one of the best of his happy possessions. "We've been looking over the splendid edition of the New Rivers there is there, and I've been so perfectly familiar with that and with all the other editions of the Nones. He pointed out to me the superiority of the Danish over the German version"—or the other way. "But THOROUGH," said the astute friend, "that doesn't make QUAY a good man." But it did in the eyes of a book-lover like PENNYFACER.

The American newspaper has been the worthy subject of eulogy by an enlightened advertiser for advertising. He says, in effect, that the New York newspaper has enormously improved, and that what has been called sensationalism has almost disappeared. Not to dwell upon any topic that may excite unpleasant or regretful contemplation, it may be well to say that all newspaper men, and many intelligent laymen, have long been conscious that the New York newspapers have long been rising in the intellectual and spiritual heights which many provincial newspapers, and newspapers of other cities, have long been conscious of occupying. As a matter of fact, the newspapers of this country, with some exceptions, of course—for it is inevitable that some editors and publishers are no better than they should be—have always been better than the politicians. Another fact is that almost, if not quite, all our gains for local good government are due to the press. The same may be said of the influence of the press in securing good government for the country at large: while Mr. GOODE, who was a war correspondent in his younger days, used to say that the most noteworthy result of the Crimean war was the modern war correspondent. The critic of events, the exposé of wrong and sham and the bad treatment of soldiers, the disclaimer of the incapacity of leaders of armies, the describer of war's horrors—this was the war correspondent. And what of the newspaper's exposition of political offenders? All this has lain in the lack of the heads of the men who have made newspapers. But there have been exceptions by newspapermen in what they have regarded as the public taste, and those who try to play down to the crowd almost always play below its level. The episode seems to have passed, according to the illuminating advertising gentleman; but there was once a time when the newspaper was very contemptuous of the editorial page. There was once a managing editor of a New York newspaper who was so successful in the management of his job that he expected to succeed the editor-in-chief, who was one of the foremost of his class. "Ah," when I do succeed," he used to say, "the first thing I'll do will be to kill the editorial page." Well, he did at last succeed, and the editorial page is livelier than ever.

WHY NOT CONQUER THE SOUTH POLE?

A QUEST FOR THE EXPLORER WHICH IS BOTH FEASIBLE AND ALLURING

By FREDERICK A. COOK, M.D.

Surgeon of the Belgium Antarctic Expedition, 1897-9

THE reasonable certainty of the success of an expedition to reach the South Pole is a strong argument for the exploration of that great void around the under surface of the globe.

No effort to reach the southern axis has ever pushed into the frozen North. There have been many Antarctic expeditions, but none has started out with the South Pole as a destination. This is in striking contrast to the many ventures sent to reach the North Pole. The fiercest rivalry has managed to hold public interest; the seeming hopelessness of its attainment has been a continuous challenge for many ages, resulting in an international race for the farthest north; but the equally interesting Austral pivot has been curiously neglected.

There are many reasons for this unequal drift of energy. Great enterprises depending upon popular acclaim for financial support drift with public opinion into narrow grooves. The Antarctic has never appealed to the imagination of explorers with the attractive lure exerted by the frozen North. They conceived a hypothetical southernmost continent to balance the earth, but the idea of its possible utility, even its very existence, was thoroughly dispelled by the circumnavigation of Captain James Cook, at a period just prior to our Revolution.

Yet the South Pole can and will be reached by the members of the first expedition who really understand the problem in hand and are prepared.

It is no task for the haphazard adventurer; its accomplishment will require a thorough understanding of the polar environment, as well as peculiar powers of endurance. The hardships involved are greater than those of the Arctic, but there is an assurance of success over a continuous land route not offered by the antipodal quest.

This will best be understood by a brief critical examination of physical conditions of the two polar areas. The North Pole is in the center of what is believed to be a moving sea of ice, and its conquest is dependent on the uncertainties of drift and weather. There this restless pack no advance nor return stations can be established. Supplies must be moved for a campaign of four months. Toward the South Pole a ship can push to 77° 30' without great risk. Thence the route lies over fairly smooth land ice upon which stations can be so selected as to enable advance feasible during, probably, nine months of the year. The distance from the start latitude to the pole is seven hundred and fifty miles, and an air-line course is possible.

It is improbable that a better route will be discovered than the one upon which the British expeditions have concentrated their efforts. This is the one leading in from the regions south of New Zealand. Here the largest known glacier yields its icy output

directly from the overland sea of ice which gathers about the South Pole. Its face is several hundred miles wide, and its surface has been hollowed for three hundred miles without the making of any perceptible rise or narrowing. The distance from Captain Scott's lastest south, 82° 17', to the South Pole is four hundred and sixty-three miles. From what we know of this glacier, and on account of the enormous quantities of ice which it discharges into the Ross Sea, it is reasonable to suppose that it must reach far beyond the South Pole.

We assume, therefore, that this glacier with its known conditions of travel will be the successful route to the South Pole. We are, therefore, able to calculate with reasonable probability the possible conditions which will govern the undertaking. Between the sea and the pole lie seven hundred and fifty miles of continuous land ice, covered with deep snow, somewhat crevassed, but with no troublesome irregularities. If the trail be laid at a long distance from the side of the glacier the great pressure troubles can be avoided. The summer temperatures are normally a few degrees below the freezing point. The winter temperature will probably indicate that, for a given latitude and altitude, this is the coldest spot on earth. Strong winds blow for prolonged periods, and the snowfall, even in summer, will be very great. The ice will have an imperceptible movement of a few hundred feet per year. The season for traveling can be extended much longer than that of the Arctic, because there is no risk from the ice disruption of summer.

The quest of the South Pole offers the possibilities of several methods of attack. It is a safe field in which to experiment with the many freak machines which inventors have offered to make arctic traverses. I have not the slightest faith in any of these devices which has not been thoroughly tried out. A machine which does not work in New York will not do service in the frigid zones, and a device which does work here will have many chances to fail in the polar ice-fields. There is little hope for balloons, mainly because the summer temperatures at no altitude at which the balloon must move are too low, and, furthermore, the winds are opposed to poleward movement. In my judgment, however, the automobile can be made to do efficient work on snow, and the South Pole quest is a venture which offers great possibilities for ice travel by motor.

Just at present it is my purpose to indicate how the South Pole can be reached by good old methods of polar travel. A corps of eight men with supplies for two years should be put ashore near the entrance of Foulon and Terror. They should have about seventy-five good Eskimo dogs, and feed for their sustenance for two years. sledges should be built of a type to suit the particular kind of

THE WAY TO THE SOUTH POLE

Copyright by D. A. Smith

The treacherous wastes of ice which the Antarctic Explorer must traverse

snow found on the barrier. The general food and equipment need not differ radically from that used in the Arctic. The boat should be sent to Australia to winter, and during the following summer go back to meet the explorers on their return.

The eight men would have a busy time preparing for the coming winter, but some would immediately push on, trying their equipment and establishing stations of food and fuel. The high westerly range with sharp peaks should make it possible to fix the stations by geoper observations so they could readily be found later. Before the fall of the curtain of the long winter night the entire freight for the next season's campaign should have been advanced two hundred miles.

With dawn of the first day of August the train of dog-sledges should be sent rapidly over the first two hundred miles, advancing

stations from there, while the party of two or three men push desperately on to the Pole. If, for any reason, the task could not be accomplished during the first season it surely could in the next year. For it would be merely a matter of persistence. The moving pack-ice, the open water, barriers of hummocks, and the impossibility of establishing stations, which have made so many disheartening Arctic failures, are not operative in the south-polar region.

"To the South Pole, to the new fairyland of scientists!" should be the foremost of coming explorers. Its discovery will put contour lines on the greatest blank on our charts. It is a reasonable undertaking which promises large rewards in geographical discovery. It is a problem peculiarly adapted to American dash and enterprise, and it should be achieved under the Stars and Stripes.

A DISAPPEARING MONARCH

By THOMAS SPEED MOSBY

WHEN in its resistless march to the West the tide of the American advance first touched the base of the Rockies, one hundred years ago, it met with an antagonist more terrible than the hordes of painted savages which then roamed the mountains and plains, and more formidable than the storm-swept peaks and ranges which seemed to frown upon the daring pioneer and bid him halt. It was then that the grizzly bear (*Ursus horribilis*), since called by ranchers and mountaineers "Old Ephraim," as a tribute to his power, rose upon his haunches with a furious growl, and formally made known his presence to the world.

For the first satisfactory account of this ferocious monarch of the wilderness, the mightiest beast of the Western Hemisphere, we are indebted to the journals of Lewis and Clark, and for more than fifty years after their expedition had passed into history no expedition ventured into the Far West without recounting among its adventures some experience, more or less harrowing, with the grizzly bear.

But the grizzly has now become so rare that even his habits and history are frequently misstated, and by those, too, who should speak with authority. It is a very common supposition that he is an animal of seclusion and solitary nature, who wanders alone along the snow-line of the Sierras and the Rockies, descending only occasionally upon predatory visits to the valleys. But the grizzly is solitary only because he is now facing extermination, and he inhabits the snow-line because he has been driven from valley and plain, and there is nowhere else to go.

It is noticeable that the early Western travellers speak of the grizzly as the "white bear." It is so described by Lewis and Clark, and James O. Pattie, narrating his father's expedition in 1824, spoke of the great number and unusual ferocity of these "great white bears." So great were their numbers in that early day, that in a single day's journey Pattie counted two hundred, and twenty of them, eight of which had attacked the party and were killed. This was on September 15, 1824, while the party was

passing through the territory now occupied by Cheyenne County, Colorado. A few days later, further south, the grizzlies became so numerous that twenty men were required to guard the camp from their onslaughts each night. So much for the "solitary" nature of the grizzly back in "the twenties." Writing of the period of the early "forties," General Fremont, in his memoirs, speaks of having seen great herds of these monsters feeding gregariously under the oaks of San Bernardino, in California. Such testimony tends to show that the great grizzly was not always the lone wanderer that we now know him to be, and tends to show, moreover, that he once liked the valleys better than his present dreary and solitary mode. Indeed, the explorers of the West found him equally at home in the parched fastnesses of the Great Basin, in the fertile valleys or among the ice-bound peaks, whether feeding upon berries or bison, herbs or human flesh, and everywhere, at all times, "monarch of all he surveyed."

But he is passing. In the places where, seventy-five years ago, two hundred of his powerful tribe could be counted in a day's journey, he is now but a tradition and a memory, and he is a lucky sportsman who gets one shot at a grizzly in a lifetime. Driven to the inaccessible retreats of the mountains, he is making his last stand against a race which has already robbed him of those myriad herds of buffalo, antelope, and elk which were once his prey, and from his icy summits where only the American eagle soars, in solitary grandeur he looks down upon a hereditary dominion which is to be his no more forever.

We have known him but a hundred years. Was there ever so swift a monarch with reign so brief? We cannot compute the exact rate at which he is disappearing (it is far easier to get at the mortuary statistics of his enemies), but, as events go, it is likely that there will still be tigers in India and lions in Africa long after the last echo of the grizzly's growl has died among the peaks and precipices of his mountain home. But he will die as he lived—die as he becomes an American monarch—the gamut of the game.

PIONEERS

DRAWN BY FRANK TENNEY JOHNSON

IN THE NAME OF DAI-JINGU

By WILLIAM INGLIS

THE Japanese wrestler does not try to throw his man down. He tries to throw him out—out of a ring twelve feet in diameter, whose extent is marked by a thick rope of straw neatly cable-laid and half buried in the bare brown earth.

And in the process of realizing his ambition the Japanese athlete goes through a series of acts as foreign to our accepted ideas of sport as his horizontal projection of the foe is different from our simpler plan of hurling him down. Moreover, there is a religious element in their sport.

The globe-trotting Mr. Kodanp doesn't like Japanese wrestling: it has in his eyes the worst fault in the world—it is un-English. Possibly that is why a group of Americans who visited the arena in Tokyo a few months ago were so agreeably disappointed; for we had read various stolid and patronizing reports of the game, full of cold Padenappery, and we started for the show expecting only by the resolution of the faithful traveler who will everlastingly die to his tracks rather than miss seeing what Murray tells him to see.

There were flurries of snow in the gray air when our 'rikishas rattled down the gravelly drive of the Imperial Hotel (oh! how good it is to get out of that cold and silent tomb!), and sped away across bridges of ancient, square-burned timbers that spanned dark-green waters full of scumpeak, jagged down endless frosty avenues of tiny shops whose shopmen were tossing their blue wrists over red fingers of charcoal in *kobekis*, ran beside bubbly, shallow canals that assailed the nostrils of heaven, and so came, after nearly an hour's running, in the district called—well, see guidebook for name of district: it's always the same.

From afar we could distinguish Edo-in, the historic battleground of East and West. High above the heads of the swarthy little people swarming toward the arena we discerned a forest of fluttering banners, red, white, blue, and yellow, each bearing the device of some wrestling clan. Seven close at hand, the outside of the place was as scolded and disenchanted as, say, the entrance to the Palo Gramels at home—a high board fence with a gate inconspicuously small for the crowd that was filtering through. But the filtering process was managed somehow without any elbowing or heel-treading or adjurations to "step lively," and every man seemed to respect himself and to respect his neighbors. Curious Japanese custom!

The wrestling platform was a square mound of cold earth raised some two feet above the ground and pounded flat and smooth. It was surmounted by a structure much resembling a Shinto shrine—four posts supporting a fluted roof surmounted by a carved dragon.

At each corner, with his back close to a post, sat a large, silent and motionless elderly man, arrayed in a dark kimono and the wisdom of all the ages. These four personages, called *Yoshi piri joku*, are all ex-champions, mighty men, men of old, men of renown, who in their day and generation had hurled many an outworned into colder darkness. To see these grave old giants squinting there, all wrapped in voluminous skirts and clinging to their folded fans, did seem a little ludicrous at first. But so our laughter. You could not contemplate their serene majesty and dare to think of laughing. They constituted the Court of Appeals of the tournament. If any one disputed the umpire's decision these ancient eyes decided.

There were a few

small enclosures for spectators on the ground near the ring, but most of the seats were in bamboo-railed boxes rising up in amphitheatre fashion on every side. Everybody squatted on his heels or sat out on his crossed legs to see the show. They offered chairs to no foreigners, but we made signs to show that while we were in Japan we'd squall as the Japanese do. We were rewarded with grateful smiles and bows from some scores of Japanese gentlemen who had worried over the prospect of seeing nothing but our tall backs.

Handy little men jog-trotted to and fro among the boxes, bearing trays on which pots of tea and small cups and sweet, thin rice wafers were appetizingly displayed. The spectators nibbled wafers and sipped the tea with loud, gurgly sounds for politeness' sake, and smoked cigarettes and chatted and laughed. Suddenly all sounds ceased. The wrestlers were marching in. From the east side of the arena came ten men of the East; from the west side ten men of the West; all barefoot, and unclad save for ceremonial aprons and narrow girdles from which hang strips of reeds that looked mighty uncomfortable and ticklish.

"Did you ever see such a lot of lubby athletes?" asked the Brunswicker, who numbers Sullivan and Ned Hennes and Wallace Ross among his friends, and knows what's what.

"Sh-h-h-h!" replied the New-Yorker. "They have to carry fat. We Western people think an athlete is no good unless he's lean; so these Orientalists just naturally take the opposite view. East is East and—"

"Oh, fudge!" cried the Brunswicker. "Call those big, stuffed poly-poly wrestlers! I'd like to put Tom Jenkins at them. He'd toss 'em around like a farmer pitching hay."

Maybe so. Maybe not. Probably we shall never know, for it would not pay a Japanese champion to abandon his sure income and come to our country on speculation; and, of course, few Japanese would care to see our wrestlers do their outlandish feats if they should happen to go to Japan.

Very gravely the opposing squads faced each other in the arena for the ceremony of *Dohio ita* or formal greetings. Each athlete pressed his left hand under his heart and bowed and then in friendly salutation. In principle the act was like that of our pugilists who shake hands before proceeding to batter. Having by those gestures expressed the entire absence of ill-feeling, the warriors solemnly marched out of the ring.

Now the *Yobedashi joku*, or "calling out man," swept grandly to the centre of the ring and proclaimed—"Higashi, Yamanaka; Nishi, Matsuda." Those were, indeed, all the words that he uttered.

But he drew them out into a recitation that lasted for minutes. In the first place, he advanced with a very slow, mincing gait to the middle of the ring, waving the rustling folds of his kimono with great dignity. He pointed with his fan to the East, then held the open fan before his mouth, and in a shrill, penetrating, yet quivering inflection, chanted:

"Hi-i-i-i-i—go—ah-i-i-i-i!"

It is said that the limitations of type cannot imitate the wailing, the trills and general flourish that the *Yobedashi joku* contrived upon the long-drawn word. And, having at last uttered it all, he next dragged out the name of Yamanaka, who was to represent Higashi, or the Eastern province, in the first bout. Next, with ever-increasing gloom,

The Ceremony of *Dohio ita*, or Formal Greeting

shrillness, and austerity, the announcer pointed to Nishii, the West, quivered out the word, and spent many joyous moments in wailing the name of Matsuda, the Western protagonist.

"Great Scott!" the Brunswicker remarked. "That announcer makes Charlie Harvey and Peter Branty sound like whispering children. 'Wouldn't he make a hit in Madison Square Garden?' I've never heard the wailing of a lost soul before, but I'm sure this is it, all right."

The more elaborate dignitary swam into our ken, the Sumo-gyōji, or referee. His kimono was more voluminous than that of

Yamanaka had pounced upon Matsuda

the announcer, also he carried a curved oval fan as token of his office. He had the detached, far-away aspect of the over-man might come and men might go, but he would poise the scales of exact justice forever. Following the umpire's advent, there appeared Mr. Yamanaka from the east side of the ring and Mr. Matsuda from the west.

Oh, how they waddled! These men—mountains. In height they were a trifle below six feet, but by comparison with the ordinary Japanese around them, each seemed like Goliath and Daniel Lambert rolled into one, with the Daniel Lambert element predominant. Fat grew upon the midst of them in rolls and folds that bore a grotesque resemblance to the armor belt of a battleship, also it hung in collars and festoons here and there. Their gait was slower than the gait of old elephants on parade. Each shot a glance across the ring at his adversary; a glance of defiance, hostility, contempt, and withering pride. Then each turned his back to the enemy, faced his home province, raised his right knee as high as possible, pounded it with his open hand and dived the right foot down upon the ground with a loud crash—I wouldn't be sure that the ground didn't tremble. Then the left leg was raised up and pounded down in the same way. Next the wrestler squatted as close to the ground as possible, as to stretch to the utmost the muscles of the legs. All this was by way of limbering up for the fray.

The two monsters of adiposity turned and faced each other across the ring, each squatting comfortably on his heels. They clapped their hands three times and glared harder than this before.

"Why do they clap their hands?" I asked Martin Gishi, our guide, who knows everything.

"That is old Japanese religious custom," Gishi explained. "Many years ago Dai-jingu, the Sun-Goddess, was insulted by her brother, Susa-no-o, and ran into a cave. So all the world was left in darkness. All the other gods and goddesses came around and hugh and sing and dance and clap their hands to coax her out. When she tried to run back, Tajikarao-no-kami—you would call him 'God-of-the-Strong-Hand'—catch her and hold her. He was the first wrestler. So you see Dai-jingu was glad after awhile to stay out of the cave, and ever since that time she has been the goddess of wrestlers. These men now clap their hands like Tajikarao-no-kami to honor Dai-jingu."

And that was not all they did to propitiate the deity. Each wrestler retired to his corner and took from an earthen platter a pinch of sacred soil. This he strewn before him as he stroiled ponderously into the ring, his lips busy meanwhile with a silent prayer to the goddess that she would guard him from broken bones. So much for ancient custom. But at the same time Yamanaka glared menacingly yet with scorn at Matsuda, as she should say: "I see! I need no protection against you. I am afraid only that I may crush you into pulp." And Matsuda replied with precisely the same sort of eye-language.

At last the fuzen came to stand, how to face.

"Now for some roughness of the house!" cried the Brunswicker, all aflame.

But it was not so. The fat giants squatted comfortably on their heels and glowered with added ferocity. Then each carefully palled aside the ticklish strands that dangled from his girdle,

Let us call the giants by their initials. Y, slowly leaned forward and put down his right fist. M, put down his right fist. Y, put down his left fist. M, put down his left fist. Y, spread out both hands, wide open, palms downward. M, did the same.

And there they crouched, face almost touching face, eye glaring into eye, their gross, over-nourished bodies strained in true attitudes that gave them grotesque resemblance to a pair of polly game-cocks. Each was trying: 1, to worry his antagonist so as to diminish his effectiveness; 2, to be ready to spring and get his grip the moment the enemy moved. For it is the law of the time that both wrestlers must grasp at the same instant of time.

Very, very slowly the heads came closer together, the Sumo-gyōji mean time posing dramatically above them with a puffed warning fan and crying, "Matta-matta! Matta-matta-matta!" which means "Wait—wait! Wait—wait—wait!" Which they did most obediently, for they knew that if they infringed the law of the time to the slightest degree the umpire would punish them severely. And still they glared and still the suspense grew, and they were so wrought upon by the intense nervous effort of out-slaring the enemy and of keeping every muscle fixed in the fatal spring that faint shivers of steam rose from their dark skins and great drops of moisture rolled down their fat sides.

At last! The leap was so swift that eye could hardly follow it, and our first clear impression was that Yamanaka had pounced upon Matsuda and gripped him by left wrist and right arm. Willy Matsuda, calmly perceiving that the enemy would have an advantage, merely braced himself against the shock and stood fast without any effort to grasp. Thereupon it was, of course, no start, according to the rules, and the men must begin again. But not without formalities.

Matsuda arose slowly, very slowly, and glowered with pity and contempt upon his foe. Then he walked over to his seconds who stood near his corner and languidly accepted from one of them a dipper of water. With a mouthful of the water he sprayed his arms, then with a paper handkerchief wiped them dry. All this elaborate process was used to wash off the misfortune, the contamination, of his former's touch.

The same pair waddled back into the ring, again went through the complicated programme of stamping, squatting, glowering, and crouching. After three minutes of this they sprang upon each other and clutched arms. It seemed impossible that these human balloons could so imitate the darting of the hawk; yet so they did, and we foreigners derived new ideas as to the agility of the adipose. Gradually Matsuda pushed Yamanaka close to the edge of the ring.

"Nokota! Nokota! Nokota!" the umpire cried, which means "You're near the rope! Don't step over it!"

The giants heaved and surged harder than ever. The mighty muscles flexed and contorted so that they surged up under the fat as a groundswell billows under the ripples of a summer sea. For a few moments Yamanaka managed to hold Fate at bay. Then Matsuda put all his power in a mighty lift and hurl, and the ballistics carcass of the enemy flew through the air and rolled inert upon the outer ground. All Nishi smiled.

We saw a dozen matches during the afternoon. The best of all was when shabby little Tamutsubaki, of Iliashi, overthrew Komegatake, of Nishi, a man of more than six feet in height, with a

The Sumo-gyōji posing dramatically

remarkable hip back. Men had bet three to one on the giant, the Japanese are a little more superstitious. No one denies that the Japanese are a stoic race; but spitting blood is thicker than water and will not be dried.

The men of Iliashi clapped their hands and yelled their joy. Oh, yes, they yelled and laughed uproariously. No one denies that the Japanese are a stoic race; but spitting blood is thicker than water and will not be dried.

OUR WONDERFUL NEW MARKET— THE PANAMA CANAL

By HENRY HARRISON LEWIS

DURING the past twelve months the keen business eye of our manufacturing interests has been focused upon a certain narrow strip of land separating the waters of the Pacific Ocean and the Gulf of Mexico in about the ninth degree of latitude.

This strip of land, in width not more than half of an ordinary working division on an American railway, presents one of the most stupendous markets for the sale of crude and manufactured material known to history. It is the site of an undertaking which has bankrupted the moral credit of one great nation, caused a most spectacular revolution, and now forms one of the most important political problems before the American people.

It is of special interest, however, to the American manufacturer and merchant, because an enormous fortune is being expended down there for manufactured material which a wise ruling has ordained must be purchased from our own manufacturers.

When it is understood that the building of the Panama Canal will require more than one hundred millions of dollars' worth of our products, bought at a reasonable profit and under satisfactory circumstances, it is easily seen that to neglect such an enormous market would be poor business indeed.

It may be well to point out at the beginning that recent kaleidoscopic changes in management really have no bearing on the quantity of material required to build the canal, nor in the rules governing the purchase of suitable material. It does not make any difference to the source of supply whether the canal is constructed by contract, by engineers appointed by President Roosevelt, or by members of the engineering corps of the army. The amount of material required will remain the same, and it will be purchased in this country from our manufacturers.

There is hardly one manufacturer who is not directly or indirectly interested in the production or handling of some product required on the isthmus of Panama; and this interest extends to a greater or lesser degree to every wage-earner in the United States. It is not claiming too much to say that the whole country will be benefited, not only through the sale of products used in building the great waterway, but also through the increased trade connections with the enterprising and rapidly growing countries on the west coast of South and Central America.

The cost of the Panama Canal has been variously estimated at the amount appropriated by Congress, \$394,000,000 (including \$100,000,000 paid to the new Panama Canal Company of France, and \$100,000,000 paid to the Republic of Panama) and at other sums recently evolved by engineers, at least \$250,000,000. Of this enormous amount at least one-half, or \$125,000,000, will be expended for manufactured products purchased in the United States.

This, it should be under stood, is the direct purchase. It does not represent the actual total amount of enormous sums being paid for labor. For instance, the number of employees now at work earned \$20,000, representing an average daily pay roll of at least \$100,000, or one and one-half million dollars each month of the year.

An industrial army of twenty thousand workers is a force of consumers worth considering. This army is like a small city and requires all that a city—a modern American community—would require. Food products, clothing, books, articles for amusement, the thousand and one things demanded by people with money to

spend are bought and consumed, and the sum total of these expenditures must be added to the amount bought direct by the Panama Canal Commission for use in constructing the waterway.

As an earned of what is being required now and will be required in the future we can briefly review the work already accomplished.

Thirty-two million dollars have been spent in preliminary work by the commission. Of this amount about \$4,500,000 have been expended in government and sanitation; about \$7,000,000 in construction of quarters and other buildings, docks, wharves, railway enlargement, waterworks, and sewers in the zone, and in engineering work; about \$12,000,000 in permanent plant; over \$4,500,000 in miscellaneous material and supplies; and more than \$1,500,000 in the construction of sewers and waterworks, and for street paving and improvements in Panama and Colon.

It will be seen from the above that practically a new State has been created, including the building of towns and the preparation and assembling of the most gigantic constructing plant known to the world.

Now comes the maintenance of this new State, and the stupendous work connected with the actual construction of the canal. The wide scope of the task cannot be seen at a glance. The digging of the Culebra Cut alone, which literally means the slicing in two of a great hill, will require vast quantities of railway material, explosives, tools, dredging apparatus, giant steam-shovels, and the other articles necessary to a task of this nature.

Then will come the building of the great masonry dams with a demand for millions of barrels of cement and for an immeasurable quantity of other manufactured products. And, to put it briefly, will follow the work of assembling the entire line of the waterway in preparation for its ultimate duty of facilitating the passage of merchant fleets from ocean to ocean.

It is manifestly impossible to give a complete list of the material which is now being purchased, and which will be bought during the next eight or ten years.

The railway enlargement alone calls for millions of dollars' worth of steel rails, spikes, bars, the plates, track-bolts, spikes, locomotives, passenger-coaches, box-cars, gondolas, signal apparatus, turn-tables, railway-tools, machinery of various classes, railroad-ties, track-tools, lanterns, and spare parts almost without limit.

A fair working idea of the great variety of articles required by the Commission can be obtained by serializing a single requisition recently received from the Isthmus. The list calls for the following items:

Dump-rail doors, bending-rolls, flanging-cameras, blasting-material, valves, shovels, ratchet-drills, jacks, vices, differential bolts, soldering-coppers, nail-shoes, nails, coal-baskets, fire-extinguishers, furnishing-pots, wire-rope, and clips, hose, lamps, bag-cases, ladders, chimneys, cotton-waste, candles, hose, barbers' supplies, matting, beds, mattresses, desks, filing-cabinets, office supplies, thread, steel-plugs, paints, varnish, shells, turpentine, oils, kerosene, alcohol, putty, graphite, claw-bars, flange-bars, sharks' teeth, bush-synthes, cat-hooks, rail-tongs, hat and coat racks, and kerosene oil.

The articles mentioned in this single requisition appeal direct to more than twenty different classes of manufacturers, such as manufacturers of railway supplies, car-factories, tube-works,

manufacturers of tools, blacksmith supplies, rope-works, cotton-mills, manufacturers of barbers' supplies, paint and varnish works, oil-refineries, manufacturers of tools, glass-works, spirit-refineries, manufacturers of office-supplies, mail-workers, makers of high explosives, and manufacturers of agricultural implements.

The quantities required by this requisition are worthy the attention of any manufacturer or dealer. For instance, it calls for more than 800 tons of dynamite, 30,000 gallons of red oxide roofing paint; 250 tons of white lead in oil; 300,000 pounds of black powder; 150,000 heavy railroad cross-ties; 4000 mule-shoes; 1000 single beds with springs, and 1500 single mattresses; 20,000 gallons kerosene; 4000 feet of steel-rope, and 350 pounds of rubber bands.

This, mind you, is not a requisition for a year's supply, but one selected at haphazard from several received by each steamer from the isthmus, that is, about every six days. It shows very clearly to the trade the enormous demand for manufactured articles created by the building of the Panama Canal.

Of equal interest is the policy adopted by the commission of purchasing practically everything in the United States. This policy was fully described by Theodore P. Shonts while acting as chairman of the Commission. His words, approved by President Roosevelt, were as follows:

"In accordance with our policy of buying in the cheapest markets, we have bought chiefly in the United States because its markets, in the main, are the cheapest in the world for the products that we need in this work. The American laborer is the highest-priced in the world, but we can buy the results of his work more cheaply here than material abroad, because of his superior skill, and because of the intelligent interest which he, as an American citizen, takes in his work.

"While buying our supplies in the United States we have seen to it that the entire country should be admitted on equal terms to the competition for furnishing them. Our theory is that since the American people are to defray the cost of building the canal, the whole American people should be treated alike in the opportunity to derive legitimate industrial and commercial profit from the outlay for construction. One of the first actions of the present Commission after taking office was the adoption of a policy designed to place all manufacturers and producers in all parts of the country on equal terms in regard to shipment of goods to the isthmus."

This quotation from the chairman's official report contains two points of vital importance to American manufacturers of material utilized at Panama. In the first place, it means emphatically that more than one hundred million dollars' worth of material will be bought, not from Great Britain and Germany, our great trade rivals, but from our own people.

The Panama Railroad Steamship line, owned by the government, has been separated from the Panama Railroad, also owned by the government, and the steamship line has been thrown open to all railway connections at New York, on agreed percentage divisions.

The commission gives all its direct rail connections at New York, as well as all others, the privilege to make rates from all producing territory clear through to Colon. Under this policy the manufacturer situated on the line of a railroad leading to New York has an advantage whatever over the one situated on lines of railway running to Gulf ports. Each can arrange for his own rates straight through to Colon.

To return to the question of demand. It has been estimated that not one-twentieth of the actual work of construction has been completed. This means that more than nineteen-twentieths of the total amount of material is yet to be purchased. This stupendous amount must of necessity be bought in quantities divided among the eight or ten years' time necessary to complete the canal for two reasons. First, because Congress will not make a lump appropriation covering the entire amount; and second, because of a lack of facilities at the isthmus and a reluctance on the part of the engineers in charge to order in large quantities.

Therefore, no manufacturer can say that the market is covered

simply because the canal has been building for several years. Nor can individual manufacturers say that the opportunity to secure a share of this fine market is limited to a favored few.

There is no favoritism, an effort to restrict the field, no desire on the part of the government or its direct representatives in the work, the members of the commission, to discriminate in any way between any clique of contractors, or trusts, or individual manufacturers.

All that is necessary in selling goods to the canal is to produce the right quality and kind of material, to sell it at the right price, and to know how to bid. It is presumed that no American manufacturer would, under the circumstances, attempt to unload inferior material upon the commission. At least he would not try it a second time.

And it is also presumed that our manufacturers know their business sufficiently well to make goods capable of being sold at the right price, which after all is the market price. Acknowledging these conditions to be true, we find only one thing remaining—to know how to sell goods to the canal.

This information can be secured in minute detail from the office of the Isthmian Canal Commission at Washington simply by writing for it. It may not be arduous, however, to give here a general description of the procedure.

In the first place, all articles are ordered from the isthmus through the chief of division of material and supplies in the form of requisitions which are received by the purchasing agent at Washington, and noted upon without delay. A circular inviting bids is prepared and distributed throughout the country. Requirements are also advertised in the newspapers of the principal cities, including trade papers, and in the United States government advertiser published at Washington.

The purchasing department, it is well to understand, does not depend much upon these advertisements. There is kept in the office of the department a mailing list of manufacturers and dealers, and circulars are sent to the list as soon as issued. The department constantly requests manufacturers of every class to send their business cards to be filed. Circulars can always be obtained from Mr. D. W. Ross, General Purchasing Officer, Isthmian Canal Affairs, Washington, District of Columbia, or from the offices of the assistant purchasing agents at New York, New Orleans, San Francisco, or Tacoma.

Sealed proposals in triplicate, must be sent to the office of the commission in Washington on the date specified in the circular. Bids in the amount of \$1000 or over must be accompanied by a bond in good security in a form specially provided, or by certified check or, or certificate of deposit in a bank or trust company of the United States, in an amount not less than fifteen per cent. of the bid.

Preliminary inspection of material will be made at the point of manufacture or purchase, to determine whether material meets the requirements set forth in the specifications, and final inspection will be made on the isthmus.

All material must be securely packed for ocean shipment and delivered at shipper's risk, freight prepaid, and free of all charges, on dock at Colon (Atlantic port) or La Boca (Pacific port), Isthmus of Panama. Full details as to shipment regulations can be obtained from the purchasing agent, and should be followed to the letter.

The following steamship lines have regular sailings from ports in the United States to the isthmus:

Panama Railroad Steamship line, Hamburg American line, Royal Mail Steam Packet Company from New York; United Fruit Company from New Orleans, and the Pacific Mail Company from San Francisco. The larger part of the materials purchased, however, go to the isthmus in cargo lots by tramp steamers.

The Panama Canal is the most stupendous undertaking in the world's history. It offers unlimited opportunities to the manufacturers and contractors of the United States, and it would seem "good business" to seize this chance without delay.

PAST, PRESENT, AND FUTURE?

By JOHN KENDRICK BANGS

IN ancient days, when monarchs great
Ruled country-side and town,
And in their halls held mortal feasts
As light as ether down;

Could devour their garden trees
With bodies of their enemies,
A-swinging all day long,
If any one should ask them why,
They raised their eyes and made reply:
"The King can do no wrong."

When Abdul in his palace bright,
Down by the Bosphorus,
Decides that some rebellious knight
Is making too much fuss.

He fires a cannon-ball in him,
And drops him in the waters grim,
A-showered on a piling;
And when somebody nicks him why,
He merely winks his other eye—
"The Sultan can't do wrong!"

When in the Afric forest deep,
Where rules the mighty Jew,
The jungle of the jungle steep,
Some savage makes a row.

They boil him well, despite his groans,
And eat his flesh, and pick his bones,
Served hot to the long-tongued,
And when somebody passing by
Frosts, the loyal subjects cry:
"The Jew can do no wrong!"

And still to-day in this our land,
Where folks are civilized,
And every one, on every hand,
Is freely criticized,

When critics dare say what they've felt
About the deeds of XXXXXXX—
If these be weak or strong—
Ten thousand injured voices rise,
And rend the welkin with their cries:
"—and—!—and—!—and—!—and—!"

WHISKERS and their VIRTUES

BY HENRY UNDERWOOD * D.W.
OF HACKENSACK
* D.W., DEFENDER OF THE WHISKER.

PICTURED BY

WHISKERS need no apology. They can feed for themselves. It is only when they are maliciously and willfully attacked, as in a recent issue of this journal, that a lover of justice, with malice toward none and charity to all, feels irresistibly impelled to speak up in their behalf. It is, therefore, with the fullest reliance upon the indulgence of the editor, the fairness of the readers, and the rectitude of the sacred cause of whiskers that I indite a few words in response to the sacred abusing them, which doubtless was inspired by the attempt of Assemblyman Cornish to cause the adoption of a law in New Jersey taxing whiskers.

As to the Cornish bill itself I need say nothing. If any such statute were enacted no one should obey it by payment of so much as one penny of whisker-tax; for it is self-evident that a tax on whiskers is unconstitutional. As well attempt to tax a man for having a fine chest, a well-turned leg, big biceps, broad shoulders, or any other attribute of manly beauty. No, no; whiskers are indigenous to man and therefore untaxable, as the Court has held. (See *Commonwealth vs. Hancock*, 223 Pa. 28, People vs. Vandenberg, 41, 144 N. J.). Moreover, the law prohibits any cruel and unusual punishment as unconstitutional; and surely it is both cruel and unusual punishment either to tax a man's whiskers, or, by taxation, to force him to shear them off.

But it is not against the ill-judged perversity of the legislator that my righteous wrath arises. Rather is it against the virulence,

prejudiced, ill-considered abuse uttered by your recent contributor, whose thin disguise of alleged humor I shall quickly tear to tatters and reveal him in his ghastly colors as an arch-enemy of whiskers. What! In our great volume of public thought to be molested by mere beardless boys? Never! Perish the thought! Let them go tarry at Jericho.

My laudious friend characterizes whiskers as microbe-carriers, as if that were a sufficient reason for their effacement. I say without fear of contradiction that they don't carry any more microbes to the square inch than many other growths usually held innocuous. Do whiskers convey microbes, forsooth? Then how about men's eyebrows, or the hair on their heads? And what shall we do with women's evening glory? Or with fur-jackets, or coats? Or with our ordinary woollen garments? Nay, since microbes infect our own surfaces, our

money, even the air we breathe, shall we go about skinless, money-less, airless? Let us hear no more, pray, about the microbes qualities of the whisker.

Whiskers are hygienic. They have a distinct therapeutic value in the prevention of coughs, colds, bronchitis, tonsillitis, and all diseases of the throat and chest. The *Country Justice* Life-buoy which your would-be humorists contribute so glibly attacks with his halting wit are veritable life-buoys wherever found. I have seen them sprouting frore and wrapped around the throats of men distinguished in medicine, at the bar, on the bench, in finance, and in agriculture. And not one have I detected symptoms of laryngeal or thoracic disorder in any wearer of the life-buoy. This form of whisker is exalted in hygienic value only by No. 2 Red Wintergreen Arseywhiskers.

As for Hackensack Taft, I see no reason for sneering. The Tafts have abundant reason for being. You will note that the poet Pastor sings:

"And he went back to the town of Hackensack
With a little bunch of whiskers on his chin."

Of course he went back. The Hackensack Taft belongs at Hackensack. It always heads for home. I have no doubt that, as soon as Mr. Pastor's suburbane got through the phony diversion of being robbed along the Hovey, his whiskers took him home. That's what they are for. I'll bet a corky that when the conductor on the New York and New Jersey Railroad found that the penniless but greatly bedazzled citizens were a Hackensack Taft he carried him free and carefully put him down on his native heath. I violate no conscience when I state that the Taft is a valid pass, honored on all roads running into Hackensack.

And what, pray, would become of Art without whiskers? Take Bernard Shaw. If you cut off the whiskers, what would be left? A mere trace of gas and hot air.

I want to take serious notice of the gratuitous fling to the effect that bands of whiskerless at Pompton, Musconetcong, etc., have sworn a horrid oath to brand their whiskers into larvae wherewith to lynch their persecutors. That is both, of course. And by way of rebuke let me cite as example of the humane, courageous, and altruistic tendencies of the whiskerless which occurred in our borough no longer ago than Wednesday of last week: Willie Charlton, a husky lad of sixteen, espoused his canoe and was in great danger of drowning in the Hackensack River. His cries were heard by our genial townsman, Mr. Thomas G. Van Linderfeldt. Without a moment's delay, Mr. Van Linderfeldt unrolled his long, silky whiskers (Genuine No. 2 Red Wintergreen Jerseywhiskers), and

The Superwhiskerman

As a defence against the blackjack

Hurled them out athwart the raging flood so that the coil settled around the shoulders of the helpless lad

with the skill grown of long practice hurled them out athwart the raging flood so that the coil settled around the shoulders of the helpless lad. Imagine the joy that thrilled Mr. Van Linkenfeldt's manly bosom as he hauled the boy ashore amid the plaudits of the multitude, carried him to the arms of his weeping mother, and, in response to loud cries of "Spends! spends!" modestly shook his head, not only in negation, but to dry his whiskers, which he then replaced neatly in their whisker-ling!

Where would our snarling, smooth-faced whisker-beller have appeared in this crisis? Shrieking for help, probably; or, at best, plunging into the icy stream in a feeble attempt at rescue, so that two lives would have been lost instead of one. Credit where credit is due. Long live Mr. Van Linkenfeldt, and may he never wear less than fifty yards of whiskers!

But it is not to the fortuitous use of whiskers as humane apparatus that I would address myself. Let us consider, rather, the true value of the every-day, common or garden whisker. The virtues of the Coty's Astringent Life-long I have already celebrated. The Vaudeville beard is a splendid adjunct. No man can succeed in Art or be a high-minded hero of fiction unless he wears this form of whiskers. Also, thick-whiskered uprightness on the points of the jaws must be worn, silly-silly, by New-Yorkers and Chicagoans this year as a defence against the bludgeons and black-jacks of the astounding highwaymen, hold-up artists, strong-arm men, rans kids, et de genere, now rampant in these cities. It was well said by Hrazar that he who bears proper whiskers on his jaws may laugh at the buffets of fortune—

Whiskerers in faribus

Ad Fortissimum ridit!

And then there is the utilitarian side. We all know how prone consumers are to forget the bundles they have accumulated on the way home. Even now on the D., L. & W. and many other suburban roads thousands of passengers are humiliated every evening by the hoarse voice of the brake-man, crying: "Netong! Netong! Don't forget your parcels!"

How easily all this may be avoided by the proper growth and training of whiskers! The suburbanite can wear them woven into curly little pockets that will carry small change and railroad tickets as well as purchases from the druggist, optician, jeweler, etc. The longer strands can be braided into stout flaps, upon which the superhuman krumpholtz can make fast the larger packages he may be carrying home. Then, whether he go spouting wild-eyed down Broadway Street to catch the 5:55 boat or leap suddenly from his car seat at the call of his familiar home station, the full-fledged consumer will lose none of his precious freight. What worry, what poverty, what frantic telegraphing, what confused explanations to anxious and reproachful wives, will be saved by this simple but not unduly device!

Consider, too, the romantic side. Having carefully recommissioned her Ed-

win's empty overcoat, Angelina sighs at the end of the delightful dinner in their rose-bowered cottage nest at Chestnuthurst, N. J.

"At last!" she cries. "Only our fourth anniversary, Edwin, and you have quite forgotten. Ah me!"

"Say not so, darling," replies Edwin, fondly, the low-light beaming in his fine eyes, as he deftly explores a pocket hidden in the umbrageous bosomage of his glossy, blue-black com-muter whiskers. "I have not forgotten. I have a surprise for you. Look, darling, look!"

And with these tender words he draws forth a beautiful, highly trained and sweet-voiced canary, which he has hitherto carefully concealed in his whiskers. The little feathered songster blinks sleepily for a few moments.

For a grand, sweet song, for having even for one moment doubted her Edwin's affection, Angelina throws herself upon him—

Oh, reader, let us leave them in their perfect, whisker-kissed happiness!

It is one of the most disquieting signs of the times that a world-wide conspiracy against whiskers is on foot. Let it be the duty of us who realize the sterling virtues of the whisker to check this treacherous revolt. I have read with horror in the daily press that, beginning on May 1, all conductors on the Burlington Railroad system must be clean shaven. Surely no patriot will tolerate this outrage.

Even now the waiters in all the hotels and restaurants in Paris are on strike—*salle lesseur!*—in order to remount and vindicate the sacred right of man to wear whiskers. My hand trembles with pride while I write that these brave souls have refused with scorn the offers of the ignoble proprietors to bribe them with higher pay if they will but wear clean faces. What heart can fail to throb at the heroic reply of these martyrs?

"Keep your poltry grid," they have cried. "We will live poorly, starve if necessary, rather than lose one millimetre of whisker!"

All in vain did the treacherous Parisians persuade the ingenuous Paul Adam to publish ten columns of whisker attack. He says forthwith that the smooth-shaven face of ancient Rome is becoming prevalent in America.

Is it, forthwith? Then let Americans tremble. For when the Romans became smooth shaven they decayed, degenerated, vanished from the face of the earth. For, as the poet truly says, it was whiskers that were

"The glory that was Greece"

And the grandeur that was Rome."

With these tender words he draws forth a beautiful, highly trained and sweet-voiced canary-bird, which he has hitherto carefully concealed in his whiskers

ENGLAND'S IDEALS OF EMPIRE

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

London, April 6, 1907.

OVER here we are all talking Empire. The Colonial Premier has been in the city, and by the time this letter reaches you the great Imperial Conference will have assembled. There is not quite the same interest in it as there was in 1902 and in 1907. The Boer war and the commotion lent to the conference of 1907 an extraordinary enthusiasm, and 1907 was the year of Queen Victoria's diamond jubilee, when also the tides of patriotic emotion ran flood-high. Today public affairs are placid, and the nation is inclined to be domestic rather than imperial. This is not at all a bad thing. These quinquennial conferences ought to stand on their own merits, and be independent of adventitious excitement. To a large extent this one does so stand, and there is not the least reason to think that it will be therefore less productive than its predecessors. If the popular interest in its discussions is less delicious than five or ten years ago, it must not be assumed that it is non-existent. On the contrary, it is very much alive and operative. The average Englishman's conception of the Empire does not go very far beyond a vague pride of membership, but that pride of ownership is sufficient to make him genuinely imperial. There is a quite distinct consciousness in all classes of society that the gatherings of the leaders of the self-governing sister nations for consultation under the family roof-tree are a spectacle unparalleled in history. If the knowledge of the precise problems they meet to deal with is superficial and slight, all Englishmen are at any rate at one in recognizing their transcendent importance. They feel that there is no such question in the whole sphere of British politics as this of drawing tighter the bonds of Empire; all agree that imperial consolidation is the master-issue before the British peoples. Lord Milner has aptly enough defined the scope of that issue. "It is to take nothing less than this, that the several states of the Empire, however independent in their local affairs, however dissimilar in some of their institutions, should yet constitute, for certain purposes, one body politic; that, in their relations to the rest of the world, they should appear and be a single power, speaking with one voice, setting and ranking as one great unit in the society of states."

This unquestionably is the ideal to which the Empire is slowly, cautiously moving. But the path is none with obstacles, and there are even aspects in which one would hesitate to say that the imperial ideal is stronger than the impulse towards separation. At present the British Empire is little more than a glittering abstraction. Parts of it correspond to the old Roman idea of a great central state, ruling with absolute, if hegemonic, despotism a vast number of varied and warring dependencies. Other parts of it, and these the more vital to the future of the race, correspond to nothing that has ever existed. If you look solely at the relations that obtain between Great Britain and India, for example, or the Malay States or almost any of the Crown Colonies, you feel yourself in the presence of an organized system. But if you look at the relations that obtain between Great Britain and Canada or Australia or South Africa or New Zealand, you feel yourself in the presence of no system at all. The Empire in this latter aspect presents itself as a haphazard conglomerate of three-parties independent, and linked neither to one another nor to the mother land by any but the most casual and decorative bonds. There is, indeed, the silent threat of the crown running through them all. But there is no unity of defence, no policy of commercial preference, no machinery for cooperative action, no visible organic unity. It is an Empire in feeling perhaps, but not in fact. The self-governing colonies tax British goods as they tax the goods of foreigners. Great Britain shoulders almost the whole burden of colonial defence. The relations between the metropolis and the dependently governed portions of the Empire are guided by an ad hoc principle of deference in imperial interests. South Africa resents the presence of Indians. Australia excludes the Japanese, without a thought of how such action may affect the wider issues of imperial policy. The British Empire, in short, is a fabric susceptible to no analogy. Among all the political problems that the world has yet witnessed it is unique, unique in its anomalies, its contradictions, its innumerable confusions, its sense of an unrelenting, unrelenting of unity not yet expressed, perhaps inexpressible, in formal arrangements and tangible bonds.

One of the great difficulties in giving to the Empire a coherence and symmetry and effectiveness it does not now possess is that the last thing the colonies desire is any multiplication of official ties. British imperial history is one long surrender of such ties, a continuous struggle towards freedom from the interference of Downing Street and the Colonial Office. No colonial statesman would now have it otherwise, any more than he would consent to have his tariff dictated by the British Treasury or his unoccupied lands handed over to the crown. All direct power, from and all direct control over, her colonies Great Britain has long ago relinquished, and the result is a relationship which, however offensive to the mathematicians of politics, has this grand virtue—it has made for loyalty and content; it has diminished, almost eliminated, the chance of serious friction; it has established a progressive attitude on the shoulders of the colonies in England and England's non-interference in colonial affairs. And as the colonies develop and prosper, come to "feel their oats,"

and to evolve a national consciousness and a national tradition of their own, their feeling of dependence upon Great Britain diminishes and their determination to "square out" their future on their own way becomes all the more firmly fixed. These are developments that, I think, make a final end of the old idea of calling in the representative principle as a solution of the problem of empire. The notion of an imperial council, a sort of Parliament of the Empire, is now thoroughly exploded.

There are, however, many other roads to federation besides this one of politics. There is, for instance, the road of trade. Follow that road a certain distance and you find it forking off into three pathways. One points to an imperial Zollverein, such as exists in Germany and the United States—an arrangement, that is to say, by which all the constituent parts of the Empire shall enjoy unrestricted free trade among themselves, and impose a uniform tariff on foreign goods and products. The second pathway points to an imperial customs union, each member of which shall have free trade with all the others, and at the same time be at liberty to fix what tariff it places on foreign imports. Both these pathways are now practically deserted, and for the same reason: the colonies cannot afford to have their nascent manufactures nipped by the unrestricted competition of British goods, and England cannot afford to surrender her vast foreign trade by adopting protection. There remains the pathway, far an advance along which Mr. Chamberlain has so eloquently and boldly pleaded, of imperial preference—a series of reciprocal arrangements by which British manufactures and other goods, and only goods of British manufacture and raw material would enter the British market, at preferential rates. England, at the election of fifteen months ago, rejected that policy, and so long as the present government lasts it may be considered out of court. It was rejected because its all-round application would mean not only a sacrifice of money, but even, but the resurrection in these islands of the protection system. But it is quite possible that even under this free-trade ministry a tentative step may be taken which secures a small measure of colonial preference without involving protection. Tea, coffee, condensed fruits, tobacco, and wine—all pay duties at this moment on entering the British market. None of these is produced, except in very inconsiderable quantities, in Great Britain; all of them are produced somewhere or other in the British Empire. On these articles colonial preference could be granted without imposing a tax on the taxpayers, and without introducing any element of protection.

Apart from commerce, the most hopeful stepping-stone to imperial federation is that of defence. A South African statesman long ago suggested that the United Kingdom and all the colonies should undertake to support a tax of, I remember, exactly two per cent. of value on foreign goods entering their markets, and that the proceeds of this tax should go to a common fund for purposes of armament. The object he aimed at is not likely to be attained by the present methods he proposed, but I think it is a perfectly fair suggestion that before very long the naval and military power of the Empire will be organized on some common basis. The British War Office and the British Admiralty are the chief obstacles at present to the realization of that aim. They want to peg the colonies down to definite promises of so many ships, guns, and men. That is the wrong principle altogether. The right principle is to encourage the colonies to raise forces, to organize and arm them in uniformity with British troops, but at the same time to leave them untrammelled as to numbers, disposition, and employment.

There are many other ways in which the unity of the Empire may be encouraged without being unduly forced. Mr. Cecil Rhodes, for instance, grasped the importance of making England the educational center of the Empire. His work might well be amplified by the establishment of good and suitable central schools and colleges that would make it unnecessary for colonial students to complete their education at Continental or American universities. Much, too, might be done for the organized provision of information as to markets, commodities, and modes of manufacture throughout the Empire. Commercial legislation, patents, copyright, trade-marks, naturalization, the appointment and activities of consuls, post and cable service and communications, shipping dues, the currency, weights and measures, and emigration are all matters susceptible to a more or less uniform treatment. One proposed has been made that seems particularly worth while—that the examinations for the Indian civil service should be held simultaneously in the colonial capitals as well as in London, so that the whole Empire might feel itself equally interested and participating in the government of the great Indian Empire. These are matters of perhaps no many of them, the approaching conference will undoubtedly leave its mark. But I imagine its most fruitful work will prove to be the constitution of a sort of imperial intelligence bureau to study and collect information on all serious problems with which the Empire is confronted. At present, as has been pointed out, a question is taken up and more or less discussed at one conference, then shelved for five years, is ventilated at a second conference, and shrouded again. In the absence of permanent machinery for the serious and the details of the Empire, there is danger of the conference itself relapsing into a mere drifting society.

From a portrait by Mr. Stebbins

MRS. CORNELIUS VANDERBILT AND HER CHILDREN

THE NEW CHINA

By COUNT OKUMA

THE coming of China to her own—and this is the conviction I have held for some years—in the foundation of permanent peace for the Far East; it is the key to all the black problems which we of the East are heir to. As long as she is in the Sheck of trouble, busy in paying indemnity which she ought to receive instead of pay, or watching international robbers looting themselves with valuable concessions, the peace of the Far East is a sleeping volcano. One can never be sure of the morrow. For thirty years I have watched China; she has always commanded my liveliest enthusiasm. Upon her awakening, upon the coming of the New China, I have always put my trust. Wedded to this view, I could not have been indifferent to her if I tried.

I was happy to see, many years ago, that the world in general, and the students and statesmen of our country in particular, did not allow me to have the sole monopoly in my interest in China. Opinions on the future of the Far East were then, as now, as many as the number of books published upon the theme. One or two of them were masterly, far-sighted, prophetic; a number of them were curious; and a vast majority of them insane and utterly erroneous. Time was when denunciations of heated dreams placed an excessive confidence in the power and possibility of China; the trouble is the facile way these dreamers have in venturing their great hopes in despair. Reaction came; everybody said that China is the Sick Man of the East. We came to hear of the partition of the Chinese Empire, and I assure you that it was not whispered in a subdued voice; unlike the early days of Christian martyrs, this cheerful gospel was not preached in catacombs; people made merry, as if Peking government were a huge joke which a certain diplomatist suddenly discovered in a forgotten volume of mythology. This period did not last long; it had no right to last long; the world in general despaired of China; the world, of course, could do as it pleased; as for me, I took my time in burying my hope and confidence in the future of China. I allowed myself to say what I thought; I held out for the territorial integrity of the Chinese Empire. That was many years ago. I was then the Minister for Foreign Affairs. One day, some one brought me an outline map of China. It looked more like a piece of waste paper to me than a map; it seemed that a number of diplomatists had taken a deal of liberty with the map. They used bits of all styles of ink in shading it, and they had cut it into bits and pieces of paper. Perhaps I might have said so in so many words and in a manner, too, that was not the most philosophic. All of a sudden—perhaps it is not well for me to say suddenly, for I expected nothing at all—some great shout burst up; it came from every point of a compass; first men and then women came in. I recognized the voice of many of my personal friends. "Respect the territorial integrity of China? Impossible!" they all said. Many of my political friends came to see me, and told me to my face in so many words that I am foolish; that I was trying to disrupt the impossible. There was no room to doubt the sincerity of their advice. Great heavens! they were terribly sincere. I had a friend of ten years' standing, and in the heated tumult of discussion I lost him and his friendship. He took public measures; preached the doctrine of the partition of China, and literally attacked me. I knew that I was running in the face of something which has much shorter patience than Providence—the public opinion of the world. That did not trouble me; I was so deeply convinced on this point that I did not hesitate to advocate a measure of defending the integrity of China at the expense of the gold and blood of Nippon. Yes, if need were, I thought we the people of Nippon as much ought to fight for it. Why? I have already said that upon the thorough rehabilitation of China as a great power depended the permanent peace of the Far East. Once more the question turned to the high table on the partition of China and the slight-of-hand riddle of the "sphere of influence" quite as ready as the moral maxims of their forefathers. And in Nippon I had to look very keenly indeed to find even a single one of my opponents yesterday. Indeed, the whole country almost left me behind in the sense of the preservation of the Chinese Empire; and we took the trouble of telling how we stood in this affair rather pointedly; the Russo-Nippon war was the outcome.

The New China is about to be born. I watch its coming with pleasure, had it with school-boy enthusiasm. Am I not being permitted at last to catch the first glimmer of dawn which shall usher the day of permanent peace for the Far East? It would be strange if I could watch so momentous an event with indifference. What makes me happier than ever is that I have a deal of faith in the abiding character of the new Order of Things which is coming into China. If I read the signs of the times aright, this new movement is none of those hysterical fits of progressive reformation. Changes which are taking place in China to-day are radical; fundamental in their character. No longer people declaim loudly on the construction of a branch railway between two treaty ports so modest that you have no end of trouble in finding them upon the map, as the sign of the rebirth of China.

Not so long ago, his Majesty the Emperor, through an imperial edict, abolished the competitive system of literary examination of the candidates for official positions. The meaning of it, in all its highest, is not read even in this our Nippon. The literary culture as the sole qualification for official life had been an ancient institution. It was, at the time of abolishment, as firm and deep-rooted as the clan system was in Nippon at the time when our

government did away with it once for all. It was one of the bed-locks upon which the official life of China was built. Since the classic days of Song and Tang the literary attainment was the only criterion upon which the government selected its official servants. Let me pause a moment, and point out what a remarkable result this method of encouraging literary attainment produced. For ages ambitious youth of China took to learning. And the only reason was "to establish themselves in life." That meant to get a government position. Learning was not an end; it was a mere humble means of securing an office. Save a painfully elementary branch of science, their education was altogether upon the classical; rhapsody, abstruse old texts became therefore one of the highly practical occupations of getting one's bread. It had a wonderful tendency, very naturally, of turning the entire officialdom of China into a paradise of bookmen. But the effect of this system upon the mass of people at large was still more remarkable. You quite as vicious as remarkable. Common people of China took it into their heads—or, to state it more correctly, the officials of China encouraged the mass of people to look upon the officials of the government as a huge trust in learning. They monopolized the brain of the empire. August officers of the government would look after the brain end of the state affairs; what was the use of the common people troubling themselves with the matters which required thought and scholarship? That was the very thing for which the officers were paid. "Let the people depend upon us, trust us," said the Chinese official. Of course, these stupid ideas.

And it was this heavy and classic institution of centuries that the imperial edict lashed to dust.

In the fifth year of Meiji, that is to say in 1872, the imperial government of Nippon inaugurated a new system of education. To think of that, in going through the history of these studies, what a tremendous effect the new school system of our country had upon the life of the New Nippon. The influence of the imperial edict of China must be necessarily be much more powerful upon the New China to be. For at the time when we introduced a new school system we had a literary examination system of China.

Another thing: for the first time China is hungry. Western civilization is no longer playing the ridiculous rôle of a man who tries to make his horse drink. The eyes of China are not turned within her own heart; they are looking abroad. And, in the close of the war, China sent to Nippon more than ten thousand students. "From this time on," said Viceroy Yuan Shih Kai to Mr. Uchida, our minister at Peking, "we shall send out our students not by ten thousands, but by hundreds of thousands." Of course, these students are being sent to America and Europe as well as to Nippon. On their return home, the majority of the young men and women are to enter into the countless schools which are rising all over the empire. These are the leaders of the New China which has about it the same pride as that of the federated States of North America; it is no longer anybody's child; the birth of nationalism in China. I do not say that it is not high time for it to come. At any rate, one cannot find a happy hunting-ground for unholy Western ambitions on the map of China any longer. At the same time she is declining to give valuable concessions, railway, mining, harbors, etc.; she is taking back what she has given, which is admirable of her. We have already heard of "China for the Chinese."

Above all, I have a great faith in the ability and experience of her Majesty the Empress-Dowager of China. She is no longer young; she is rich in experience; here has been a bitter school. At the time when the allied army of England and France sacked Peking, she, in company with Emperor Hien Fung, braved the dust and privations along the Nitze. She has known the desolate days of years which followed the sack of Peking; she has known the unity demanded; then she came to know Ignatieff. She had seen how China parted with an imposing empire watered by the Amur from Nisholsievsk down to Vladivostok and Pussiet Bay. She saw all that Russia paid that splendid empire were a few polished sentences of a diplomatist, and they were hard-edged. In the south she saw the long-haired rebels threaten the city of Nankin. It was in the midst of those unhappy days that she was called upon to face the death of Emperor Hien Fung. Her Majesty seems to enjoy more than her share of critics; those of them who are very sharp. Nobody contends that she is a perfect woman. But there is a woman who has taken upon her delicate shoulders a burden, heavy and big with the fate and destiny of 400,000,000 of people. For wellnigh half a century she has fought her way. Of one thing you may be very sure, here was no iron-barbed path. Among the diplomatists which represented the Christendom of Europe at her court she met no Don Quixotes; because she was a woman no political storms tamed their fury. If you wish you can close your eyes as much as you please, but you cannot escape one fact: she is an ordinary woman; the ordinary woman; the ordinary woman very far from being tame or commonplace. And it is this sovereign, with her ability, with all her extraordinary wealth of experience, who is back of this new movement in China to-day. Mark you, all through the French trouble she was the conservative; among internationalists through the Chinese trouble she was the same; through the troublesome days between the Manchus and the Chinese parties within her own court, through the Boxer trouble; she has always been a consistent conservative. And now read in the light of her career, this sudden change in her life is full

of meaning. For the first time she has read the herring in the sky; she has bowed to the inevitable. Her decision is decisive, quite in keeping with the strength of her character. And we read the Imperial edict abolishing in one day the whole system of literary examination. And some of us have had the honor of meeting the high dignitaries of the examination which her Majesty had despatched to study the institutions—political, economic, social, of Europe and America, as well as those of Nippon. It was the fourth year of Meiji, as we all remember, that his Majesty, the Emperor of Nippon, sent thinkers, Kider thinkers, the greatest statesmen of Nippon of the time, to study the arts, sciences, and the life of the West. The more of China is the same.

Now the reigning Emperor of China is delicate in health. He has always been progressive; years ago he made no secret of it. Up to this time—that is to say, as long as the Empress Dowager remained ultra-conservative—there was little harmony between the critical court, so given to side a statesman, so rare a talent, so-called, as I have said, in such a professed wealth of experience, as the New China will find in her Majesty the Empress Dowager. The youthful enthusiasm of the reigning emperor would command at all times the benefit of ripe thought of the Dowager. It is almost ideal.

We of Nippon rejoice as much as the children of the New China. For the coming of China, in her own, is the best guarantee for the permanent peace of the Far East.

We Make One-third of Our Champagne

Everyone knows that France is the greatest champagne-producing country in the world. But how many of us are aware that the United States takes second place as a producer of the heady wine? Probably very few; yet the fact remains that in 1905, between 2,000,000 and 3,000,000 quarts of champagne last year, and it is easily possible that within a few years we shall make more champagne than France.

It is surprising to find, in the reports of the Bureau of Statistics of the Department of Commerce and Labor, that the importations of champagne during 1906 fell 41,444 quarts below the imports for 1905, while for the nine months ending with March, 1907, the falling off was 105,612 quarts compared with the corresponding months of the preceding year; and the single month of March, 1907, showed a decrease of 31,720 quarts compared with March, 1906.

While a comparison of these figures of the recent imports of champagne with those of 1905 only is of itself somewhat misleading, owing to the fact that 1905 showed an abnormally large importation of champagne, a study of the general figures of importations shows clearly that the importations of champagne are not keeping pace with the imports of other classes of merchandise, nor are they in proportion to the growth of population or of other conditions which might be expected to lead to large importations of this article usually classed with luxuries. A comparison of the figures of 1906 with those of several years earlier shows that the champagne importations of 1906 were but twenty-seven per cent. greater than those of the year 1900, while the importations of all articles classed as luxuries in 1906 was practically fifty per cent. greater than that of 1900, and of general merchandise an increase of sixty per cent., indicating that importations of champagne has not kept pace with that of other luxuries or of the great

group of articles forming the total imports into the United States in the period from 1900 to 1906.

The manufacture of champagne in the United States has been quadrupled in the last ten years, according to statistics collected by the Bureau of Statistics.

New York State is by far the largest producer of champagne in the country, that State being chiefly in Orange County in the southeastern part of the State, and Steuben County, in the western section of the State. A consensus of estimates by the producers and dealers indicates that probably two-thirds of the American champagne of the genuine, or fermented-in-the-bottle variety, is produced in New York State, the other one-third being produced chiefly in northern Ohio, Missouri, and California.

The area in which conditions are suited to the production of champagne is estimated as sufficiently large to render possible an enormous increase in production, the growth being at present limited by the fact that the sums of capital are required for its successful and profitable production.

One marked characteristic of the large number of letters received by the Bureau of Statistics upon this subject is an almost uniform expression of opinion by experts whether engaged in importation or otherwise, that the American product compares favorably with that produced in other countries, and is steadily improving in quality with the increased experience of American producers.

The conclusion of the Bureau of Statistics from this study of champagne production in the United States is that the quantity of genuine, or fermented-in-the-bottle champagne wine produced in this country at present is nearly one-half as great as the importation of wine of the same general class; or, in other words, that about one-third of the genuine champagne wine now consumed in this country is of domestic production, and the proportion which the home product forms of the total is rapidly increasing.

Lindy's Select Patronage

It was during the time of the Spanish-American war. An officer of a Massachusetts regiment, carrying under his arm a bundle of soiled linen, called at the home of a colored woman living on the outskirts of Knoxville, who had made quite a reputation for good laundry-work among the soldiers.

"Does yo' leebing 't' de Fif' Mah'baad?" Lindy asked.

"'T' de Hund'uban-fifty-EF' Indevany'!"

"No."

"'T' de Pemedeevany'!"

"No."

"'T'wen'y-seven' (Ohio)!"

"No!"

"Wah, yo' all eiar outen here! Ise kep' private wash-holy by dose fo' regimints!"

The Youthful Fancy

This story of the little boy who comes here from Sandyville and asks us whether what kind of animal a connoisseur cross-eyed bear might be, was told at a dinner-table the other evening, and immediately elicited a trio of similar anecdotes.

One gentleman, a prominent writer, declared that as a little boy he read *Basile*, and laughed heartily over the grave-yard scene, especially the line "men have died and worms have eaten them, but not for love." This he construed to mean that men died and worms ate them, but not because the worms enjoyed that particular diet. They just had to eat men or get nothing, in the same way that little boys are obliged to eat some unpalatable morsels which they most prefer pie. He said that the line made a strong appeal to his sympathies in that he was continually falling foul of his nurse on the porridge question.

Another member of the party related how, as a youngster, his nurse would dwell on death-bed scenes of her late friends and relatives, particularly the administration of extreme unction. To his childish ear the

phrase took on the sound of "extra unction." From this he deduced that when a person was ordinarily sick, he received something known as "unction," which, when he became seriously ill, was doubled or internal, viz., extra unction.

Lastly, a third guest told how in his native Lancashire it is the custom to address households for every member of the family to take turns at making the Christmas plum pudding in a large bowl, which custom is popularly known as "stirring."

Heating this in mind, when he recited the couplet:

'Twas the night before Christmas, and all through the house
Not a creature was stirring, not even a mouse,

it brought up visions of a family whose Christmas would be void of the conventional dessert. Not even a mouse lent its aid to the culinary preparation, and hence—oh, unhappy household!—no plum pudding.

Get Wise!

A NEW YORK business man was telling some friends not long ago of the disadvantages of having two telephones in his business office.

"A new office boy entered upon the discharge of his duties last week," said the merchant, "among which duties is that of answering the telephone calls. The very first call resulted in his coming to me with the statement:

"'You're wanted at the 'phone by a lady, sir.'"

"Which one?" I asked, thinking of the two 'phones.

"'Well, sir,' said the boy, after an embarrassed pause, 'I—I think it's your wife, sir!'"

While Running

ONE (sympathetically), "And that near on your feet is from a bullet wound?" How was it that you were shot in the face?"

SPANISH WAR VETERAN, "I foolishly looked back."

FRONTENAC

THE AMERICAN GENTLEMAN'S PLAYGROUND

"THE WORLD OVER, NOTHING COMPARES WITH IT FOR THE OPULENCE OF NATURE."

STRAIT northward from New York, direct to Clayton. Thence car and a half mile by boat and Frontenac is before you—unique, incomparable, exquisite, entrancing Frontenac—its swarthy and wooded islands in the majestic St. Lawrence; the perfumed breezes that never tire wafting Adriatic fragrance; the waterless roundabout without a particle of dampness; gummy fish to tempt reel-skill; ample airiness for the sailing yacht; favoring currents for the most regal floating steam palaces; superb American and Canadian highways for motoring; golf-links and tennis-courts the most ample; deeply dense forests for gun-work; never a tormenting fly, and undisturbed by the tantalizing mosquito; all the sequestration the luxury-lover glories in; and every polite pastime possible that the indolgent man of affairs relishes—as a holiday—that is Frontenac.

Every man of means has his ideal for a summer home. The lonely childless—why not upon an island all his own, amid hundreds of other islands straddling the historic St. Lawrence, that mileless waterway for the confirmed yachtsman? to become an active member of the club, whose members are princely good fellows, bent on the activities of gigantic interests, save for the midsummer months, when they seek this exquisite playground whereon to race their boats, entertain their fishing clubs, have their house parties, revel in motor-car tours on either shore, sail away to the Lakes, or dropping down the river to the rapids—journeying if they please, sliding away their time in favorite sports, regat-

blion on the creek, the sparkle in the eye, the surge in the vein—until one has summered at Frontenac.

Who is not borne away by eye-pleasure? Who is unresponsive to balmy odors? Who is not deeply fond of carefree winds, when they are never petulant or whimsical? Who does not glory in landscape—a landscape so rare that European tourists come hither intently bent upon feasting their eyes upon the luxurious landscape, to partake of the sumptuous hospitality provided at the Hotel Frontenac, and to sail between the myriad dots of verdure that compose this Venice of the "Thousand Islands"? Who can fail to derive helpful inspiration from well-treed lakes with sloping shores; shady pastures for sleek cattle, chunky sheep, and grazing horses; ample berths for the most majestic craft; moorings for the deopod-trunked flutilla; benignant moonrays that are too indulgent to scorch; soothing and calming anilens, swept through the evening air from the towering, branched rollins of the woodland, as the mellowed north winds tone forth their vestal hymns upon rustling leaf-keeps; sunsets that purpur the azure; sunrises that legend the horizon; moonlight that bedliver the river? Who would not have of these?

There is many a man in the United States, rich "beyond the dreams of avarice," who has circled the globe health-hunting, and who has returned still health-hungry. He would gladly endorse an empire, or give his all to the humblest peasant, could he once again feel as he did when a boy. He has hidden farewell to hope,

Chateau Colinet, residence of Charles G. Emery, Colinet Island, directly opposite Clayton, two miles above Frontenac Hotel, Thousand Islands, St. Lawrence River.

ing themselves with the elite society of the mammoth hotel at Frontenac, at will—could any life be more ideal than that?

Undoubtedly it is because the wealthy men of the United States are unaware of the faultless ravishment of Frontenac that they do not vie with each other in getting possession of the islands or one of the choicest locations on the main land and erecting thereon—as some of them have done—castles and country seats, with their own piers, mooring their own yachts, plunging into the animated, almost berish frolics of the club, bringing their families into the reviving, exhilarating atmosphere of this glorious altitude on the St. Lawrence.

Summer life is ever a persistent search for coolness and comfort. Frontenac breezes never drip with chilling moisture; nothing ever rains or corrodes, the breeze never dies down; the bathing always has the invigorating temperature; the sports are not necessarily all men's sports, but enjoyable to women as well; for it is all for health, rejuvenation, nerve-helping, weariness-dispelling, sleep-inducing, rest-inviting, content-bringing; and those things are what people search the earth to find, and often die at the task, satisfied.

That is the ideal! A colony of American gentlemen, owning their own islands, erecting thereon their own chateaus, electing their pastimes, finding precisely the society of their own liking. Really one has not learned half living; has not learned the secret of extracting most joyous pleasures; has not inhaled the sweetest aroma of existence; has not beheld turquoise skies, sapphire waters, emerald isles; has not inhaled the hazy blowing pines of the mountain pine; has not seen the sun elude its stairway of molten gold far down the current; has not beheld the shimmering pathway of the moon's miles on miles of radiant riverway; has not wooed Nature of all its beauty of health; has not caught the

has sunken down into his rut of health-ruin, resolute in the belief that it can never be otherwise than wretchedly miserable. What a thrilling, kindling, purging, gladdening awakening awaits him if he but trust himself to the soothing, the water-side, the balmy air, the unbroken peace, the soothing content of Frontenac! To have a home on one of these islands or on a shore site is to become a veritable potentate of health. There you may become just as much of a factor socially as you desire; but you cannot even avert becoming a lordly baron of every happiness that accompanies an achelous body and a woriless mind.

This is the HARPER'S WEEKLY reader's type of country. Nature geared (not mutilated) by the artistic dexterity of man's embellishing touch. Alluring as it may seem on paper, no description does it justice. To be there—that's the thing! To see, to inhale, to imbibe, to thrill, pulsate, and there with an unbelievable bounty of the physical and mental, that is knowing Frontenac as it should be known; and it may only be known thus by visiting it.

So this summer, if you would just have a peep into God's own country, and see what a joy it would be to live there six months in the year, take the New York Central to Clayton, only eight and a half hours from New York, and it will be spread out before you. If you go for a day, you'll stay weeks; and if you go for weeks you'll abide months; and if you go once, it is an humble prophet's prediction you'll buy an island or a shore plot, build your chateau, and hereafter become part and parcel of this most exclusive, most beautiful colony of American gentlemen; to enter which is to occupy the very Paradise of Nature; to enjoy which is to render up constant thanksgiving. Tickets sold and baggage checked direct to Frontenac.

THE PRESIDENT OPENS THE JAMESTOWN EXPOSITION

PRESIDENT HIMSELF WAS TO HAVE FORMALLY OPENED THE JAMESTOWN EXPOSITION, ON APRIL 29, BY PRESSING A GOLD BUTTON WHICH WAS TO START THE MACHINERY GOING; BUT AS THE MACHINERY WAS NOT READY THE PRESIDENT BURNED IT, AND TRAVELED DOWN THE WATER WITH DELIVERING A LONG HISTORICAL AND ADMONITORY ADDRESS. IN ADDITION TO THIS, HE REVIEWED IN HIS YACHT, THE "MAYFLOWER," THE ASSEMBLED AMERICAN AND FOREIGN WAR-SHIPS IN HAMPTON ROAD.

Arthur Symons on Wind

THERE is a group of British literateurs, known as the Imaginists, who are quite the cleverest persons in the world, and are known to be infallible as well. These gentlemen, though they are all consummate artists, abuse themselves now and again to pronounce the last word on various æsthetic matters. The very graciousness of this concession lends an added *delecto* to a passage like the following from "Plays, Acting and Music":

"The Miesinguer Orchestra," says Arthur Symons, "is famous for its wind; and when, at the first concert, I heard Lieben's flutists for wind instruments, it seemed to me that I was hearing brass for the first time as I had imagined brass ought to sound. Here was, not so much a new thing which one had never thought possible, as that precise thing which one's ears had expected, and waited for, and never heard the quite miraculous thing these wind-players certainly did, in common, however, with the whole orchestra. And that was to give an effect of distance, as if the sound came actually from beyond the walls. I noticed it first in the overture to 'Léonore,' the first piece which they played; an unparalleled effect, and one of surprising beauty."

It may be observed, for the benefit of those who are not "Imaginists," that in the "Léonore" overture a trumpet is played behind the scenes.

The Water Cure

CALLER: "Do you think the doctor is going to help you, Mr. Jones?"

JONES: "He may, if I can only follow orders. He told me to drink hot water thirty minutes before every meal, but I'll be blundered if it ain't hard work to drink hot water for thirty minutes."

The Chinese Way

It is not an unalloyed delight to a writer to get a manuscript back from a publisher; however, if one's manuscript *must* come back, it is pleasant to have it with as much sugar-coating as possible.

The Chinese editors excel all others in the art of returning contributions in such a way as to spare the contributor's feelings. Instead of curtly saying that the manuscript is "unavailable," or "not adapted," they send the writer a letter somewhat like the following:

"Illustrations Brother of the Sun and Moon: Behold thy servant prostrate before thy feet. I bow to thee, and beg of thy graciousness those myriads grant that I may speak and live. Thy honored manuscript has designed to cast the light of its august countenance upon me. With rapture we have perused it. By the bones of my ancestors, never have I encountered such wit, such pathos, such lofty thought. With fear and trembling I return the writing. Were I to publish the treasure you sent me, the Emperor would order that it should be made the standard, and that none be published except such as equaled it. Knowing literature as I do, and that it would be impossible in ten thousand years to equal what you have done, I send your writing back. Ten thousand times I crave your pardon. Indeed, my head is at your feet. Do what you will."

"Your servant's servant,
—THE EDITOR."

Pure Moonshine

A MOUNTAINEER of the of the back counties of North Carolina was arraigned with several others for illicit distilling. "Defendant," asked the court, "what is your name?"

"Joshua," was the reply.

"Are you the man who made the sun stand still?"

Quick as a flash came the answer, "No, sir; I am the man who made the moon shine."

The Awakening of Helena Richie

By MARGARET DELAND

As an achievement in letters, this story of passion and folly, repentance and renunciation, deserves to be ranked among the chiefest examples of American imaginative writing.—*Philadelphian North American*.

It sails among the novels of the year like an ocean liner in the midst of a flotilla of cockleshells.—*Cleveland Leader*.

Mrs. Deland has done nothing finer. She has taken hold of a striking theme and has wielded out of it her greatest artistic triumph.—*Boston Herald*.

An immortal book—far and away the best thing that has appeared in years.—*Columbia State*.

Illustrated. Price, \$1.50.

LIQUEUR

Pères Chartreux

—GREEN AND YELLOW—

This famous cordial, now made at Tarragona, Spain, was for centuries distilled by the Cistercian Monks (Pères Chartreux) at the Monastery of La Grande Chartreuse, France, and known throughout the world as Chartreuse, the above cut represents the bottle and label employed in the putting up of this article since the Monks' expulsion from France, and it is now known as Liqueur Pères Chartreux (the Monks, however, still retain the right to use the old bottle, and label as well), distilled by the same order of Monks who have securely guarded the secret of its manufacture for hundreds of years and who alone possess a knowledge of the elements of this delicious nectar.

The Mystics

By KATHERINE CECIL THURSTON

Author of "THE MASQUERADER"

FRONTISPIECE FROM "THE MYSTICS"

A YOUNG man, whose fanatic uncle wills away the family estate to a secret brotherhood, discovers the secrets of the society, and plans a daring *coup* to recover his possessions. He appears as the Mystic Prophet whose advent is daily awaited, and is accepted as the Head of the secret order. In this precarious situation the hero falls in love, and, at the peril of life and all, boldly chooses to play the lover's part. Romance and mystery are delightfully mingled throughout. The tale has the same persistent excitement and breathless fascination which marked "The Masquerader."

SUPPLEMENT TO "HARPER'S WEEKLY," MAY 11, 1907

"A LESSON FROM THE SCRIPTURES"

Response of George Harvey to the above toast at the Jefferson-Metheny dinner, given on Saturday evening, April 10, at the Waldorf-Astoria, New York City, by the National Democratic Club.

My text will be found in Ecclesiastes, tenth chapter, thirteenth and sixteenth verses:

"Woe to thee, O land, when thy king is a child. . . . The beginning of the words of his mouth is foolishness, and the end of his talk is mischief."

The preacher had in mind a ruler, not necessarily young in years, but foolish in mind, in temperament, in impetuosity, in love of excitement, in passion for notoriety, in heedless disregard of considerations born of sobriety and calmness; a daring leader, though an unscrupulous pursuer of talent, but devoid of knowledge; noisy, confused, contradictory, inconsistent, illogical, irrational, yet so emphatic and insistent in expression as in effect to pass as the discoverer of all truths, while, in fact, only an exponent of the principles or fallacies of others, maintaining each tenet with uncompromising arrogance until compelled to abandon it and then shaming retreat in imprudent ambiguity; a constructive statesman by profession, a destructive politician in practice; is seeming a chivalric Orlando; in fact, a Bonapartes Farouk!

Such the king when the preacher depicted as likely to bring woe upon the land, whose talk beginning in foolishness ends in mischievous madness! Led there arise my misunderstanding as to the pertinence of the present application, let us admit at the outset that such also is the ruler under whom we now live and have the remnants of our moral and political being. We are told that a President chosen by the people is immune from criticism, that he is a thing apart, and a mere executive officer, but a trillane enveloped in the odor of sanctity which safeguarded the kings of old. It is in vain that criticism of officials has ever been a prerogative of the people. Not so now! The heavy hand of fear rears upon the land. The authority of one has triumphed over the courage of the many. The mighty organization known as the Republican party has become a mere personal machine. Its former leaders have drawn back obediently into their corners. Their wishes are no longer regarded, their consultation no longer desired; obedience to edict is not only exacted from, but enforced upon them.

So, too, with the representatives of the party founded by Thomas Jefferson! With substantial unanimity Democratic Senators and Representatives rat the crumbs of patronage from the hand that smote them, and lick the boot whose impact they have felt, while simultaneously they unspoke, if not, in fact, peerless leader, hidden like a crystal in the smoke of his successful rival's gathering as he paws the few scraps that are left of his own fallacies. Politicians heretofore courageous, hasten to follow the crowd. Every headless man, Republican or Democrat, every one you know, eager in the preceding silence of private discussion, but speaks with hated breath of the face of possible publication. All have grown so accustomed to untested promises, unswerving soundings, and scornful invective, that it seems lost nature that the few who still venture to insist upon the inalienable right of communities, whether accompanied by State, city, or township lines, to govern themselves should be denounced as reactionaries, and the yet smaller number who raise their feeble voices on behalf of caution and restraint in the conduct of great affairs, should be held up to painful derision as contemptible mollydoers. Never before was there such universal heed of the injunction of the preacher, "Curse ad the King; so, and in thy thought, for a bird of the air shall carry the voice and that which hath wings shall tell."

How happens it that a whole people has been thus brought under the yoke of tacit submission, with an voice raised in protest, with none even to ask the reason why? Prioritarily, we are beset with much more of troops than at last we have an honest President. But did we ever have a dishonest President? In a land where for more than a hundred years in but has stained the personal epithets of its Chief Magistrate is there so great reason for hesitating now? Or may the undue emphasis placed on honesty be, perchance, the outcome of essential coming akin to that of the cutthroat? How else can we account for the persistent and determined refusal of official recognition? When before has a President of the United States, lesser or greater, at what seemed the critical moment in his own candidacy, brought large sums of money for use, and in conducting a political canvass over a protracted period, but on election day? When before has it been necessary to purge an official conscience and reinforce a claim of civic righteousness by dissuading one who has been a friend in need, however unworthy, with those accused of being anarchists and murderers?

But the end, we are told, justifies the means—any means, apparently. "No matter what you do if your heart be true!" A well-meaning man, Horatio! Excellent also were the intentions and the resentment of the red-tie cow in Chicago that kicked over a lamp filled with the oil of those engaged in predatory activities. Great was the fame won by that cow: so why ask what happened to the thief?

Again in ancient times the failed ostrich left her nest to seek means of alleviating her thirst, and a bear came along and saw the eggs, and he roared loudly and drew a his audience, and he made a great search and so quickly consumed the delicious ostrich, and involved in mighty voice against bear snicker, and deep was the awe of those who heard him. But mere speech did not suffice: to act was his motto. "Behold!" he said. "The ostrich has proven her incapacity or unwillingness to perform her duties. A stronger power is required. I will crush the eggs!" And he did it with his forthwith to do so. Who can deny the praiseworthiness of the

intent? So why raise impertinent questions respecting the fate of the eggs? That Teddy Bear was so mollified, he was a dove. An ardent admirer of Napoleon, "he tried to do too much, and he did it." So we of today are constantly, almost hourly, enjoined to be doves and builders. But, pray, where are true examples to be found? Who are the doves and builders—the Hills and the Morgans who have opened the great West to civilization and now are seeking country for the democratic supremacy of the world, or the Roosevelts and the Fitzgerts, who from the beginning of their machoed have divided their time between office-holding and office-seeking, and seem to consider their sole mission in life to be the regulation of the affairs of others?

It is not the ostrich, but the dove that he should be condemned? Rather I should ask, What hath he not tried to undo that he should be praised? The actual accomplishment of either good or ill may be balanced by a feather. The roaring of the lion favorably subsides into the cooing of the dove. It is not the vanguarding hesitating, as in the latest speech at Cambridge, of much already done, but the supplementary threat of "girding up loins to do more" that has roused havoc at home and apprehension abroad. It is not the enforcement of old laws, however unjust, nor the proposal of new ones, however socialist and unconstitutional, that alarms. Despite executive assent upon honest judges, we still have an independent judiciary, and the time may come when even Congress itself will cease to be supine. It is the illimitable volume of violent fulminations from the source of the present, in checking up the foundations of industry and drying all its streams. Already great undertakings have been abandoned: new enterprises have been halted; the business world looks apprehensively to the future, and all who have anything at stake or ought in anticipation thank God in their hearts for the promise to forgo a third term, rather than to pray, though with a little misgiving, for the keeping of the pledge.

I say "with a little misgiving," because signs are manifest that the "spear that knows no brother" is again to be hurled into the arena. "My pillars," the butterfly, and who but "Mr. President" these things? All corporations should be accountable to some sovereign. Was the language of the Message of December 5, 1905, immediately followed by the grandiose phrase "I am in no sense hostile to them." Now comes the unprecedented and arrogant declaration, insolent to a free people, of the right of a President of these United States to name his own successors—the violent denunciation of those venturing to question that prerogative as "conspirators," engaged necessarily in treason against usurping authority—the raising of the revolutionary instinct of a people. And though the people are shocked and terrified, yet not dissatisfied! What does it all mean? That the American people, debilitated by the moribund spectacle of blatant profligacy yawning from the pinnacle of self-appreciation, stand ready to witness the destruction of the very fabric of free institutions? That they are ready to do so?

Yet so in truth it seems. In place of the calm, sober government by men appressed by, rather than revelling in, grave responsibilities, we are now in the midst of a nightly melodrama. Further still is a game, a great game: "a hilly game," some would say; a game so far-reaching, so pregnant with possibilities that it involves the well-being of eighty millions, the salvation of a whole world of human beings still looking hopefully to this marvelous asylum for the helpless and distressed; a game upon whose results depends the outcome of the greatest political experiment ever tried, that of proving the ability of a free people to rule themselves successfully in the communities in which they live, instead of submitting to the despotism of centralized authority, which even now, everywhere else, is becoming a relic of past ages.

It is in no spirit of partisanship, but in infinite sadness, that we force abandonment of principle in a national campaign led by two false prophets striving only to determine which may raise a banner most attractive to the multitude.

But oh, the play of it all! The scandalous duplicity of those holding power! The nervous demagoguery of those seeking it. The snail trafficking in votes to be bought in exchange for influence to be won! The shameless breaking of trust pledges in the name of expediency! The sallow about the face of the candidate in time of need! Their ruthless disavowal when ambition has been realized! The daily, almost hourly, exhibition of roaring rancors of trouble! The lava streams of invective turned on to wash away chthonic evidences of double-dealing! The cowardice of those who would, but dare not speak! The writhed form of personal consequences manifested in every hand! The refusal to accept meekly and with gratitude the penalties of unpopularity for the doing of the right!

Is there no courage left in us? Must time-honored Democracy leave the Republican party to voluntary submission? Is there not somewhere to be found inspiration to tear down the complex creation of shreds and patches now wared insidiously in our faces, and raise, whether for success or failure, but everlastingly for the credit of the fathers of the Republic? May not our final attempt be made to join hands with the conservative South and blaze the way for the entrance of living truth and real slavery to supplant the hollow sham and glaring hypocrisy before which now in shame we bow our heads? If government by the people means the freedom of the individual to utter what he chooses, we are indeed to the limit! But let us, at least, go along with our faces to the front, trampling expediency under foot, sparing compromise, defying mobs, following the fixed star of unyielding principle, and trusting to the return to reason of the American people and the passing of the laws for a resurrection that shall be glorious because deserved!

Comments of the Press

THE EAST

THE WALL STREET ANARCHISTS

The evidence increases of the organization by the Wall Street interests of an active, aggressive, malevolent campaign against the President and the policies for which he stands. The President lately uncovered the conspiracy not a few days ago, and now the enemies who have been used to fight him by hidden processes have found courage to attack him openly.

No more malignant words respecting him have ever been used than those uttered by George Harvey on Saturday last at a dinner given by the National Democratic Club in New York. What Harvey stands for is well known. When he viciously denounces the President, the voice and the virulent epithets are those of the big promoters, stock jobbers, and financial engineers of the money centre. He charged, in the most rabid phrases, that the President is making war upon the important, commercial and financial interest of the nation; that he is a reckless, ignorant demagogue, and that he has succeeded in robbing both Republicans and Democrats of high degree in public life.

Here, then, is the accusation of Wall Street that the President is a dangerous oppressor, an enemy of industry and progress, a blatant agitator against law and order. The Hills and the Morgans and the Harrimans are held up in contrast as public benefactors. Modern methods of finance are hailed as blessings which Roosevelt demagoguery would destroy. Never has the defiance of predatory finance been more boldly proclaimed. This spokesman of Wall Street has put into words the irreconcilable differences between his employers and the people of this country. He has brought them clearly before the nation as teachers of anarchy, infinitely more dangerous than the most rabid form of government. For what is the lesson that the one side of the picture has been carried on in defiance of honesty, order, and law; on the other side is a President, backed by virtually the entire people, who has aimed to enforce the laws, and to strengthen them where they were weak. It is a lesson that the Wall Street bandits rage against President Roosevelt. By selecting the most conscienceless manipulators as types of public benefactors, they proclaim that they are against law, recent law, and will fight law wherever and whenever it interferes with their predatory schemes. In every meaning of the word they are anarchists.

When Harvey declares that the President is a public enemy, but that, nevertheless, \$5,000,000 freemen are with him, he indicts not the President, but the entire nation. No, not quite that either. He proves conclusively that George Harvey is an advocate of a hopelessly bad cause, and that he is willing to assault common sense as well as to impeach his own integrity that he may do the bidding of his employers.—Philadelphia North American.

DESERVING OF THANKS

From a certain standpoint nothing could be more admissible, nothing more aptly put, than this. The beginning of the President's words, his pledge that to the utmost of his ability the predatory trusts should be compelled to obey the law, and to give everybody a square deal, is the only promise made to those who know how strongly those corporations were entrenched, and how great an influence they wielded; the "mischievous madness" that followed—in the action that forced the dissolution of the Northern Pacific merger, that compelled the anthracite operators to submit their quarrel with the miners to arbitration, that safeguarded the public against the abuses of the Beef Trust, and that on Saturday last secured a judgment in the Federal courts that renders the Standard Oil Company liable to a fine of over \$200,000—could not, in the opinion of Harriman and Baer and Armour and Rockefeller, be more fittingly characterized. "Mischievous madness." Indeed! What other phrase in the English language could describe it so accurately—from the trust standpoint? Some of those who take the same view as "Colonel" Harvey object to snarl at the assertion that a combination of big financiers have been willing to raise a fund of \$5,000,000 to prevent the nomination of a candidate by the Republican national convention pledged to carry out the policies of President Roosevelt, but in view of that Chicago verdict in the Standard Oil case it is easy to believe that the men whose main profits are threatened would be willing to put up \$100,000,000 to compel the defeat of those policies and to tip the candidates of both parties to a conservative, reactionary policy. That there will practically be such a combination to secure the nomination of reactionary candidates, whether it has yet crystallized into a "conspiracy" or not, no one who knows the magnitude of the stake involved can for a moment doubt.

"Colonel" Harvey deserves the thanks of President Roosevelt's friends for placing the issue so clearly before the people of the United States.—Breadth Times.

CORPORATIONS AND THE LAW

It will perhaps interest Colonel Harvey, the versatile editor of *Harvey's Weekly*, a "journal of public opinion" that is popularly supposed to voice the sentiments of J. Pierpont Morgan, to learn that the Standard Oil Company has been convicted in Indiana of robbing rebates from the Chicago & Alton Railroad, one of the properties that has figured so extensively in Mr. Harriman's violent operations. The Jefferson Davis dinner at which Colonel Harvey vehemently denounced the middle-class interference of the Roosevelt administration with the corporations. He would have the country return to the good old times when, if rebating was recognized as a crime, it went unpunished; but he cannot hope to bring the public around to this way of thinking. The country

has now had for some years an era of law enforcement, and it will not be satisfied in an administration of any other kind. This does not mean hostility to the corporations, for the public resists the important part that corporations play in our economic system and in the development of the country; but it does mean that the corporations, like the individual, are expected to respect the laws that have been framed to preserve these industries, rights set forth in the Declaration of Independence. Compliance with the law is what the Roosevelt administration stands for, and Colonel Harvey ought to know that the President has no desire to assail rebalors or to restrict unnecessarily the caprices of industry. The fact that he has freely conferred with Mr. Morgan, Mr. Harriman, Mr. Miller, Mr. McCrea, and other railroad presidents and representatives of the business world, as well as with John Mitchell, Samuel Gompers, and other representatives of labor, that he has conferred with the big shipper and with the small shipper; that he has freely sought advice from persons of all classes, competent to give it, is the best possible proof that the President's purpose is not destructive, but creative along lines of honesty and fair dealing.—Springfield Union.

A FOOLISH ATTACK

Colonel George Harvey, made head of the Harper publishing house by grace of the late William C. Whitney, and continued in that position, if rumor be true, by grace of J. Pierpont Morgan, has made another foolish attack on President Roosevelt, an attack which, like Mr. Harvey's speech at the dinner, is a masterpiece by the use of rhetorical phrases than by either logic or common sense.

The attack in question would be a foolish and unwarranted one, no matter from whom it came. Roosevelt has, of course, made many mistakes like any man who accomplishes anything. But there are men in this country who have less warrant to attack Roosevelt than Colonel Harvey. He was placed in the position he now occupies, not so much on account of any displayed ability, but because it was felt that he was a "safe" man; a man who would not be likely to start organized interests, whether those interests were working for or against the people and popular rights. He has fulfilled the expectations of those responsible for his rise. Colonel Harvey may call himself a Democrat, but he is a Democrat of the type of Baer and other of his ilk, men the leaders of the real Democratic party would be prompt to repudiate him as a fellow member.

The reason Roosevelt has incurred the enmity of Harvey and men of his stamp is because Roosevelt has put the interests of the people above those of a few corporations who would hoist big or rich those corporations. The enmity of Colonel Harvey and his followers will only help Roosevelt, especially when such enmity is expressed with such illogical injustice as in this latest tirade of Colonel Harvey's.—Rocketer (New York) Times.

PLAIN SPEAKING

Colonel Harvey's biting sarcasm and his characterization of President Roosevelt as a bombastic Puritan will hardly be allowed to pass unnoticed. His real, critical direction of the character and feelings of the President will be well agreed to by the bulk of the people, although there are those who will be found in hearty agreement with most if not all of his strictures.

Such a savage attack upon a President has never before been made by a man of the position held by Colonel Harvey. Generally, even if men possess such thoughts, they remain unexpressed out of consideration for the high position occupied by the incumbent of the White House, but evidently Colonel Harvey felt that the time had come when plain speaking was demanded, and he pertinaciously cannot be reproached with any lack of plain speaking.

We foresee a lively campaign ahead of the American nation and much publicity, some of which will be aimed against the man who advocates publicity as a panacea for most our woes.

Colonel Harvey's speech will be far more discussed than the recent Harriman letter, and will probably bring forth a reply from President Roosevelt that will be equally as interesting a reading, if lacking the polished sarcasm of Colonel Harvey.

His arraignment of Bryan was more contemptuous than sarcastic, and his denunciation of the supineness of the leaders of both parties and their willingness to let things stand that some day, as they seize upon the crumbs of patronage doled out to them, shows how one man at least regards the present political situation in the United States.—Justice (Wassachusetts) Citizen.

SPASMS

Colonel George Harvey's platform spasms of fear, as he points out in a more or less enthrilled audience—of President Roosevelt's political opponents—the terrible menace of Roosevelt, are among the most telling diversions of the hour. We wish that there were an American Cervantes to do justice to the Don Quixote of the Moxes, Harper publications. Colonel Harvey's pen and tongue are knives that fight windmills as valiantly as ever the cracked old Spanish knight did; and, if he occasionally lapses into the rôle of Sancho Panza, why, the interest is heightened, and the spectator gets an added run for his money.

Behind all, however, is the fact that Don Harvey is not cracked; he knows a hostile knight from a windmill, as the set knows her kittens from her she-enemy's puppies; he is perfectly and sanely aware that his Don Harvey's Delusions are not fooled by his victims and secretly accept his rant at its real value. Hence Don Harvey becomes more than Quixote, for Cervantes's knight was a fool, and could be pardoned for his grotesque hallucinations. When Don George rushes pell-mell at anti-regulation and pure-fowl laws and other kinds of "centralization" he is playing the crank for a

price, which is politics, and he knows it and knows that all his hearers know that he knows that they know it. To tell the people that they would be placed in peril through their own delinquency from oppressive corporations is a task that might better engage the energies of a real demagogue.—*Pontiacist Times*.

At the dinner of the conservatism the absence of Alton B. Parker was conspicuous. It had been generally understood that he would be the principal speaker. However, Cabot George Harvey made a speech which attracted as much attention as anything that Mr. Parker would likely have said would have attracted.

This representative and spokesman of the "conservatives" made an attack upon President Roosevelt which was anything but conservative, and spoke for the "money power" that is the particular object of the hatred of the radical Democrats, in terms which will doubtless evoke something caustic from the lips of William Jennings Bryan when he speaks at his Jefferson-day dinner in Brooklyn.

"A constructive statesman by profession, a destructive politician in practice; in seeming, a chivalric Orlando; in fact, a Bombastes Furioso"—thus Colonel Flarvey characterized the President in the beginning of his speech; and thereafter he proceeded to elaborate this misrepresentation of the character of Theodore Roosevelt.

Further on he declared the Hills and the Morgans to be "the doers and builders, who have opened the great West to civilization and have made the country the seat of the supremacy of the world," and then he made the assertion that "it is the illimitable volume of violent fulminations from the source of power that is 'choking up the fountains of industry and drying all its streams.'"

(Incidentally, perhaps, Colonel Harvey neglected to praise the Harrimans and Rockwells here.—*Albion Journal*.)

To have a rejected member of his own profession attempt to so abuse and belittle the President of the United States of America is a happening that fills us with regret and indignation. Nothing that the President has done could remotely justify such a verbal assault. To be sure he is not perfect. He has his faults and his weaknesses. But he is a man of great character, a man of great and important in temperament and astuteness in action. He aims to reach his goal by the shortest route and, in "getting there"—as he himself would probably put it—he has not always followed procedures as closely as some of us may have wished. But, with all his faults and weaknesses, he is a man of great character and great ability. He has won respect and admiration from every country in the civilized world, and thus has added honor to his country. The "Peace of Portsmouth" will ever continue to give him a place in the ranks of the world's statesmen, and if he had nothing else to show for his life, this alone would be sufficient to entitle him to the respect of mankind.

Enjoying the respect and confidence of millions of his fellow countrymen, and holding in the hollow of his hand the destiny of the nation, it is not to be imagined for one moment that an attack, such as that within referred to, will not be resented. It was an unacceptable injustice to the President and an indignity to the people. We fail to comprehend the reason that occasioned it, and were the speaker another, we might feel safe in assuming that the tirade was an outburst from one conscious of his own inferiority.—*Wall Street Messenger.*

Whatever he says, or whatever the Harper publications say, is what the great railroad and trust magnate wants said.

"What," asked Harvey at the banquet, "are the builders and doers—the Mills and Morgans, who have opened the great West to civilization and won for our country the commercial supremacy of the world, or the Roosevelt and Bryans, who have divided their time between office-seeking and office-holding, and consider their sole mission in life to be the regulation of the affairs of others?"

There was, of course, but one answer to such a question. Everybody at the banquet saw what a great and good man Morgan was and what a wretch was Roosevelt. Those who did not see were further enlightened.

Roosevelt's leadership, they were told, means "that the American people, delirious by the marvellous spectacle of distant probity yawning from the pinnacle of self-appreciation, stand ready to welcome the destruction of the very fabric of free institutions."

Which, with a lot more of the same sort of balderdash, was intended to convey the idea that the President was a dangerous and dishonest man, whose rule was a menace to the country, from which the people could be redeemed only by hurling him into oblivion and setting up somebody of the ilk of Morgan, "who won for our country the commercial supremacy of the world," in his place.—*Brooklyn Observer.*

Bravo, Colonel Harvey! I retract my recent damning paragraph. Neither Mark Twain nor anybody else could equal Colonel Harvey's great speech at the Jefferson-Jackson banquet of the National Democratic Club. He spoke not only as a Democrat, but as a free and independent American citizen. He straddled the fence between the two parties, and he did so with a firmness and an obstinacy to the development of our business and a means to our prosperity. But he denounced with equal truth and severity the cowardices of the Republican and Democratic parties in tamely submitting to the domination of the trusts. He said that he would not only rise to play the despised role, but demands the right to select his successor. Every sentence uttered by Colonel Harvey stung both a lack, and every statement was backed by incontrovertible facts. It is a matter and manner that has never been surpassed in the history of the United States. The only other great speech of Cincinnatus was that of the great orator, John Jay, at the Convention of 1790.

Cutline or that of Burke against Warren Hastings—and, as Demosthenes endeavored to arouse the Athenians from their indolence, so Colonel Harvey appealed to the old American spirit beneath the present cowardly apathy. The National Democratic Club should order this speech to be translated into every language and a copy sent to every citizen of the United States.—*New York Times*.

The speech has this significance: George Harvey is described by Tom Lawson, of Boston, as the mouthpiece, the alibi, the foghorn, the calliope—in brief, the press-agent—of J. Pierpont Morgan. He is the head of the Harper publication house and its various magazines, and he has been carrying on for some years the economic, and of doubtful finance. He may be known by his collar.

This speech means that high finance has definitely broken with President Roosevelt. The financiers have no further use for Roosevelt and that section of the Republican party which will follow him hereafter. They must either get hold of the Democrats or form a new party based on their principles. Therefore, George Harvey, wearing the diamond collar of Morgan, talked at the Jefferson dinner.

The game of the high financiers is to annihilate Roosevelt for 1908 as a farter is anything. They are too late at the game, and even could they succeed the prize would not be theirs. The people are awake to the situation, leaders and led. They have just one word to the Pierpont Morgans: "Get out for Europe and stay."—*New York Daily News*.

Colonel George Harvey, speaking for the Democratic *cause*, read Mr. Roosevelt and Mr. Bryan out of both parties. The Colonel in just as safe and sane as Thomas F. Ryan, and loves the Constitution to the point of idolatry. "Who are the cowards and builders," he asked the Hills and Morgans, who have quailed the great and brilliant and won for us a century the commercial supremacy of the world, or the Roosevelts and Bryans, who from the beginning of their manhood have divided their time between office-holding and office-seeking and seem to consider their sole mission in life to be the revivification of the affairs of others?"

A Democratic ticket nominated by Colonel Harriman ought to be the entire Stock Exchange vote, unless Mr. Harriman were to on account of complimentary references to the Hills and Morgans. Bedeviling corporations may be reprehensible and Mr. Roosevelt may be a bold, ruthless murderer, but the \$10 dinner was of scanty value in helping us to arrive at the denudation of a 1907 Democrat.—*New York World*.

Colonel George Harry is a gentleman of brilliant parts, the editor of *The North American Review*, and the active head of the house of Harper & Brothers. He is altogether too much of a man to be anybody's mouthpiece in the servile significance of the word. But perhaps his bitter attack on President Roosevelt will be better understood when it is considered that he has for years been closely associated with the hooded "captains of industry" in New York, and that Mr. J. Pierpont Morgan is reputed to be the practical owner of the great publishing concern of Harper & Brothers.

Colonel Harvey merely expresses the views of that class of New-Yorkers of which by his own signal abilities he has become a conspicuous member.

Unwittingly he is abetting the growing movement for the re-nomination of Roosevelt.—*Boston Post*.

In another hall another group of men whom Mr. Jackson probably would call not "real Democrats," also held a banquet in honor of Jefferson. The chief speaker was Colonel George Harvey of *The North American Review*. His was a much more polished, scholarly address than was delivered by any of the orators at the Hearst banquet. But the singular thing was that he, too, expressed great dissatisfaction with both the Republicans and the Democratic party and called for the organization of a new political movement.

Colonel Harvey was pleading openly for corporations, and probably had no idea of saying anything that would even suggest a resemblance to what the heard crowd was saying in the other hall. But taken together the different brands of Jefferson-day speeches make an amusing symposium.—*Buffalo Express*.

This is *averse*, but *deserved*. No President has shown the nonchalant disregard of the Constitution that has been exhibited by Mr. Roosevelt. He seems to think that he was put in the White House to "do things," Constitution or no Constitution. When he finds that some favorite scheme of his would be regarded as unconstitutional by the Supreme Court he talks about "interpretation" of the Constitution. He knows that the Court is not his authority, and what is more, he uses his own power in appointing justices to the Supreme bench to secure men whom he knows would favor such "interpretation and construction." If President Roosevelt would give more attention to squaring his acts with the Constitution, and less to finding places for "driving through it with a bulldozer," he would be a much better for him and for the country.—*Rochester Union Advertiser*.

These are black and bitter days for our friend, Colonel George Harvey, editor of HARPER'S WEEKLY. At times Colonel Harvey suffers from the hallucination that he is a railroad rate, and that Mr. Roosevelt is about to regulate him. At other times he thinks he is the Standard Oil Company and that the Federal jury has convicted him on 1483 separate counts. When free from either of these delusions he believes that he is a Chicago and Alton reorganization which the Interstate Commerce Commission is about

to investigate, or else that he is a brother of Mr. Roosevelt's and has been discovered. According to other rumors, Colonel Harvey is sometimes convinced that he is a national property and that the administration is interfering with him. But at all events it is a very sad case.—*New York World*.

Colonel Harvey has many friends in the land of his birth, and the New Hampshire constituency need not feel anxious about its attitude toward a "wayward son."

Vermonters have never placed Theodore Roosevelt on a pedestal, nor crowded him as deities. They esteem and respect the man and President, but the fact that Colonel Harvey has criticized him does not make the critic *antithese morientis*.

Mr. Roosevelt is a public man. All public men are amenable to criticism. Criticism is the Great American Right that comes out in the Magdalen, and started at Valley Forge, and perished in the rebel prison walls.

It is unparliamentary for George Harvey.
Let the Colonel criticize; the President can stand it.—*Montpelier (Vermont) Journal*.

No well-balanced counselor on the proprieties has recently advanced eagerly that notion—that the President is "immune from criticism" absolutely. What has been pointed out of late is that it is impossible to separate the Presidency from the holder of it—the man from the office—and that both are entitled to a certain respect that should always operate to keep criticism within moderation and the bounds of decency, while overstepping such bounds might be condoned in the criticism of other persons; that while a man may make of his tongue an unworked bottle of vitriol at his own sweet will, there is at least one instance in which he must not do it without a license. To good taste. To good taste, on Colonel Harvey his own quotation from Aristides Ward on Napoleon Bonaparte, "he tried to do too much—and he did it."—*New York Commercial*.

In the Colonel's opinion Mr. Roosevelt is "vulnerable" and worse. His high belief in himself might be endangered were it not for the danger to republican institutions which it creates. "Violent sublimations" from the White House are destroying American industry, yet no one must complain because the order of sanctity envelopes that structure and "the King can do no wrong." There is no stopping this powerful ruler; Congress is supine and the judiciary is in peril. Do the American people, cries Colonel Harvey, "stand ready to welcome the destruction of the very fabric of our institutions?" Then we, indeed, in the land, "it is a painful picture. The only consolation is that it may be overdrawn. The figure of Mr. Roosevelt has been a legacy for the future in the lively imagination of the head of the house of Harper.—*Providence Journal*.

It may not be a situation that the G. O. P. regrets very much, but it is a fact just now that Roosevelt is likely to strain his legs by kicking at nothing. It would be something that would be very much appreciated if Roosevelt should be elected for the third time by common consent. In such an occurrence would prove that there is no fight left in the great Democratic party, and there is nobody in the field to watch the Republican party. It would not have our national politics in the most wholesome condition imaginable. While Colonel Harvey may have been excited and in a measure frantic, his abuse are not wholly wrong and unwarranted. President Roosevelt believes in two parties.—*Binghamton Republican*.

Colonel George Harvey is awaiting his sentence. With a full realization of his impending doom he is doubtless, now that the exhilaration produced by his brain-storm of Saturday has worn off, covering in fear and trembling as he realizes that no earthly power can save him from the consequences of his mad language. His is not a mere "difference of reflection" which will consign him to the Annals case. Whatever his punishment may be, he brought it upon himself. No plea of "domestic Americanism" can avail him, for there is but one kind of that madly recognized at the present time, and no individual has the right to develop in himself any different or original symptoms.—*Phenixville Republican*.

Senator Rayner and Colonel Harvey at the same board could not agree with each other. Senator Rayner indicated that there could be little hope for the Democracy until the President and his policies were out of the way, and flattered himself that they could lead forward. Colonel Harvey, on the other hand, could find nothing better to do than to denounce the President with a profusion of adjectives and a lavishness of vituperation which did more honor to the amplitude of his rhetoric than to the sobriety of his judgment. His voluminous invective was mainly directed at President Roosevelt, but he included Mr. Bryan in the same class and put his anathema equally on both.—*Philadelphia Press*.

Now what would the gallant Colonel Harvey do if the President should hear of unparliamentary or give attention to the theatrical efforts made by the Colonel at the South Carolina St. Patrick's dinner, and on Saturday night at the Waldorf-Astoria, to advertise some person or publication at the expense of the nation's Chief Magistrate? Of course the Colonel's tremendous personal outrage would stand him in good stead in such an event, but even a greater protection is to be found in the fact that nobody much beyond himself is interested in what he said, and that it is of no importance, anyway.—*Brooklyn Standard Union*.

Whatever President Roosevelt may say about Colonel George Harvey, of New York, being the mouthpiece of J. Pierpont Morgan, Colonel Harvey, in his two recent speeches, has given the President some advice that if followed would improve his standing with the people. The *Courier* has always been an admirer of President Roosevelt, but his recent disposition to call every one who does not agree with him a liar, and his determination to name his own successor, are not entirely commendable.—*Roseton (Vermont) Courier*.

Colonel George Harvey's virulent attack on the President as a "Bombastic Fustian" might attract more attention if it had not been so bitter in its tone, and had not depended on such hypotheses as that "the great Republican party has become a mere personal machine." Colonel Harvey's kindred wall is that "a whole people has been brought under the yoke of trust submission, and no one raising a voice in protest." Colonel Harvey thereupon raises his note, firing it up with the "lava of invective," and clearly failing to comprehend that such such assault as this on the President merely adds more in numbers and substance to his support.—*Boston Record*.

Great speech to read, that of Colonel George Harvey, a brilliant orator and man of affairs, in which he attacked President Roosevelt. Delphin Delmas's speech in favor of Thaw and the inheritance law and "domestic Americanism" was great reading, too. The one failed to relieve Thaw, though it may have saved him from the possibility of more serious results than have yet come to him. In the other case, where Colonel Harvey is out after the President, we imagine that the result will be even less effective with the people than was Delmas's speech, and may create a little the minds of the jury.—*Brooklyn (Standard) Enterprise*.

Perhaps it is not well to take Colonel Harvey, of HARPER'S WEEKLY, too seriously, but he certainly takes himself too, and it is not the best thing in the world for the paper which he edits. Some of us have memories of the early days of Abraham Lincoln's administration and the tone of HARPER'S editor in those days towards him, and Colonel Harvey recalls that time too vividly to be forgotten. Abuse and misrepresentation of the President is not judicious, nor is it called for by any of the existing conditions.—*Bridgeport Standard*.

We rather imagine Colonel George Harvey, that is the end business, too, and will be less deplorably disturbed by the Roosevelt policies, if carried to their legitimate conclusion, than by the unobstructed and unchallenged progress of the corporations with which you are familiar, along lines that helped to inaugurate the policies. Really, Mr. Roosevelt appears to have concentrated the anger and resentment of the trusts and trust men all at one point. It can be expected that the \$5,000,000 campaign is already begun?—*Arthur Park (New Jersey) Press*.

Colonel George Harvey, who has been assailing President Roosevelt, is a gallant who served on a Governor's staff with distinguished ability. He has been under the fire of newspaper criticism so often that a view of the big stick has few terrors for him. In view of the fact that certain of the publications which acknowledge Colonel Harvey an assessor are lauded by corporations, one might assume that the Colonel has a little use of his own which he desires to wield upon the least provocation.—*Troy Record*.

Well, the world is not going to do anything except admire Colonel Harvey's breath-control, his credulity, and his ingenuity as an advocate. Therefore Roosevelt comes under the head of things that are not "so." That he is a "real menace to the stability of our national institutions," that he trades "with those notoriously corrupt," that he is "the most conscious of persons," etc., etc., etc.—these things you may tell to the marines, not to the American people. They are mere parodies of the facts.—*New York Mail*.

We do not think that Mr. Roosevelt is that bold, bad man that Colonel Harvey draws him to be. Mr. Roosevelt would run the publication business in much the same way Colonel Harvey does. Colonel Harvey would make much the same kind of President Mr. Roosevelt is. Both are men of originality, audacity, impetuosity with the better of precedent, and with electric realization of the high possibilities of revivifying old precedent to meet new conditions.—*Brooklyn Eagle*.

The attack of Colonel George Harvey, editor of HARPER'S WEEKLY, upon President Roosevelt, has not increased his popularity with the rank and file, however satisfactory it may have been to the railroad presidents. The *Brotherhood of Locomotive Engineers* and *Chronicle* points to the Colonel as the latest victim of brain-storm, and adds that "if he was the father of Wall Street, and it was his only child, he could not be more in earnest." Mr. Harvey takes himself and his views too seriously.—*Troy Record*.

If Colonel Harvey of HARPER'S WEEKLY is a worthy critic of Roosevelt and dares stand by his guns, whatever the cost, he will enjoy the advantage of being in writing from Roosevelt's friends, who are showing up his own deficiencies in resentment for his attacks on the President. Most of the President's assaults crawl when the popular response strikes them. We think that Harvey is just strong enough to stick.—*Waterbury American*.

Of course there is one short and easy answer to all criticism of persons high in authority by George Harvey, Colonel Harvey

works for J. Pierpont Morgan. Therefore, anything he says against Mr. Roosevelt will only help to recommend him. This appeal to class feeling is already being made by the newspapers which sing paeans to "the big stick" because it "helps circulation."—*Hartford Times*.

George Harvey should have a rare! He announces that Roosevelt is a boyish, senile, and irrational leader and an unsafe guide, summing up by calling the President a "Boonshooter Parson." Vermont has furnished many brave men, and Mr. Harvey is one of them. But just wait and see what the President calls him!—*Montpelier Argus*.

The report that several members of Congress chuckled over Colonel Harvey's attack on the President as the great warper lends a tragic interest to that tirade. The member of Congress who chuckles over the mention of usurpation virtually smokes a jopony pipe while sitting on a keg of gunpowder.—*Rochester Democrat*.

An address delivered by Colonel Harvey, of *The North American Review*, a few days ago, has been denounced as vituperative, asaristic, sacrilegious, and so forth. Colonel Harvey handled his subject without gloves, and called things by their proper names, and that is the full dimension of his offending.—*Harrisburg Independent*.

Colonel George Harvey, of HARPER'S WEEKLY, is much distressed lest Mr. Roosevelt may turn the United States into an empire. He is unnecessarily worried. There are some 80,000,000 people who in the critical moment would interpose a vigorous objection, which would wipe the empire-maker off the map.—*New Haven Leader*.

Mr. Harvey's rattle-trap talk at the New York Democratic Club's banquet on Saturday night was forty-five years overdue. His was a fair sample of a Democrat's harangue during the dark days of the Republic, when the celebrity-hunters were just as sure as Mr. Harvey is now that the country was going to the bows.—*Plainfield (New Jersey) Press*.

George Harvey declared at the Jefferson dinner, Saturday, that the President was "showing his retreat in impregnable ambiguity," and Grover Cleveland was so falteringly that in a Sunday interview he forgot to use more than three words of four syllables.—*Springfield Union*.

George Harvey's bitter attack on President Roosevelt. It may be noticed, is meeting with about as much counter-attack from the Democratic as from the Republican press—and not all this Democratic press is of the radical brand. How we do "get together!"—*Springfield Republican*.

The World predicts that a Democratic ticket nominated by Colonel Harvey ought to poll the entire stock-exchange vote, unless Mr. Harriman were to bolt on account of complimentary references to the Hills and the Morgans. Such is the fate of exposing usurpation at a dinner costing \$10 a plate.—*Boston Record*.

Colonel George Harvey, in his speech at the Waldorf on Saturday night, called attention to one thing worth considering. Discussing the blubbs that is being made because Roosevelt is at heart a man, he asks when did the United States ever have a President who was not an honest man? When?—*Boston Traveler*.

Colonel George Harvey's denunciation of those Democrats "who eat the crumbs of patronage from the hand that smote them, and lick the boot whose impact they have felt," would be more impressive if he furnished particulars. Did he have in mind the so-called "White House" Democratic Senators?—*Portland Argus*.

Colonel George Harvey, of HARPER'S WEEKLY, is much distressed lest Mr. Roosevelt may turn the United States into an empire. The Colonel should calm his feelings by reading history, which will tell him that the same fate was expressed of George Washington and Andrew Jackson when they were in office.—*Providence Bulletin*.

In brief, the voice of Harvey is the voice of Morgan. HARPER'S WEEKLY is now a vehicle of attack upon President Roosevelt, and HARPER'S WEEKLY is owned and controlled by the Morgans interests. That kind of anti-Rooseveltism doesn't have a feather's weight in public sentiment.—*Newark (New Jersey) Star*.

Colonel Harvey's unreasonable and intemperate criticism will do President Roosevelt no harm, but a son of Vermont ought not to get his exceedingly fine abilities to such really lame uses.—*Northfield (Vermont) News*.

Of the President, Editor George Harvey says: "He is a spectacle of idiotic profligacy yawning from a pinnacle of self-appreciation." Mr. Harvey might be described, doubtless, by four "shorter and uglier" words.—*Washington Herald*.

Colonel George Harvey's denunciation of those Democrats who "eat the crumbs of patronage from the hand that smote them, and lick the boot whose impact they have felt" gets right down to the fundamentals.—*Boston Record*.

Colonel Harvey and Messrs. Grant and Debs all think that Theodore Roosevelt is a bad man—but for different reasons. Which

leaves the President still about where he was before in the regard of the American people.—*New York Mail*.

The long speech doubtless will receive considerable attention. HARPER'S WEEKLY is likely to be excluded from the White House, and quite possibly Colonel Harvey will be honored with membership in Mr. Roosevelt's Annals Club.—*Buffalo Courier*.

Editor Harvey is still hearing from his exchanges, but he probably will not quote their remarks in his next edition.—*Philadelphia Inquirer*.

Colonel George Harvey compares Theodore Roosevelt with the great Andrew Jackson, and "Old Hickory" is powerless to resent it.—*Buffalo Times*.

Colonel Harvey denounces both Roosevelt and Bryan, and at last accounts was trying to find out what Mr. Fairbanks amounts to.—*Portland Advertiser*.

Mr. Morgan may owe HARPER'S as much as he sees fit and circumstances enable, but he ought not to own Harvey.—*Panama (Rhode Island) Times*.

From his courteous remarks about President Roosevelt at that Jefferson banquet we may gather what Colonel Harvey thinks of Andrew Jackson.—*Newark Star*.

Colonel Harvey must be a superior sort of person. President Roosevelt has not yet remarked that he is pleased to be denounced by him.—*Buffalo Inquirer*.

Go ahead, Colonel Harvey; knock Roosevelt as hard as you can. It advertises Harvey, entertains the public, and doesn't in the least harm Roosevelt.—*Reading Telegram*.

However, Colonel Harvey will find himself in some rather distinguished company on the Presidential blacklist. It isn't like being hung up all by one's bow-tie.—*Boston Record*.

There is one explanation of Colonel Harvey's remarks which nobody seems to have thought of. He may have spoken as he did simply because he felt that way.—*Providence Journal*.

Mr. George Harvey calls for a leader who can effectively oppose President Roosevelt. Such a man there may be, but he is most certainly not under Mr. Harvey's hat.—*Providence Tribune*.

The voraciousness with which he protests against Presidential direction of the country rouses the suspicion that Colonel Harvey would like the job of regulating it himself.—*Providence News*.

Colonel Harvey has had another brain-storm. These attacks are getting alarming.—*Panama Times*.

THE MIDDLE WEST THE SENSE OF HUMOR

The most humorous thing in the Sunday papers yesterday, both as treated by the author's straining expression to be witty and by the public's irresistible desire to laugh at not with his production, was George Harvey's speech attacking President Roosevelt. And yet, paradoxical as it may seem, if that speech proves anything positively it is that Mr. Harvey has in some unfortunate manner managed to lose his sense of humor.

This unfortunate man is widely known as the literary lieutenant of J. Pierpont Morgan. In his capacity of editor of HARPER'S WEEKLY and *The North American Review* one would think that he could enter into cordially close contact with the world around him to keep that balance and sound sense which is at the basis of genuine humor. But, no. He occupies a lofty pinnacle, and he occupies it so vehemently that that pinnacle has become the whole of reality for him, with nothing else in the world except the fragrant, big-headed, big-lick-leaving figure of the "king that is a child," that "spectacle of blatant profligacy, yawning from the pinnacle of self-appreciation," which is aiming at "the destruction of the very fabric of free institutions."

The Northern Securities Company has been dissolved, the Standard Oil Company is being compelled to give up its criminal habits, the public-law thieves of the West are on the run, Harriman is waiting his turn, the United States Senate has bent the knee and concurred in the passage of a most salutary railroad rate bill, pure-food legislation has been enacted after twenty years of snoring from the nation's legislators, the Panama Canal is being constructed with admirable expedition despite unceasing underground obstruction at Washington; and yet all that Mr. Harvey and those for whom he speaks run see in that our "king is a child."

The American people get two great laughs out of this. One is right now. The other will be the first Tuesday after the first Monday in November, 1908. And there will be numerous small smiles in between.—*Chicago Record Herald*.

THE PEOPLE TO BLAME

Colonel George Harvey, now at the head of the host of Harper & Brothers, and editor of HARPER'S WEEKLY, does not like Theodore Roosevelt. He said so some weeks ago in a speech in South Carolina, and with intensified bitterness he said it again Saturday

night at a Democratic banquet in New York. It may be interesting as it is strenuous practice to go out against the cyclone of popular sentiment which is now with night irresistible for the re-nomination of the President. But the Colonel amplifies his invectives; they should rather be shot at the insane muzzes of the American people rather than at Mr. Roosevelt. The President doesn't ask to be re-nominated, and it is most uncertain that he will accept even should it give him next summer with practical unanimity in the national convention of his party. The prospect before the people is that they must draft him for the nomination, force him to accept the leadership for the third term, by nominating him and then adjourning, and refusing to accept reelection by him. The people are to blame. They approve the policies which are proving so embarrassing to Mr. Harriman and Mr. Rockefeller and other gentlemen interested in large affairs. Colonel Harvey should turn his oratorical guns on the millions of third-termers among the people without whose encouragement not approval it would be easy for a few millionaires to nominate a "safe" man to succeed Roosevelt, while in the mean time they put out enough cash in the right places to reduce him to a condition of innocuous desuetude. It is the might of the people that makes this danger. The Colonel in his next philippic should let the American people know what he thinks of them. The way to prevent a third term is to stop the people from giving it. Mr. Roosevelt will not take it if it be not pressed on him with invincible popular determination.—*Rockford (Illinois) Republic*.

It is human nature to review the past. But nothing is clearer in human history than that the living adjust their institutions to their needs. It is this that makes progress, and also that makes decay. Our New Orleans contemporary admits that we weathered the Jacksonian era. But now it acknowledges the correctness of the picture that Colonel Harvey presents for the nation (which is not presented) of that time and says that the same condition exists now on a vastly greater scale, and "how all may end is a problem which is to a large extent in doubt and gloom." We do not see it so. We believe in the capability of the people who self-government under whatever form; that they are able to preserve their liberties. Whether they are, or not the future must answer. Of this much we feel assured: the American people are going to have a government in most conditions of to-day—the conditions under which they live, one that will guide them safely through the vast interests that modern complexity has produced. But we do not believe that it will be necessary to abandon the essential features of our historic dual polity. There may be too great a drift to "nationalism" at one time, but then, we believe, will be a temporary movement. State rights are not the American rights. State rights are too important for the maintenance of progress and liberty long to be neglected or obscured.—*Indianapolis News*.

The thing of weight in Mr. George Harvey's recent utterance is the same as that in the less well outgiving Mr. H. H. Rogers: what it stands for rather than what it says. There is an incidental quality attaching to the Harvey bitterness in this, that, aside from the revelation that all such outbursts are as to the manner of man that makes them, it reveals a certain noble quality that in all too common men is not. The American, the American, the American, an Englishman, a German, or a Frenchman of similar position in life indulging in such vituperation on a similar occasion. They might differ never so strongly about the policy of a premier, but they would state their differences in parliamentary language. Indeed, among us, with the exception of Mr. Hearst, one has to go back to the days of "Brick" Pomroy and W. F. Story, of the *Chicago Times*, to find a similar relic in speaking evil of dignitaries, couched in illingenuous so-called. And, considering Mr. Harvey's position as editor of a magazine devoted to the serious discussion of public questions, he is entitled to the blue ribbon for ribaldry. But, as with the utterance of H. H. Rogers, his speech is significant for its supposed meaning. It is taken by alarmists as an indication of an effort of the great "interests" to cause a reaction of public feeling in regard to the rate of interest, of which the rate has been threatened to fall into innocuous desuetude; an effort to make the country believe or fear that the present policies mean ruin and loss to small investors. Well, the railway people and other great interests have a right to make their views known. But we guess they will be a pretty difficult task for them to sweep back the tide.—*Indianapolis News*.

George Harvey, in making his vitriolic attacks on President Roosevelt, has not added to his reputation or helped the Harper publications at all. As the editor of *The New American Review* Mr. Harvey has been looked upon as a man with a balance wheel, but if he did have one Pierpont Morgan, one of his chiefs, has knocked it off. He declared the American people are being "debauched by the spectacle of blatant probity yawning from the pinnacle of self-appreciation." Mr. Morgan should read a famous phrase of former President Cleveland and be a little careful, or else he will fall into "innocuous desuetude." Mr. Morgan himself should take a hand in curbing his mouthpiece, as such uncalculated remarks, no matter who they are made by, do not sound well when applied to the Chief Executive of the United States. Such attacks lead the Republicans of the country into closer union, while members of our other great party, the Democrats, do not stand for such talk.

If the great American public once believes this is part of a plot on the part of the money power of the country to intimidate Mr. Roosevelt it will make him stronger than ever. H. H. Rogers started it, now comes Morgan's man Harvey. A few more such and the "wicker of the big stick" will have the whole United States in his pocket.—*Grand Rapids News*.

This attack is not surprising, for it is thoroughly in keeping with Colonel Harvey's record heretofore. This very able man, evidently disaffected toward the administration, has always sided toward the side of vested interests, and it is evident that he is one of the principal supporters of the corruption anti-Roosevelt movement at the present time. The fact that such men are coming out in open opposition to the Roosevelt idea of government indicates that these men are about to make a last ditch fight for a restoration of the old order of affairs, with perhaps some modifications, and it is not improbable that the next twelve or fourteen months will witness one of the most intense pro-revolution Presidential campaigns in the history of the nation. Much, of course, will depend upon the manner in which the anti-Roosevelt attacks are received by the American people. If they are listened to and the public manifests some little interest in them, there is no doubt but that battle royal will be waged against the President and his policies. If, on the other hand, it is found that the people are disposed to resent these attacks and arrangements, or if they are received with indifference, the fight will be more passive in character.—*Gloucester (Illinois) Mail*.

No reasonable person will quarrel with Colonel George Harvey for exercising his natural and indefeasible right as a citizen to hold the President of the United States off, and take a line sure to make people sit up and take notice when he wants to do some effective speaking. His philippic in the Jefferson birthday dinner delivered at the Coliseum was an excellent specimen of its kind, and aroused his hearers; and the shower of vituperative and satirical invective will rebound harmlessly from the triple armor of the President's popularity like birdshot from a little ship.

As a literary or rhetorical performance, Colonel Harvey's witty and picturesque caravansera is most enjoyable. There are some palpable hits in the way of satire. Humorous laughter will go up in this broad land over the Harveyverian verbal cartoon of a big Teddy bear roaring virtuously against race suicide, and squandering a couple of decorated eggs in a benevolent attempt to hatch them out. That is excellent fun, and no doubt the Great Champion of the busy work and the prolific rabbit will see the point and enjoy the joke along with the rest of us.—*Illinoian Sentinel*.

The attack on the President by Colonel Harvey at the Jeffersonian banquet of the Democratic Club of New York indicates that there is to be a lining up of the reactionary forces of the Democratic party not only against the President—which was to be expected—but against any man in the Democratic party who may be in actual touch with his attitude against the reactionary forces. This speech will fairly be regarded as the first in the campaign against Bryan for the nomination for the Presidency. From this time on it will be a fight of the railroad, Standard Oil, and other like interests in the Democratic party against all policies that appear to threaten their positions, whether they are in the Democratic or Republican party.

In view of this the Republicans of the country will line up at once with the President, or with some other man who represents the policies he has been advocating. The fight may mean a new alignment of parties as we saw that of 1896 over the silver question.—*Moine (Illinois) Dispatch*.

Here is a man who is presumed to be in touch with what is going on in the world, else how is he competent to edit a national weekly, and yet he seems to have closed himself in with the gossamer partitions of his den and worked himself up into a terrible state of mind, all because, perhaps, Roosevelt does not jump every time the editorial pen is put to paper.

It may be that Colonel Harvey was trying to be humorous; if so, he succeeded, but not in the way he intended. People will laugh at him, but not in sympathy with what he says. He cannot injure Roosevelt in the popular estimation, and the people have the situation pretty well sized up.

Colonel Harvey seems to have entirely overlooked what has been accomplished since Roosevelt went into office. Or it may be that it is that sort of activity that Harvey is opposed to. Perhaps Harvey is trying to work up some sympathy with Morgan, Harriman, and others who have left the sling of the President's whip.—*Des Moines Times*.

Saturday night George Harvey, who has edited the Harper magazines and other publications since J. Pierpont Morgan formed a trust for their control, made a speech markedly antagonistic President Roosevelt and Mr. W. J. Bryan. Mr. Harvey is a McKinley Democrat and still goes to Democratic meetings, and actually professed a Jefferson celebration with the speech.

It sounded like an unabridged edition of the speeches made in the Bloomington campaign by Mr. Hearst and Mr. Frank V. Randall together. Perhaps Mr. Harvey will take less offense if we say that their speeches sound like pocket editions of his.

In either case timid racialism is being brightened. In one case it is being scared from the city and in the other from the nation. The coincidence in these thoughts is that they are both the product of a beleaguered campaign to quote from Harvey's speech.—*Bloomington Bulletin*.

When Colonel Harvey points for us what a President ought to be, it is as if he had been imagining that he drew a President's portrait lines out from memory—from the measurements treasured in recollection of a has-been President, who now lives in Princeton. When he describes the horrifying deviations from the normal and the expected of an existing President, it isn't any indefinite, illusive ideal standard of comparison he uses, but a highly corporeal

standard of actuality that happens to be deposited for the benefit of posterity at Princeton, just as standards by which other things are weighed and measured are deposited at State capitals. When he picks out for us a future President who will be to us all that a President ought to be, he doesn't take any chances. He picks out one who has been moulded through the veritable contact and impress of the Princeton pattern of Presidents and inspiration to the line of succession in the White House.—*Des Moines Press.*

The President is a decided character. There are no half-hearted views as far as he is concerned. He has his own ideas, and his own purposes. He is going to let the world know what they are. He is willing to take the consequences. Although he may never have dreamed that Editor Harvey would utter such a crushing denunciation, it would doubtless have made no difference to him. In fact, the President has no need to worry. There was never a more popular man in the United States, and there were never a man more deservedly popular. Mr. Harvey will have to find a phrase even more striking than the one just quoted before he attracts much attention from the common people. They are the friends of the President.—*Indianapolis News.*

Although frenzied financiers are holding President Roosevelt responsible for the chaotic condition of the stockmarket, and Colonel George Harvey, editor of *The North American Review*, is denouncing him as a demagogue and a dictator, the country is still breathing serenely and contentedly, and the people are still placing their faith in the man who is pointing the way. And as they listen to the wails from Wall Street and to the philippics from Harper's man, they love the President? For the reason he has made.—*Pittsburgh Blade.*

President Roosevelt is in many respects unlike any President this country has ever had, but the difference is one the people seem to like. If left to the popular vote it is very likely his policy and principles would receive several hundred votes to one, and for what? Colonel Harvey stands for, and the vote would just about represent the degree in which the country shares his apprehension for the safety of its Constitution and institutions.—*Grand Rapids Herald.*

Colonel George Harvey is altogether too much of a man to be anybody's mouthpiece in the avowed significance of that word. But perhaps his bitter attack on President Roosevelt will be better understood when it is considered that he has for years been closely associated with the leading "captains of industry" in New York, and that Mr. J. Pierpont Morgan is reputed the practical owner of the great publishing concern of Harper & Brothers.—*Langston (Michigan) Gazette.*

Whenever Colonel George Harvey, editor of HARPER'S WEEKLY, has nothing else to do nowadays, he makes a speech assaulting the President. There are a great many differences between Colonel Harvey and the President, but one of the most obvious of them is that the President is a dear old fellow while the Colonel is a rascal of words. In fact on behalf of the readership he should beware lest the WEEKLY become known as the journal of civilization.—*Pittsburgh Press.*

Probably Colonel Harvey goes too far in his arraignment of the President, but the fact remains that the great majority of business men and interests of the country fear him and his kaleidoscopic policies, and are fearful of what the future has in store for them and the people generally, if he continues to run amuck. In a word, they don't know where they stand in that they do not know whether he will jump.—*Burlington (Iowa) Gazette.*

But the logical mind has now borne the perfect fruit, and Colonel Harvey delivered the final words at a dinner to the Sons of St. Patrick, at Charleston, South Carolina. Such conclusions should be studied by the whole country.—*Winona (Minnesota) Independent.*

As we understand Editor Harvey in HARPER'S WEEKLY, he suggests that we let the world go as far as they like, provided only the nation accept his irrepressible suggestion and make Dr. Woodrow Wilson President.—*Idaho Press Journal.*

Colonel Harvey refers to President Roosevelt's recent utterances as "rotting caricatures of truth." This is as good as an application for membership in the Amalgam Club.—*Richmond News.*

No, Colonel! your speech was a brilliant handling of an unpopular theme, and children still cry for the Tiddly-bears.—*Madison Sentinel.*

J. Pierpont Morgan ought to muzzle his man Harvey.—*Cincinnati News.*

THE FAR WEST

LAMENTATIONS

George Harvey, editor of HARPER'S WEEKLY and of *The North American Review*, has a bad case of the cholera dumps over the political situation. He need to say pleasant things, and lots of them, about Theodore Roosevelt, and he has even been known to compliment Mr. Bryan, but these happy days have passed. Now he fears him the whole nation has gone to the loss sense and hope knows Harvey no more.

The most recent eruption of Colonel Harvey's mood found expression in a speech before the National Democratic Club last Sunday evening at the Jefferson-Hickory dinner. Just why Colonel Harvey should be asked to talk to Democrats on a Jefferson occasion does not appear, since he is not a Democrat in the accepted sense of the term, and he certainly has not supported any Democratic policy of late years. However, that is a minor matter, and in his opinion of Roosevelt the brilliant ismismatist must have found a sympathetic audience.

Not in the Colonel any better content with the Democratic party and its leadership. He thinks Democratic Senators and Representatives cut the crumbs of patronage from the hand that smote them, and look the best whose impact they have felt, while simultaneously their undisputed if not, in fact, perforce, ruler bubbles like a cripple in the wake of his successful rival, gathering as he goes the few scraps that are left of his own fallacies." And more to the same effect.

Reverting to Roosevelt, the doctored Colonel objects to the President's assumption that he has a monopoly of honesty and that so many others are in the Amalgam class. He remarks, with some sarcasm, that we have never had a dishonest President. Moreover, he does not recall any other President who "brought large sums of money for use, not in conducting a political campaign over a protracted period, but on election day."

Kindred in his palmarious days of grief couldn't have done much better in the way of lamentations, could he? No hope in the Republic, no glimmer of a gleam of light, no glimmer of the dawn, no pall of gloom encompassing the nation and night coming on awfully fast!

Still, come to think about it, the Colonel may be mistaken. Possibly what he mistakes for historical trash is only the effect of a cold boiler smelter and too much kum-bum-bum following. That West here the people have a good deal of faith in America and the Americans. Some of them think the President is a sort of hostess, too! In bad men in politics, but when they get time to take his eye in hand they'll try to settle him as they would any other rascally citizen who had citizens and his own. He has the affluence of genius. Moreover, the West likes to think that honesty and efficiency and leadership are rather common traits in American humanity, and that when the East finally wakes up to the foolishness of worshipping Roosevelt as a sort of modern Moses when he is nothing but a very common politician of the crowd, there will be no difficulty about finding a better man as his successor.—*St. Louis City Herald.*

FOOLISH AND KNAVISH

It is unnecessary to explain who Colonel Harvey is. Everybody knows all about this great literary luminary whose editorial genius presides over HARPER'S WEEKLY, *The North American Review*, and sheds an occasional inspiring ray into the rampant pages of HARPER'S MAGAZINE, the night of May 15, 1901, when he delivered a sermon from a text in Ecclesiastes to the vast congregation of millionaires at the Waldorf-Astoria in New York. The text promised us upon that land whose king is a child. Colonel Harvey applies it to America and Roosevelt. According to him, "Roosevelt is a mischievous child with a passion for notoriety, notoriety, confusion, contradictory, inconsistent, illogical, irrational."

The sermon, or address, is one of the most virulently abusive of a public man that it has ever been our fortune to read. The language disregards all the conventions of decency, the spirit is one of deep and malignant hatred, delivered as it was to an audience of trust augurers, it probably found great acceptability in their ears. We rather guess the American people will judge of it somewhat differently. The eminent Colonel's virulence may be gauged from one sentence. Although his speech is utterly restrained in abuse, reckless in assertion, and scandalous in epithet, nevertheless, as though to put impudence itself to shame, he says that Americans no longer dare to criticize the President. "The heavy hand of fear rests upon the land," and nobody has the courage to open his mouth to reveal Mr. Roosevelt's awful deeds. It was at that moment doing, somewhat infamously, we must confess, but still doing, the very thing he said nobody dared to do. And hundreds of others in the service of the magnates are doing the same thing and Colonel Harvey knows it.

Doubtless the distinguished Colonel delivered the speech a very brilliant one, but we cannot agree with him. We have never been able to discern brilliance in billingsgate, nor do we believe that literary or political genius best exhibits itself in uttering slander, the error the orator makes which would of itself be damning even if his speech were otherwise admirable. The failure to mingle with his falsehoods that small seasoning of truth which is invariably essential to make such attacks effective. Had the Colonel been a genuine artist in backbiting he would have inserted here and there a fact. The reader's suspicions would thus have been lulled, and some of the misstatements might have been confirmed. As it is, the truth is so potent and continuous that there is not the least danger of any person being misled.

We congratulate Colonel Harvey on that strength of mind which enables him to rise superior to decency and generosity, and his adversary of Professor Woodrow Wilson for the Presidency; but we cannot congratulate Professor Wilson on his abuse of an advocate. Were the American people fools and knaves such a foolish and knavish address might captivate them. Being intelligent persons with a preference for candor, it will only disgust them.—*Portland Oregonian.*

MUDDLED MESSAGES

Colonel George Harvey, at his Jefferson-Hickory banquet, Mr. Bryan and Mr. Bryan, and his all together present, happy confusion of partisanship. Mr. Harvey in the brilliant effort of

two or three magazines, supposed to be controlled by J. Pierpont Morgan, one of the "doers" whom he lauded in his speech, and his Democratic hostility to Roosevelt Republicanism was matched only by his horror of Bryan Democracy. Mr. Hearst, whose voice and newspaper, as always, he trusted to speak for Hearst as Hearst sees him, is incapable of disavowing his horror of any other man who might by any eventuality become President ahead of Hearst; so his Jeffersonism is against Bryan Jeffersonism even as it is against all that is not pro-Hearst. At another Jeffersonian banquet in some later Mr. Hayes will take the part of Mr. Hearst's "perennial leader hobnobbing like a cripple in the wake of his successful rival, gathering as he goes a few scraps that are left of his own follies." The funny thing about this cleavage at the top is that it goes no deeper than the legs of the banquet-table, where it shows itself. Among the people below there is no sign of the dissection that rages around the champagne-cups. For ease and a wonder the "divide-and-conquer" scheme is not working. Party lines are mighty faint except when some party fighter manages for a moment to draw his pencil down an alleged line fence. The men about the festal boards are contending for an empty opportunity. The flock which they fight to herd at present shows no disposition to be corralled.—*Amelia (Nebraska) Journal*.

Appearing as a Democrat, Colonel Harvey has chosen Jackson as the horrible example with which to frighten the nation. Jackson was domineering and believed himself to be greater than the republic and when Jackson retired the "dodge" name. Perhaps! That was a good long time ago. But Mr. Harvey has not changed since then. And Roosevelt has two years, perhaps six years, in traditions of our country. In the storm and stress of these perilous times it is well that some strong, true voice should be heard crying out against the unconstitutional and socialistic tendencies of the chief executive and the demagogues of the American people. Only a week or ten days ago many alarming stories were told of the nervous collapse by which the President was threatened; he has done so many queer things during his administration, so many things that would appear to indicate that he is at times unbalanced in his judgment. So far the people have been deceived by the blare of trumpets and the pomp of pageantry with which this latest successor of Washington has encompassed himself around about. It was so in the days of the French Revolution. It has ever been so in the history of the world that the unthinking multitude have been moved by sound and fury, but history shows that vaulting ambition has always overreached itself, but that in the end the people have recovered their poise. It will be so in this case. The order second thought of the plain people of the United States will restore the government at Washington to the ways of the founders.

We hope that every man of sound mind and good digestion will read the speech made by Colonel Harvey Saturday. It sounds like a trumpet above all the confusion of tongues, and strips the rags of authority from the President of the United States, who would make his "thus with the Lord" superior to the mandates of the law. We have had enough of "the raging of the revolutionary instinct of a lawless mind," enough of "the mendacious duplicity of these holding power," enough of "the empty millinery of flattery and sanctimonious theories of men enough of 'hollow sham and glaring hypocrisy.'" In the administration of our national affairs. In this hour of peril Colonel Harvey appeals to the conservative South, but the effectiveness of the appeal will depend upon the loyalty of the plain people in all parts of the country. We have no fear that there will be other strong voices raised against the downright iniquity of the new policies which have been preached by the mouth of the President, and that in the end this country will be safely delivered from the present drift to anarchy.—*Charlotte News and Courier*.

Colonel George Harvey's abusive thrash against President Roosevelt cannot be regarded as anything but a call to arms, intended to rally the leaders and minions of the robber trust army. Such a torrent of invective cannot be designed to turn the multitude against the President, but it is intended to excite an ignorant mob to not understand the injurious effect upon their own cause of mere violent railing of names. Epithets is not argument, and instead of winning support, can only have the opposite effect of strengthening the person attacked.

It is the familiar and the last resource of those who have a weak cause to direct attention therefrom, raising a false issue, by abusing the attorney for the other side. Hence is the interperate personal onslaught upon Roosevelt. When the charge is made and proved that the trusts are robbing the people, that robbers are used to build up trusts and destroy competition, the only answer returned is that Roosevelt is assuming the airs of a king, and that he is personally obnoxious. The answer is defective, for it does not follow the complaint, and should be stricken from the record.—*St. Paul Pioneer*.

Editor HARPER'S WEEKLY, made a speech in which he scored the President of the United States in a terrible philippic. The speech was a great speech. The *Ledger* does not approve what Mr. Harvey said, but certainly made the strongest criticism of Mr. Roosevelt ever delivered. He used every charge, and named them admirably. He put an adverse color on innocent facts and made the harsh facts hot and bitter. It was one of the very strongest speeches made in ten years, if not the very strongest. Even those of us who do not agree with him must concede that the speech was a great one. It puts the anti-Roosevelt side of our politics as no other man has done it, and is so much superior to the speech of Senator Foraker that they cannot be compared. Mr. Harvey is not known in the South as an orator, but that one speech will draw him an audience in future, no matter what his subject.—*Birmingham Ledger*.

Colonel Harvey, the latest spokesman of this organized band for the protection and possession of the privilege of public plunder, has seen fit to change his label from "Breadwinner" to "Democrat." Having spent the last decade of his career as a Republican, slandering Bryan at the behest of Morgan and his allies, to his disgust he runs against a Roosevelt. And so he drops back to "Democracy" once more and makes diligently to defaming Roosevelt and Bryan both. He regrets, does Colonel Harvey, that a toothless people have placed their trust in Bryan and Roosevelt rather than in such distinguished guardians of popular rights as Pierpont Morgan and James A. Hill.

They're all of one leather, these photters, and God pity the party they capture—for the people will not.—*Des Moines World-Herald*.

Colonel Harvey, of HARPER'S, is "ferocious" both Roosevelt and Bryan. Harvey is the man who conceived the Woodrow Wilson

boom, and the strain of holding himself down to it in producing a series of brain storms only like the spark of a run-down motor.—*Minneapolis Journal*.

Colonel Harvey talks about "blatant probity yawning from the placidness of self-conceit." If William Dean Howells wrote that way he couldn't get anything printed in Colonel Harvey's publication.—*Denver Republican*.

Maybe Colonel Harvey said all those harsh things about the President merely to prove that he is not a mollycoddle.—*Denver Republican*.

THE SOUTH

A POLITICAL HERMON

Colonel George Harvey, of HARPER'S WEEKLY, does not grow weary in well-doing. Saturday night he preached a sermon at the Jefferson-Birthday dinner of the National Democratic Club in New York, his toast being "A Lesson from the Scriptures," and his sermon being based on a very effective text taken from the Book of Ecclesiastes. A great many of the Roosevelt worshippers will protest against the severity of his arraignment, but no thoughtful student of history will fail to appreciate the conditions pointed out by this fighting Vermont Democrat.

We have always felt that Roosevelt would track the end of his race before the close of his present administration. The people have been infatuated with him, misled by the exuberance of his spirit and the sanctimony with which he has disregarded the best traditions of our country. In the storm and stress of these perilous times it is well that some strong, true voice should be heard crying out against the unconstitutional and socialistic tendencies of the chief executive and the demagogues of the American people. Only a week or ten days ago many alarming stories were told of the nervous collapse by which the President was threatened; he has done so many queer things during his administration, so many things that would appear to indicate that he is at times unbalanced in his judgment. So far the people have been deceived by the blare of trumpets and the pomp of pageantry with which this latest successor of Washington has encompassed himself around about. It was so in the days of the French Revolution. It has ever been so in the history of the world that the unthinking multitude have been moved by sound and fury, but history shows that vaulting ambition has always overreached itself, but that in the end the people have recovered their poise. It will be so in this case. The order second thought of the plain people of the United States will restore the government at Washington to the ways of the founders.

We hope that every man of sound mind and good digestion will read the speech made by Colonel Harvey Saturday. It sounds like a trumpet above all the confusion of tongues, and strips the rags of authority from the President of the United States, who would make his "thus with the Lord" superior to the mandates of the law. We have had enough of "the raging of the revolutionary instinct of a lawless mind," enough of "the mendacious duplicity of these holding power," enough of "the empty millinery of flattery and sanctimonious theories of men enough of 'hollow sham and glaring hypocrisy.'" In the administration of our national affairs. In this hour of peril Colonel Harvey appeals to the conservative South, but the effectiveness of the appeal will depend upon the loyalty of the plain people in all parts of the country. We have no fear that there will be other strong voices raised against the downright iniquity of the new policies which have been preached by the mouth of the President, and that in the end this country will be safely delivered from the present drift to anarchy.—*Charlotte News and Courier*.

EARNING PAY

Lacking sound argument, the anti-Roosevelt group of financiers, apply named reactionaries, are resorting to their time-honored method of attempting in their attempt to lessen the public esteem in which the President is held. Always, when a President or other high official, or a Presidential candidate, declines to extend these worthy financiers favors which are not authorized by law, they turn to shame, mingled with moral protestations.

Colonel Mahabert Harvey—be careful his political title valiantly fighting for home and friends and fatherland in the service of the Governor's staff of New Jersey—is the official mouthpiece of the reactionaries. A few weeks ago he fired some sentimental snuff-puffs at the President, and Saturday night he let them another volley in the dinner of the National Democratic Club in the Waldorf-Astoria. The *Yves*, in another column, publishes his remarks in full: not because we agree with his sentiments, but because it is well to reveal to the public the manner in which the predatory corporations are waging against the President and his policies. It is hardly necessary to comment upon the *Jerry* staff officer's fulminations; they sound like Dr. Wily's description of a brainstorm of Thaw-cow fame. The invective the Colonel uses, his absolute unfairness, his garbling of the President's utterances, his misrepresentation of the President's acts, and his complete lack of sound argument, will lead all right-thinking readers to the right conclusion.

Colonel Harvey, however, may be simply earning his pay. He is much indebted to the class of financiers and corporation rangers in whose interest he defends the President. He was originally a reporter on the New York *World*, and he did his work well and was made chief editorial writer, which he also did well, because he is all ability. Waffon C. Whitney was famously impressed with the Colonel, and in the language of the profane, "put

him in right." The Colonel proved a valuable assistant to Mr. Whitney and his associates in various transactional deals, particularly in Havana. When the famous publishing firm of Harper & Brothers fell into financial straits, J. P. Morgan came to the rescue and reestablished the business on a sound basis, installing Colonel Harvey as manager and editor of HARPER'S WEEKLY.

It will be seen from his history that Colonel Harvey might have other reasons than that of his main judgment for smiling at the President.—Whitney News.

FOUNDING BASS

The foregoing is the mild and unobjectionable part of the criticism, and aptly describes Mr. Roosevelt as disingenuous and non-office-holding citizens we him. The speaker was perhaps unwittingly severe in his towering denunciation of those who imagine, act, and speak as though a President, however culpable, was immune from censure simply because he was the Chief Executive. But as yet no one has denied Colonel Harvey's basic assertion nor challenged his conclusions.

The New York Commercial approvingly publishes the speech, and mildly scolds the distinguished editor for using harsh terms to depict intolerable conditions. Its implication is censure Colonel Harvey for using whole pounds of rough-words where a few ounces of vitriol would have accomplished the same results.

The remarkable speech closed with these ringing words: "May not one final effort be made to join hands with the conservative South and blaze the way for the entrance of living truth and real sincerity to supplant the hollow show and glaring hypocrisy before which now in shame we bow our heads?"

And the sedate and conservative Commercial earnestly advises the leaders of the Democracy that if they would keep their eyes off the White House for sixty days, and forget the activities of its present occupants for a time, they might discover some most excellent Presidential timber within their own ranks.

The Commercial knows as well as the balance of the country that Mr. Roosevelt thrives upon excitement and diverting journals when the country gives evidence of settling down to peaceful pursuits and calm discussion. It knows he and his advisers seek for, create, and precipitate avalanches of excitement for the sole purpose of keeping himself in the public eye to the exclusion of real and vital questions, and it knows that sixty days of unbroken quietude would force him to blight his chances for further publicity, as the searchlight of calm and dispassionate examination of his achievements would put him in the class of those who exist only in sounding brass and tinkling cymbals.—Kansas City Post.

A REACTIONARY

This, of course, is intended as a pea picture of the President. It was written by a Northern and broad-minded man to do violence to the nomination of a Southern man for the Presidency. Can any one say that the portrait is not true to life? We cannot find any feature of it that is at variance with the actuality. Mr. Roosevelt has seen fit to call those who do not approve his programme "reactionaries."

The epithet is certainly unfortunate for him; for he is to-day the greatest reactionary in the republic. He is harking back to the old discarded theories of government. Protection was for several centuries the policy not only of Europe, but of England. Free trade was the child of the eighteenth and nineteenth century. Under protection the people of England were virtually ruined. Under free trade that country has held the commercial supremacy of the world. Free trade is, therefore, the modern, protective the antique, doctrine. Mr. Roosevelt stands pat on the antique system. The "reactionaries" do indeed want to get back to constitutional government, and brighten up again the shimmering ideals of the republic.

Mr. Roosevelt would go back further to the time of unconstitutional government. He would obliterate the line separating the various branches of the government. He would be the executive, the lawmaker, and the interpreter. He would read into the Constitution whatever he desires to find there but can't. He would make of Congress a farcical and impotent lawmaking body, and would leave a Suetonius to the Supreme Court. Such a programme as his—the most reactionary ever established in our history—is a menace not only to the liberties of the people, but to the welfare and progress of the nation. The President's doctrine may be summed up in a sentence: "I am President; I am Congress; I am the Supreme Court."

Will the people of a free country stand for it? We fancy not.—Memphis Commercial Appeal.

CONSTITUTIONAL INTERPRETATION

Colonel George Harvey, the versatile editor and manager of the Harper publications, is one of the strict constructionists, who hold that many of the proposed activities of the United States government are unconstitutional. Mr. Harvey gave voice to his opinion in a recent address in which he criticised bitterly President Roosevelt's policy, particularly the executive and extension of the power of the Interstate Commerce Commission. It is undoubtedly true that the Federal government is today doing many things that the founders of the republic did not intend that it should do. That is because the founders of the republic were only human, and could foresee a hundred of the problems that have been developed through the enormous growth of national industry and wealth.

The Constitution of the United States has been and is a great and glorious instrument. But if rigidly interpreted it would have prohibited internal improvements of any kind; it would have invalidated the original Interstate Commerce Commission

and all subsequent legislation increasing its powers and duties. The Constitution gives no direct warrant for the expenditure of national money on the Panama Canal, for the Oliver dunes, for great trade exhibitions like the Chicago Fair, for fine public buildings, or for a hundred other different things that the government does appropriate for. Many new ideas have been read into the Constitution, in accordance with the beliefs and tendencies of the time, and many more will get to be read into it. The Constitution is not the master of the American people. It is their servant. And those things which the majority of the American people wish to have done will be done, regardless of strict interpretations of words written over a century ago by men who, however wise they were at the time, could not foresee the difficulties that would arise generations after them.—Whitney Intelligence.

VAIN RHETORIC

Why is Colonel Harvey, of two magazines, wandering about discharging, from such points of vantage as annual banquets, rhetoric at the President? The rhetoric is very commendable. Possibly it would pass muster—even with some faint expression of approval—with any of Colonel Harvey's own editors. We cannot perceive, however, that it can accomplish anything. Vague general sensations of rashness, vanity, egotism, and ambition cannot inspire the man who shows results from his work, however awkward or uncommensurate his methods may be. The President did intervene to end the blood and disaster war between Japan and Russia, and was an active factor in restoring peace. Unquestionably that act lifted this republic high in the honor and respect of the powers of the earth. He was the chief factor in bringing about the rate-regulation bill and forcing reform in the great packing industry. Whatever Colonel Harvey and other gentlemen of similar methods, precise rules, and general subservience to tradition and precedent may think, it is a fact that the President has the respect of the nations and the enthusiastic confidence of the people of his own country. Therefore, his Constitution, are discussed and put before the public in simple words, we can see force and meaning. Bombarding a man with high-sounding sentences and general accusations improves us as a waste of the speaker's breath and of the time of his hearers and as fatiguing the attention of the general public.—Richmond Leader.

QUITE AS DANGEROUS

A notable incident of the past week, in political annals, was the speech of Colonel George Harvey, editor of HARPER'S WEEKLY, delivered in New York city, at the banquet in honor of Jefferson's birthday by the National Democratic Club. Harvey, a well-known journalist took for his theme the biggest topic of current discussion; he denounced on President Roosevelt, and said some things that were strikingly true. The speech created a sensation, because no man of equal responsibility, on an important occasion, had ever before been so merciless in his criticism of the President of the United States, and sought, at the same time, to sustain his attack by logical argument, citing the record to sustain his contentions.

The story does not endorse this arrangement in fact. It is too big a thing for a dinner speaker. Mr. Harvey had been led into serious error by his inability to comprehend the kind of government that he is called upon to administer. He cannot understand the limitations of either the Federal authority or the Executive power. He has a contempt for the Constitution, and imagines himself a lawless president for 80,000,000 people who need his constant care and guidance. We do not agree with Colonel Harvey that the President is a Machiavelli of sinister aim and purpose; but we do agree that his errors are quite as dangerous as if inspired by malignant intent.

It is as true that Roosevelt, as a politician is as strong with the people as ever he was; that remains to be seen. The people have long supported the fallacies of the protective tariff because they believed it a friend. We shall see if they trust a friend of the tariff who is convinced the tariff is a robber and a cheat.—After.

Saturday night, Mr. Harvey, of the Harper-Morgan publishing house, addressed a Jefferson dinner in praise of Morgan and Hill, and in disparagement of President Roosevelt. Just what opinion Mr. Harvey might have of the living or the dead is a little inconsequential, but as a study in style his oratory may have some interest for possible imitators.

We supposed that "oratory" of this kind had gone out of fashion, or had been relegated to moot courts. The Foraker method is not so much, but it has not been realized, and with pure fiction. Mr. Harvey has not been told the President is above criticism; he has not been informed with a blast of trumpets nor by any other signals that "at last" we have an honest President; he has not been told "that the red justice the man"; he is not a politician, but a man who has been misled by a man who is engaged in a little advertising adventure which will not "pan out."

That the public may understand something of the spirit of the conspiracy or organized opposition or predatory attitude formed to control the next Presidential election we give a full report of the speech of Mr. Harvey, which was contained in the New York newspapers last Sunday.—Louisville Post.

Editor Harvey, of HARPER'S WEEKLY, who is possessed of a particularly robust race at the myriads and doings of Theodore Roosevelt, seldom lets an occasion slip to make a text of Secretary

Root's statement that if there were to be centralization it would come from the failure of the States properly to exercise their own powers. This statement of a tendency has been assiduously heralded as a threat and as a statement of administration policy. Every time Editor Harvey thinks of it he sees red. The fact of the matter is, however, that just at present the tendency toward the enlargement of the powers of the central government is marked and the causes thereof are diverse. Whether the tendency is only a temporary movement, or a permanent one, or whether it will develop into a permanent constitutional fact, it is much too soon to say. A great deal depends on the position which the courts take on questions now being brought before them.—*St. Paul Pioneer Press*.

These publications reflect the views of Mr. Harvey, and these are at the same time the views of the interests that were kind to him. When we read in them that Mr. Roosevelt is a menace to the country, and when we see that Mr. Harvey has inaugurated an oratorical campaign against Mr. Roosevelt, we may know that two bitter conservative and reputable publications are not actuated by high and disinterested motives in their efforts, and the personal efforts of their "editor," to rescue the country from the thrall of Rooseveltism. Mr. Harvey and the publications which he "edits" are merely the vents and vehicles of the interests that have started a systematic campaign of vituperation upon the President for the things he has done unto them; and their utterances should be taken only at the net weight.—*St. Joseph (Missouri) News*.

This notice to exhibit the new baroque in his desperate attempts to reach notoriety by surpassing in his mad and vulgarly historic and Odell, and Hayburn and Tillman, while it illustrates further the inflated animosity prevailing among the circles, political and financial, that Harvey assumes to represent.

When a man is immune from disease it means that disease may attack him, but he is not injured by the attack. If the President is immune by experience or by prevention. Certainly the President is immune to such attacks as Harvey can make. The men injured by such attacks as those of Hayburn and Harvey are the men for whom such attacks assume to speak.

But think of the future of literary and political publications edited by such a master of style as Mr. Harvey.—*Louisville Post*.

What Colonel Harvey thinks about the President and Mr. Bryan is not of great importance. No great number of people sat up late Saturday night to hear what Colonel Harvey said. Some ten or twelve million American voters, who believe in Theodore Roosevelt and William J. Bryan, never heard of Colonel Harvey. It is important, however, to note the evidences of a systematized and persistent campaign of vilification that is being waged against the President. The two Harvey effusions, the Harrison letter, the effort to discredit his action in regard to the Brownsville rioters, were not mere accidents. They show that a very large and powerful element is working secretly but industriously to discredit

Theodore Roosevelt and his policies. They hate him for what he has done, and they fear him for what they think he may do.—*Reading Intelligence*.

Colonel Harvey's arraignment of the governing element in both parties, and particularly the Republican party, of late years, is far more forceful, because more reasonable, than his severe attack upon its official head. Reading between the lines, we are impelled to the conclusion that the vigorous philippic of the Colonel is more in the interests of the repulsive oligarchy, rather than of the people.

But *Register* readers will find the address worth perusing, then each can form his own judgment.—*Whispering Register*.

If the coarse attacks of Harvey are a sample of the plan of campaign of the corporations against all who dare endeavor to bring them to account, the gods will indeed destroy those whom they have made mad, for nothing short of madness can account for such folly. Nothing can do more to arouse the people to Mr. Roosevelt's support. Nothing can do more to crystallize the extensive sentiment regardless of party lines in favor of retaining him in office for another term.—*Lexington Herald*.

If the conspiracy of Colonel Harvey and the Standard Oil people to capture both Republican and Democratic parties in the interest of conservation, which has been discovered by the busy Washington correspondents, materializes, and if both Bryan and a Roosevelt Republicanism are defeated for the nominations, this should furnish a rare chance for that well-known conservative, Eugene V. Debs, to slip in.—*New Orleans News*.

Colonel George Harvey, the editor of *HARPER'S WEEKLY*, continues among the leaders of the Roosevelt bullers. The trouble with those who are opposing Mr. Roosevelt is that the more they attack him, the more popular he becomes, as was shown by the New York Times's symposium of opinion from Republican editors. Somehow the people seem to like the things Colonel Harvey condemns.—*Chattanooga (Tennessee) Times*.

All this sort of thing may be lots of fun for Colonel Harvey, but it is in no means death to Mr. Roosevelt. Such attacks as this are merely contradictory evidence of the reality of the thing known as Roosevelt luck.—*Baltimore News*.

Colonel Harvey should thank his stars that the Harrison incident distracted the President's attention just as he was getting ready to reply to the Harvey accusations.—*Albion Journal*.

"Colonel Harvey has nailed President Roosevelt Bonhamster Furies." But he will hardly disclose the President's secrets and meet him face to face.—*Richmond Leader*.

If Colonel George Harvey reaches the portal of 1908 without being called a liar, it is no more prophesying for us.—*Boston Post*.

Letters from Readers

CHICAGO, April 14, 1907.

To the Editor of *Harper's Weekly*:

Sir,—Allow me, a plain American citizen, to tender to you my sincere thanks for your speech at the dinner of the National Democratic Club last evening.

Under the foul influences you specified, as as a people are fast degenerating to the status of a nation of yellow cows. Everything you said concerning our illimitable cowardice in the presence of power is true, and to your question, "What does it mean?" there can be but one answer—revolution! That the Republic is in mortal danger no thinking man doubts.

Then comes the other question, "What are you going to do about it?" And it is not so much that we are wanting who are afraid of the press, as you suggest, as that the press is apparently hopelessly in the hands of the powers which threaten us. The Republican party, and its able assistants—the alleged Democratic party—are as one, for the purpose only of preserving the peace, that we may be ruled according to the law (1). And such laws, laws known to be unconstitutional at the time of their passage—laws declared in the courts to be unconstitutional—yet kept in full force, for years after, through administrations of both parties, finally displaced by other unconstitutional laws to be administered at triple cost of the first. Traits, essentially the abhorrence of both the political parties, sustained by both with special laws, which hand to those secret subsidies, by millions of dollars, of the people's money. Proven murders by poisoning of thousands of our soldiers and sailors, hushed up of fixed courts of investigation, and the murders continued—the blood of the murdered crying in vain for redress even yet! To vill the footless witness the policyholders robbed of millions to silence the ready "yawn" of the alleged opposition. Witness the racy transfer of millions of voters to the subsiding of the McKinley administration. Watch the conspirators looking the horrors in the secret archives of the assassin's doctor's house, where they may never see them. Then note the frantic struggle to keep back the silver hand of a Hughes, shamefully successful, by the weakening of the infamous Armstrong, aided by the scared cries of Morton—"You still raise hell!"

Well, Colonel, that is precisely what is wanted. If we can raise it we might control it; if we wait too long it will come as an earthquake's power and destroy us. Now, sir, how say you—shall we content ourselves with mere denunciation of the crimes and criminals—denunciations which, however powerfully expressed, serve mainly to alarm or arouse their efforts to superior methods of defense, or improved methods of concealment of the vicious purposes? We all know "what it all means." Something is to be done. The monster evil is too strongly entrenched to be needed to answer; if it is to be destroyed in detail, we must get rid of "make-believers" of every degree—Presidents or police-men. We are mortally tired of old New's dogmatic policies, which consisted of "stunts" and mountebank fiddling when Rome was burning. We don't want to be Wilhelmized by any of the "medieval business of Germany," nor Edwardized by any of the illustrations (1) Prekiffles of the stepmother country.

"Bath Lexington no more, get it? Forget us, God, when we forget."

I am, sir,
W. CLARK MARSHALL.

PARAIST, NEW JERSEY, April 17, 1907.

To the Editor of *Harper's Weekly*:

Sir,—I see by the papers that your speech at the other night has put you on the White House black-list. It was to be expected and you are to be congratulated. As a minister I cannot help being in loss with a man who is not afraid to speak the necessary as well as the truthful word. Your condemnation of the present monarch-President fell a long way within the lines of fact. And even those who most loudly dispute you deep down in their hearts feel as you do. There has been so much talk of Roosevelt's moral bravery, of his sincerity, of the purity and nobility of his ideals—that it seems one in the language of Scripture, ready "to spue them out of the mouth." I have tried to keep in touch with our public life, and for one I fail to see one sign of moral bravery, of sincerity, of purity of ideals in Roosevelt beyond what is possessed by the average political boss of to-day.

New York, April 17, 1907.

No doubt he believes in himself—and he also believes that whatever he does to prolong his popularity and secure his power is right. He is a civil-service reformer only to the extent that it pleases him. He is a thoroughgoing opportunist.

Harmful though his demagogic tactics are, he is most to be condemned for introducing into our political life some amazing anti-democratic tendencies. He governs not as the representative of a great party—but solely as an individual. The appointed officers of the government must be thoroughgoing Rooseveltians; they must honor and praise and show what our ruler would do. Am we to have an Index Expurgatus and a newspaper censor thus effectively keep from the people all views that oppose Theodore I?

Perhaps he is honest in saying he will not be a candidate in 1908. He it so. But it is astonishingly plain how resolute he is to continue to rule. He has made it clear that the Presidency is not within the choice of the people, but is to be handed down by him in his personally chosen heir. Is it possible that the people of America are so fooled by this unceasing moribund claptrap that they are willing to allow the Presidential chair to become a throne with the house of Roosevelt as the reigning house?

I am glad you spoke as the papers said you spoke. Let the good word go on.

I am, sir,

April 12, 1907.

To the Editor of Harper's Weekly:

Sir.—I cannot forbear congratulating you upon the courage you showed in the address which you delivered before the National Democratic Club on Saturday night.

I presume the newspapers that report it in full; if you have it in full printed form, will it be asking too much of you to supply me with a few copies of it? I am thinking about going to the expense of having it printed and widely circulated on my own account. I am a Southerner, a Democrat, and a "State-Rights" man by tradition, inheritance, and education. I voted for McKinley both times, as against Bryan; but I do most earnestly hope that the Democrats now will have sufficient coherency to get together and nominate a man who will appeal to the conservatives of the country. I believe such a man could beat almost any candidate the Republicans could put up, and am very sure he could beat Roosevelt if he (as we all fear) is planning to have the nomination "thrust upon him."

In my opinion, the most available man for the leadership of the Democratic party in the present situation is David R. Francis, of Missouri. I have watched Governor Francis' career for a long time. He was, I think, twice Governor of the State of Missouri and once Mayor of St. Louis before he was forty-five; or it may be that he was twice Mayor of St. Louis and once Governor of the State of Missouri. At all events, he has held either one office or the other twice. He had the courage, in 1896, to bolt Bryan's "free silver" heresy, and for that reason, at that time, was regarded as a little outside the pale of Democracy. He was, as you may recall, made Secretary of the Interior by Cleveland during the latter part of Cleveland's last term—more as a compliment to his moral courage as a Democrat than anything else. He is a successful business man, and, while not crissip specially for money, has made a competency; in fact, I believe, a considerable fortune. During the past two or three years he has devoted his entire time and energies to the exploitation and administration of the St. Louis World's Fair, the success of which is largely attributed to his efforts.

I am not in politics myself, or in the way of getting his name before the public, except by such indication as this letter implies. It seems to me inevitable, in view of the position you are taking, that you will be shortly well within the councils of the Democratic party, and it is for this reason that I take the liberty of drawing your attention to Governor Francis's name.

I am, sir,

THE OYSTERLAND SERVICE, April 8, 1907.

To the Editor of Harper's Weekly:

Sir.—There is no fool like an old fool. Can't you see the sign of the times?

You endeavor to put upon the President the part of an assassin of industry and public debaucher, and centralization of power. Down in your heart you know the President is carrying out the will of the majority of the people.

Because he is calling the show down against the vested interests you try to represent, because it has become dangerous through him to graft and rob, and because he has made it dangerous for big public Senators and Congressmen to keep up their vote bartering.

Because rotten judges whom the vested interests openly hang their run buy and sell are on the anxious seat.

You show your ignorance of the trend of the times. Who are you to judge, by what right?

Your journals must be controlled by the Wall Street sharks. I have lost thousands of the price of the month, and the earth of the power of these pests I would give up all I have. You must be a malicious and unmitigated old scoundrel to publish what you know to be untruths.

I am, sir,

J. B. GILMORE.

To the Editor of Harper's Weekly:

Sir.—I have no doubt you have by this time been completely answered under by congratulatory telegrams and letters on that remarkable speech you delivered last Saturday night. Much to my regret, I cannot claim intimate friendship with you, but I certainly am entitled to be numbered with the great army of American citizens who are sympathizing with the sentiments you expressed on the occasion above referred to, even though none of us has been bold and brave enough to express those sentiments so publicly.

It is truly a wonderful speech. I never saw a better putting together of well-chosen words with powerful meaning. How are you going to preserve the republic? Is it to be put in a thing like pamphlet form, or otherwise? I am so anxious to have a complete copy of the text. The New York Sun's report was seemingly full, but no doubt something was omitted, and I do not want to miss a word of it.

With warm congratulations on the brilliancy and usefulness of the speech,

I am, sir,

M. J. VORMEYER.

STRAUSE, NEW YORK, April 17, 1907.

To the Editor of Harper's Weekly:

Sir.—I have not the honor of personal acquaintance with you, but I will again take the liberty of expressing my great appreciation of the position you are taking with regard to the present dangerous tendencies in the country. I believe that you have laid the whole country under a debt of profound gratitude for your mighty address at the Waldorf-Astoria on the occasion of the Jefferson dinner. I never have read anything so full more breathless attention than I read this address. It will be strange if it does not penetrate the thick, black curtain that is over the eye of the public at this time.

The elect were never more thoroughly deceived than they are by President Roosevelt. Every citizen of the country, does not seem able to analyze these reports and give them their just weight only. To my thinking there is nothing significant in the reports of these papers except the political and demagogic servility which is evidenced.

Again permit me to thank you for your great address.

I am, sir,

JAMES R. DAY.

MILWAUKEE, WISCONSIN, April 15, 1907.

To the Editor of Harper's Weekly:

Sir.—Permit me to say that I read with great interest and delight your speech delivered on April 13, at a dinner given by the National Democratic Club in the Waldorf-Astoria. I think that every man, save those without property, principle, or sense, will thank you from the bottom of his heart for the courage you showed in painting the picture as it really is.

Your remarks on "liabilities and debts" was so pertinent that it does not seem to me that any one could help but see the ridiculousness of a comparison between those who have really done something for the country's good and those who are continually setting themselves up as judges of everything under the sun.

As a citizen of this country, I trust that you will continue your endeavors to stop what every thinking and honest man must see is, or will be, the ruin of the country's prosperity and commercial prestige. Please pardon me for intruding upon your time, but I could not resist telling you how much I admired your courage and stand.

I am, sir,

ARTHUR MCGROCH.

ST. PAUL, MINNESOTA, April 15, 1907.

To the Editor of Harper's Weekly:

Sir.—Please accept thanks of subscriber, as probably one of many thousands, for giving conspicuous expression to honest, intelligent, and am sorry to add, little doubt sound opinion concerning one who imagines that the office of President of the United States is an affair wherein to exploit an affected personality.

In a few generations there will be an American born people in the United States, and more homogeneous and homeborn and home-loving. In those times the people will use the demagogue for the only justifiable purpose—an example.

Washington did not seek popularity with the malcontent in Pennsylvania; nor did Lincoln in later times. "Good-betterism" is one of the throwaway arts of the demagogue. Why did not Theodore Roosevelt order prosecutions in Pennsylvania against mine owners, and give the miners also to understand that he would run them into their shambles with United States bayonets if called upon? What's the matter with Governor Hughes?

I am, sir,

CHARLES O. HENWATER.

ORANDELL, NEW JERSEY, April 11, 1907.

To the Editor of Harper's Weekly:

Sir.—I beg to congratulate you on your *excellent* and *most* speech at the Democratic Club. The country needs leaders more; but we need more: we need men who are able to interpret the modern "New, severe, brief, unadorned" can enlighten the masses and organize them on genuine American principles. But such men we have not, or if we have any cognizant of the mission of the Amer-

lean people they are not to be found. Hence, in accordance with the eternal law of cause and effect, this country is helplessly drifting back to where it started from: the history of anarchy is about repeating itself. This is my answer to your question, "How it happened that a whole people has been brought under the yoke of tacit submission, with no voice raised to protest, etc." I am, sir,

F. E. BLUNCKSTONE.

PETERSBURG, VIRGINIA, April 13, 1907.

To the Editor of Harper's Weekly:

Sir,—Last evening I read with much interest your very striking article upon Jackson and Roosevelt, published in the April 5, 1907, number of *The North American Review*. This article is no strong and states the case so clearly that I trust it will reach a large number of readers in this country.

In order that I may enable more readers to see it, I will be obliged if you will have sent to me a dozen copies of the address if it is printed in pamphlet form; otherwise a dozen copies of the issue of *The North American Review* of April 5, 1907, containing the article. I, of course, will pay for these pamphlets or copies if you will kindly advise me of the price.

I am, sir,

ALEXANDER HAMILTON.

MACON, GEORGIA, April 13, 1907.

To the Editor of Harper's Weekly:

Sir,—I beg leave to intrude upon you a moment to thank you for the wisdom you gave to the people to think upon in your speech at the Jefferson-birthday dinner at the World Auditorium on the night of the 13th instant. I hope other patriots will take courage from your manly utterance and come out into the open against Rooseveltian anarchy, and in favor of free republican government, as established by the fathers, that we may continue to dwell in a land of law, of liberty, and peace, and not of anarchy, oppression, and strife.

I am, sir,

JOHN P. ROSS.

ROSLIN, MASSACHUSETTS, April 13, 1907.

To the Editor of Harper's Weekly:

Sir,—Allow me to congratulate you and the country upon your courageous, vivid, and truthful portrayal of the character of our present rulers. Your opinion, so ably expressed, is that of many sober thinking men, irrespective of party allegiance. It would be of interest if one could have watched the features of the daring leader as he read and reread your masterly speech given at the Jefferson-birthday dinner. May the words of wisdom, patriotism, and manhood you have again bring forth results worthy of your sense and effort.

I am, sir,

HENRY I. DOER.

NEWARK N J April 25, 1907.

To the Editor of Harper's Weekly:

Sir,—I read in the N Y Papers that Geo Harvey was snub by a Club, they say he has lost his Blue Blood, that is the reason he makes such a fool of himself he thought he was doing wonders when he was trying to abuse the President instead that the President is more popular than ever, and Geo Harvey is very unpopular, because he is against all reform and in favor of the dishonest Gamblers and the Trust that oppress the Public he has made a great mistake to up hold dishonest people it will not work the People will not stand it.

I am, sir,

NEW YORK, April 15, 1907.

To the Editor of Harper's Weekly:

Sir,—Only a line or two to tell you how heartily I approve of your address reported to yesterday's newspapers reflecting on our present President.

I recall with a somewhat melancholy satisfaction that about six months after Mr. Roosevelt had been elected, after the death of Mr. McKinley, I wrote in a friend's and student of and well acquainted with our political conditions, these words: "I think Roosevelt is a dangerous man." I wish I had been mistaken.

I am, sir,

JAMES R. STEERS.

NEW YORK, April 14, 1907.

To the Editor of Harper's Weekly:

Sir,—I have read with intense interest your masterly address of last night, and want to suggest as a Democratic Statesman David E. Francis, of St. Louis, who is wisely everything to recommend him that condemns the two talking-machine leaders of the two parties of to-day. Francis is sound in business. Has an enviable record: has been Major, Governor, cabinet officer. Is Southern, Western, Central, geographically. As an organizer and manager, the World's Fair proved him a winner. I have no interest but national ones to serve by the suggestion.

I am, sir,

W. D. H. WASHINGTON.

BRATTLEBORO, VERMONT, April 25, 1907.

To the Editor of Harper's Weekly:

Sir,—We have submitted and paid for your WEEKLY. If God will forgive me I'll order it again. We, as Vermonters, are

all, in a way, proud of Colonel George Harvey, on account of his ability and for the reason that he is a native of Vermont, but when a man who has the ability that he evidently has allows himself to "run riot" in public and make such a consummate ass of himself as he recently did, I have no further use for him, whether he was born in Vermont or Heaven.

I am, sir,

A Loyal VERMONT.

NEW YORK, April 15, 1907.

To the Editor of Harper's Weekly:

Sir,—Permit me to congratulate you most heartily upon the speech you made last Saturday. You expressed in a most apt manner what I and many of my friends have thought and talked for many months, and these friends rejoice with me that some one has had the ability and courage to come forward and expose the hypocrisy of Roosevelt and the foresight to recognize where the present indifference to his lawlessness and cloak may lead us.

I am, sir,

GEORGE F. PHILIPS.

NEW YORK, April 15, 1907.

To the Editor of Harper's Weekly:

Sir,—Heartily thanks for your outspoken criticism of Roosevelt last evening. I have long contended that the only way for the Democratic party to progress is to criticize and oppose, and yet the Democratic leaders are among the most cowardly in publicly praising the man they secretly despise and distrust—because he is popular. Nothing is going to check the President but criticism like yours in increasing volume.

I am, sir,

G. O. V.

NEW YORK, April 14, 1907.

To the Editor of Harper's Weekly:

Sir,—Whether you recall me sufficiently well to pardon this note or not matters little, for I must add my acknowledgments to the many I know will receive in response to your fearless and truthful arraignment of our Executive Chancellor who, from the national dignity, proclaims the morn and thinks that thereby he has caused the sun to rise. His efforts awaken admiring cookies in the barony, but only disgust in the home-land.

I am, sir,

JOHN KING DEER.

NEW YORK, April 14, 1907.

To the Editor of Harper's Weekly:

Sir,—I read your speech printed in the *Herald* last Sunday, and I desire to convey to you my approval. I am a Republican, but I think this country and the party are pretty hard up when they have to permit a man who has had two terms in the White House to even suggest who his successor shall be.

I am, sir,

STEPHEN FISKE.

NEW YORK, April 15, 1907.

To the Editor of Harper's Weekly:

Sir,—I read your speech printed in the *Herald* last Sunday, and I desire to convey to you my approval.

I am a Republican, but I think this country and the party are pretty hard up when they have to permit a man who has had two terms in the White House to even suggest who his successor shall be.

I am, sir,

D. W. STEELE, JR.

NEW YORK, April 14, 1907.

To the Editor of Harper's Weekly:

Sir,—Simply as a general proposition, may I "hustle in" and tell you how fine I think your speech of last night was?

It was full of cold, unvarnished truths, most aptly at this time. If there were more people who had the courage to say what they really think about the present trend of affairs in this country it would do a lot of good.

I am, sir,

R. H. M.

To the Editor of Harper's Weekly:

Sir,—Bravo for your courage in your speech and your cleverness to leave out Bryan. I was a very warm admirer of Roosevelt before people and admiration seemed to have destroyed his clear judgment, and before his unpopularity, made way of extinguishing one evil through creating one which may prove much worse, made me doubt if he had any idea of the foundations of business, or simply cured for the socialist vote only.

I am, sir,

A REPUBLICAN.

NEW YORK, April 15, 1907.

To the Editor of Harper's Weekly:

Sir,—Permit me to make tardy expression of recognition of your courageous and effective speech at the Jefferson dinner last week. A friend in writing me on the subject says: "His [your] certainly has laid the country under an obligation of gratitude." I concur in the above.

I am, sir,

J. A. D.

NEW YORK, April 16, 1907.

To the Editor of Harper's Weekly:

Sir,—I have read with much interest the speech you made at the dinner of the National Democratic Club on Saturday night. I wish to express to you my thanks for the gratification I experienced in reading the speech. It expressed my views regarding President Roosevelt and his so-called policies exactly.

I am, sir,

PERCY L. KLOGE.

NEW YORK, April 15, 1907.

To the Editor of Harper's Weekly:

Sir,—Accept my congratulations upon the very courageous speech which you made the other night at the dinner of the Democratic Club on Jefferson. I hope you receive my thanks for the pleasure which it gave me. It is gratifying to know that somebody can speak out at the right time and place.

I am, sir,

GEORGE F. PARKER.

STUMPT, NEW JERSEY.

To the Editor of Harper's Weekly:

Sir,—I want to congratulate you upon the compliments they are paying you in Washington as one of the heads of the "Rich Man's Conspiracy."

Your speech at the dinner was devilish good—good text—happy thought and vigorously and effectively presented.

I am, sir,

G. W. HOMER.

NEWARK, NEW JERSEY, April 15, 1907.

To the Editor of Harper's Weekly:

Sir,—I want to congratulate you on your great speech. It certainly was masterly and attracted the attention of the whole country to the fact that Mr. Roosevelt is not yet A.K.A.

I am, sir,

JAMES SMITH, JR.

EVANSTON, ILLINOIS, April 14, 1907.

To the Editor of Harper's Weekly:

Sir,—That speech of yours last night was certainly a corker! I am occupying the calm of this beautiful Sabbath morning in wondering if you have yet been called a liar, and if so what kind.

I am, sir,

WILBUR NEMET.

NEW YORK, April 14, 1907.

To the Editor of Harper's Weekly:

Sir,—Permit me to congratulate you on your perspicacity, perspicacity, and courage.

I am, sir,

FRANK D. PATRY.

CHICAGO, ILLINOIS, April 15, 1907.

To the Editor of Harper's Weekly:

Sir,—I read it in the paper. Thank you.

I am, sir,

W. S. CROSBY.

Conspiracy

An Illustration of the Direful Fate of a Critic of Official Conduct

THE BIG STICK

Special to the "Brooklyn Eagle."

WASHINGTON, April 15.—That the White House conspiracy story has not been dropped by the President was made apparent to-day when the official announcement was made that the vitriolic attack on the President Saturday night by Colonel George Harvey at the Jefferson banquet of the National Democratic Club was merely a part of the general scheme of the corrupt expedients to destroy the power and influence of President Roosevelt. Secretary Loeb said that Harvey was recognized by everybody as the mouthpiece of J. Pierpont Morgan, and that Harvey's words must be taken as representing the views and opinions of the banker.

From now on any public man connected in any way with corporations who has the temerity to criticize the President in a public speech may expect a crack from the big stick. It is plain that this will be the reply of the White House to attacks on the President. It was thought that the ridicule that was heaped upon the \$5,000,000 conspiracy tale had effectually killed it. But it seems that the general idea intended to be conveyed to the public by it is still to be exploited. The first intimation of this was given on Friday last, when it was stated at the White House that the interview given out that day by H. B. Rogers, containing a mild criticism of the President, was a part of the plot to break down the latter and elect a reactionary. To-day it is announced that Colonel Harvey is simply another representative of the conspirators who has fallen into line and "sung his little song." It is believed that this is a splendid way of intimidating the President's critics and silencing adverse talk.

THE HIDDEN MOTIVE

Special to the "New York Times."

WASHINGTON, April 15.—Another sensational chapter in the revelations of the "rich men's conspiracy" was unfolded at the White House to-day, and another name added to the fatal list. This time Colonel George Harvey, editor of HARPER'S WEEKLY and THE NORTH AMERICAN REVIEW, is the guilty man. The cause of his denunciation is the speech he delivered at the Jefferson dinner in New York on Saturday night, in which he preached a sermon against one-man power and severely criticized President Roosevelt.

In due form and with all proper solemnity this speech was pointed out at the White House this morning as evidence that Colonel Harvey had joined the conspiracy to prevent the nomination of a man of the Roosevelt type for the Presidency next year. It required a little ingenuity to make the connection, but ingenuity is politics is not lacking at the White House, where, according to official declaration, they "are not soveries."

In this case Colonel Harvey was connected with the rich conspirators through his relations with J. Pierpont Morgan. It was not very long ago that Mr. Morgan was regarded at the Executive Mansion with feelings which would not have justified the calling of any man a conspirator just for being associated with him. But since the revelations about Harriman, who once was and now is far from being a friend, to be consulted about measures to Congress and other important governmental affairs, there has developed a decided tendency to examine with great care all the sayings and doings of any man who may have ever crossed the path of one of those Wall Street millionaires.

In somewhat indefinite manner it was recalled to-day that during the peace negotiations at Portsmouth, in the fall of 1905, Colonel Harvey issued invitations to M. Witte and some other members of the Russian delegation for a dinner. M. Witte did not accept this invitation, as the story of today goes, and the reason intimated was that on making investigation as to who Colonel Harvey was, he found out that his would-be host was in fact "the representative and mouthpiece" of J. Pierpont Morgan. From what was said the inference was drawn that it was through officials of this government that M. Witte derived this information on which he declined the honor of dining with Colonel Harvey. At any rate, ever since that invitation was refused Colonel Harvey has held the administration, and particularly Mr. Roosevelt, responsible for his discomfiture, and has acted accordingly. That, on the solemn authority for this whole story, is the real reason for the bitter shafts which Colonel Harvey has been launching at the President recently.

It is becoming more and more apparent that so opportunely it is to be lost to arraign the rich men of the Republican party as conspirators against the continuation of the Roosevelt policies. It was pointed out as soon as the remarkable disclosures were first made at the White House that they would have the effect of lining up the sheep and the goats. Now it appears that but there should be any failure to effect that lining up, such men who delivers himself of anything unfriendly to the Roosevelt regime is to be branded at once as a conspirator. The interview with H. B. Rogers, which was printed the other day, principally revived this sort of attention at the White House, and Colonel Harvey's utterance is not allowed to get by the first business morning after its delivery without being duly catalogued.

IMPERTINENT IMPERSONATIONS

From the New York "Sun."

It is to the everlasting credit and glory of our esteemed contemporary the Times that by diligent investigation at Washington it should have uncovered the miserable truth about Colonel George Harvey. In a vague sort of way it appears that the White House itself is the source of the Times's information; a circumstance which certainly does not diminish the interest of the facts now revealed.

The substance of the disclosure—if we may be permitted to hold down news matter so unsensational—is that Colonel George Harvey is not merely the gallant soldier, the patriotic philosopher, the accomplished Episcopalian, the benevolent journalist, the amiable butterfly of fashion that he has seemed to the superficial observer to be. Loeb or somebody else has now unmasked him as one of the most deeply and darkly implicated initiators of the Rich Men's or Five Million Dollar Conspiracy; and, furthermore, he is shown to have joined the gang of plutocratic villains not by reason of honesty, if misdeeds and duplicity, conviction, but from one of the most paltry of motives, resentment of a social slight.

That and not any genuine solicitude for the preservation of the institutions which the fathers and founders bequeathed to us, is "the real reason for the bitter shafts which Colonel Harvey has been launching at the President lately."

Bad enough, but the files of the New York newspapers enable us to supplement the Times's narrative with even more damaging facts.

The dinner having been ordered and perhaps paid for in advance, and Mr. J. Pierpont Morgan having signified his intention to be present to meet Mr. Witte, and Mr. Witte having declined, at the unceremonious invitation of Mr. Roosevelt's administration, the honor of dining with Colonel Harvey, how was that representative and mouthpiece of plutocracy to cover his discomfiture? What did Colonel Harvey do? He did what any thoroughly bold and base son of iniquity would do under the circumstances. He hired somebody to impersonate Witte, and impulsively placed the fraudulent Russian statesman at the banquet table between himself and Mr. J. P. Morgan. He exhumed the administration's contemptible shrewdness by dressing up another dummy guest to resemble the honorable Vilho Rosen, Secretary of State, and produced him before the assembled guests and seated him next to himself at the table. To omit no detail of deception, he likewise introduced a simulated Baron Rosen.

Will it be believed, on the testimony of the New York newspapers of September 7, 1905, that Colonel George Harvey had the assurance at that wickedly conceived dinner not only to cause the fictitious Mr. Root to get up and make a speech indicative of the administration's hearty participation in the spirit of the occasion, but also to pull the wires behind the puppet Witte as to make the fabricated guest of honor seem to utter in pretty good French a toast to "the illustrious President Theodore Roosevelt?"

A DIFFERENCE IN RECOLLECTION

From the *Charlotte "News and Courier"*

There appears to be some difference in the recollection of some persons as to the facts in the case—it is so much proper to put it in this way than to say that anybody is a liar—said, in spite of the evident truth that the New York Sun belongs to the "rich men's conspiracy." It also shines for all, and suggests a possible explanation, which ought to be satisfactory to Loeb and everybody at the White House. Harvey did give a dinner and did ask Witte to be present. Witte refused, according to the White House story, but Harvey has an inventive turn of mind, as all Vermont Yankees, and not to be outdone by the President, rigged up a man to look like Witte and went on with the dinner. He also presented some one to look like Root and another man to look like Baron Rosen, of the Russian embassy, and gave the dinner in spite of the President's warning to Witte. The make-believe Witte toasted "the illustrious President Theodore Roosevelt," and the sentiment was received with loud and long-continued applause, and the pleasure, and the satisfaction, and the entire sympathy of the administration with the happy occasion, and the make-believe Baron Rosen sat through all the courses with as little concern as if he were in his own country, prepared at almost any moment to be shown through the roof of the hospitable home at which he was entertained. It is a little strange that nobody found out the trick Harvey played on the President and Witte, and the rest of the country, until the "rich men's conspiracy" was discovered by Loeb at the White House.

The Sun's explanation relieves a somewhat embarrassing situation, and demonstrates again and for the twentieth time how venacious are the stories that are told for the benefit of the romancers at the national capital. It leaves Harvey in an awkward position, but that is Harvey's fault. He had no business saying things which he could not prove.

ON SOLID GROUND

From the *Trenton "True American"*

Colonel George Harvey, editor of *Harper's Weekly* and *The North American Review*, has been added to the list of the President's foes by the author of the White House himself.

Colonel Harvey is a Democrat of the old school. He has a notion that in this country one man's opinions are as good as another's, and that the majority should rule. He made some rather less rhetorical sword-thrusts at the President's presumption that he alone knows what the country needs and wants, and, therefore, should name his own successor, at a Jefferson-day dinner in New York Saturday evening.

This speech got under the exceedingly thin Presidential epidermis, and Colonel Harvey's name goes down on the list of conspirators against the President.

Colonel Harvey quoted evidence galore to prove his contention that the Rooseveltian policies are childish, and the President's dubbing of all who oppose him as "rich men" seems to be cumulative evidence that his criticism is well founded. The old rallying cry of the Republic was a denunciation of the rich, and the President has chosen it for a rallying-cry to carry him through the next campaign. Another President of another republic employed the same shibboleth to carry him into a perpetual presidency some years ago. The gentlemen in question is known to history as Napoleon III.

Colonel Harvey's address, which appeared in Monday's *True American*, was confined chiefly to the President's policies, his chief objection to which was the "one-man power," the key-note of them all. He objected to Mr. Roosevelt's attempt to dictate where the people should choose to move, and the democratic policy being employed for the success of the President's designs.

Colonel Harvey has based all his recent utterances on the solid ground of history's teachings, and in his controversy with the President has shown great wisdom and understanding of the fundamental of the argument. To date, he seems to have the better of the dispute.

UNMASKED

From the *Milwaukee "Sentinel"*

What an extremely fortunate and timely thing it was that Secretary Loeb got scent of that "rich men's plot" to assassinate the kind of man Mr. Roosevelt doesn't want in 1908.

Thanks to the unerring nose of the faithful Loeb, we are now provided with a good working hypothesis to explain and account for these attacks on our worthy and ubiquitous President which, in the nature of things, must be expected to multiply as conversation time approaches. Just bear in mind the fundamental fact that there is a plot, as secret and sinister a thing as that line as has gripped the imagination since the days of Titus Oates, a conspiracy of a cabal of infamously rich and shamelessly successful men, and you hold the key to the dark hidden springs of every criticism of and disagreement with the course and views of President Roosevelt.

Here, for instance, was that strange maneuver of Colonel George Harvey's at the Jefferson-birthday dinner the other day. Colonel Harvey actually criticized the President in the most plain-spoken way. In the apparent obscurity of the moment, whether moved thereby by champagne or in sheer superiority of malignity, he went so far as to joke him at Mr. Roosevelt. The fact that Harvey is a Democrat, is rather given to the dissipate vein and must have his little joke, was, of course, no sufficient explanation of his cutting loose at a Republican President at a Democratic dinner. The thing lay deeper.

Just resort to the great Loeb plot hypothesis, the Copernican theory of our day, has at once cleared up the seemingly impenetrable mystery of Harvey. When the speech was reported mystified Washington asked, "Who is this Colonel Harvey?" Rumor replied that he is a student who appears in person who seems to have plenty of money. "Plenty of money! Alas! An hour's work on this case established the damaging fact that J. P. Morgan once furnished the money to rehabilitate a moribund magazine establishment that Harvey was put in charge of. That forced a connection between Harvey and Morgan; Morgan is in the "rich men's plot," therefore, it is as clear as daylight, the Harvey speech is part and parcel of the "rich men's plot." Says the illuminating Washington despatch:

Friends of the President see in Harvey's thinly-veiled assault to the Presidential office and to the President himself an attack by the Morgan interests on the President and his policies. It looks to the Roosevelt men like another link in the conspiracy of rich men exposed at the White House recently.

So the great Loeb plot hypothesis has been supported hitherto that the conspirators were all "reactionary" and suspiciously prosperous Republicans. But Colonel Harvey is a Democrat. It would not be surprising should some unguarded criticism of Mr. Roosevelt by Colonel Harvey enrich the great commoner himself in this web of mystery, before we finally get done with the worst plot of modern times.

A RIGHT TO THINK?

From the *Utica "Observer"*

It seems scarcely credible that Colonel George Harvey, the accomplished editor of *Harper's Weekly* and *The North American Review*, is actually on the President's black-list, and that he is to be henceforth rated as a "conspirator" bent on destroying the present Presidential policy and controlling the next Republican national convention. How does it happen that Colonel Harvey is cast among the puts and not among the sheeps? We will try to tell—providing that we are (unlike to yesterday's New York Times, through his Washington correspondent, who sent a special despatch detailing the latest news from the White House).

It appears that on Saturday night last Colonel Harvey made a speech at the Jefferson dinner in New York, in which he openly condemned the one-man power, and inferentially struck at Theodore Roosevelt. That is the substance of his offense. His case was considered at the White House on Monday, and it was declared that the Colonel had evidently enlisted in the rich men's club, and was therefore sentenced at the White House. Further, however, that this explanation looked somewhat in the direction that it might be considered too thin by the average man—the President went deeper into Colonel Harvey's career to find a reason. What he found was this: In the early autumn of 1903, while the Portsmouth Conference was in session, it appeared that Colonel Harvey invited Count Witte and some other distinguished Russians to dine with him in New York. Count Witte was compelled to decline the invitation because an alleged investigation he found that his would-be host was the representative and mouthpiece of J. Pierpont Morgan! Mr. Morgan is not now *proven* *guilty* at the White House. It is plain how Colonel Harvey, as the friend and "mouthpiece" of such a man, becomes himself one of the "millionaire conspirators" against the President!

Colonel Harvey keeps on in his accustomed way, contributing much excellent matter to *Harper's Weekly* and *The North American Review*, and displaying all that independence which George William Curtis used to show in the old days when he made *Harper's Weekly* an oasis in the desert of Republican newspapers. In the last number of that lively and entertaining *Weekly* magazine he prints an article called "Jackson and Roosevelt—Parallel," and therein he points out where General Jackson erred—from the standpoint of Daniel Webster and other old Federalists—in much the same way as Mr. Roosevelt has erred in the sight of State-rights Republicans and strict Constitutionalists and Constitutionists. Then he tells how Andrew Jackson made Martin Van Buren President, and predicts how Theodore Roosevelt will not

be satisfied unless he succeeds next year in forcing Taft or Root upon the Republican party as its candidate.

Hasn't a man a right to think so? Hasn't he abundant Presidential acts from which to draw his conclusions? Yes, yes, to both questions. And is he to cast into limbo and branded as a "conspirator" for so thinking? Well, hardly, in our estimation. And yet we have never willed the big stick nor do we pretend to interpret the feelings and motives of him who wields that instrument of torison.

THE THREE LISTS

From the *New Orleans "States"*

President Roosevelt now has open and ready to fill at a moment's notice three lists. One for "liars," one for "conspirators," and one for "enemies of the republic." Hence any man who dares to oppose Mr. Roosevelt or criticize what he may say or do is sure to find himself put down on at least one of the three lists. The latest name to be added to the already imposing array of conspirators is Colonel George Harvey, editor of *HARPER'S WEEKLY*, who has recently been saying some unpleasant things about the President, and saying them in a way that bites through the skin.

Last Saturday night at the Jefferson dinner of the National Democratic Club in New York, Colonel Harvey took occasion to express the opinion that the country has enough of "the raging of the revolutionary instinct of a lawless mind," enough of "the mendacious duplicity of those holding power," enough of "the unshy alliance of Monroism and sanctimony in time of need," "enough of hollow sham and glaring hypocrisy in administration of national affairs," and enough of a good many other things besides the enumeration of which is responsible for the fact that he is now in the conspirators' class.

The things said by the President would have hurt him more than they did were it not for the fact that Colonel Harvey is one of those kind of Democrats whose affections are divided between the Constitution and the corporations, with the latter holding the larger part of his favor. He is a polished type of the "safe and sane" Democrats who dwell mostly in New York, and his main job is that of spokesman for the "interests" controlled by J. Pierpont Morgan and other bonhomers of high finance. Being a fine talker as well as a shrewd writer, Colonel Harvey in his Saturday night speech read Roosevelt out of the Republican party and Bryan out of the Democratic party with pleasing facility.

It is very evident that no Bryan or Roosevelt will do for Colonel Harvey in 1908, and he will not be satisfied with less than a Democratic ticket which will secure the entire vote of the New York Stock Exchange. Mr. Bryan may be guilty of reprehensible conduct in attacking the predatory operations of "vested interests" and Mr. Roosevelt may be a dangerous brain-rotter and ruthless usurper; but it is very evident that the kind of talk that Colonel Harvey gave out at the 810 dinner of the National Democratic Club is not calculated to arouse criticism in the rank and file of the Democracy. Having been pretty well "done up" in recent years by such "doers" as Morgan and Hill, the people prefer to link their fortunes with Bryan and Roosevelt rather than with the new Colonel Harvey extols so highly, and who have "opened" a great many things besides the great West to their peculiar kind of "civilization."

ONLY ONESELF TO BLAME

From the *St. Louis "Republic"*

Colonel George Harvey is the latest name for the President's displeasure. The reckless editor who dared to publicly proclaim Theodore Roosevelt a menace to the nation has been classed as one of those conspirators who have entered into an unholy alliance to thwart the will of the people—as conceived and executed by Mr. Roosevelt—and to defeat the policies and purposes of the occupant of the White House.

Colonel Harvey cannot expect much public sympathy. There were dire enough reasons enough why he must have known what would be coming to him if he attacked the man with the big stick. Colonel Harvey dared to brave Presidential displeasure, and Colonel Harvey—in the classic language of the vaudeville man—has got it. The country is too intent upon watching President Roosevelt to see what he will do next, or what he will do next, to give Colonel Harvey and his chagrin or resentment more than a passing thought.

The only issue raised by the Harvey incident—if so mild a controversy with the President may be dignified as an incident—is determined no man shall attack him, personally or officially, and escape unscathed. When Loania and Storer and Parker and Harriman clanked with the President, the issue of personal veracity was raised. The world knows how proud was the President to meet it and to make mince-meat of it. The *Amman Club* is probably as well and generally known to-day as is Tammany or the Gridiron Club. But Colonel Harvey did not intimate anything against the President's personal honor, and he has not been accused of a "deliberate falsehood."

The whole head and front of Colonel Harvey's offending is that he has criticized the Roosevelt policy and method. If one would be neither a "falsifier" nor a "conspirator" he may keep a closed mouth. If any man gets in trouble with the White House—let him blame himself. Let him who runs and reads be warned.

Colonel Harvey, editor of *HARPER'S WEEKLY*, has been placarded as one of the five-million-dollar conspirators. The Colonel was named from the White House on Monday because of his criticism

of the Roosevelt administration before the National Democratic Club in New York. The term conspirator carries a certain amount of approbrium with it, but as applied by the President it gives even an editor some appearance of financial standing. The President should not assume too many conspirators, however. If the five millions be divided into many small parts the conspiracy will be reduced to the ordinary level of a mere campaign.—*Mobile Register*.

The New York Times has the exclusive information that Colonel George Harvey of Harpers has never recovered from the hint given by the President to de Witte to keep away from a Japan-Russia dinner given by Harvey in New York in 1905, the intimation being that de Witte had better not get involved even socially with a big banking house like Morgan's, which has a number of public enterprises as valuable attachments. But that is magnifying a cause altogether too much.—*Boston Record*.

Outside of the publications which he represents, the public knows little of the true nature of Colonel Harvey. That he stands clear to "vested interests" cannot be questioned. As for President Roosevelt, he is known by the acts which have the approbation of millions of his fellow citizens. Hence the futility of the attack by the gentleman who went out of his way to shy a brick at the Chief Magistrate.—*Troy Record*.

Colonel Harvey has been denounced as a "conspirator." This new organization, being not so exclusive as the *Amman Club*, is already leading the latter in membership. The only requisites for membership to the Conspirators' Association are a speaking acquaintance with some man of wealth and the disposition to discuss with any of the policies of our strenuous President.—*Philadelphia Republican*.

The attempt to attribute Colonel Harvey's caustic criticism of the President to his failure, through administrative influence, to secure the attendance of Count Witte at the famous dinner which Pierpont Morgan gave to the Russian members of the peace embassy, and at which Colonel Harvey presided with signal tact, falls rather flat, in view of the fact that the great Russian was at the dinner and made a speech.—*Boston Herald*.

The President will find in Colonel Harvey's deliverance further evidence of the great conspiracy of the rich men to defeat his policies of which he complained immediately following the Harrison incident, and thereby Colonel Harvey may get into the game. But should J. Pierpont Morgan make one of his celebrated peaces with the White House, Colonel Harvey may find some difficulty in cutting his last words.—*Charleston Post*.

Of course George Harvey is a "conspirator" and a hireling of the plutocrats. Any man who criticizes the President is hired by the Money Power to plot against the government. We would respectfully suggest that Private Secretary Lock be murdered. What he is not bound to be attributed to the President, but he is not nearly so interesting a talker as Mr. Roosevelt is.—*Philadelphia Record*.

Colonel George Harvey, of the *New York American Review* and *Harpers' Weekly*, is reported to have been entered upon the White House list of "conspirators," because of his savage criticism of President Roosevelt at a Jefferson-day banquet Saturday night. This seems to be a case of mis-hearing. Conspirators do not work and plan from the houseposts.—*Springfield Republican*.

Colonel George Harvey has another bunch on his score for besides the one mentioned yesterday. He is mad because President Roosevelt advised Count Witte not to attend the Colonel George Harvey dinner, and another yet because the Russian envoy took the President's tip.—*Washington Journal*.

Ha! Ha! President Roosevelt charges Colonel George Harvey with being a "plotter" against his imperial intentions of naming his own successor. Ha! The conspiracy thickens!—*Trenton True American*.

Colonel Harvey, it seems, is in the \$5,000,000 conspiracy, too. If that enterprise continues to be divided up it will soon make its millionaire promoters look like a set of pickers.—*Philadelphia Inquirer*.

Perhaps Colonel Harvey got on the President's list of conspirators merely from the fact that he took a line, which would be considered justification under present conditions in the White House.—*Rockford Herald*.

Speaking of conspiracies, who knows but there's one between the Honorable William Randolph Hearst and Colonel Harvey.—*Providence Bulletin*.

Colonel George Harvey seems to be identified with reasonable accuracy as the present agent of that Irish Men's Conspiracy (Limited).—*Providence Bulletin*.

Colonel Harvey is now catalogued on the White House conspiracy list, but as yet he has not been promoted to the higher distinction of membership in the *Amman Club*.—*Boston Globe*.

What Prominent Men are Saying of this New Book—

The Future in America

By H. G. WELLS

BOOKER T. WASHINGTON—"I have read with cordial interest Mr. H. G. Wells's *Future in America*. He has written with an alert, open mind, and has discriminately set forth in his admirable study the trend of American institutions. I find myself with him especially in his deep sympathy with those parts of our American citizenship that most deserve and need at this time the helpful sympathy of all good citizens."

A. CONAN DOYLE—"I think there is as much wisdom and political insight in Wells's *Future in America* as in any book I have ever read."

FRANKLIN H. GIDDINGS—"Mr. Wells's observations are so keen, his style is so vivacious, *Professor of Sociology, Columbia University* and his humor so kindly that his study of the future in America appeals to a multitude of readers merely by its interest and charm. But to the thoughtful it is far more than so much good reading. It is safe to say that Mr. Wells is one of the ten or twelve most up-to-date men just now alive, and in his 'search after realities' he has found and described some realities here in the United States that we shall do well to face and examine. Impressionistic as it is, Mr. Wells's volume is quite as serious a challenge to sober thought as Mr. Bryce's more detailed and conventional account of our institutions."

ROBERT C. OGDEN—"The sympathetic spirit of Mr. Wells's study of American conditions stamps his work with a winning note of sincerity. The book is stimulating, instructive, interesting. It should be carefully read by every American with a weary head and an anxious heart concerning present-day problems in this country. The chapter on the 'Tragedy of Color' is impressive and masterful."

COMMENT

The National Beverage

On General Grant's birthday Senator BEVERIDGE made a speech. It was a speech in defence of THEODORE ROOSEVELT, and naturally, therefore, in condemnation of States' rights. It had special reference to a speech made in this city on JEFFERSON'S day. Senator BEVERIDGE is not a constitutional lawyer nor a constitutional statesman. He occupies a position, however, by favor of Indiana, where he can do much harm by melting constitutional principles in the fire of his rhetoric. He waxes with much feeling that the States must confine themselves to local self-government, and that the nation should be supreme over all subjects that are not "confined to that portion of the American people living in any particular State." In this philosophy a State should not be permitted to do anything that might affect, directly or indirectly, the people of other States. The extravagance of Mr. BEVERIDGE'S contention is illustrated by his advocacy of the policy of taking away from the States all control over their own railroads if they pass beyond the State's own boundaries, and his supreme announcement that the nation should decay to a State the supervision of the capital of its own citizens which is invested in corporations created by it. He also favors national laws for the prevention and punishment of overcapitalization, national compulsory publicity laws, and, finally, he favors the national incorporation of all great corporations. He had something to say, of course, concerning his proposed child-labor law, and here he goes a step in advance of the Presidential theory of constitutional amendment by judicial constructions; he believes in changing the Constitution whenever, in the opinion of the majority of Congress, small or larger changes should be made. Instead of amendment by judicial constructions, Mr. BEVERIDGE would have amendment by legislation.

Constitutional Amendment by Legislation

Mr. BEVERIDGE'S speech is especially worthy of comment, because he gives the frankest and fullest expression to the views of the constitutional school of THOMAS ROOSEVELT. When Mr. Riser addressed the Pennsylvanians, the school was not disposed to go farther than the declaration that it was prepared to accomplish its purpose to amend the Constitution by the constructions of judges whom the President might appoint for the purpose. This, to say the least, is not an honorable method, but it recognizes the fact that the Constitution is still respected and believed in by the people. Mr. BEVERIDGE goes farther, and his methods are much franker and altogether more admirable than the earlier subterfuge. In place of the judges he would substitute Congress. Either of the two views would destroy our constitutional government. By the method of amendment by constructions the judicial servants of the Executive would make the changes desired

by the President; by the BEVERIDGE method, Congress would pass whatever laws it desired. The objection that a particular law was contrary to the Constitution would be met by the assertion—we quote from BEVERIDGE—that "for the evils of the hour the Constitution permits us to apply the remedies of the hour." That is what the English Constitution permits Parliament to do, but our own theory of government is that a constitutional provision is the law of the people, governing Congress as it governs the President and the judges, and the people themselves who made it. The Congress which undertakes, by applying the BEVERIDGE theory, to amend the Constitution by legislation is usurping a function which the people have reserved to themselves, and thus violate the very law which gives it life. But it breaks the law after the manner of a highwayman, and not after the manner of a pick-pocket. Mr. BEVERIDGE is at least entitled to the credit of being willing to take all the chances of an open attempt to destroy Federal government. Whether he would set up in its place a national or centralized republic like France or a constitutional monarchy like England he does not tell us. His familiarity with the instrument which he attacks is shown by the extraordinary remark that the doctrine that the States ought to be permitted to retain the powers recognized by the Constitution as belonging to them is the same as the doctrine by CALHOUN that the States may deprive the Federal government of powers which they had granted to it; also, Mr. BEVERIDGE announces that "in this Constitution not one word about States' rights appeared." If he will read the Tenth Amendment he will find these words: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Governor Hughes and the Legislature

Governor HUGHES'S defeat in the KELSEY matter is symptomatic. The New York organization of the Governor's party is for the bad men, the bad practices, the bad acts, of whom and of which Mr. HUGHES has promised the people of the State to rid their government. The proposition in the KELSEY case was clear, and was well set forth by the Governor the day after the refusal of the Senate to remove the Superintendent of Insurance. He had found that the politicians of the State had maintained corrupt relations with insurance companies, and that these had been fostered and increased through the agency of the office of the Superintendent of Insurance. Subsequently, when he went to Albany, he discovered that KELSEY had not administered his office to improve matters; and he demonstrated by a public examination that he was ignorant of his duties, incompetent to administer them, and lenient to old offenders. Therefore he asked the Senate to remove him. The two party machines united to retain KELSEY in office. It is natural that they should do this. If the people are to have their way, party machines will be no better than old junk. It remains to be seen whether the machine leaders are right, and whether they will take their government away from the bosses who have been using it for private gain. There are promising signs that the people who by their votes decide the fates of both machines and Governors are decisively with Mr. HUGHES.

Is Hughes's Defeat General?

It is reported from Washington that the administration fears that the defeat of Governor HUGHES in the KELSEY case is more serious than appears on the surface; that it implies defeat all along the line of his promised reforms; that it means defeat of the bill for the reorganization of the vote in the last municipal election; and that the utilities bill is also doomed. It is said, further, that the President intends to lead the Governor a helping hand in his proposed campaign throughout the coming summer to induce the people to remove the Republican politicians in office. It is pretty evident that some of the Governor's measures, notably the public utilities bill, need discussion, and that any effort to force the politicians to support them through fear of Mr. ROOSEVELT would be an improper use of power and influence. As for the reforms which Governor HUGHES desires, for the adoption of which the wise people of the State will stand by him, New York had best be left without aid from Washington. The State has always been in the habit of looking after its own affairs. Besides, Governor HUGHES cannot be aided from

Washington except by acts which will bring joy to the hearts of the rascals, even if they are for the moment defeated.

Whitney for Governor

Mr. HENRY M. WHITNEY is willing to be the Democratic candidate for Governor of Massachusetts. Lately, Mr. WHITNEY has been agreeing with Mr. BRYAN more than has appeared either necessary or natural, but it must be remembered that the Democratic organization of Massachusetts is divided between MORAN and BRYAN, MORAN being the favorite of MORAN—if he does not still favor HENRY—while BRYAN is the candidate of GEORGE FRED WILLIAMS. Mr. WHITNEY is not intending to run on the issue of the initiative and referendum, or because he may favor government ownership of railroads, but on the question of reciprocity with Canada. This is the burning issue in Massachusetts, and Mr. WHITNEY is the embodiment of it. Two years ago he ran for Lieutenant-Governor against EMMY DRAPER, the embodiment of the other principle, and came very near a victory. Last year he was denied the nomination for Governor for reasons that some Massachusetts Democrats ought not to want to recall. All the time, however, the sentiment for free trade with Canada has been growing in Massachusetts. The protective tariff that was first devised to make some citizens rich is now making most of her producing citizens poor. Massachusetts is to the rest of the Union as England is to the rest of the world. She has much to sell and little to protect, and she wants her natural market, which the DINGLEY law denies her.

Campaign Funds of 1908

STEPHEN W. DODGEY, once a Senator, and now dwelling in California, is an authority on campaign funds. He raised, or had the credit of raising, the money—or "soup," as Mr. ARTHUR called it—that is supposed to have carried Indiana for GARFIELD. He has responded to the world long enough to say that Mr. ROOSEVELT is a candidate for reelection. This Mr. ROOSEVELT continues to deny with great and appropriate vehemence. He has now included those who favor the third term for him among the reactionary conspirators. Their game, he thinks, has for its purpose the discrediting of him with the people. Mr. DODGEY goes on to say that Mr. BRYAN could defeat Mr. ROOSEVELT, because he could raise a larger campaign fund than would be contributed for Mr. ROOSEVELT. This is the kind of prophetic vision which one might expect from a former seer who, like Mr. DODGEY, has been so long retired from political activities. Besides, campaign funds will not be so fashionable in 1908 as they were in 1904; nor is it to be expected that so strange and new an experience as a political triumph—such a reversal of what may be called the alteration of nature's law—is to come to Mr. BRYAN so late in life.

Trial by Mob

A very serious state of things has been brought about in the HANCOCK and MOYER case. What has been going on is nothing more nor less than an attempt to prevent a calm and fair judicial trial of the three men who are charged with the murder of ex-Governor SPRINGFIELD. That this movement has been stimulated by an incognito letter written by the President does not excuse the effort to excite public opinion in favor of the accused. The parade of thousands of labor men and women in the East, and especially in New York, to the end of influencing the administration of justice is not an agreeable spectacle, and does not lead a glory to our American civilization. The old maxim that in war the laws are silent has in proper communities its complement. When the law is judging men, public expression, especially if it be of the howling sort, ought to stop. We have had far too much of trial by the public, especially the prejudiced public. Such trials are usually conducted without evidence by men who know not the law or who do not appreciate its sanctity. Every country has its blot, and our deepest blot just now seems to be made by our administration of criminal justice. The outcries of the multitude in behalf of an accused are as hostile to the doing of exact and even justice as is the judgment of a single high official.

The Tariff Agreement with Germany

The announcement that there has been a tariff agreement between this country and Germany has led to some premature

rejoicing. It is true, indeed, that a tariff war between the two countries has been delayed, and perhaps absolutely prevented. But we must wait for a final judgment until Congress meets next winter. Germany insists upon a modification of our administrative tariff law before consenting to a final grant of minimum rates, and Congress alone can comply in this respect. Besides, the Kaiser is meeting with difficulties on his side, and, as we all know, in these days important international relations are dependent on legislative bodies. The main objection on our part appears to be in respect of German champagne, and, judging from the wine-lists of hotels and restaurants, such a concession would not strike the ordinary American citizen as of vast importance.

Very Little Home Rule for Ireland

It has proved impossible for the HANDEMAN government to fulfil the promise made to the Irish Nationalists during the last electoral campaign that it would introduce and carry through the House of Commons a bill conceding a substantial instalment of home rule. Mr. JOHN E. HENDERSON, the Nationalist leader, has declared that his party would accept nothing less. There is no doubt that the Premier, Sir H. J. CAMPBELL-BANDEMAN, is a genuine believer in home rule for Ireland, and meant to do what he said he would, but unfortunately the Chancellor of the Exchequer, and the Secretary of War, Mr. HADAMANT, have announced that they will resign sooner than sanction any measure that can be regarded even as the germ of a separate legislature for Ireland. As they would probably be followed by at least one other member of the cabinet, the Liberal party would be split in twain, and that would be a disruption which even the Irish Nationalists would dislike to witness, for they fear that if an appeal to the constituencies should be made this year, the Unionists might triumph. The new Irish council for which the bill provides will, therefore, have no legislative functions, and even its administrative powers will be qualified, not including, we are told, control over the Lord-Lieutenants, the Irish Privy Council, the Irish judiciary, or the Irish constabulary, though it will exercise authority over the metropolitan police of Dublin. The composition of the projected council is intended evidently to conciliate the Nationalist members of the House of Commons on the one hand and the Unionist majority of the House of Lords on the other; for all the Irish members of Parliament are to be members of the council, the necessity for separate elections being thus obviated. On the other hand, a minority of the members of the council will not be elective, but appointed by the government, in order that the land-owning minority in Ireland may be represented. Such a measure may prove acceptable to those Unionist peers who, like Lord DEVEREAUX, favor administrative devolution to a certain extent, but what position will be taken by the Nationalist M.P.'s will be determined by the convention of their party which will be held at Dublin during the Whitsuntide recess. To an American onlooker it seems patent that it would be a mistaken policy for the Irish Nationalists to repudiate the bill, no matter how far short it falls of satisfying their claims. Half a loaf is better than no bread at all.

Man Who Go Wrong

A Long Island Episcopal clergyman lately abandoned his wife and children and eloped with a young girl. The bishop of his diocese, Dr. BRIDGES, has been criticised for saying in a sermon treating of the occurrence that "the priest always takes his color from the people to whom he ministers." He seemed to suggest that the lax morality of society in these parts was partly to blame for the clergyman's fall, and that suggestion he intensified by his further remarks. No doubt it is true, as a rule, that when a society is rotten its rottenness in time generates more or less into its priesthood, but no reflection of that sort seems to us to touch such a case as that of Mr. COCKE, the runaway Long Island rector. When a man in his position and of his general standing goes the way COCKE has gone, the degeneration of which his fall is the evidence is not social, but purely individual. A few years ago an Episcopal clergyman, after a remarkable church career in Buffalo, came to New York as rector of a parish. Here he preached brilliantly for a time, but presently changed his religion and became a Roman Catholic (somewhat to the dismay of that body), and after a time left his wife and ran away with some other woman. But long before these final

eccentricities had developed it had been said of him by an eccentric physician that his mind was unsound, and that he was certain in time to come to some sort of break-down. So in the case of another young clergyman in New York, who was a fire chaplain for a time, but who left his wife and went off with a trained nurse—his eccentricity was very noticeable long before he ran away. Such cases as these are not produced by bad conditions of society. They are individual disasters, traceable, no doubt, in most cases to some kind of physical degeneration. They happen in all callings, and it is no more significant when the culprit is a minister than when he is a bank officer, a doctor, or a lawyer. A certain amount of bad timber gets into all the professions. Defective character is often joined to very good abilities and sometimes to great talent. Sometimes, too, men of good aspirations degenerate, become irresponsible, and come to calamitous smash. All there is to do in such cases is to clean up and go on.

Eight Hours of Factory Work Enough

The new child-labor law for New York State, which will take effect next January, provides that no minor under sixteen years of age shall be employed or permitted to work in any factory before eight o'clock in the morning or after five o'clock in the afternoon, or more than eight hours in any one day. Under the law now in force nine hours of work are permitted, between six o'clock in the morning and seven at night. A minor under sixteen needs at least nine hours of sleep, and under the new law his chance of getting it will be considerably bettered. He also needs fresh air—out-of-door air—in some of his waking hours, and five o'clock seems plenty late enough to keep him in a factory. The new law attests that New York is one of the States that can deal with its child-labor problem without the interposition of the Federal government.

Sermons and Golf

In Brockton, Massachusetts, a controversy is going on between one of the city's clergymen and the young men whom he accuses of not frequenting the church and of preferring the art of golf. The young men retort that the cause of the falling off in church attendance is not a growing disrespect for religion, but the decay in the art of sermonizing. The quarrel is one in which each side would find it difficult to sustain its case. Of one thing we are sure, however, that there is both more physical and more intellectual activity in this country than there was a generation or two ago, but it may well be that greater as are the interests of the mind, they are not so obvious as they were. It may be, too, that the mind is proportionately less influential than it was; but if this be true, the mind has met with reverses that are temporary only; it will recover its natural ascendancy. We are sure of this, too, that no good preacher goes without a sufficient congregation, and that no good pastor is poor in human material eager for his improving ministrations.

Citizen Brisbane Speaks

Citizen ARTHUR BRISBANE was one of the after-dinner orators who spoke at the nineteenth annual reunion of the lecturers in the Board of Education courses at the Hotel Astor on May 2. He followed Dr. LEITCH, who told about the work the lecturers were doing, and how, among other things, they gave the new-come immigrant in his own tongue his first lessons in American citizenship. Citizen BRISBANE, when his turn came, said to the lecturers:

I wish this country could compare more favorably than it does with the countries from which our immigration comes. These immigrants leave Russia, with its lawlessness and its Czar, and they come here to a country in which there is a more dangerous lawlessness—the lawlessness of the dollar. You have a great opportunity—the opportunity to tell the immigrant the actual truth about this country—that a dollar here is as lawless, as powerful, as cynical as the Czar of Russia.

Citizen BRISBANE ought to know as much about dollars and their powers and dispositions as any one. He has the handling of dollars of his own in fair multitude, and in a recent State election he was very close to no lawless, mischievous, and cynical lot of dollars as one often sees disbursed. If with his intimate knowledge of Mr. WILLIAM HEARST'S disbursements he has formed a deep and honest impression that American dollars are lawless and cynical, it would be unkind to dispute

his assertion, even though it is so very much too general and sweeping.

A Harvard Method of Diffusing Education

The current number of the *Harvard University Gazette*—an official publication of the university—has a list of fellowships and scholarships awarded in the Graduate School of Arts and Sciences, certain features of which are worth remarking. There are over ninety of these fellowships and scholarships, carrying incomes of various amounts, which are intended to help the holders of them to continue their studies. The incomes are derived from gifts made at various times to Harvard University, chiefly by such Boston or Massachusetts donors as have at all times been the university's chief benefactors. What has interested us has been to notice to whom the income of all this Massachusetts money is going. Out of the ninety-odd awards of income, less than one-third are to graduates or students of Harvard College. The rest go to graduates of more than forty different institutions, scattered over the country from Brunswick, Maine, to southern California, including graduates of four or five of the Canadian colleges and one from Cambridge, England. The fact that makes these students eligible for these awards is that they have been members of the Harvard Graduate School. It makes an impression on the mind to see this Harvard money handed out to facilitate the pursuit of knowledge by graduates of the universities of Texas, Alabama, Wisconsin, Michigan, Missouri, Illinois, Toronto, and Rochester; of Leland Stanford University and Wesleyan and Colgate and New York and Vanderbilt and Delhomme and Bucknell and Queens and Acadia and McGill and Western and Northwestern; and of a score of colleges, from Oberlin and Alleghany and Georgetown to Dartmouth and Bowdoin. Certainly it is a liberal spirit that actuates this wholesale extraparietal diffusion of family funds.

Mr. Schwab's Experience in San Francisco

Mr. CHARLES M. SCHWAB has been telling the San Francisco labor organizations that they are fast killing off the goose that have been laying golden eggs for them. He did not express it in that metaphorical guise. He put it plainer, declaring that the Union Iron Works, which belongs to his steel company, will never build another ship in San Francisco so long as labor conditions remain as they are now. "I have never seen anything like it anywhere," said Mr. SCHWAB, and went on to explain that he had acquired along with the Union Iron Works a contract to build three battle-ships for the United States government, and had built them at a cost of \$2,500,000, which was more money, he said, than his company had been able to make in all its other works in other parts of the country. He wants no more such contracts. Unless labor conditions change, he said, all manufacturing must stop in San Francisco, since no man would dare bid on future contracts with the labor organizations constantly raising wages and reducing the hours of labor.

Guarding the Honorable Toes of Japan

London despatches, dated May 7, say that after some belching and filling, and much discussion and many jeers, formal notice has been sent to Mrs. D'ORVILLE CARTER that "The Mikado" must not be produced in England, and she has given orders withdrawing it from the stage. It may return sometime, when Japanese approval is less essential to British comfort than it is at present. Meanwhile the mass of ethnological knowledge has been enriched by the observation that the Japanese have the most extended and sensitive toes in the world. It seems inconvenient for the moment to ascertain how hard a nation with such toes can kick.

Spot for Sport's Sake

President HARKNEY of Yale wants his young gentlemen to enter into their athletics "for the love of honor in the broadest sense, unimpaired with the love of gain in any sense." He reproaches those of them "who regard athletics as a sort of competitive means of pushing the university ahead of some rival." This, he says, is professionalism of the most subtle and therefore the most dangerous sort. Even to consider whether athletic victories increase numbers in a university he considers a dangerous course leading with temptation. Spot for its own sake! says Dr. HARKNEY.

The Results of the London Colonial Conference

ALTHOUGH no colonial Premier could have expected the adoption of the proposed preferential tariff in favor of the colonies by the present British government, in view of the emphatic verdict against that project pronounced at the last general election, the inference should not be drawn that the Colonial Conference, just held in London, has proved entirely abortive. Perhaps a greater show of deference would have been paid to the advocacy of that policy by Mr. DEAKIN, the Prime Minister of the Australian Commonwealth, had he been earnestly supported by all of the other delegates from the colonies. This was not the case. Mr. DEAKIN received active cooperation only from the representatives of New Zealand, Cape Colony, and Natal. General BOTHA, Premier of the Transvaal, declared that he did not want a preferential tariff, because he thought that Great Britain should be left to consult her specific interests in that matter, just as his own country desired the liberty of taxing British goods at will. A similar position was taken by Sir ROGER BONE, the Premier of Newfoundland, while on behalf of the Dominion of Canada Sir WILFRED LAUREN reiterated what he said five years ago, that he should deem it ungracious to demand from Great Britain a quid pro quo for the tariff preference which the Canadian Parliament had spontaneously granted to the mother country. He also seemed to feel it peculiarly ill-timed to urge such a policy just now when the BARNETT government is known to be pledged to free trade.

Thus the British cabinet was rescued from the unpleasant predicament to which it would have been subjected had it been constrained to reject a request unanimously and vehemently pressed by all the self-governing colonies. Under the circumstances, the extremely cordial relations which from the outset had existed between the colonial Premiers and the home government were not for a moment disturbed, and two measures tending to promote imperial cooperation were cheerfully agreed upon. During the intervals between colonial conferences, which henceforth will be periodical, an executive committee or secretariat will be created as a permanent bureau in the colonial department, the purpose of which is to keep the home and colonial governments continually supplied with data bearing on their respective political, industrial, and commercial interests. Had such a secretariat existed some years ago, it is probable that more deference would have been paid by the Colonial Office to the vehement protest of Australia against the acquisition of the New Hebrides and a part of New Guinea by Germany. Of equal, if not greater importance, is the agreement to establish an imperial general staff, the aim of which is to further cooperation in the defense of the British Empire. There is no doubt that volunteers for such service would be forthcoming if a crisis should arise, but in the absence of any provision for common command of the imperial military forces or for common control of foreign policy, it is seen to be indispensable that the independence of the self-governing colonies should be carefully respected. To them, consequently, has been reserved the power of manufacturing the weapons and ammunition used by their contingents, a stipulation, however, being made that these shall conform to the imperial standard. It will be the duty of the imperial staff, when requested by a colonial government, to offer advice as to the training, education, and war organization of the latter's soldiers. In furtherance of the same end, a provision is made for the interchangeability of officers. The object contemplated, in fine, is that, if, at any future conjuncture, it should be essential for the mother country to come to the help of any colony, or for any colony to come to the help of the parent state, or of a sister colony, the partners in the defensive work will be familiar with each other's military systems.

There may not be long steps toward the imperial consolidation of which Mr. CHAMBERLAIN dreamed, but they are plainly calculated to enable the widely separated parts of the British Empire to act together more efficiently than they could act to-day. Perhaps more important should be attached to what may be called a by-product of the conference, to wit, the Empire Education Fund, which was founded by a gathering in the Guildhall, on April 23, which was presided over by the Lord Mayor of London, and addressed by Lord MILENDA, who, as high commissioner, upheld so long and soundly imperial interests in South Africa, and by Mr. DEAKIN, Premier of the Australian Commonwealth. These speakers pointed out that it would be impossible for the Englishman of the next generation to "learn to think imperially," instead of insularly, if he should possess no more knowledge concerning the outlying portions of the British Empire than is current in England now. We might, at first thought, take for granted that in 1907 the English schoolboy is as familiar with the nomenclature and geography of the British transmarine dependencies, with their history, social and political structure, agricultural, mineral, and industrial resources, as is an American schoolboy with the story and actual condition of all the States that compose this union. This is by no means the fact. The London Standard is our authority for asserting that it is doubt-

ful whether, even at his Majesty's colleges at Winchester or Eton, the knowledge of the existing British Empire is as complete as is that of the Athenian Empire of 430 B.C. We are told that, in the public elementary schools, except in so far as the zeal of an individual teacher may supply the deficiency, the British Empire is not even a name. To remedy this glaring shortcoming is clearly an indispensable step toward evolving a sense of genuine solidarity between the mother country and its daughter states. With that end in view, the Guildhall meeting passed resolutions calling on the Board of Education to prepare maps and text-books, and to make the teaching of empire subjects obligatory in every public elementary school. The meeting further pledged itself to assist in providing the pecuniary means needed for the purpose, and the Empire Education Fund is the result. The trustees of the fund, who have already been appointed, will at once undertake a task which should have been accomplished long ago. When we recall what the dense ignorance concerning the American colonies which prevailed even among accomplished statesmen in the reign of GEORGE III. cost Great Britain, we can but marvel that the task should have been neglected so long. The correlative duty has never been neglected in the British colonies. The Australian or Canadian schoolboy knows all about the mother country, and even the American schoolboy knows far more about the British colonies than is known to his coeval in the United Kingdom. The study of the history of Great Britain and of her colonies is obligatory in the public schools of almost all our States, and it is little short of amazing that a similar usage should not prevail in the so-called national or board schools of Great Britain, which are supported partly by the rates, and partly by grants from the imperial exchequer.

So far as contemporary adult Britons are concerned, whose education after leaving school or the university has been mainly, if not wholly, confined to reading the newspapers, they have acquired during the last few weeks a more thorough acquaintance with the over-sea factors of the British Empire, and have come to feel a deeper interest in them, than has ever been the case before. From this point of view the present conference has been much more successful than its predecessor of five years ago. That gathering was looked upon—no doubt justly—as a device of Mr. CHAMBERLAIN to promote the popular acceptance of his preferential tariff policy. The result was that even many Unionists failed to take the former conference seriously, while Liberals gave it the cold shoulder. It was in no sense a political, or even a social, success. This year, on the other hand, the Unionists have spared no effort to convince the visiting Premiers that they are the original and most faithful friends of the colonies, while the Liberals, on their part, have tried to compensate for their inability to grant a preferential tariff in all other possible ways. The consequence is that the Premiers will go home feeling that the actual and prospective significance of their respective countries, as influential sections of the British Empire, is at last distinctively comprehended by Englishmen of light and leading, and thus their personal loyalty, and disposition toward imperial cooperation, will be immensely strengthened.

Happiness

THERE is a great mass of literature asserting about as on the subject of happiness—what it is, how to attain it, and how desirable, once attained, it is like to be. The general tone of our essays is optimistic and hopeful. The lamentations of LOPPAH, who exclaimed a lifetime and the very highest poetic gifts in singing the inevitable and infinite vanity of all things, belong to a day that is past. HERE, too, is his gay, mocking way assured us that happiness was a light coquette who never staid long in one place, who stroked the hair from one's forehead, kissed one lightly, and sped off; but that unhappiness was a staid and affectionate matron of faithful disposition who, when she came, embraced one tenderly, sat down on the bed and unfolded her knitting to stay.

What is noticeable in the many new essays on happiness is that our up-to-date writers offer us guide-books. Happiness, they tell us, is quite truly attainable, and they proceed to give us directions. If there is a way to it it would seem a pliable matter to seize happiness altogether on this pilgrimage, for it is indubitable that there is happiness, and a little of it is almost always to be got for the effort. Life, after all, is only lived once, and we are all of us in the same case with the haught whose epitaph read:

"I shall not pass this way again."

Life is, indeed, so far as we know, a single experience, and he is foolhardy who does not gather all he can, and his energies together to draw from it the best results possible. There is an old German saying that "Maa does what he can, and bears what he must, and the name by which he calls the result is left to each to decide; a clever man calls it happiness." This seems

to point the way to the main thesis, namely, that happiness is not external, but is something obscure and difficult of analysis in our own dispositions.

This life is definitely chained to a law of cause and effect. Whether in any other progression we shall be able to effect things, to cause certain results to flow from certain habits and actions, we do not know, but at any rate, while we are here it is a most curious and interesting matter to devote ourselves to the observation of this law. Certain courses of action must certainly lead to desirable or undesirable results, and to study the law and conform to it is a matter for endless excitement and interest.

In our lax and casual and haphazard way we are very apt to think of happiness as a matter to be influenced by some external change. But it is an interesting fact that into our altered circumstances we advance with the same spirit. The temporary vicissitudes of life, its accretions and casual trappings, enwrap the unchanged habitude, and he who is nervous and impatient under the crosses of poverty is nervous and impatient under the responsibilities of wealth; who succumbs to a depressed and hopeless resignation in affliction is not likely to become suddenly heir to a high courage and fine endurance in the larger events which attend fame and brilliant position. The truth is that through all the notable courses of life we are lashed by our own spirits. Colours and trappings cannot hide them, money cannot lay any claim to put them to sleep or to make them change their mood. The business of happiness is somehow coming to terms with our own spirits; learning to bear with them in as far as it is impossible to better them, and to the best of our ability never to give over enlarging and struggling with them.

There is an anecdote extant that when Mr. EDMUNDS preached his first sermon in Boston, he spoke from the text, "Pray without ceasing," and divided his sermon under two heads, first, "All prayers are answered," and, secondly, "Therefore, be very careful what you pray for." It was a really New England precaution. It is true that we do not know the results of a change in surroundings or externals, and show any man who looks can prove to his own satisfaction that possessions do not bring happiness, it is as well to turn our energies to the inner way of life.

If thought and prayer do beckon events to us, as indubitably they do; if trust brings out the best quality of our neighbor, and the human being indeed offers us what in perfect faith we demand, then we must concern ourselves, not so much with desire, but with the strength of the demanding spirit. St. FRANCIS has shown us that to take the goodness of others unawares for granted, not hesitating to hope or to beg for it, but unobtrusively to know it, brings goodness to the world. So it is wise to turn the key upon our longing for things and bequest qualities. Is life ugly? What a chance to fling all one's energy into the scale of order and beauty and create them for however small a circle. Is one lonely and abandoned? Radiate strength and good cheer and the world of men will cluster about one for warmth. Is life dull and a drag? Impose tasks and relieve labors. Above all, set to work to get life out of a living instead of waiting a life in merely waiting a living. And, again, never become trouble. The word we have to live through is our own anxiety and depression, and yet it is possible to dismiss these and say, "Take no thought for the morrow."

Again, there is much to be gained by deliberately enjoying what we have instead of detaching from it because it is our own. "I wish," said a beautiful and majestic woman who was being complimented upon the pleasure her mere appearance gave—"I wish I could make a dollar as easily as an impression." And the herald from the outer responded, "I would give all my dollars for one hour of making an impression."

No one can have all the happiness, but each one can have some of it, and it is he who can learn to call the sum of most experience by that name.

Personal and Pertinent

In England a man who is not a lawyer is often appointed Justice of the Peace, but it does not follow that, if a layman, he must keep or tend a bar. He is usually well placed socially, and provided with such libidinal instincts that he will be kind to the helpless and downtrodden. He is expected to be the adviser and guide of the poor, but it would be regarded as a disqualification for the office to be poor in mind. A large knowledge of law is not requisite, but men of intellectual gifts are preferred. Recently two friends, whom we all like because of the looks they have written for our instruction and entertainment, have been appointed to this honorable office, which because of such moment in the time of the Second Henry Tison that it almost totally eclipsed the older office of coroner, while its occupants maintained the ancient liberties of Englishmen, many of which the king was persuading the House of Commons to permit to him. One of the two is Mr. H. G. WELLS, who has been appointed Justice of the Peace for Folkestone; and

the other is Mr. THOMAS HARDY, who is the Justice of the Peace for Dorset. To judge from Mr. HENRY LABOUCHERE's voracious weekly, the chief task of most English justices at the present is to whack paupers; but while it is too early to judge definitely of the judicial careers of the two literary gentlemen, Mr. LAWS CHURCH and the rest of us may be assured that both of them will consider wife-beating a more grievous crime than rabbit-killing.

Is the cigarette habit such an evil as pipe-smokers and total abstinences declare it to be? It is so implied in the category of misdemeanors by the legislatures of several States; and the legislators would not have made the hostile assault if they had not been certain they would attract to themselves the support of a great number of voters, nor if they had not been prejudiced on the familiar theory that cigarettes so steal away the brains of their virtuous that they do not possess sufficient self-respect to maintain their pet vice at the ballot-box. Most people have in their youth shared this conviction, that tobacco, in certain forms, is damaging to the nerves and mind and body of those who indulge in it excessively, the customary form of expressing the sentiment being "the tobacco fumes, if he be understood, for instance, has "stunted himself" by smoking. Boys of whom that can be said have frequently had high rank among their fellows. No State, so far as we know, has been entertaining enough to make it a crime to read Mr. HEADLEY'S "Dime Novels," or books of that kind, but many parents, especially those who have never read anything, are down on the literature of the plains, of the Indian, whether saucy or sentimental and overwise, and of the cowboy, who is chiefly in dervish, and usually mounted and in the act of shooting, or threatening to shoot, something bad. CHARLES LUMMIS, whom we all read, and read about with satisfaction and pleasure, does not agree with either freezing deposit. He keeps the public library in Los Angeles, and the public library has a new house. On the top is a roof-garden, and to it, in that beautifully pure and embracing atmosphere, Mr. LUMMIS invites the readers, men or women, grown up or little, those who can recite SHAKESPEARE upside down or those whose cheeks grow pale and whose eyes begin over storms of red warblers or white swans or sublimated female schoolmarm—lavishly "the only woman in the camp,"—and there the readers may smoke anything as they may read anything, even cigarettes. Are the ways of the newest civilization to reverse all tradition and to come Eastward?

They say that AUGUSTUS THOMAS is to run, or stand, for Mayor of New Rochelle, where he has long lived in a neighborhood which he dominates. Even the old negro currier who dwells at the foot of THOMAS'S lane now recognizes that the physiognomy's true name is AUGUSTUS and not "Gus," notwithstanding the recent ascription of a daily newspaper that no one in New Rochelle knows who is meant when one speaks of AUGUSTUS THOMAS. They all truly know him by whatever alias the inquiring stranger employs. THOMAS began his theatrical career by writing a lantern in the gloomy grey-wards at St. Louis. Then he made pictures and reported for a daily paper in St. Louis. Then he hara-stormed in Missouri. Then he came East and wrote "In Mizoura," "Alabama," and "Arkansas," until he heard that an old boss of his had remarked that THOMAS could just write forty-five plays and no more, for after that he would be out of titles. THOMAS, realizing that his serious-minded boss had forgotten the Hawaiian Islands, Cuba, the Philippines, and Guam, nevertheless turned his back on State nomenclature, and took his way to sparkling comedy, whose characters are all as witty as himself, standing, on the way, over the almost heretofore corpse of a few problem plays which might have been more actively alive if they had been blessed with the oxygen of ROOSEVELT'S reign than they could possibly be in the dense humidity of HARRISON'S term. When THOMAS had a literary bent he had also a theological spouse, and he introduced himself with congenial comrades at his "Hour of the Invention," at New Rochelle. ROBERT LYONS was his religious instructor. Dr. WOLF HARTEN furnished the literary entertainment in his Sunday symposium by reviving "Cassy at the Bat"; KENNEDY drew the pictures on the dinner cards; EDWARD SUMNER painted the landscape over the mantle, and infused the atmosphere with anti-Concordian philosophy; the young HARRYMON sang the negro melodies; and HENRYMON furnished his usual eulogy upon the "man on horseback." When LYONS dropped out of the charmed circle, THOMAS found HAYAN and politician, and ever since, as he has grown richer and richer, he has fought the good fight against photography. He has stamped and run a Democratic club, and he would make a good Mayor if he would take the office for which he is much too big a man. Nothing more serious in purpose could be imagined than the anti-English alliance of some years back between THOMAS and his man JOHN. It went very far. One day when THOMAS and JOHN were together watching the slow approach of a new car, JOHN said,

"Ah! Mr. THOMAS, why did you buy a red one?"

"Because," said THOMAS sorrowfully, "the man was out of green ones."

Correspondence

COLONEL VON BORK, C. S. A.

Richmond, Va., April 26, 1867

To the Editor of Harper's Weekly:

SIR.—In your issue of April 27 you say that a Berlin newspaper has stated that if the Southern Confederacy had achieved its independence it would have proclaimed itself a monarchy and would have offered the crown to Prince Frederick Charles of Prussia. You also say that the Berlin paper quoted the late Colonel Hens von Bork as authority for the statement, adding that he said the plan was known to General Robert E. Lee and General J. E. B. Stuart.

In behalf of my comrades in arms, the survivors of the Confederate armies, I want to thank you for repudiating the statement as utterly false and absurd. There is no person who lived in the Southern States from 1861 to 1865 who does not know that the suggestion is simply monstrous. Nobody ever thought of such a thing, and it is not too much to say it was unthinkable.

But I knew Colonel Von Bork most intimately, and I am not willing to let his name upon his memory pass without protesting against it and repudiating it upon his behalf. He was one of the most high-minded and noblest of gentlemen that I have ever known, and he was incapable of inventing and giving currency to a falsehood; and particularly to one that placed his comrades in arms, to whom he was tenderly devoted, in such an absurd position as this particular falsehood placed them in.

If you care for them I will give you some of the leading facts relating to Colonel Von Bork's connection with the Confederate army. He was of noble birth in Prussia, and, when our war commenced, he was a young officer in the Prussian army very anxious to see some real war. He was an immense man, fully six feet two, with a herculean frame. When he came here he brought with him a valiant sword with him, that was at least six inches longer than any other sword I saw during the war, and he used it so effectively in battle that it came to be as well known to the cavalry service as any officer in that service was. After the war he presented it formally to the State of Virginia; it was accepted by her Legislature, and it hangs now in the public library at Richmond as one of her most cherished relics.

Von Bork ran the blockade in the summer of 1862, and landed at Charleston, South Carolina. He came at night to Richmond, bringing letters to the Secretary of War, who sent him out to General J. E. B. Stuart. He told me that when he reported to Stuart that officer did not receive him graciously, muttering something about the Secretary of War camping tramps upon him. It was the day of the battle of Seven Pines, as we call it; of Fair Oaks, as you call it. In the course of the battle Stuart got mixed up in and surrounded by a number of the enemy and was in extreme peril. Von Bork rushed into them with that immense sword and cut Stuart out and saved him. After the battle Stuart said to him, as he told me, "You will do; I will keep you." He did keep him, and Von Bork never left him until that time, with the rank of major, until he was wounded and disabled. I knew him well in that time, that is, I was a private in Company A, Ninth Virginia Cavalry, constantly seeing Stuart and his staff. Von Bork among them, so that the acquaintance was all on my side. I think it might be said that Von Bork did not leave me until such a person in existence as myself. But I repeatedly saw him in battle, and I am truly sorry there was no more gallant and daring soldier in the Confederate army than Von Bork. I was within one hundred yards of him when he received the terrible wound that disabled him and I saw the thing happen. It was in June, 1863, in a cavalry battle near Allie, in Loudon County, Virginia, when Pleasanton, commanding Meade's cavalry, was vainly endeavoring to push Stuart back so that he could get up on the Blue Ridge mountains and see General Lee's army moving down the valley of Virginia to Gettysburg. Von Bork was shot through the neck from behind, aimed in the body, by no chance ball from a Sharp's carbine. He hovered a long time between life and death, but finally rallied. He was promoted to lieutenant-colonel, and sent by the Confederate government to London in a diplomatic capacity, where he remained until the war ended. After the war he published some most interesting memoirs of it in *Blackwood's Magazine*. He served in the Prussian army in the war between Prussia and Austria, upon the staff of some distinguished Prussian officer, but I forgot which. I think, but am not certain, that it was the very Prince Charles we are talking about. He told me that his general imposed very heavy duties upon him during the battle of Sedan, and that during the day the unusual exercise caused his old wound to reopen and he was almost suffocated by the discharge of blood.

He returned to this country in the summer of 1884, and came to Richmond to revisit his old comrades in arms. During his stay here then I became very intimate with him. Through a most melancholy and pitiful combination of circumstances he had got into a state of great nervous prostration, and he begged that his old comrades would come to his assistance. We did so, and set him upon his feet so that he was able to live out the remainder of his days in comfort. I am, sir,

WILLIAM L. ROYALS.

MAKES AND THE STAGE

London, Eng., March 28, 1897

To the Editor of Harper's Weekly:

SIR.—The undersigned, not intending to criticise a great newspaper, cannot help to sustain W. B. S. in his review of February 28,

in regard to the pictures published by you of the President; Naas in his time would not have drawn such things as members of the Ku-Klux Klan.

HARPER'S WEEKLY seems to have a passion for gaudiness, which you have used to illustrate in "The Season's Plays" the best actors so the New York stage—Ellen Terry, etc.

Will you kindly tell your ignorant readers why hideous masks, instead of the portraits of prominent actors, should be used by—
I am, sir,

GEO. C. KIRCH.

It is understood that the Greek actors always appeared in masks, and the use of them in the ornamentation of theatres and of books and writings pertaining to the stage has continued for centuries. Those you speak of in HARPER'S WEEKLY were not put in in disparagement of the actors you mention, nor were the pictures of the President in action published in disparagement of him.—ECCLES.

MUNICIPAL OWNERSHIP IN LONDON

SALT LAKE CITY, UTAH, May 6, 1897

To the Editor of Harper's Weekly:

SIR.—I think you have gone astray a little on the recent municipal contests in London. The result there has not been an appeal to the doctrine of municipal ownership, and I believe you will find that London even under the revolutionaries—who sailed under the false colors of municipal reformers—will be further advanced in this principle than it is at present.

During the election the Tory press—and Toryism from time immemorial has always been opposed to all progress, whether social, political, or industrial—sowed statements that London's debt, through the municipal extravagance of the Progressives, was far above £100,000,000, which, saying the least, is pretty tall stretching of the truth. In this amount is some millions which were thrown on the rates by the wretched Balfour ministry in its London education scheme years ago. The real debt of London was issued, and by the Tory press, some few weeks ago—after they won the victory—and the total was £28,000,000, a difference of fully £70 million dollars. The greatest blessing London ever received has been the eighteen years she has had under Progressive municipal rule. A tall man can pretty nearly see the difference between the two—the London of to-day and the London of twenty years ago. The thousands of acres that have been added to its parks, open spaces, playing fields, and recreative grounds, and these under Progressive rule have been laid out out in the well-to-do aristocratic sections of the town, whose citizens have ample means to go abroad and to the country, but in the working-class districts, where such spaces are needed most. The death-rate of London has been reduced fully ten to fifteen per cent. under Progressive rules, owing to the enforcement of sanitary laws with no class privilege. The wholesale condemnation and tearing down of unsanitary property which the city bought, and in some cases left open, dumping thousands of loads of sand and rubbish there, making them ideal playgrounds for the children, and the erecting of splendid structures (docks) whose architecture and finish would credit the average in the neighborhood of Fifth Avenue, and letting them from all prices from sixty cents up—to this and the laying of thousands of acres of land for the erection of model working-men's cottages meant a tremendous outlay of capital, but it is not money squandered. The London of twenty or thirty years hence will benefit socially, materially, and, I believe, spiritually from it.

All these needed improvements cost money and it can't be done without it; and it is a known fact that the wealthier sections of London don't pay their fair quota to London's rates, making it heavier on the smaller tradespeople. The Progressives have done their level best to remedy these evils and for a short period have had a setback, but the lion (now in sheep's clothing) will be found out ere long, and the party who has the social betterment of all London at heart will again be returned in even greater power next election. I am, sir,

JOHN MORGAN.

GRIEVED ABOUT WHISKERS

DALLAS, TEXAS, April 25, 1897

To the Editor of Harper's Weekly:

SIR.—In your issue of HARPER'S WEEKLY of April 27, you publish an article on whiskers, with pictures of very exaggerated ugliness of the man with a beard; it puts me in mind of the fool boy who disfigures his face and sticks out his tongue at some other boy that he does not like to show him how he looks.

If Mr. Cunnish did not get civil answers to his questions it is because he did not deserve them. How would you like to have a man ask you why you wear hair on the top of your head, if you have any? or carries mirrors as well as the beard. Nature put the beard on man's face, and a man looks more like a man with it on than without it; at any rate he does not look like a newly escaped convict; but there are men with a genius for ridicule who are like the dog who rushes out and barks at passers by, and other dogs rush out and add to the general racket.

I am, sir,

A. BOWEN.

national, but must be paid for out of the private means of our governmental representative. Every citizen of the United States who goes to Dorchester House goes as the guest of a kind fellow-citizen who is paying the visitor's charges out of his own pocket.

Conditions are such to-day that no American, whatever his abilities and qualifications, can accept a foreign ambassadorship (with one possible exception) unless he be possessed of independent means which will permit him to spend at least two or three times the amount of his official compensation. This state of affairs is creating a class distinction that is nothing less than a rank absurdity, under our republican institutions, and the spectacle of one of the richest governments in the world allowing an individual no matter in what capacity, to uphold its dignity and importance mainly at his personal expense, should humble the pride of every American.

That "they do these things better" in

other lands is fairly well demonstrated by the recent action of a number of foreign governments. As a case in point, the Hon. James Bryce, lately appointed British ambassador to Washington, is paid a salary of \$50,000, and, in addition, a fund for the maintenance of the very handsome establishment on Connecticut Avenue which he also provided by his home government.

Not to be outdone, Germany, likewise owning a large and well-equipped embassy here, has promptly followed suit by raising the annual compensation of her representative, Baron von Sierberg, from \$30,000 to \$35,000 per annum, in order better to enable him to meet the demands of his official position. The French Republic, not long ago, acquired a magnificent site on the northern heights overlooking Washington, and has sent one of its best architects here to prepare plans for an imposing embassy building.

One example will suffice to demonstrate that the acquisition of embassy and legation property is a shrewd and highly profitable business proposition. The ground on which the British Embassy stands was bought some thirty years ago for forty cents a square foot. It is now easily worth \$10. What with one foreign government giving its ambassador a salary equal to that of the President of the United States, and the majority of the other European powers maintaining their representatives both

The Impressive Official Residence of the U. S. Consul at Tahiti, Sandwich Islands
THE ACQUISITION OF THIS PROPERTY COST ONE OF ITS OFFICIAL OCCUPANTS \$300, WHICH HE HAS SINCE BEEN UNABLE TO COLLECT FROM THE UNITED STATES GOVERNMENT

residential property seems not only expedient, but right. The amount of the appropriation asked for by Mr. Longworth was \$5,000,000, an insignificant sum in comparison with the hundreds of millions annually carried by the far-famed "pork" bills for rivers and harbors, public buildings, and the like.

The thin Representative was not permitted even to insert in the current diplomatic and consular bill a small opening wedge of an appropriation for \$500,000 to be expended at the discretion of the Secretary of State in the acquisition of embassy and legation property, as this provision was promptly ruled out on a point of order. As a widely travelled American, Mr. Longworth knows from personal observation and experience how imperative this legislation has become, and to what a vast extent such a signally and short-sighted policy hampers American interests abroad.

Many of the absurdities of the present regime, which are not merely tradition, but matter of official record, would seem better adapted to serve as the basis of a tillicumbic libretto, or a farce-comedy, than the dry reports of a staid departmental bureau. It would certainly appear that the resources of this country are adequate to provide proper equipment for its foreign work, but no longer than two years ago the Consulate at Yokohama had no typewriter, no telephone, and no fund for postage, so that bills of

here and abroad in official residences of proportionately liberal incomes, the policy of the United States government shows in sorry contrast. As a matter of fact, however, this condition arises, not from a lack of administrative support, but from the failure of Congress to take the necessary action.

Not for want of opportunity, let it be noted, for the closing of the Fifty-ninth Congress left high and dry on the calendar a bill introduced and warmly advocated by the Hon. Nicholas Longworth, of Ohio, the main purpose of which was to provide proper official residences in the various foreign capitals, and thus remedy the present wholly inconsistent situation which, in limiting our foreign representatives to men of immense wealth, threatens to become a reproach to American institutions and ideals.

As a measure logically following the much-needed reforms in the consular service, inaugurated about a year ago by Congressional legislation,

the negotiation of the

The United States Consulate at Amoy, China

lading, and other such documents, were, perforce, deposited in the mails stamped, in the cheerful confidence that the recipients would want them had enough to pay the double rates exacted at the other end for insufficient postage.

At the time of the Taft Philippine expedition in 1906, no funds being available for repairs to the Tokio legation, it was considered extremely fortunate that the ceiling of the dining-room, which had been somewhat shaky, fell down two days before instead of during the state banquet given by the American minister in honor of this distinguished party of statesmen.

Pride of country is little simulated by the democratic simplicity of a former American minister who was at one time accredited to one of the most aristocratic courts of Europe, and who, taking up his abode in a shabby, ill-smelling flat, received his diplomatic colleagues in his shirt-sleeves, and, at parting, returned to them their own visiting-cards, with the would-be jocular remark that they should thus consider themselves called upon.

In times when consular salaries were small, and fees were the main, yet somewhat precarious, income of certain consular officers, a benevolent petroleum trust obligingly came to the rescue of an embarrassed government by allowing its manager in an important East Indian city to assume the added title of United States consul, and incidentally to transact the consular business. Inquiry from an indignant and protesting American tourist developed the fact that the original appointee, having discovered that it would cost \$700 to reach a post which yielded the munificent salary of \$400 per annum, had discreetly declined the honor. Far like reasons a number of other big office structures, in that particular section of the Orient, bore aloft, in immense lettering, the sign, "The Blank Oil Company," beneath which appeared in modest and unobtrusive type the legend, "Consulate of the United States." In another city—in this instance a Russian trade center—the same chagrined tourist, after a long and wearisome search, finally located the American Consulate in an obscure quarter of the town, only to find it shuttered and locked, bearing the sign, "Office hours from 5.30 to 7 p.m." That particular consul made his real living by running a hardware shop.

Even near at home, in the domain of our next-door neighbor, the records occasionally show incongruous situations. An official of the Department of State, on a tour of inspection in Canada, found himself at a small railway station with a wait of an hour or so between trains. To kill time he asked to be directed to the local consular agency, and a neat-looking butcher shop at the cross roads was pointed out to him. With some misgivings the official crossed over, and putting his head in the door, asked a white-coated individual where the United States consular agent was to be found. The white-coated one carefully cut and weighed a slice of ham before replying: "I am your man. What can I do for you?"

For the good of the service, that consular agency was quietly, but promptly, transferred to more fitting surroundings. Instances of the absurdities and inequities of the old system, or rather want of system, might be multiplied indefinitely, but the possibilities of their future recurrence are now happily eliminated.

Fortunately for our national prestige, and the upbuilding of our commercial supremacy abroad, after a fight of over eighty years' standing, the necessary legislation was obtained in April, 1906, which, in combination with an executive order issued in June following, has opened the way to a thoroughly businesslike and far-reaching reorganization of the entire consular service. At a stroke, these enactments have cleared away most of the old and hampering conditions, by providing a corps of inspectors, grading all consuls-generals and consuls into classes, in conformity with the rank and importance of their posts.

Salaries have been raised and graded according to the classes established, and fees, as a source of income to consular officers, have, practically, been abolished. Members of the consular force who receive over \$1000 a year must be citizens of the United States, and they are absolutely debarred from engaging in any outside business or trade. The higher grades, under the President's order, are filled solely from the existing personnel by promotion, for efficiency and length of service. Appointments from civil life may be made only to the two lowest consular grades, and then under examination, with special requirements as to adaptability and fitness.

All this is reform which really reforms, and which leads inevitably to the logic of extending similar housekeeping methods to other branches of the foreign service—notably in the acquisition of residential property. The few experiments in that direction already made by the United States government furnish unanswerable arguments in favor of the proposition. The United States now owns legation property in Peking, Tokio, and Seoul, consular residences in Tangier, Morocco, Bangkok, Siam, and Tahiti, S. I., and leases in perpetuity the land on which the consular buildings are situated in Yokohama and at Amoy, China.

The Legation at Peking, but recently completed, is a model, a beautiful structure of American design, material, and workmanship, occupying a proper site, and thoroughly adapted to all the requirements of our minister and his high position. It was built, furnished, and embellished by direct Congressional appropriation.

The Tokio Embassy is an old building (probably in a somewhat better state of repair since the episode of the fallen ceiling) which occupies ground specially allotted for the purpose by the Japanese government, for a nominal yearly rental. It cost \$50,000 and is now worth \$200,000, for land values in Japan are rising constantly.

The property owned in Seoul was originally acquired for \$3000, and is now

estimated at \$40,000 at least, with local prices also increasing rapidly. Both building and grounds at Bangkok are gifts to the American government from the King of Siam, while the site of the Tientsin consulate is a grant from the Moorish authorities. Considering the other properties, there are comic-opera elements beside which the humors of "The Mikado" distinctly pale. At Amoy we own a consulate on ground originally leased for hospital purposes, but just how we acquired it is not made clear in the records.

At Yokohama a large plot of ground is leased in perpetuity by the Japanese government, but Congress declining to appropriate funds, the necessary offices were built by a former consul-general at the post, and the title has passed to each of his successors in turn. Therefore, if you are made consul-general to Yokohama, you buy your consulate and rent it to your home government for \$600 per annum. Thus in thirty-five years something like \$20,000 has been expended for the rental of a building which probably could have been originally constructed for less than \$10,000, with the title owned by the government instead of a private individual.

The Tahiti property is remote, and one might say far removed from the international limelight, but nevertheless it is the gem of the collection. The land was originally granted to us by a dusky native queen, who gave it, and then, womanlike, took it away again, only to change her mind and give it back once more. Here was the old situation of land but no money for buildings, so, as usual in such cases, the long-suffering consul came to the rescue and put up a consulate at his own expense. One retiring official carried away the title to the building, without making a deal with his successor, and when consul No. 1 sued for the rent of his office structure, consul No. 2 sued for the rent of the ground on which it stood. The judge in the case was wise, and awarded judgment to both plaintiffs, and ordered that consul No. 2 purchase the building within thirty days, for 1500 francs. This was done, and for thirty years the unfortunate official (or possibly his heirs) has been

unable to collect from his government this odd \$200 agreed for its alleged property.

In fact the acquisition of embassy, legation, and consulate property is its own justification. It removes the hateful restriction of "having the price" as an imperative qualification for an ambassadorship, and places every office in the gift of the nation with reach of the man of ability. It increases the dignity and importance of our representatives and augments their efficiency, because a fixed abode obviates the necessity of house-hunting and the constant moving about of official records. The actual money saving is almost too obvious to dwell upon, and a government which spends something over \$200,000,000 annually to keep the nation in a war footing should promptly vote the small appropriation required, seeing that the United States spends less than \$1,000,000 annually to maintain preferential relations.

Consular residences are imperatively needed in the Orient, where conditions are such that it is impossible to rent suitable quarters. American producers, seeking the vast markets of the Far East, should gather enlightenment from the magnificent office structures erected in the great Oriental trade centers by Germany, England, and France, and should unite in a movement to have the American representatives on some sort of an equal footing with these competing powers.

The old regime of two or three consular clerks at a post like Canton, when Germany finds the need of fifty, or of ten clerks at Hongkong, when England requires forty-five, is archaic and should pass to the administrative dust-heap. The foreign service, since its establishment, has borne on its rolls the names of many of our most brilliant and able men, and its possibilities in that direction should be carefully fostered. All too frequently Congressional parsimony and indifference have brought about a condition of things which proved a source of amused bewilderment to the foreigner, and of helpless mortification to the travelling American.

THE ACTIVITY IN DIPLOMACY

THE HUMAN DIPLOMACY IN BIRD, SKETCHED IN BROWN IN THE PHOTOGRAPH, IS TO BE PRESENTED BY MR. MORRIS R. JOYNT TO THE SEVENTEENTH MEETING OF THE FRANKFURT ON THE MAIN EXHIBITION, WHICH IS SAID TO BE GREATLY IN NEED OF ART. MR. JOYNT HAS ALREADY PRESENTED FRANKFURT DIPLOMACY TO THE BRITISH MUSEUM AND THE REPUBLIC OF FRANCE. THE SPECIMEN WHITE WILL ABOVE THE FRANKFURT QUINCE M WAS DISCOVERED IN BIRK FARM QUARRY, WYOMING, WHERE MANY SIMILAR FRONTS OF THE JURASSIC PERIOD HAVE COME TO LIGHT. THE SKELERON IS SIXTY FEET LONG, THIRTEEN FEET HIGH, AND EIGHT MILLION YEARS OLD.

THE DEMONSTRATION WAS OCCASIONED BY THE RECENT ATTITUDE OF PRESIDENT ROOSEVELT, IN WHICH HE CLASSED THE ACCUSED MEN AMONG HIS COMPREHENSIVE LIST OF "UNDESIRABLE CITIZENS."

THE CRISIS IN ENGLISH LIBERALISM

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

London, April 25, 1907.

THE title of this article is not meant to be sensational, but severely matter of fact. There is a crisis in English Liberalism. Indeed, there are two crises. One, and perhaps the more momentous of the two, is concerned with the present and future relations of Liberals with the party of labor and socialism. The other, which, though less important, is more immediate and more definite, is summed up in the question of the House of Lords. The present government has to deliver an attack on the greatest stronghold of privilege, while it is itself harassed in the rear by allies who partake a good deal of the nature of guerrillas; and the play and interplay of these two forces are shaping a situation that only the deft handling can save from disaster. On the one hand there is the necessity of removing or at least attenuating the overwhelming obstacle that blocks the path of serious reform. On the other there is the not less imperative necessity of reconciling or, at any rate, of reconciling the Labor group and the unpledged forces behind it. To attack the House of Lords is to raise up a formidable array of vested interests. To prosecute a policy which the Radical extremists can be persuaded to support is to run the risk of making every property-owner a foe; and, as Lord Rosebery recently reminded the government, it is the suspicion of hostility to property that sooner or later has overthrown every Liberal ministry of the last forty years. Here, then, is a dilemma which will fix all the destinies and resolutions of "the strongest government of modern times."

What, under these circumstances, should be the tactics of the ministry? Clearly, I think, the ministry should so arrange its programme as to build up the strongest possible case against the House of Lords and then dissolve. That is to say, its tactics ought to be governed with a constant eye to the overwhelming issue which must before long—possibly before another two years are over—be submitted to the electorate. The House of Lords has year after year one of the government's principal bills, and the government has so far found no effective way of reversing its action. If the process is repeated throughout the present session, if measures are passed by the Commons only to be mutilated or destroyed by the Lords, and if the government again "takes it lying down," then the Upper Chamber holds the balance of the Constitution, the government is convicted of ineffectiveness, and the ancient democratic Constitution of this country is for the time in jeopardy. The highest sort of parliamentary generalship will be needed if the battle with the Lords is to be joined on grounds of the government's own choosing, and under conditions reasonably favorable to its success.

I am not quite sure whether the Liberals have it in them to rise to the height of the occasion. As a party, discipline has never been their strong point. They are still, as they have been for half a century, a congeries of enthusiastic and somewhat ill-regulated groups rather than a united and harmonious confederation. Each section has its own pet measure, which it thinks of presenting independently, and which it is but too apt to press, with only a slight regard for the general interests of the party. And just now all sections are filled with the utmost remaining vigor. They have come back to power after nearly twenty years in opposition, with a legitimate mandate to power free trade, with a positive mandate to effect certain far-reaching changes in the social structure of the country. They are impatient to get to work and "do things." It is difficult to get them to listen to counsel of patience and prevision. They fling themselves upon the government, saying it to take up now this bill and now that, regardless of how such a policy will react upon the special problem of accumulating a case against the Lords. For it is clear that if the government's principal measures are brought forward now and rejected by the Lords, the country will have got over its indignation by the end of a couple of years, and a dissolution in 1908 might possibly find the government without the popular backing that could alone effect so great a change in the Constitution as is implied in a curtailment of the prerogatives of the Upper House. That, at any rate, is the danger ahead, and only a skillful selection of the measures that are to be placed in the front lines of attack, only a genuine spirit of sacrifice and restraint among the various sections of the Liberal party, can avert it.

There are, for instance, at the present moment three bills of great clear importance to the public mind. One is the Irish Devolution bill; another is the bill for extending small holdings in Scotland; and the third is the bill for extending small holdings in Scotland and for establishing a land court, with compulsory powers to buy land and to divide it; the third is the bill, not yet introduced, for dealing radically and comprehensively with the English land system. Now, nobody expects that the Lords will pass these bills. The probabilities are that all of these will be rejected outright. If a single one of them escapes it will only be with such modifications as will have wholly destroyed its efficiency. Then, again, the temperance reformers are clamorous for a bill stringently attending the licensing act, and the Lords are extremely unlikely to agree to any such proposal. Here, then, are lost measures of the first order which are practically

doomed from the moment of their birth. Is the government to dissolve directly the Lords have consensated or rejected them? Is it to continue in office as though nothing in particular had happened? Or is it to enter the final stages of these bills and let it be prepared to make their mutilation by the Lords a *minus* bill? Policy, in my judgment, prescribes the last of the general three courses as the best. The dissolution, in other words, I think, to be deferred long enough to give the government a first, to introduce at least two Radical budgets; secondly, to educate the country on the manifold and definite issues involved in the House of Lords question; and, thirdly, to arrange matters so that when the appeal to the electorate is taken, the decisive actions of the Lords shall be both fresh and clear in the public mind. It will not do for the government to ask a moral of popular confidence simply on the strength of what it has laid to accomplish, even though the failure is due to no lack of it. It must have some positive achievements to show. It has already passed several valuable measures, such as the Irish Disputes bill. It is engaged at this moment on the most thoughtful and thorough scheme of army reorganization that has ever been presented to Parliament. It is determined, and, as many bills lie wholly within its control, the Upper Chamber must be also able, to recognize the national finances and to reject taxation along what I may call Roosevelt lines. And there are many other smaller and less contentious measures of great public utility which, as they do not touch the land or election or the Church, the House of Lords may reasonably be expected to pass. Then, therefore, it is needed to enable the government to convince the nation that, given a fair chance, it can act and act usefully.

Time, also, is needed, as I have said, to educate the country on the main issue. The House of Lords question is a question that is not to be settled by whirling dervishes. It goes down to the very roots not only of the Constitution, but of the social fabric of the country; and clear and sober thought is the first requisite for dealing with it. The government is understood to have agreed upon its line of action. It does not intend to put forward any proposals for changing the Upper Chamber more democratic or more representative, or for interfering in any way with its internal composition. It confines itself to the problem of readjusting the relations between the House of Lords as it is and the House of Commons as it is, and of protecting them in such a way that the national welfare shall not be helplessly thwarted. How it proposes to solve this problem I do not know. There are many ways in which it might be solved, but there is no way in which it can be solved without a profound constitutional change. The government has not yet professed to put. Some assert that by the practice of the Constitution it must produce its plan without immediately disclosing upon it. But that is on the assumption that the government's proposals will be embodied in the form of a bill. I think it more likely, and certainly better tactics, that they should take shape rather in the form of a series of resolutions. These resolutions would provide a tangible basis for discussion, and would at once concentrate the public mind, now somewhat hazy and scattered, upon a definite project. That would in itself be an immense gain. At the same time, the government has in reserve powers which it can at any moment wield with effect. The House of Commons, so long as it retains the sole jurisdiction over the kinds of taxes that are to be raised, and over their allocation and expenditure, has always on hand a weapon of enormous potency.

But ultimately the issue will have to be squarely joined, and the question of questions for the government will be put. Some say that even before that comes, the issue is settled. Mr. Asquith will have introduced his budget, and his reputation is that it will be a popular and a radical one. A new house there will be another budget, and it will give well to the will be a genuine measure of democratic finance, and may even lay the foundation for a scheme of old-age pensions. These budgets, and the various minor measures of social reform that have been and that in all probability will be passed, should enable the government to appeal to the country with a certain effect. But something more will be needed than that. The Lords have rejected the government's education bill. There are almost certain to reject its Irish bill and its Scotch and English land bills. Which of these measures can be relied upon to move the people to the most resolute campaign against the Upper Chamber? Which should the House of Lords question be regarded as the most important? I do not think there is much difference in answering that query. The problem of the land is now recognized as the greatest social problem confronting the English people. It is not too much to say that reform on any large scale in England is impossible until the land is reformed from feudalism, ceasing to be the monopoly of the absentee-rich, and becoming more and more the property of the people. We are rapidly approaching what will prove to be nothing less than an agrarian revolution, and the spirit behind it will furnish the government an nothing else can with the requisite strength for a broad and final settlement of the issue of Lords problem.

ROUND THE CLOCK WITH THE CONSUL

WHAT IT MEANS TO UPHOLD OUR PRESTIGE AT THE EARTH'S ENDS

BY "ONE OF THEM"

WHILE I was roasting on the rocks of Aden—a Prometheus bound (at \$1500) to be pecked at by stinky American eagles—I had time to think. And I concluded we consuls were just modern marionettes trying to lubricate the great machine of commerce—and mostly getting ground under the wheels for our pains.

Yes, sir, the service, it seems to me, is a microcosm of this baffling world. One is taken and the other "goes left"—in a strictly non-Biblical sense. What I mean is this: Smith will get Cairo, and the magic cunk of "agent," which means Khedival balls and a grand time; for he's tagged on to the fringe of diplomacy. And to poor Brown's lot will fall a lurid hole like Cabo Gineiras & Dios, where the poor chap can't raise a glass to his lips without having it shattered by a rifle-shot from the latest revolution.

Don't argue with me; I've had too much of it. I've tackled Zanzibar and the Arab slave-traffic; was nearly gashed by the Boers at Thurno-fu; kicked my heels idly among impudent Siamese in Bangkok; got heart-sick and lonely in the Society Islands; and bought good American citizens from Albanian brigands in Patras. You see, I had to pay up, for in the second letter they said they'd send an ear by the next courier!

And I was scared all right. I'd seen the flow after Odessa Jews, Kurds chasing Armenians in Kharpert, Arabs after everybody professing Christianity. They all mean business, take my word for it. A lively life, friend, my home may be under the date-palms of a Moorish oasis or half buried by Siberian snows. My daily work may be done in Chinese ideographs, or the Amharic script of jessous Abyssinia. I am postured by ships, their maulers and hands; by tourists and explorers, by men with an axe to grind—or one in their hands, literal or metaphorical. I've had both—the latter in Dar-el-Bahda. He was a slave I'd freed. But that's a long yarn of ingratitude that I'll always bound me.

I'm pulled away from a statistical report or golden advice to American trade to christen a kid, try a bunch of promise case, or a claim about cattle. The same one calls on me to argue with both sides in a budding revolution, that I know may pit my walls with holes and bedraggled Old Glory over the door. It's not a lot of use trying to be dignified. If I can uphold America out here and keep a whole skin, I'm lucky.

"John," says a stern country, "your duties are many and onerous. Protect American merchants and American commerce. Report on new openings and chances for American brains and industry. Settle disputes, redress grievances, relieve the shipwrecked and send them home, John. Recover and save all you can out of wrecks (see wrecks, *discatendul*). Keep a register of American subjects. In short, wave the flag and keep our privilege high—on the pay of a dry-goods clerk. Study and learn; learn languages like Chinese, and expect promotion—say, from Port au Prince to Bogota." I tell you I often wish I was a pet parrot in a decent family at home.

I rise early; it may be the mosquitoes or an earthquake. Anyway, I rise early, take a bath, threaten to shoot the servant (they need this), and breakfast gently, chiefly on stale fruit. And you fellows complain about the servant problem! How about your best boy collared by a leopard, or bitten by a bandytail? How about otherwise decent chaps shot dead in your doorway for political spies, or going off in a jag with your only bottle of whiskey and doing a devil-dance on the table in your show uniform?

Trouble begins at the office. My chief receives a letter of complaint that has travelled by devious ways from Washington. The man says I'm too high-toned for my job. What can I do? The next I will marvel that a mighty nation should entrust even its meanest affairs to such a ruffian. I am accused of cupidity and stupidity, obtuseness and diffuseness.

Turning to my domestic correspondence, I find a claim for local taxes. Of course a consulate pays none, so I reply gravely, magnificent in phrase, saying nothing. The skipper of a bark in the bay asks for details of honors and lights, holding grounds and port anchorage. Another man's hands have mutilated, and he wants 'em all locked up in the consulate. Well, the consulate isn't

worth much, but I prize my old deck and decline. Then comes the sailors' story. Skipper, say they, has wholly starved and boiled and half murdered them on the high seas. Can be shot or hanged on this convenient territory!

I hark out of this. You see, at 11:30 there's a wedding, and I must be in the office, grave as an owl, to read the service. Pretty figure I'd cut if young Jenkins and his bride (awful nice figure—she's from Detroit) beheld the office wrecked by errand sailors. Of course they'd say I'd been drinking, sure, and fought imaginary

Bought good American citizens from Albanian brigands

foes in my country's behalf. They'll live here, of course. He exports gasoline, and her father rose leaves, gums, and spices. Beauty and the Beast every way you look at it. If they have a child I'll have to register it quick as an American citizen, otherwise it might as well die.

To every soul on every American ship that sails into this port (previous few, thank the Lord!) I'm America, and made to feel it. The few come, the many write. "Sir," says one man on good stationery. "I manufacture leather goods wholesale. What chance have my products in your territory?"

Friend, you've less chance than a cockroach of a living here. If it were a nice line of Manners, now, with soft-soled cartridges, I could promise you a bumper season. But leather goods! Man, your mission is as futile as Paquin frocks in Lebanon. . . . It's! . . . And I see he wants me to turn his rainbow into Ashlar, payment according to goods sold in my territory. Next, please.

Here is a collector—collects butterflies and orchids for a New Jersey importing-house. Has *Odonatoglossum spicatum* or *Euprepodion caudatum* been perceived in my locality? And if so, in what quantities? Are the natives peaceable and willing to work at fair wages? Is camel hire cheap, and could I arrange for a drying-house?

A request for samples of my stamps (at my expense); a pathetic query about a sailorman, last heard of in (allegation) and believed to have sailed for Eastern ports in a "coffin ship" of great age; a request from a newspaper editor for "a selection of sharp prints of the city, with its walls and environs, suitable for reproduction. Full captions to be placed at back. Trouble expected in your town."

Now, I've waited for it too—for years. The trouble, I mean. Not a mere trivial fight outside our red-mud walls, but a regular bad lot.

More letters. Private yacht expected. Is there a non-remissible house in the whole city that can be hired for a party of six for three or four days? Will pay a decent price. Can I arrange the catering? No oil with the cooking, as the owner's wife can't abide it. Plenty of prickly-pear—believe it's now in season.

And listen to this:

"Dear Mr. Consul—My son is of a roving disposition, and leans toward the East. I don't know where he got it, not from his father, a dry-goods-man in Paris (Tevan). Can I apprentice him to you for two years? The pay is regular, and government and he could shift from place to place, getting nearer and nearer home. I enclose three stamps, hoping for a favorable reply."

I reply, but not favorably. The fondest mother would turn shuddering from the "trade" of consul when she read my letter. Her darling should be hangman first; it was occupation for a pariah; its duties of a kind that bequeathed me the strongest; that led to language varied, indeed—even twisted and heated as Versavian lava.

I still have those three green stamps.

And yet more letters. I am asked to send samples of bulls and gun engravings; of sandal-wood and rosea fibers; of the cloth and ornaments worn by women; of the country's peas; of pigments and beads; of minerals from coal to gold; of medicinal herbs for doctors and quacks; of horse-trappings and bridles and saddle-cloths;

To dream that a grateful President . . . pressed my hand

of coffee and wood [with quotations] and paper and bark; dates and palm oil, with argan oil and olive oil, skins, and perfumes.

I reply to all. I try to know everything or appear to. Each takes it for granted I've been raised to his trade, and he pelts me with technicals till I'm sore.

Even women are at me about native dopes for eyes and hair and skin. I tell them of henna and kohl and strange carnis used by dark-eyed beauties (let the word stand); and next mail brings me an order for pounds of the stuff. Any one of our eighty millions, you understand, can get at me, complain about me, worry me, bully me, seek my aid by letter or visitation. Thank Heaven, the telegraph is unknown as the railroad in this savage land.

Already I see I have sympathy. Yet the worst is to come. I mean the handful of Americans right here within these crumbling mud walls that have beaten back the wild surges for a thousand years.

You'd think, wouldn't you, those people would live in amity—a few white families cast among a savage horde? Why, friends, there is proportionately more hatred and uncharitableness in our little colony—more jealousy and heart-burning and scandal—than in all New York! First. An imported hat (fashion three years old) may indirectly lead to a "case" at the consulate; maybe assault; maybe slander; maybe a duel.

Think of playing tennis with a chap at 10, and judging him with all the penalties of the law at 2.30!

A comes here, red and incoherent. B, he says, has spread a report among the German and British families that he—A—has been smuggling Winchester at night along the Waterport wall. As he raves, Mrs. A. forms a dreadful background. Her nose is red; fire is in her eye. She huffs in, and shows clearly that Mrs. B. is at the root of all things evil in our little world. A bids her shut up. She is rude to him. I adjust my glasses and clear my throat meekly. Then I make a few notes and clear the office.

Enter B, suppressed fury in his very gaze. A, says he, is doing an iniquitous traffic in selling American "protection" to rich natives wishing to thwart their precious practical government. While I'm trying to get things clear, in ramps C. "I've been doing a bit of farmin' out at Ain-el-Hajar with Haddi Mokhtar," he says, "and now all my blossomin' goats have been raided. Say, would you mind drawing up a claim for me against the Pasha? And lay it on thick, old fellow, so I make a bit. See?"

Fellows like that you simply can't awe. "What's the use of havin' a counsel (why do people call me a counsel?)", he will say, "if he can't or won't protect his own people?" Now "protect," according to C, means just fat profits.

I elude the consulate at four and emerge with the mosquitoes into the great square of the city. Afoot the streets are clapping and howling in monstrous notes; the shrill mooncaddis wails in the green-tiled minaret; the vast green swell pulls and shimmers in the blinding light. I'm filled with a kind of holy calm till D's raucous voice asks "If the ditch is dug yet, and is Roosevelt still at the White House?" "Have I no news, anyhow?" "What's the use of a consul from whom things official are persistently hid?"

You see, even these people are ever at me. They seem to fancy some subtle occult exists between me and Washington; that Affairs of State are sent wireless and hot for the "American Colony." That their raised finger will bring the towering New Hampshire or Connecticut under the crepe-mailed wings of Oriental bolts with

(Continued on page 735.)

MAM' LINDA

BY WILL N. HARBEN

ILLUSTRATED BY F. B. MASTERS

CHAPTER I

IN the rear of the long store, at a round table under a hanging lamp with a tin shade, four young men sat playing poker. The floor of that portion of the room was raised several feet higher than that of the front, and between the two short flights of steps was the inclining door leading to the cellar, which was damp and dark and used only for the storage of salt, syrup, sugar, hardware, and general rubbish.

Near the front door the storekeeper, James Blackburn, a portly bearded man of forty-five, sat chatting with Carson Dwight, a young lawyer of the town. A man of medium stature, with a massive head crowned by a shock of reddish hair, a smooth-shaven, freckled face and small feet and hands, stood in the doorway. He wore a long black frock-coat, a waistcoat of the same material, and baggy gray trousers. The exposed portion of his shirt-front and the lapels of his coat were stained by tobacco juice.

"I've been up to the doc. over to the clinic, and the Lord only knows where else looking for him," he said to Carson, his low partner, as he advanced and stretched his short arms out over the show-case on the counter behind him.

"Work, eh?" Carson smiled.

"No; since when have you ever done a lick after dark?" he said, dryly. "I've come to give you a piece of advice, and I'm glad Blackburn is here to join me. The trouble is, Dan Willis is in town, half full, and evidently loaded for bear. He's down at the wagon-way with a gang of mountaineers. Some meddling press, no doubt your beautiful political opponent, Wiggin, has told him what you said about the part he took in the mob that raided negro-town and whipped the law some."
